The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made only to men working on Canadian farms for at least 8 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is in no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian government will pay all fare over one cent per mile from Spokane to Canadian destination. Information as to low railway rates, etc., may be had on application to

J. N. GRIEVE.

Have a Little Canary Bird.

Dear Aunt Nellie: I have been sick since I wrote the other letter. I had appendicitis and was operated on. I am improving now. I live on a 640-acre farm. I saw my friend, Ella Love,'s, letter in the corner. We have a little canary bird.—Lyda Augst, R. R. 1, Box 30, Beebe, Wash.

Goes to Pleasant Hill School.

Dear Aunt Nellie: I enjoy the letters very much. I am 11 years old and will be 12 the twelfth of May. We have hree cats and one dog and his name is Mike. I live on a 40-acre ranch. I live a quarter of a mile from school. I am in the sixth grade. I go to Pleasant Hill school. My teacher's name is Miss Hemmingsen. — Goldie Christensen, East Stanwood, Wash.

Killed the Coyote in the Hen House.

Dear Aunt Nellie: I have written to you once before. I like to read the other girls' and boys' letters. We have about 50 lambs now. I feed two lambs by hand. The first of March we had a coyote come into our chicken yard and papa killed it in the hen house. That was the second one we have killed on our ranch. We have 34 little chickens now.— Frances McManamon, Othello, Wash.

Move to Their Country Home Soon.

Dear Aunt Nellie: I will be 7 years old on the 25th of March. I am in the first grade. I am living in town now but will soon be going to our farm. We have five horses. Their names are Jocker, Ned, Pearl, Ruby, Flossie. Then we have four mules. Their names are Jessie, Josie, Midget, Julie and one mule colt named Peter. I have a pet chicken named Peck.—May Drew, Bridgeport, Wash.

Daddy Is Cashier of the Bank.

Dear Aunt Nellie: I am living in a town named Johnson. I am 10 years old. My birthday is on the 20th of June. I have two brothers. Their names are Fred and Ray. My daddy is cashier of the bank of Johnson. I am at my best friend's home tonight. I am going to school all the time. I am in the sixth grade.—Grace Willoughby, Box 28, Johnson, Wash.

Baby Waves His Hand to Lillo.

Dear Aunt Nellie: My father takes the Washington Farmer and I read the Children's corner. My subject is "My Best Friend." My best friend is my baby brother. He will be one year old May the eighth. His name is William. He can't crawl but stands up alone. When I go to school he waves his hand at me. I am 14 years old and I'm in the seventh grade at school.—Lillo Pollastrini, Pasco, Wash.

Another New Member for Our Club.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. I am in the second grade. I live on a farm nine miles from town. My height is four feet three. I have blue eyes and light brown hair. My sister's name is Lucile. She is 6 years old. Her birthday is the 28th of November. My teacher's name is Miss Lehan. We walk two miles to school.—Paul Helme, Washtucna, Wash.

Twenty-eight in Harriet's School.

Dear Aunt Nellie: I enjoy the letters very much. I am 12 years old and I am in the fifth grade. I have a mile and a quarter to walk to school. I live on a farm. We have 10 cows, two calves, two horses and a colt. We also have three geese. I have three brothers and four sisters. Two of my brothers go to school. My teacher's name is Miss Hemmingsen. She is a very good teacher. There are 28 children in the school.—Harriet Imislund, East Stanwood, Wash.

To Move to Idaho This Spring.

Dear Aunt Nellie: My father has taken The Farmer for a long time and I have read the letters. I am 7 years old and in the third grade. I have six sisters and one brother. I am taking music lessons from one of my sisters. I go to school at Wilcox. My teacher's name is Mrs. Brown. There are 21 pupils in my room. My father sold his ranch last fall and we are going to move to Idaho in the spring.—Kathryn Chamberlin, Wilcox, Wash.

Pearl's Trip to California.

Dear Aunt Nellie: I live on a 290-acre farm. We have 13 head of horses, 52 cattle and about 100 chickens. I am 11 years old. My birthday is the 19th of February. I have a little brother named Perry. We ride a sorrel pony named Queen to school. I have gone to school three terms of school without missing a day. I am in the fifth grade at school. I like my teacher. Her name is Miss Macy. I have missed three months of school this term with sickness. My subject is "Our Trip to California." We started to California the day before Thanksgiving and got there the 2d of December. We stayed there about one month and then we went to Los Angeles for a while. From there we went back to my grandpa's and grandma's and stayed another month. We started home the 28th of January and got here the 1st of February. We found it much cooler up here than it was down there.—Pearl Smith, Elberton, Wash.

Esther Can Milk One of the Cows.

Dear Aunt Nellie: I like to read the letters. I live on a 44-acre farm. We have six milk cows. We have five calves. I can milk one cow. I like to wilk. We have some little pigs. There was one little one that was not strong so I had him in the house one whole day. I am 10 years old and I am in the fourth grade at school. There are 36 children in school. There are four children in my class.—Esther Bergman, Ridgfield, Wash.

A Lovely Time Earning Her Money.

Dear Aunt Nellie: My subject is "How I Earned My First Money." I went and stayed with a woman and she gave me 50 cents a day. We planted flowers and hoed the garden and fed the chickens and the horses when her husband wasn't home. I had a playhouse and a swing and a set of dishes and a rocking chair and a table, a mat and stove. I used to cook on my stove and she used to play with me and we used to eat our dinner there some times. Now the lady whom I stayed with moved to Canada.—Margaret Cox, Leahy, Wash.

Glad That William Has Joined Us.

Dear Aunt Nellie: I will write a letter to the Corner and tell you what I do. I go to school at the Davis school. My teacher is Zula Babcock. I am in the fifth grade. I have a good time at school. I joined the Chronicle Children's Corner and got a pin with a picture of Uncle Wiggily on it, and it said Chronicle Juniors. I have a brother by the name of Leonard Harmanes. He is in the third grade in school. Leonard and I are the only ones in our school. I am 11 years old and Leonard is 9 years old.—William Harmanes, Colton, Wash.

Out of School for a Long Time.

Dear Aunt Nellie: I am a girl 12 years old and in the sixth grade at school. My birthday is the 17th of September. Irene Glissler of Odessa is just one year older than I. I hope our corner will grow larger than it is now. It is growing a little every week. I have not been to school for a long time. I took sick in the latter part of November and I have been out ever since then. I have a little brother 3 years old. His name is Earl. We have a dog named Teddy. We have four horses and six cows. My uncle lives right close to us and he lives across the line in Canada. I will write again.—Jeannette Samson, Sumas, Wash.

The Story of a Little Girl.

Dear Aunt Nellie: I will write on the subject, "My Favorite Book." My favorite book is "Whiter Than Snow." It is a story of a poor little girl. I like the story very much. There are three children in our family. I was 11 years old the 23d day of September. I am in the fifth grade at school. There are 33 children in our school. There are eight children in my class. We have only one room in our school. There is no sixth grade at all. I like to go to school. We have 10 more weeks of school. I like to read the letters in the Corner.—Martha Arndt, box 14 A, R. 2, Ridgefield, Wash.

Knows a Lot of Psalms by Heart.

Dear Aunt Nellie: We have 12 chickens and only got six eggs yesterday. I am 9 years old and in the second A grade. My birthday is October 10. I can say the books of the Bible. I live on an 80-acre farm. I can say the 23d, 117th, 8th, 15th, 1st and the 19th psalms. I can say all the Ten Commandments by heart. I have a big pet dog. His name is Nick. I have three sisters. I ride to school three miles. I have one brother. One of my sisters' names is Marion, the others are Neva and Dorothy. My brother's name is David.—Margarette Dye, Lagrande, Wash.

Glad the Cousins Wrote to Her.

Dear Aunt Nellie: I got three letters from my cousins since I wrote to the Corner. My brother or father takes us to school every morning. I will tell you about our school room. There are 17 seats in our room. The organ is up on the platform. We have a heater in our schoolroom and three windows on each side of the room. We have one big blackboard in front of the schoolroom and three little ones on the sides. The teacher said that when the snow goes off we can plant some shade trees and flowers. I have a horse named Bessie and I ride her after the mail. I was glad the cousins wrote to me.—Margaret Cox, Leahy, Wash.

Glad That Tillie Wrote to Us.

Dear Aunt Nellie: My papa takes The Farmer. I always look for the Corner because I enjoy reading the letters that the cousins write. I will tell you about our school. There are two rooms. I am in the big room. I am in the sixth grade. My teacher's name is Mr. Rosenquist, and I like him very much. There is a bookcase, an organ and lots of pictures and a Victrola. I live on a farm. We have six cows, four calves, one horse and one pig and some chickens. I have three brothers and one sister. My brothers' names are Oscar, Clarence and Melvin. My sister's name is Mabel.—Tillie Helde, Mount Vernon, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Effie Luddington, Florence Hwang, Louise Hwang, Ethel Miller, Esther Bower, Raymond Geissler, Theresa Wilson, Beulah Walker, Rosalie Arledge, Bernice Baker, Rosa Sahli, Amy Lauth, Pernille Hanson, Hilma Anderson, Glenn Faber, Mabel Kessey, Avah Sharpe, Arthur James, Clifford Zimmerman, Mabel Iverson,

Ups and Downs of a Bunch Grass Boy

(Continued from page thirteen.)

fairly ample, such as they were. We had brought considerable quantities of dried fruit from Walla Walla—dried peaches, dried apples, dried prunes, dried apricots and a good deal of canned fruit. We had plenty of flour and potatoes, some onions and carrots and sufficient seasoning condiments to enable mother to cook a palatable meal; but we were short of meat. When the snow was banked high about the eaves of our house we used up the last scrap of meat in the house.

We had neither butter nor milk, so the loss of meat was a pretty hard blow. Mother had used the bacon fat for seasoning and shortening, to make gravy, and in other ways to splice out in her simple cookery. I remember yet how utterly repellent boiled potatoes, with no gravy or bacon fat, were to me. It had been my habit to take an ample helping of potatoes seasoned with bacon gravy or bacon fat, and made more palatable with pepper and salt. When the last of the bacon was gone my 9-year-old wisdom was sufficient to enable me to realize that it was useless to weep, rebel or otherwise be unpleasant. Mother and father made light of their hunger for meat, and I tried to do likewise; but I remember

The Bible Says:

going about the house with an empty feeling that went clear to my shoes. Mentally I compared fat bacon with other things I liked—bananas, oranges, candy, licorice, and so on; but they all lost in the comparison.

A neighbor who lived several miles distant came to our place on snowshoes one day. The conversation turned to table fare, and the neighbor said his folks had run out of fruit. In the course of the conversation he said they had plenty of meat—at which I pricked up my ears. When he left it was with a half flour sack full of dried prunes, peaches and apricots mixed, over his shoulder. I took it for granted that he would return the next day with some of his meat; but he didn't. Day after day I watched for him to appear, and at last gave up, and at the supper table that evening broke down and wept.

But I would not tell why. I thought mother and father would feel badly if they knew I was hungry for meat, so I explained that I was just lonesome and thought that if I cried I would feel better.

They were deceived, and I was glad that they were. I moistened my boiled potatoes with water, peppered and salted it rather excessively and made a brave endeavor to eat with a smile, which I did, though once or twice was on the point of gagging.

Mother was sorry I was so lonesome; so after supper she got out a book, the name of which I do not know, and read a part from it which told about an old porter in London town of long ago whom everybody called Trotty because of the funny way he walked. She came to the place where Trotty was sitting on a doorstep eating tripe—and got no further. I wanted to know what tripe was. She told me it was a kind of meat which poor folks like Trotty ate in those days. A thought flashed through my mind—perhaps here was a resource in the meat line which we had overlooked. I next asked, so guardedly as to arouse her suspicions, if folks like us were too poor to eat tripe. Mother saw through my question. She asked me abruptly if I was hungry for meat.

I evaded the question and was convicted thereby. She knew; and led me on adroitly, laying first one pitfall, then another, like a skilful lawyer conducting a cross-examination, and presently had the whole story—how I had longed to trade some prunes for some meat; how I had tasted bitter inside, and the bitterness began at my teeth and reached to my very toe nails.

The next morning, bright and early, father struck off on snowshoes. All that day mother seemed to be worrying, and asked me several times how I felt. Father had gone to hunt meat, of course, though they did not tell me, fearing to raise false hopes. He came back at night with a can of salmon, the oil of which mother poured into a teacup and gave to me to drink. I took it in small sips, pretending to be disinterested; but I took small sips and tasted each for a long while. Afterward I mixed small pieces of the canned salmon with my potatoes.

That night after I had pulled out my trundle bed and was in it pretending to be asleep, father told mother that as soon as freight could be hauled into the country Mr. Reeves—the pioneer storekeeper—would have in some bacon; meanwhile we could get nothing but salmon and oysters, and that Reeves would sell only a few cans to any one man, as the whole country was out of meat.

Father made a few more trips, and each time came back with salmon; and at last he returned with some very fat and very salty bacon! It was a red-letter day.

I hung to mother's skirts while she cut off thin, white slices of the fat bacon and dropped them into the frying pan; and when I saw the bacon fat poured off into a small cup and a little bit saved for my potatoes, I jumped up and down and whooped for joy.

The long, cold, dark, silent winter passed finally, and there was grass for the horses and meat for us. Cowboys passing by and stopping for a meal said that down in the rocky scab land south of us the "potholes" were heaped with dead cattle that had bunched there during the big storms, and perished—tons of beefsteak freezing up and going to waste while we lonesome settlers were fairly praying for fat, salty bacon!

Next week the bunchgrass boy will tell how he devoured every scrap of print that came his way, about the approaching battle between John L. Sullivan and James J. Corbett for the championship of the world and how in fact, he read everything that came in sight. Finding some papers in a shack about the execution of a number of criminals, the young bunchgrass boy carries out the details to the minutest particular with the pestiferous squirrels as convicted and sentenced criminals.

Boys!

M100.

Full-sized mitt, with special brown tan, with laced thumb and buckled back; made with deep packet and firm padding. Retails for $1.50. Sent postpaid to any boy for one three-year and one yearly subscription to The Farmer.

WILL TRY NEW PEAS.

Give Good Results on Dry Soil.

R. H. Chick of Spokane, but who has farming interests in the vicinity of Reardan, Lincoln county, is this year putting in 2000 pounds of field peas of the Brown Carleton variety. These peas are claimed to be more productive than other varieties in the dry regions, and it is claimed that they stand up more sturdily and are therefore more easily harvested, and with less loss from shattering.

They are grown by a number of ranchers in Oregon, 20 bushels per acre having been produced where the annual rainfall was only nine inches.

Can Add Ten Per Cent to Crops, Says R. C. McCroskey.

"Ten to 15 per cent increase in the production of grain and other farm stuff can be had this year by intensified farming," says R. C. McCroskey of Garfield, veteran banker and farmer of the Palouse country.

"High prices in prospect are the inducement which will appeal to farmers to give the care to their operations which will bring these results. Farmers in the west in many instances are careless or wasteful in their methods.

"Fall-sown grain can be gone over even after the grain is up in the spring and by the use of a fine-tooth harrow a mulch is produced by pulverizing the packed soil and this mulch keeps the moisture in the ground, greatly increasing the yield."

Can Not Limit Discussion to Any Six-Inch Boxes.

In a circular letter to the newspapers and periodicals of the state E. F. Benson, commissioner of agriculture, suggests that a double column space six inches deep be boxed in and used in each issue of the publications for the dissemination of such information along lines of agricultural preparedness as seems most timely. Commissioner Benson adds: "Personally I would be glad to do any work, whether in the office, the field or the trenches, that would seem to be the best work possible for me to do. Just now I find it necessary to spend 14 to 16 hours a day in the office. It is a pleasure to do this in the hope that that work may be of some benefit to our country."

Want Ads

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, the Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

HELP WANTED—MALE 3

OUTSIDE SITUATION.

Good salary can be earned selling our complete line high class nursery stock. Cash advanced. Write for terms.

ALBANY NURSERIES, ALBANY, ORE.

HAWTHORNE AUTO SCHOOL,
445 Hawthorne ave., Portland, Ore.

NURSERY STOCK 621

JUST THINK! STRAWBERRIES FROM June to November. Bear first year set out. Americus everbearing, $1.50 per 100. F. I. Moffet, Ellensburg, Wash.

HOMEST'DS, RELINQ'M'TS 642

THE UNITED STATES HAS TAKEN TITLE to about 2,300,000 acres of railroad grant lands in 18 counties in western Oregon from Washington to California, part on each side of Southern Pacific railroad. The agricultural lands will be opened to homestead under government laws. For $1.00, we will mail you a large map showing sections of all lands taken in 18 counties; entry modifications; information about each county, its soils, crops, rainfall, climate, etc. CONLAN & CO., 234 North 19th street, Portland, Ore.

FARM LANDS—FOR SALE 651

MONTANA LAND.

Are you looking for a farm home or a land investment in grain or grazing lands in the great grain and stock country of Montana? If so, it will pay you well to see our Montana Land List, telling of improved and unimproved lands in several of the best districts of Montana—Judith Basin, where prices range from $36 to $60 per acre—Eastern Montana, where we can show you several fine tracts at $8 to $20 per acre—Shields River Valley, that famous grain and stock district, where good grain lands, partly improved, sell at $40 to $50 per acre, and sure to increase in value while producing a good income on your investment—Conrad and Great Falls districts, where good grain lands can be bought at $20 to $30 per acre. Lest you forget, we say again, if you are interested in Montana land in practically any good district in the state, don't fail to call or write for Montana Land List—it's free, and will probably save you time and money. We have made a careful study of the land situation in Montana the past few years, and believe we can be of service to you. Hege & Watkins Co., 715-17 Paulsen bldg., Spokane, Wash.

In answering advertisements don't fail to mention this paper.

Grain and Produce Markets

Chicago Grain.

CHICAGO, April 28.—Feverish advances of 12 1-2 cents here in the price of wheat today were followed by a sudden collapse of 15 1-2 cents owing largely to official denials that the entente allies had been purchasing future deliveries at Winnipeg, and because of the action of the Winnipeg exchange in summarily prohibiting all speculative trade. A wild finish in the Chicago market resulted, with the price varying from 2 1-2 cents under yesterday's close to 7c advance, with May at $2.74@2.74 1-2 and July at $2.25 to $2.26. Corn closed 3-4c off to 1c up, and oats off 1 1-4c to 1 1-2c.

In provisions the outcome ranged from 7c decline to an equal gain.

Uncertainty of wheat traders at the finish was due in a great degree to the fact that the recent great advance in Chicago prices was based largely on the assumption that upturns in the Winnipeg market were due mainly to purchases for Great Britain and her allies.

Corn broke sharply with wheat after having jumped with that cereal to new high levels.

Business in oats attained large proportions, but otherwise the cereal duplicated the course of other grains.

Provisions like other commodities advanced to fresh top records and then crumpled down.

Cash Quotations.

CHICAGO, April 28.—Wheat—No. 2 and No. 3 red and No. 2 and No. 3 hard nominal.

Corn—No. 2 yellow, $1.59 1-2@1.62; No. 3 yellow, $1.56@1.60 1-2; No. 4 yellow nominal.

Fierce Battle in Wheat Between Bulls and Bears.

Violent fluctuations continue in the wheat market, with powerful influences on both sides in the fierce battle between the bulls and the bears.

The bulls emphasize the world shortage, the war, the run-down condition of agriculture in Europe, the low and dwindling stocks in this country, and the discouraging prospects for the 1917 harvest.

The bears counter with reports that Canada has 100,000,000 bushels, which is 50,000,000 bushels more than its own requirements, and that this surplus can now come into the United States free of tariff tax. But they are relying more on the probability of the government's taking control of food supplies and fixing prices. Some of them are whistling loud to sustain their courage. Here is the way that a New York dealer puts it:

"Thanks to the newspapers, coupled with government admonition to the farmers to produce food supplies, we have an unheard-of price level, wholly unwarranted in view of the facts. At the worst, we have prospects of an average winter wheat crop and a splendid chance of present prospects being improved. A record spring acreage is inevitable. There never was greater incentive to plant wheat, corn and oats. Who can successfully dispute the United States has a chance to produec 800,000,000 bushels of wheat, winter and spring? A spring crop of 350,000,000 bushels will just about make this figure. Our spring is late and unusually backward. As a result we have had no growing weather, crop reports could not be more gloomy. We are sure to get seasonable weather, followed by cheering crop reports. Then fears of famine in this land of plenty of ours will fade like mist. We will gaze at the price and wonder if anything but 'the bunk of a busy brain' made present price levels possible. It required courage to advise caution on the long side of stocks and cotton last fall. Yet the equilibrium of the bulls was badly upset. Wonder if history will repeat itself in grain. Is it not time to stop, look and listen? The wise man will feel for the top from now on in distant months of all grains."

And after all is said, no one can be sure that the man is wrong in his forecast.

Wheat prices may decline sharply from the present extraordinary level, but cheap wheat seems far in the future. These are war times, and war and high wheat travel together.

In 1904-1905 during the war between Japan and Russia, wheat advanced from 74 cents in 1903 to 121 in 1904. Following this, May wheat sold at 131 in 1909, and cash wheat 160.

In 1897 wheat sold at 63 cents, but in 1898 the May option reached 185. The Leiter deal, however, had more to do with this than the Spanish-American war.

Russo-Turkish war came in 1876 and wheat which was selling at 83 cents went to 175 in 1877. Although it went down to 77 after the war, yet, in 1882 it was up to 144.

In 1861 wheat at Chicago sold at 62 cents. In 1864 it saw 228, and in 1867 285.

In the Crimean war 1854-56 wheat ranged from 38 cents to 185.

Price in 1815 would average 175. Two years after Waterloo it advanced 285.

The close of the revolutionary war, followed by the French revolution and the Napoleonic wars, and the war of 1812 was another era of high prices for wheat, wherein it was higher at the close than at the beginning of hostilities.

Seattle Wheat.

SEATTLE, April 28.—All speed records for buoyancy of Washington wheat were broken this week and singularly enough soft wheat has followed automatically the lifts in the eastern hard wheat market, a feature never known before this year. Wild, impetuous, unrestrained, the market ran away with itself to the extent of 37@41c higher.

Just at the close of last week millers were bidding $1.75@2 farm price. The sales had no more than been concluded than country prices began soaring, starting at $2, then $2.12 and finally to $2.40. This figure has been twice refused by farmers of eastern Washington. Country bids advanced faster than bids on 'change, indicating the fierceness of the battle of buyers for possession. By midweek millers were offering $2.35 to $2.50. A little wheat was picked up on that level, and all farmers are now inclined to sell. A few are holding out for $2.50, and will get it next week, according to the attitude of millers of Puget sound. The advance on the week on 'change was 30@33c, as against a lift of 50@60c in the country.

Washington farmers are rather well out of grain. Millers have quit quoting wheat for reshipment east, as they are now compelled to watch their holdings to carry them to the new crop years.

Estimates of the wheat remaining in the three northwestern producing states that must be moved vary from 15,000,000 to 18,000,000 bushels. The yield of these states for 1916 was about 70,000,000.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., April 28.—Hogs—Receipts, 8100; steady. Heavy, $15.35@15.70; light, $15.10@15.60; pigs, $13@14.50; bulk of sales, $15.25@15.50.

Sheep — Receipts, none; market, strong. Prime lambs, $13@13.50; common lambs, $12@12.50; choice yearlings, $11.25@12; good yearlings, $10.75@11.25; best mutton ewes, $10@11.

Portland Market.

PORTLAND, Ore., April 28.—Local agitation against the high price of potatoes and a subsidence of the eastern demand have weakened the market. Buyers are not now offering over $3.75 at country points.

Butter prices were cut 2 1-2 cents and the market is weak at the reduction. Cheese continues very firm.

Eggs declined to the 31 cent level, but there are indications that storage operators are about to enter the market again and buying cards sent into the country are quoting as high as 31 1-2 cents.

Dressed poultry and meats were slow in the latter part of the week.

The only wool business done during the week was in the Yakima section. Shearing is under way in the Willamette valley and buyers are quoting 45 cents on this class of wool. Bids for mohair hold at 65 cents. The hide market is firmer with the eastern advance.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats No. 1, $53.50 per ton.

Corn—Whole, $71; cracked, $72 per ton.

Millstuffs—Bran, $41 per ton; shorts, $44.

Barley—No. 1 feed, $55.25; brewing, nominal; rolled, $55.

Hay—Buying prices: Timothy, eastern Oregon, $26@30; alfalfa, $23; grain, $18@19.

Eggs—Oregon ranch, case count, 31@31 1-2c per dozen; candled, 33c.

Poultry—Hens, 19@20c; ducks, 22@23c; turkey, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 39@40c per pound; cubes, 35c.

Cheese—Oregon triplets, 25c; young Americas, 26c.

Dressed meats—Veal, 14@14 1-2c; pork, 18 1-2@19c.

Hops—1916 crop, 3@6c per pound.

Potatoes—Oregon jobbing price, $4.25@4.50.

Wool—Eastern Oregon, fine, 35c; coarse, 40@44c; valley, 40@45c.

Beans—Oregon small white 12 1-2c; California small white, 13c; large white, 12 1-2c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags, (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Seattle Market.

SEATTLE, April 28.—Eastern Washington asparagus from all sources is coming into market at the rate of half a carload per day and is selling at 12 1-2@15c per pound in cube and pyramid packs. Practically every producing district is now represented, including Kennewick, Granger, White Bluffs, Prosser and Hood River. The quality was high almost from the start.

All the needs of this market are now being supplied and California orders have been cut off.

The apple and potato seasons are closing simultaneously this year. Both commodities will exhaust themselves at about the same time on the highest market ever known here. Jobbers are quoting $95@$100 for No. 1 Yakima gems, but will sell freely to the extent of their present holdings at $95. Locals are $90.

This has been the heaviest season for local spinach in the history of the street. Prices are $1.15@1.25 per crate. It is estimated that double the amount of any former year has been sold and at higher prices.

Rhubarb is beginning to flood the street again, and present quotations of 2c per pound promise next week to break to 2c.

The sunshiny weather today, so long deferred, is having a bearish effect on butter. Country reports indicate that the flow of cream will be heavy next week, with a sharp increase in the seconds which will supply the market with city creamery firsts, now being brought from California. Jobbers take contrary views of the effect of mild weather on eggs, some asserting that the lay will be reduced. Storage is practically at an end for the season, the crop being about 70 per cent of the normal.

Butter and Eggs.

SAN FRANCISCO, April 28.—Eggs—Fresh extras, 31½c; fresh extra pullets, 29½c; extra firsts, pullets, 29c.

Cheese—New firsts, 19½c.

ELGIN, Ill., April 28.—Butter—Seventy-five tubs at 37c, 55 tubs at 38c.

NEWS FOR BREEDERS

There has been considerable loss of sheep in the Willamette valley this spring, mainly on account of leeches and lung worm, the wet, backward season favoring their ravages. There have been some cases of lip and leg disease, which is rated as a form of foot rot. A rather smaller percentage of lambs than usual have been saved.

Professor Hyslop of the agronomy department of the O. A. C. urges the planting of as much spring grain as possible this spring—wheat, barley and oats, but especially oats, which yield the greatest production per acre. Professor Hyslop expects hay to be scarce this fall and advises the planting of spring oats for hay. He says there will be four times the acreage to beans that there has ever been, but does not even then expect the supply to equal the demand, and considers beans a safe and profitable crop. For hog feed he would plant early corn and hog it off or feed soft.

Behrman Bros. of Hillsboro, Ore., recently purchased from J. S. Hiatt of Cresswell, Ore., 16 head of registered Jerseys of extremely fine breeding. The herd bull is a grandson of the great show bull Noble of Oakland, out of a dam that made over 400 pounds of fat on private test as a two-year-old, and she has a sister with an official test of 466 pounds of fat, or 543.2 pounds of butter as a 3-year-old. But it is the females that are strongest along producing lines, four of them being granddaughters of Hood Farm Torono, the sire of four cows with over 1000 pounds of butter and over 50 others with high records. Nearly the entire herd is bred to a double grandson of Hood Farm Torono, that Mr. Hiatt retains with just a few head of females on his place near Cresswell. H. A.

Creditable Record for Twins.

Two cows from the herd of J. W. Clise, Redmond, Wash., 5-year-old twins, Willowmoor Blush and Willowmoor Bloom, have just finished a year's test with official records averaging 14,509 pounds of milk, 671.95 pounds of fat and 4.63 per cent of fat, which seems a creditable record for twin heifers and shows a high standard of dairy production of the Ayrshire breed, says C. M. Winslow, secretary of the Ayrshire Breeders' association.

Oregon Half Ton.

Here is the big Poland China boar, Oregon Half Ton, that has been in use by George W. Buck of Oregon City as his junior herd boar, and that was recently sold to George Burkhead of Hillsboro, Ore., for $100. He was bred by A. D. Severes of Iowa.

Mr. Buck reports a great demand at present for breeding stock. It seems to him a shortage now exists and that it will get worse. He recently sold to Raymond Murphy of Hillsboro the good sow Giantess Equal, for $75, and to M. T. Pfeffer of Dayton, Ore., Miss Orange Knox for $75. He also sold Mr. Pfeffer an Orange Belle boar pig. He reports a number of other good grades.

WESTMORELAND SQUIRE.

The above picture shows Westmoreland Squire, grand champion Guernsey bull at the Pacific International Stock show at Portland, Ore., last December. He was purchased during the show by Floyd Reith of Astoria, Ore.

Goes East for Stallions.

C. W. Brown of the firm of Brown & Mood, Moscow, Idaho, was in Spokane Monday night on his way east to purchase some pure-bred Percheron stallions for distribution in the Inland Empire. The French government has permitted a consignment of 100 animals to leave the country, these being among the few exportations allowed since the war began. Mr. Brown hopes to secure six or seven head for the northwest.

Sell Bull Calf for $400.

H. H. Curtiss of Pullman, Wash., dairyman, has shipped an 8-months-old Jersey bull to Benton county, receiving $400 for the animal. The bull goes to an association of Benton county farmers, who made the deal for the pedigreed animal through their county agriculturalist, Lee M. Lampson.

Holstein Herd for Sale.

James C. Graham of Palouse, Wash., having sold his farm will shortly sell his herd of 78 Holsteins, half of them registered.

CLARK BUYS BOAR.

E. M. Clark of Nehalem, Ore., who purchased 13 of the best gilts sold at the Kiger sale near Gresham in February has purchased the great boar, Chief's Col. Jr., from J. M. Fruit of Brooks, Ore. Chief's Col. Jr. was sired by Chief's Col. a hog that has been a grand champion of the Illinois state fair and sired the greatest number of winners in the Duroc classes there. His dam is Lucy Wonder 184, by Volunteer, grand champion of the Chicago International in 1913. She was purchased, bred by Mr. Fruit from H. E. Browning of Illinois and out of the litter Mr. Fruit kept Chief's Col. Jr. for his own use and developed him into a great hog. He sired the junior champion sow and first get of sire group at the Oregon state fair last fall. With the very fine lot of richly bred young sows Mr. Clark has this boar is worth to him more than the reputed price of $100 paid for him. Breeders and show men will do well to keep an eye on Mr. Clark.

RICHLAND JERSEY CATTLE CLUB.

H. H. Curtis of Pullman has just shipped to Lee Lampson, county agriculturist of Benton county, Wash., for one of his cattle clubs, St. Mawes Pilot, a young Jersey bull. His sire is Poppy's Golden St. Mawes, whose dam has a record of 1120 pounds of butter in one year and 3001 pounds in three years.

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

The Board of Trustees of the Leland Stanford Junior University begs to announce a *complete dispersal sale of the Stanford Herd of 300 Registered Holsteins* at the Stanford Ranch, Vina, California, *June 5, 6 and 7.* For information or catalog address M. H. TICHENOR, Sale Manager Palo Alta, California.

25 - STALLIONS - 25

GREAT PUBLIC SALE

At W. H. BEGGS' Stable, Back of Baker Theatre, Baker City, Ore.

WEDNESDAY, MAY 9, 1917

AT ONE O'CLOCK

Imported and American Bred Percherons, Shires, Belgians and Clydesdales From Two to Eight Years Old.

REMEMBER you will have an opportunity to buy stallions sale with size and bone (also correct pedigree, are extra good and are equal in conformation to any you can find in the northwest. Also a few stallions that I have taken in exchange that I can recommend, that are broken to work. One pair extra good Percheron mares, one good standard bred trotting stallion, 16 hands high, weighs 1300; one imported German coach stallion.

Last year I sold 16 stallions at public sale at Pendleton. While they sold low, I **SOLD ALL.** Arrange to see horses before sale. THIS IS YOUR OPPORTUNITY.

If you are a member of a company and want an extra good stallion, get together; come to sale; you will find him.

If you want a good rugged colt, he will be here, and if you want a ranch stallion with or without a pedigree, broken to work, I will have him.

Terms will be one-third cash, balance 6 months' time; approved security. Two per cent discount for cash.

J. R. JUSTICE, Importer

Phone 38. Baker City, Ore.

Dispersal Sale of High Producing Jerseys

45 Registered Jerseys
55 High-Grade Jerseys

They will be sold at Farm, FAIRBANKS, WASH., ON MAY 10, 1917. (Fairbanks is 35 miles south of Spokane on the electric line.)

Herd rich in the blood of Stoke Pogis, Gertie of Glynllyn, Golden Glow and other famous animals of American breeding. 22 of the grade cows offered have completed a year's record in the Whitman cow testing association, the yearly average for the 22 being 7328.7 pounds of milk and 367.6 pounds of butter fat. WRITE FOR CATALOG.

IRA P. WHITNEY, Sale Mgr., R. 7, Spokane.

A. G. WOODWARD, Owner. Fairbanks, Wash.

COMPLETE DISPERSION SALE

37 HEAD REGISTERED JERSEYS, JUNE 14, 1917.

On account of ill health I am forced to sell my herd of Jerseys that I have spent years of time in selecting and developing—this includes cows in milk, herd bull and young stock. Milking herd has an average official record of 510 pounds yearly. Catalogue giving full description will be published. Send name and one will be mailed when published.

W. A. FORREST, McMinnville, Oregon.

Notable Herd Dispersal.

Many years ago Governor Stanford, started to found a great ranch at Vina, Cal. With a great fortune and with 58,000 acres of land it was not long before it blossomed like a rose.

Long before he had considered the founding of a great university, Governor Stanford was casting about for wise and helpful ways of spending his money. While traveling in southern Europe he was struck with the absence of drunkenness among the wine drinking peoples; he conceived the idea that by establishing a great vineyard and manufacturing wine he could end drunkenness in Vina too. It is interesting to know that the trustees of the university decided against the plan three years ago. The great vineyard has given way to an orchard and wide alfalfa fields.

More than 30 years ago, in the early 80s, Governor Stanford laid the foundation for a great herd of Holsteins. Year after year the blood of the best producing strains has been introduced and it is said that some of the cows on the place have most gratifying records.

Word comes from the university now that the trustees have decided upon a policy which will eliminate the Holstein herd altogether. There are about 300 of them and they are to be sold at public auction on the ranch at Vina, June 5, 6, and 7. M. T. Tichenor, one of the owners of the Palo Alto stock farm at Palo Alto, is sales manager. Holstein breeders and dairymen will be much interested in this announcement.

BUYS BULL FOR $10,000.

Joseph Shepherd, buyer of cattle for the Argentine, gave $10,710 for James McWilliam's young Shorthorn bull, Garbity Golden Victor, a roan by Edgcote Actor, and champion at Perth sale in February.

Boys' and Girls' Clubs Earn $118,000

James Dickey of the Plaza Potato club, cultivating his patch with a spike tooth implement that he made himself.

Great Chance Is Open This Year to Boys And Girls to Do Something Worth While In Nation-wide Campaign for More Products

Emery Donoho of Valley prairie, demonstrating the confidence that his pig has in him. Emery raised two pigs.

The boys and girls of Washington who were members of pig clubs, garden clubs, potato clubs, apple clubs, sewing clubs, canning clubs and the like earned $118,000 last year. That ought to be enough inspiration for twice as many to join the clubs this year, and for all of them to work twice as hard as last season. Besides this, the whole nation—in fact, the whole world—is calling for the greatest production of things to eat ever grown on the farms of the country, and the boys and girls can do much for themselves and at the same time prove themselves real patriots by making special effort in their club work and individually this season.

Last year the products of the canning clubs in the state totaled about 170,000 quarts of fruit and vegetables worth over $4000. The Broadway pig club of North Yakima raised and sold pigs worth $450. One Whitman county boy, Oren Little, produced pork at a cost of 3 cents a pound.

Maud and Mabel Farish of Garfield painted pictures and sold them for $15, investing the money in eggs. They made a profit of $92 from the poultry hatched.

The Lane boys of Roosevelt, in Klickitat county, took charge of some orphan lambs not wanted with the herds of sheep, raised them, sold them and invested their money in a little second hand automobile which they used as a passenger and express vehicle, increasing their profits.

These are some of the results, showing some of the ways the boys and girls worked to make money. There are scores of others. Girls can make money sewing, raising flowers, growing vegetables, canning fruits and garden truck and in other ways, and by doing so will also be helping the United States to win the war into which it has been dragged. Boys can raise pigs and potatoes, sheep and calves, care for apple trees and harvest the crop, and in scores of ways produce things greatly needed by the people of the country and the soldiers who are fighting in the battlefields.

All over the United States boys and girls are rallying to the call of Uncle Sam as loyally as any regiment of soldiers. They are ready to "do their bit" in winning the war, and if they produce as much in every state as they produced in Washington last year they will have added over $5,500,000 to the wealth of their country. They will do even more.

Paul Adams of Vera Apple club, working in the orchard.

A session of the Freeman Pig club. Those present are, reading from left to right in the picture: Top row, Lyndell Shields, Harry Jones, W. J. Boy (leader), Burton Rubeck and Gale Boy. Lower row, Ellis Womack, Cecil Wycoff, Claude Haller and Meredith Haller.

In This Issue

will be found such subjects as

Price Control
Freight Rate Case
Labor Problems
Orchard Blight
Coyote Menace
War Review

Maudie Adams of Valley prairie, holding her 300-pound pig. That is, the pig that weighs 300 pounds now. Maudie hauled the brush and refuse off her acre of land and cultivated it herself, raising her own pig feed. She was the only pig club girl in Spokane county last season.

To Build a Car As You Want It

The latest M[illegible] show you that John W. Bate[illegible]er at building cars.

You have nev[illegible]rice, seen a car so complete. Y[illegible]ever seen such luxury, so muc[illegible]ength, at anywhere near our price.

How Mr. Bate Works

Mr. Bate, the great efficiency expert, has spent 1[illegible] on Mitchells. The latest Mitchell is [illegible] model. It is the final result of 700 [illegible]ments.

But he started [illegible]ding this model plant, which now covers [illegible]5 acres. He spent millions of dolla[illegible] to build and equip it to build this one type economically.

Nowhere else in the world could a car like the Mitchell be built at the Mitchell cost. His methods will save us on this year's output about $4,000,000.

It is that saving which pays for all the Mitchell extras, and gives men these matchless cars.

31 Extra Features

There are 31 features in the Mitchell which nearly all cars omit. Things like a power tire pump, reversible headlights, dashboard engine primer, ball-bearing steering gear.

There is more beauty and luxury than was ever before combined in a modest-priced car. The reason is, we build our own bodies. And all we save goes into this extra luxury.

And no other car has Bate cantilever springs. They make the Mitchell ride like an aeroplane. In two years' use, on many thousand cars, not one of these springs has broken.

100% Over-Strength

But the chief Mitchell extra is double strength in every vital part. In the past three years we have doubled our margins of safety. We are making the Mitchell a lifetime car. Three of these cars have already run over 200,000 miles each. That's 40 years of ordinary service.

Over 440 parts are built of toughened steel. All safety parts are vastly over-size. All parts which get a major strain are built of Chrome-Vanadium.

In these days of high steel prices, any car which is built this way is either rare or costly.

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.

Price $1460, f. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines, with 120-inch wheelbase and a 40-horsepower motor—¼-inch smaller bore.

Price $1195, f. o. b. Racine.

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

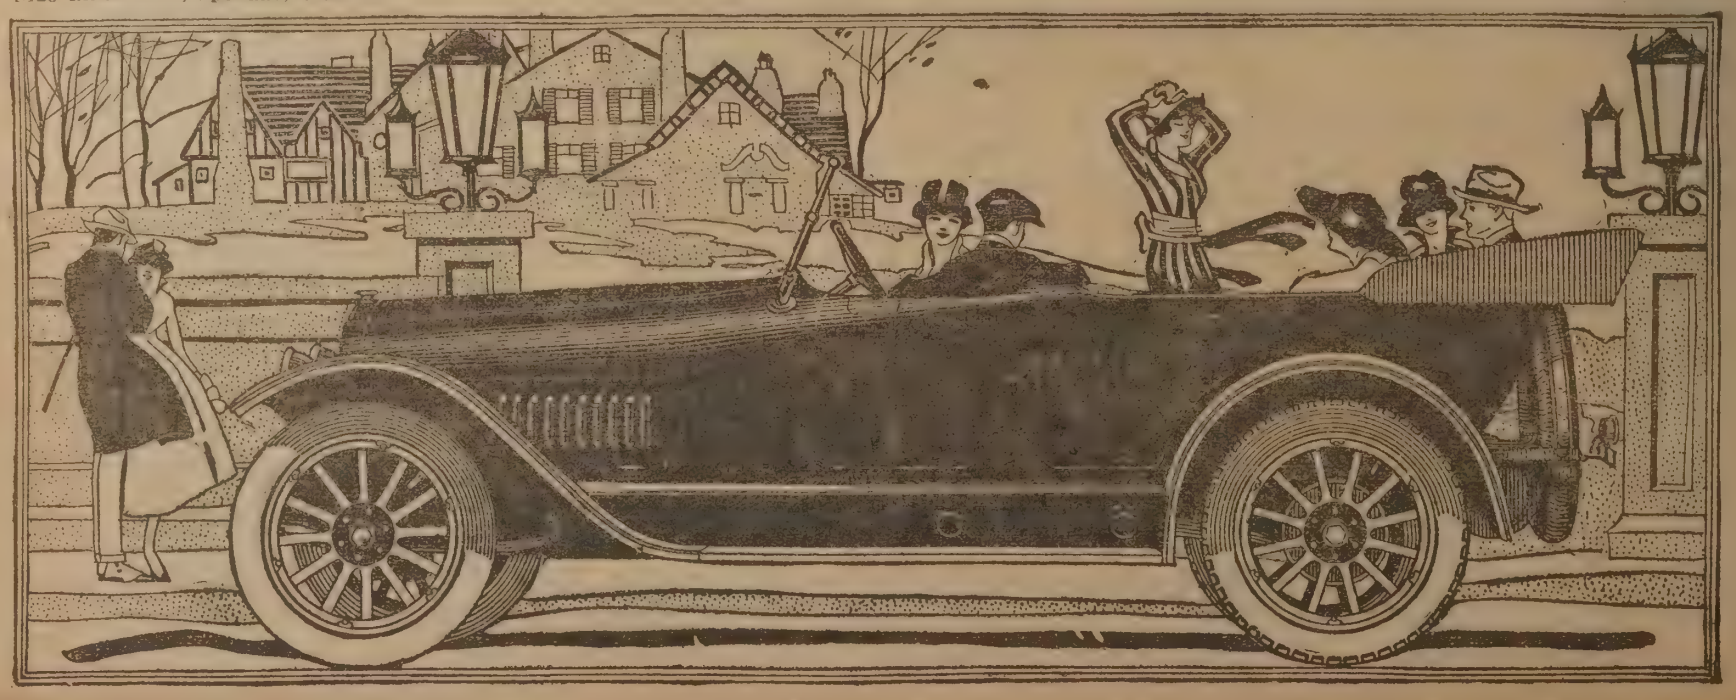
Everything You Want

Mr. Bate has worked 14 years to combine in Mitchells everything you want. He spent one year in Europe, to glean the best ideas from there.

Before designing this year's Mitchells, his artists and experts examined 257 new models. So all the known attractions are combined in these Mitchell cars.

One Size, $1195

The smaller Mitchell—Mitchell Junior—costs only $1195. Yet it is a powerful Six, with a 120-inch wheelbase. You never saw such value in a car around this price.



But the larger Mitchell offers special value. See both sizes. See the extra features, the extra beauty and the extra strength. You will want a Bate-built Mitchell then for the car you buy to keep.

If you don't know the nearest Mitchell dealer, ask us for his name.

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 40. No. 19 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF May 10, 1917

Price Control Rouses Farmers of Washington

Big Majority Apparently Is in Favor of Regulation by the Government During the War

A few days ago The Washington Farmer sent out a letter of inquiry to representative farmers here and there throughout the state of Washington, stating:

The farmers of this country face two very vital questions at the present time: Government regulation of prices and ways and means of meeting the demands for maximum yields.

Do you favor government control of prices of wheat, potatoes, butter, eggs, wool, cotton and other staple farm products during the war? Please give the reasons for your attitude.

Are you or your neighbors attempting to increase your crops this year? If so, what crops, and how?

There was no attempt to make a complete survey of the state by counties but the remarkable number of responses from the scattered points throughout the state give a most valuable indication of the attitude of the farmers on this subject.

The answers to the second question as to how the farmers are responding to the call for increased crops are fully as remarkable, and these will be given in the Farmer of next week.

A similar survey was made throughout the farming districts of Idaho and Oregon.

Out of 118 replies received from 47 counties of the three states—Washington, Idaho and Oregon—97, or a little over 82 per cent, are in favor of government control of prices of staple farm products, 13, or 11 per cent, are opposed, and eight, or nearly 7 per cent, are in doubt. It should be stated here that of the 97 favoring government control of prices 40 also expressed the belief in the government control of products which the farmers have to buy, such as farm machinery and manufactured goods generally, some of these even saying that they would not favor government control of prices of farm products unless these other products were included.

Out of 41 replies received from Washington 34, or nearly 83 per cent, are in favor of government control of prices of farm products, four, or a little over 9 per cent, are opposed, and three, or a little over 7 per cent, are in doubt.

Out of 43 replies received from Idaho 33 of these, or a little over 76 per cent, are in favor of government control of prices of farm products, six, or nearly 14 per cent, are opposed, and four, or a little over 9 per cent, are in doubt. Of the 33 favoring government control 12 also expressed their belief that the government should fix the prices of farm machinery and other products which the farmers have to buy.

From Oregon came 34 replies, of which 30, or a little over 88 per cent, are in favor of government control of prices of farm products, three, or nearly 9 per cent, are opposed, and one, or nearly 3 per cent, are in doubt. Of the 30 in favor of government control 12 also expressed their belief that the government should fix the prices of farm machinery and other products which the farmers have to buy.

Taking the Washington replies in detail it is found that 13 counties were represented in the 41 answers—Adams, Benton, Clallam, Douglas, Grant, Grays Harbor, Klickitat, Okanogan, Snohomish, Spokane, Wahkiakum, Walla Walla, Whitman. Vitally interesting points are brought out in these letters, which are given below:

Adams County.

M. R. Fox, Hatton, Adams county, replies: "I am confident the government could and should regulate the prices of all food grown," adding, "I have always been in favor of a law forbidding gambling in farm products, also making it illegal for a board of trade to exist."

K. F. Gerhardt, one of the biggest farmers of Adams county, says:

"I do not favor government control of farm products, whatever, not even during the war."

Dan Krehbiel of Lind is in favor of government control of "what the farmer has to buy as well as what the farmer has to sell."

Otis Robinson of Lantz has this to say: "I do not favor government control of prices of farm products until after it has left the hands of the producer. My reason is that in about nine cases out of every 10 prices advance after the product is out of the hands of the producer."

Another of the wheat producers of Adams county, T. R. Booker of Othello, writes: "It looks like something should be done by our government at

George Severance

Is Experiment Director at W. S. C.

Announcement has been made at Pullman that Professor George Severance, now head of the department of agriculture of the state college at Pullman, has been appointed acting director of the experiment station to succeed Ira

Professor George Severance.

D. Cardiff, whose resignation was recently accepted by the board of regents.

Professor Severance will continue in the capacity of director until a permanent appointment is made and accepted. The position has been offered to W. J. Spillman of the federal bureau of farm management, who was formerly with the state college.

To assist Professor Severance in his station work, President Ernest O. Holland of the college has appointed an advisory committee consisting of the following members of the college faculty:

George A. Olson, department of chemistry; Frederick O. Heald, plant pathologist; O. L. Waller, engineering department; J. W. Kalkus, veterinary department, and A. L. Melander, entomologist.

Crying Need of Farm Workers

France Adopted Method of Temporarily Bringing In Oriental Labor

Germany has one chance of winning the war—the chance that food supplies may fail and France and Great Britain be conquered by famine.

That danger is confessedly grave. Conferences at Washington with the visiting French and British commissioners and reports from American diplomats and commercial attaches abroad have convinced administration officials that the food problem is serious, and that the situation is constantly growing worse.

If the United States can feed its allies, Germany will be defeated. Hence the tremendous importance of the nation-wide campaign for increased farm production.

"You must produce more food," says the president, the secretary of agriculture and the governors of the 48 states of the union.

"We are willing," say the farmers, "and will do it if we can get the necessary labor. But we need workers, and it is your duty to find them."

A plan to supply the needed farm labor has been brought forward in the east. It is the French method of temporarily bringing in Oriental labor, with the requirement that the imported Chinese and Japanese workers be sent back at the end of the war.

In New York an effort will be made to array organized labor against this bill. When this opposition was reported to Willian H. Gibson, the originator of the plan, he said:

"I don't see any reason why organized labor should oppose the measure to supply this country quickly with agricultural laborers. The bill has been carefully drawn, and vests discretion in the president to act in the present labor shortage emergency. In any event, the Chinese and Japanese labor could not be retained here more than one year after peace was declared. The bill aims to furnish adequate help to take care of this year's crops, as the war from present indications will be over before it comes time to plant and gather another crop. The bill, if enacted, will furnish labor which the unions are unable to supply."

Frank S. Gardner, secretary of the New York board of trade and transportation, made this comment:

"I don't see how a labor man with a spark of patriotism could oppose this bill, and I don't believe organized labor will oppose it when it knows its full provisions. The bill is closely along the lines of the law enacted in France to furnish that nation with man power at a time when the very life of the republic was threatened by a lack of labor. The French law expressly provides that at the end of the war, the Chinese laborers shall be shipped out of France. Just the same thing is proposed in the bill drawn up by Mr. Gibson and indorsed by the board. This war may be won or lost through a scarcity of food, and it behooves us to make every effort to gather the biggest harvest this year that intelligent application is capable of."

The Farmer hopes that organized labor in the Pacific northwest will take a broad and patriotic view of this problem. As enlistment goes on in the army and navy, the shortage of men will become increasingly severe. The plan of temporarily importing Orientals to work on the farms would help out immensely, and hurt no one. It would cheapen farm products, and the cost of living, because the farmer could cultivate much land that is now neglected from lack of labor, and that would benefit the city wage-earner and his family.

America is in a world war, and ordinary methods will not meet extraordinary conditions. Union opposition to measures to strengthen the nation and feed its allies on the firing lines, would be of a price with the attitude of selfish speculators and manufacturers trying to make exorbitant war profits out of the country's peril.

Under all ordinary conditions the Farmer would resolutely oppose additional Oriental immigration. But we must deal now with a condition, not a theory. We must help our brave allies win this terrific war for liberty, civilization and the future peace and security of free governments.

THE PATRIOTIC LEGION OF WASHINGTON

Membership Open to Men, Women and Children.

I am a loyal and patriotic American. I most earnestly desire to do my share in helping to defend the honor of my country in time of war. I therefore request enrolment as a member of THE PATRIOTIC LEGION OF WASHINGTON and pledge myself to the work of increasing our nation's food supply during the war into which our country has been plunged.

Signed.....

Date of Enrolment ..... Address .....

When signed forward this blank to the Editor of The Washington Farmer, Spokane, Wash.

The following were enrolled during the last week as members of the Patriotic Legion of Washington:

Frank C. Greene, Cheney; Mrs. Addis E. Vercoe, Mount Vernon; Mrs. H. C. Adkins, Rice; R. N. Rathart, Prosser; Mr. and Mrs. Cecil Ackerman, four sons and two daughters; Mr. and Mrs. LaFollette, Rockford; Martin Hansen, Walla Walla; Walter Burnen, Pomeroy; J. M. Pulliam, Deer Park; J. B. Rore, Ellensburg; D. Fowler, Withrow; Rev. H. M. Course, Neppel; Charles E. Wiltfong and family, Chesaw; C. E. Ludden, Arletta; Nelson S. Pierce, Colville; George F. Richardson, Ellensburg.

An additional list of members as received and enrolled will be given next week.

Big Fight Before I. C. C.

Railroads Seek $375,000,000 More Yearly

The greatest battle ever fought out before the interstate commerce commission is now in progrss at the national capital. The railroads have asked for authority to advance freight rates 15 per cent. Their annual freight earnings now aggregate $2,500,000,000. A 15 per cent blanket advance would enable them to take an additional $375,000,000 yearly from the producers and consumers.

The commission has tentatively granted the petition of the railroad managers. It has said that unless an adverse showing is made by protesting interests, it will make permanent its temporary order and grant the 15 per cent advance to take effect June 1.

The commission has set the week from May 7 to 14 for hearing the railroad side of the contest. Hearings will be resumed May 23 for the opposing side. The commission's statement is as follows:

"The interstate commerce commission has readjusted its calendar for the month of May so as to set apart the week beginning may 7 for hearings before the commission on carriers' proposals to generally increase freight rates and the protest thereto. The hearings will be held in the ballroom of the Raleigh hotel in Washington, D. C., beginning at 10 o'clock a. m. During those six days it expects that the carriers will put in their case. Hearings will be resumed on May 23, and it has been suggested that the full presentation of the carriers' side may be facilitated if cross-examination of their witnesses is deferred until the subsequent hearings. This will give the representatives of shippers and the public additional opportunity in which to prepare to cross-examine, as well as to prepare their case in chief against the proposed increases."

This gives time for the producers to protest, but there is no time to lose.

Organizations of farmers should meet immediately and adopt protesting resolutions and send them to their senators and representatives at Washington. Granges, farmers' unions, farm loan associations, organizations of fruitgrowers, stockmen, woolgrowers, local improvement societies, should busy themselves now before it will be everlastingly too late.

Farmers and other producers should also take immediate action to stir up the merchants in their trading towns.

Orchard men are aroused and in action, but theirs is relatively a minor industry, and unless they have powerful support their interests may not avail.

Remember that if the 15 per cent increase is granted, the farmer will contribute a large part of that $375,000,000. He will pay both ways and down the midle. The railroads will take increased toll out of all his products, and will pay higher prices for all he buys. The time to "holler" is before you are hit.

Food Preparedness

State Papers Hot on the Trail

Empire, Waterville: Plant, Mr. Farmer, plant with care, plant something everywhere.

Journal, Burlington: The government should control and regulate food products and prices.

Review, Toppenish: Overnight almost the farmer has become the center of national consideration.

Pioneer, Stevenson: Let us all get together in a friendly understanding and pull together for a bumper crop of everything we raise this year.

East Washingtonian, Pomeroy: Some of our farmers plan to grow corn on considerable tracts of land, while others will plant more land to potatoes. Still others will seed to grain lands intended for summerfallow.

Republic, North Yakima: The response of the farmers of the Yakima valley to the government's call for increased food production is magnificent. No matter where one goes new land is being opened up, and the old farms are being pushed to the limit of their capacity.

Tribune, Oakesdale: While we are doing all this charging on the capitalists as being the instigators of war for profit, why not charge the cause of war to the farmers of the Palouse country in the interest of two-dollar wheat?

Tribune, Puyallup: There is every reason to believe that a substantial recompense awaits those who will give their best efforts to meeting the demands imposed upon the producers of the nation; but, even though there were no prospect of personal gain involved, the dictates of patriotism, in its purest and noblest form, of humanitarianism—love of country and of fellowmen—will stimulate to action.

Pullman Land Is Sold.

Mrs. Elizabeth Bryant of Pullman, Wash., has sold a 80-acre tract of land to J. K. Smalley for $3000. Mr. Smalley will improve the tract.

Better Potatoes

Where Small Piece Seed Was Used

To the Editor of The Washington Farmer: If you ever took particular notice when digging potatoes you never find a good hill where the seed piece was large enough that the growing of the young plant failed to use up the food stored in the seed piece and left it to rot in the hill. Our first start here in potatoes was from some small pieces I saved as I used the potatoes. I saved only the perfect eyes with a well-developed, healthy sprout, about one-fourth inch long. These sprouts will continue to grow after planting. Our seasons are so late and the growing season so short that we have found it pays us when planting to use only the eyes that are showing development and to cut small pieces, reserving the balance for cooking. Often I have not cut over three or four eyes from the potato and these from the seed end, as they are more apt to grow than the ones near the stem end. I do not know as our plan would work on a large scale, but I do know that it has resulted in a perfect stand for us.

Last spring I had set out a box with small potatoes in it. They had turned green and had the prettiest little purple sprouts. We had used every available potato eye from the potatoes in the cellar and as a last resort planted these. They came up at least a week before those from the cellar and surely showed me how to get earlier potatoes, for there were big potatoes in the hills from the green potatoes long before there were in the other hills.

I do not know how long before planting eyes could be saved, but have thought of having a box of dry dirt on hand and placing them in it, though so far have always just dropped them into a can or box and kept cool and dry.

Other neighbors here also make a practice of saving the potato eyes for seed when using potatoes in late spring.

MRS. PAUL GRAFF.

Benewah, Idaho.

What do you think of the two pages of the colored comic picture in The Farmer last week? If you wish to see them continued, mark a cross (X) in the little square opposite the word "YES." If you do not wish to see them continued, mark a cross in the little square opposite the word "NO." These colored pictures are designed especially for the children and the editor of The Farmer will be glad to have the children also vote on this question by filling out this coupon and mailing it to the Editor of The Washington Farmer, Spokane, Wash.

RAISING BROCCOLI

How to Plant and Fertilize It.

To the Editor: I should like to know something about broccoli—the best variety for market, how to plant and fertilize it and so on.—H. S., Vancouver, Wash.

Professor O. M. Morris, of the state college of Washington, answers this question:

The only variety of brocolli which I know of as being grown in the northwest to any extent is the large, white French. This plant is always used as a substitute for cauliflower, but is by most people considered distinctly inferior to that crop. It can be developed as a winter crop for winter supply, because it is capable of greater storage than cauliflower. It is grown by the same general methods used in cauliflower production, and is grown as a late crop. It is frost resistant to a very considerable extent, and on that account can be left in the field until hard frosts have come.

School Children Active.

Reports come that practically all available vacant lots in Clarkston and Vineland, Wash., are being cultivated. the school children taking an active part in the campaign.

First Farm Loans

Made Through Spokane Land Bank

The first farm loans to be made through the Spokane Land bank have been authorized by President D. G. O'Shea, who has just forwarded to Washington, D. C., the application for a charter for the Eureka (Mont.) Farm Loan association, carrying approximately $50,000 worth of mortgages, approved by Appraiser W. E. Craves of the Spokane bank.

The Eureka local will probably be No. 1 in the list of over 500 local associations now in process of organization the northwest.

The Spokane bank has already reported to the national board that it can led $10,000,000 in this territory during the coming year.

FROM A DAIRY FARMER.

To the Editor of The Washington Farmer: I am in the dairy business in a small way and I find The Washington Farmer is the very farm journal needed on the dairy farm.—STEVENSON E. BARR, Tacoma, Wash.

The A B C of Road Construction

When Two-Horse Team Can Do the Work of Four Horse

By FRANK W. GUILBERT, Chairman Executive Committee Washington State Good Roads Association.

IV.

"It has been often said "a chain is only as strong as its weakest link." With a road the traffic is limited by the "weakest" mile. Usually the limiting mile is a hill or grade. Therefore, it is desirable to reduce the grades on our roads to a reasonable rise. Every grade reduction means a saving to every vehicle which may pass over the stretch of road affected. The greater the amount of tonnage moved over the lower hill the greater the saving to the community. It costs twice as much to pull a load on a steady 5 per cent grade as it does to pull the same load on a level road of the same character of surfacing. It costs four times as much on a 10 per cent grade to transport a load as it costs to move the same load on a level. Your two-horse team should do about the work of your four horses, if your hill is cut from 10 per cent to a 5 per cent grade. The generally accepted maximum grade is now 5 per cent. In certain cases on account of very difficult construction, a steeper grade is permitted.

Now then, what does a 5 per cent grade mean? Just this: A rise of five feet in going a horizontal distance of 100 feet. A 10 per cent grade is a rise of 10 feet in elevation on a base of 100 feet. Two per cent then is going up two feet in 100 feet of horizontal distance. Draw a line 10 inches long on paper. Set a point directly above one end of the line one inch. Draw a line from the point to the other end of the 10-inch line and you will have a 10 per cent pitch on paper which will give you a very good idea of the grade on the ground.

What Uncle Sam Will Ask of the Men Who Are to Serve in the Country's Army

Make the Farm a Training Camp

Manhood of Seven Hundred Thousand High School Boys Is Challenged by Great Opportunity

Here are two outstanding facts:

First, there are approximately 700,000 high school boys in the United States averaging about 16 years of age.

Second, the world-wide need for increased food supplies has created a demand for farm help such as never before known in this country.

These facts may well be considered together. May not the former be in part a solution of the problem raised by the latter? And does not the latter place an unprecedented opportunity before the boys enrolled in the high schools?

In the state of Washington there are at least 10,000 high school boys not old enough to enlist in the army or the navy, but who, in most cases, are old enough and physically fit to enlist in the equally needed and equally honorable army of agriculture for service during June, July, August and September. What would such enlistment offer?

A Patriotic Opportunity.

It would offer food for the armies of this country and those of England and France and their allies. It would offer triumph for the cause of honor and humanity. It would offer to the boys who enlist as soldiers of the soil a test of manhood, which, if successfully endured, would insure them admission into the uniformed and armed ranks of the army as soon as they reach military age. It would offer as good money income as any occupation open to the average high school boy in the city. The average high school student, whose knowledge of farm life is very limited, probably would be worth to his employer on the farm $1 a day for the first month or two. The third month, which would find harvest beginning, should bring him $2 a day at least, with considerably more if he proved equal to the tasks before him. The fourth month should show an increase rather than a decrease, with wages for some harvest jobs in the cases of boys who developed into capable men of $3 to $5 a day. This should make his summer's wages approximate $150, if he proves capable, out of which, unlike the case in city employment, no board bill would have to be paid. The same boy, working in the city, probably would earn an average of $40 a month, out of which would go living expenses and other expenses incidental to city life that would eat at least half of it up.

From a purely monetary standpoint, the summer on the farm is to be preferred to the summer in the city. But the call of the farm is not a call to a lazy vacation. It is a call to hard work, overalls, hot sun, sore hands and feet (for the first few days), and abandonment of the movies, the white collar, the tennis court and the eight-hour day. It is a call to a life ideally adapted to develop manhood—physical manhood and rugged character that would shorten the preliminary training for the army day for day of the time put in in the farm fields.

Every high school boy who can make good in the army can make good on the farm, and a boy who can not make good on the farm can not make good as a soldier.

The opportunity is a challenge to the manhood and patriotism of several hundreds of thousands of the youthful young men of this country. It is a challenge to 10,000 in Washington.

But the challenge can not be accepted by the boys without the cooperation of the farmers who need them and some organization to provide the enlistment machinery—probably the government, which is already taking definite steps toward the formation of a great agricultural army.

The farmers, if they require the service of the boys, must realize that they are not seasoned, experienced "hands," but raw recruits. They must take precautions to make the work endurable during the "training season" of the first couple of weeks. They must temper the work just as they must temper the work of a colt just placed in the harness.

Must Organize Thoroughly.

And what of the machinery by which the recruits may be assembled for duty? The army and navy have recruiting stations. So must the army of soldiers of the soil, and toward this end the government is already working. Definite, specific methods must be devised for enlisting the workers and listing the farms where their labor is needed. A definite aim must be to so organize the work that boys fitted for certain classes of farm labor will be directed to places where those classes are required to be performed. Wherever possible enlistment should be in squads for communities, not only to afford the boys means of self-entertainment to make up in part for what would be comparative isolation for them, but to indulge the spirit of cooperative army life.

The opportunity and the responsibility stretch in three directions. Three-quarters of a million boys, hundreds of thousands of farmers and the government of the United States are involved.

Land Bank Appraisers Named

Men of Sound Judgment and Absolute Fairness

By N. W. DURHAM, Chairman Spokane Committee on Federal Land Banks.

Five land bank appraisers for the Spokane farm loan bank have been appointed by the national board at Washington and other appointments are expected. Appointments to date are, as stated last week:

Washington—C. B. Kegley, master of the state grange, and A. D. Davison of Stevenson.

Montana—W. D. Graves of Missoula and T. S. Hogan of Billings.

Idaho—C. E. B. Roberts.

The law does not limit the number of these appraisers. The federal farm loan board is authorized to make as many appointments as may be found necessary, and to fix their salaries Their pay has been set at $2400 a year. The law says: "Land bank appraisers shall receive such compensation as the federal farm loan board shall fix, and shall be paid by the federal land banks and the joint stock land banks which they serve in such proportion and in such manner as the federal farm loan board shall order." So far no joint stock land banks have been chartered in the Spokane district, so at present the Spokane bank will pay all the salaries of these appraisers.

The position carries much responsibility and calls for sound judgment and a spirit of absolute fairness. The law provides that—

"Before any mortgage loan is made by any federal land bank, or joint stock land bank, it shall refer the application and written report of the loan committee (of the applicant farm loan association) to one or more of the land bank appraisers, and such appraiser or appraisers shall investigate and make a written report upon the land offered as security for said loan. No such loan shall be made by said land bank unless said written report is favorable."

The law makes these appraisers the watchdogs of the treasury. No loan can be made without their approval, and an appraiser's approval will practically be final, for the bank will be guided by his judgment. While it has power to deny a loan over his recommendation, extraordinary circumstances would have to arise to lead it to take that action.

These appraisers will have to be on guard against over-appraisal by local committees. While it is not likely that a loan committee would deliberately inflate valuations, it might be carried away by local spirit, or in periods of real estate speculation a loan committee might, honestly, and with the best of intention, make appraisals not justified by permanent conditions.

The law lays down a wise general guide. It says that "in making said appraisal the value of the land for agricultural purposes shall be the basis of appraisal and the earning power of said land shall be a principal factor."

But we have seen by experience that there have been periods when the earning power of land was not an infallible factor. Take even so staple a product as wheat. We have seen it sell as low as 25 cents a bushel, and at that price the earning power of the land vanished. Upon the other hand, it would not be wise to capitalize land on the basis of present high prices for wheat.

The market prices of orchard and irrigated lands also have fluctuated widely. All these factors should be weighed with careful judgment, and the duties of the appraisers call for men of the soundest discretion. Twenty-four hundred dollars a year is none too much to pay for the services of officials entrusted with such heavy responsibilities, provided they are upright, efficient and industrious.

Favor New Open Season.

Whatcom county sportsmen favor the opening of the season for upland game birds October 15 and the closing of the season November 30, in place of the present season of six weeks from September 15 to October 31.

Washington Portraits No. 14.

W. J. Blancheft.

W. J. Blanchett has been farming near Quincy, in Grant county, since 1904, and at present has 640 acres, on which he raises wheat, some horses, enough hogs for his own use, and a large amount of chickens. Mr. Blanchett believes in plowing the ground as soon as the crop is harvested, to a depth of six or seven inches, so as to catch the spring moisture. In the spring, as soon as the weeds start, he keeps the weeder busy, so as to keep the land clear. Mr. Blanchett does not farm all of his land each year, but has half of it in summerfallow.

The next in the series of Washington portraits will be that of W. W. Wrenn, of Castle Rock, and will be given in next week's issue of The Washington Farmer.

First Live Stock Entry for Spokane Interstate Fair

The first live stock entry for the Spokane Interstate fair has been received from Julius M. Fisk, head of the Fisk farm at Spring Valley, who entered 22 head of sheep and horses. An entry five months ahead of fair time, accompanied by a check for stall rent and a request for preference location, is something new at the fair office and breaks a record for the Spokane institution. President Thomas S. Griffith already has the assurance of an excellent live stock show in September.

Irrigate Seleen Valley.

The Seleen ranch and other land owned by T. Claud Bennett in the Seleen valley, Wash., is to be put under irrigation through the use of overflow water, according to the plans of Mr. Bennett.

The Bunch Grass Boy Falls in Love

But before falling under the 'thralling spell of puppy love he distinguished himself by being the solitary scholar of one of the first Sunday schools ever held in the Big Bend country. His teacher was Daddy Utt, a patriarch with a long white beard, a herd of Holsteins and seven daughters. You'll enjoy reading about Daddy Utt.

Then came the first district school—and a variety of love affairs. First there was Frances, who caused a heroic attack on the spelling book; then "Minervy"; then Laura, who made our hero waver between the passionate desire to be a bronco buster and the wish for the less exalted position of president of the United States.

ALL THIS IS NARRATED IN JOE ASHLOCK'S MOST AMUSING VEIN IN THIS ISSUE ON PAGE 17. There's one of these Bunch Grass Boy's narratives in every issue of The Farmer. You're reading them, aren't you?

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farmer's Ox About to Be Gored

The railroads are pressing with great vigor their petition to the interstate commerce commission for a 15 per cent blanket advance in freight rates on all the lines in the United States. It was not a false alarm when The Farmer urged its readers to busy themselves with earnest protests.

The New York Journal of Commerce, a daily newspaper that specializes on business and railroad news, says railroad officials interviewed by its reporters "appeared confident of a substantial increase, probably the full 15 per cent."

> "They were encouraged in this view by the fact that important business associates have urged that the advance be allowed, and by the absence of any large opposition. The railroads must have additional revenue to operate efficiently and the commission will recognize this, is the view generally taken."

It is safe to say that such business associations as have spoken for the proposed higher rates are composed of interests that can pass them along to the producers and consumers. It is not their ox that is being gored.

The railway managers are counting much on "the absence of large opposition." This bears out The Farmer's first warning, that unless there is stout opposition the interstate commerce commission will grant the advance.

Already the fruit growers of the Pacific northwest have rallied to the defense of their endangered industry. The lumber manufacturers have followed suit. They need as earnest, active allies the grain growers and stockmen.

Immediate action is needed. All organizations of farmers should pass protesting resolutions and transmit them to their senators and representatives with instructions to file them with the commission.

Prepare to Save What You Grow

The schools, country as well as city, have a great opportunity before them in this time of need for increased food production. Many are taking advantage of this opportunity. In a general letter sent to every teacher in his county, one county superintendent sends this message to the farmers of the districts:

"Have you cellars and roothouses? If not, build now. Provide at once for the coming winter. Grow all your soil will produce and then save all you grow. Do this by canning, curing, preserving and storing. Home garden clubs should cooperate this year with home life as never before. Teachers should talk agriculture, thrift and economy in a way that children can become actual helpers in this time of need."

State Grange Master Should Be Farmer of Ability and Character

Mr. Kegley's acceptance of the position of appraiser for the federal land bank will mean the election of a new master of the state grange at the annual meeting in June at Wenatchee, since it would be manifestly impossible for him to hold both positions and do justice to either.

The federal government will properly expect the appraisers to devote their undivided time and thought to the duties for which they are employed and paid $2400 per annum.

On the other hand, the state grange will need as master a man who will be practically free to devote his entire time, zeal and energy to its unbuilding.

The state grange master should be a farmer of exceptional ability and character. He should put the welfare of the agricultural industry above all petty personal considerations. While having a broad grasp and knowledge of public questions and problems, he should refrain from playing politics as a game and always remember that the grange comprises members of all shades of political belief.

He should be above petty hates and resentments. He should have sound business judgment, with ability to discriminate between worthy and genuine cooperative undertakings and bogus schemes like the swindling Northwestern General Trading company.

Within its membership the state grange of Washington has scores of able men who can measure up to these requirements. The Farmer has no candidate to back at the Wenatchee meeting. It has no desire to dictate to the grange, the farmers' union or any other organization. It does have deeply at heart the welfare of the agricultural industries—the prosperity and happiness of the farmers and their wives, sons and daughters. Naturally and rightly it wants to see men of the highest fitness at the head of the grange and other farmers' organizations, and it is confident that the Wenatchee convention will choose a successor to Master Kegley who will command the respect and confidence of the public of Washington and neighboring states.

Can a Farm Support Two Homes?

The farm labor problem is more acute this season than usual, due not only to actual shortage of men, but to the fact that late spring has brought farm work on with an unusual rush. In addition to these two conditions, reports from many sources indicate that many men are unwilling to work on the farms for the wages they receive and under the conditions which often, possibly generally, prevail.

Especially this latter brings forward the question: Can it be made practical on the average farm for a man to be employed the year 'round, and if so, can such man be provided with real home life, such as will make him a contented and willing and efficient worker?

Inquiries bring a variety of replies to the year-round labor question, but one general statement is made by nearly all—that farming must be done intensively, and that live stock must be made a considerable part of the production to enable the farmer to keep help all months of the year. And the suggestion also comes that the way to remove the discontent from the laborer's mind is to provide him with a home of his own where he can live his own life with his wife and children. Is this practical? In other words, can the average farm support two homes? Some farms do, but possibly they are not "average" farms. Possibly the very fact that they do provide separate houses and separate conveniences and separate garden patches and household equipment lifts them out of the average class. But here is a possibility that deserves serious consideration.

How large a farm would it take to support two homes? In the dry farming regions it might take a thousand acres. In the fruit-growing regions maybe twenty-five acres, or maybe one hundred. In the dairying sections from ten to fifty. Soil and climate conditions would do much to determine this, but possibly the administrative ability of the farmer himself would do more to determine it.

But whatever the practicability of the plan, it remains unquestioned that the permanent, stable, contented laborer alone can or will perform the kind of service that makes farming pay.

Washington Gleanings.

Principal F. C. Barker and his students of the Ahtanum school, North Yakima, have flourishing pig, sheep and garden clubs busily at work, all of them with good membership.

Spokane's fruit and vegetable cannery plans to can this summer 3,000,000 pounds of fruits and vegetables and will employ a maximum of 200 persons at the height of the season.

The dairy herd at the state prison is being increased steadily, and by fall Warden Drum hopes to have about 90 Holstein cows. A butter plant will be put in and butter supplied other state institutions.

J. W. Phillips of Bluestem has sold his half section near Bluestem to A. C. Carlyle of Davenport for $24,000. He then bought the E. E. Noble ranch near Reardan, consisting of 800 acres, the price paid being $50,000.

Herman Curtis, the well-known farmer and dairyman of the Cedar creek district, north of Palouse, has closed a deal for the purchase of 160 acres adjoining his home farm from J. B. Harding. The price paid was $77.50 per acre.

Ten pupils of the Moxee schools have formed a Moxee bean club. Each of them is to grow a quarter of an acre of Kentucky Wonder beans in competition for honors and also for the $40 a ton which the Libby, McNeill & Libby cannery has agreed to pay them for the product.

Preliminary arrangements have been made to get the Lynden cannery ready for the season's work. Berries of all kinds, cherries and beans will be packed by the cannefy the first year, and contracts are being offered the farmers for a period of four to six years for their crops.

Fourteen pupils of the Lower Naches schools have organized a pig club and will do their share toward raising the meat production of the county. Under the direction of Superintendent W. P. Tyler the boys are already launched on the enterprise. They will grow the Hampshire breed.

Frank M. Rothrock and John Napier, herd superintendent of the Hercules stock farm at Sprague, have left for the east on a buying trip. They are going primarily to receive the $5500 purebred Shorthorn bull recently purchased in Scotland. Mr. Rothrock will purchase two or three cars of purebred Shorthorns from middle western breeders.

The Washington state commission for food production has requested Secretary of the Interior Lane to expedite the issuance of certificate of title on Indian lands sold to whites who wish to place the land under cultivation but whose deeds have not yet arrived from Washington. Many thousands of acres of land in the Yakima valley are tied up awaiting issuance of deeds.

Calvin Casteel, manager of the Okanogan government irrigation project, states that within all probability the government this year will invoke the reclamation regulation that requires all landowners with subscribed water under the government project to have at least one-fourth of their land under cultivation during the year 1917. This will affect about 2000 acres of the project and will mean the cropping of at least 500 acres of rich land that has heretofore lain dormant.

What Others Say

The Farmer: If the farmer will only get the crop in the ground, the labor question must and will be solved.

The Farmer and Stockman: Everybody seems to be agreed that in times of war the farmer is the most important man of any nation.

The Farmer's Review: Sickness and death among farm animals may be prevented in a great majority of cases by observing sensible sanitary precautions.

American Agriculturist: The slogan should be, "A silo on every farm." What a splendid contribution this would be to the preparedness campaign.

California Cultivator: In any case, don't fear overproduction. If the war should stop today Europe will still starve unless America feeds her.

Trees in BLASTED soil bear better

Fruit growers have proved—by planting some trees in blasted beds and others in ordinary ground—that trees planted after the use of explosives root deeper, grow faster and better—that they are thriftier in every way, bear earlier, and yield larger crops.

They have proved also that when the soil of established orchards is properly blasted the trees immediately take on new vigor and bear better fruit thereafter. Orchardists know that this condition is due to the increased moisture-storage capacity induced by blasting and to the consequent release of plant food from the subsoil.

Fruit growers in every Pacific Coast State have used tons of

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

for planting trees and deep-tilling their orchards. These powders are made in two brands, Eureka Stumping Powder and Giant Stumping Powder, and are prepared especially for farm work. prepared especially for farm and orchard work. They are more effective and do their

Eureka Stumping Powder pulverizes the soil instead of caking and packing or throwing it high in the air. This is the action that is wanted in stump and soil work, and the action that the so-called "high strength" dynamites will not give. When you use Eureka Stumping Powder the finished job costs you less money.

Giant Stumping Powder, which is also used for subsoil blasting, is the most efficient explosive for many other kinds of farm work, including blasting dead trees or stumps in wet soil.

WASHINGTON Fruit Growers Say:

"Generally speaking, the growth of plants depends upon the condition of the soil into which the roots penetrate. If the depth of loose soil is too limited or the surface water is permitted to stand too long, the growth is impaired. Explosives properly used in such instances have invariably relieved the condition and resulted in excellent growth. The yield is often three times as great on blasted soil as from those untreated in the same vicinity."
ROSECROFT FRUIT FARM, Sumner.

"We consider the use of explosives an important factor in planting orchards. It is important to secure good drainage and the roots should be able to penetrate deeply into the subsoil. Young fruit trees newly planted should make at least one foot of new growth the first year, and this is hardly possible unless the land is put into good mechanical condition, with plenty of room for the roots to spread in the loosened subsoil."
A. LINGHAM, Puyallup.

Experiment Stations Say:

"I have seen orchards in Hood River greatly benefited by the use of dynamite, where the dynamite opened up the soil to give better drainage." C. I. LEWIS.
Oregon Experiment Station.

"The use of explosives is not simply a benefit in the case of hardpan, but is beneficial to all soils and is necessary in any heavy, impervious soil. Its effect is to loosen, drain, and aerate, and give additional feeding ground for the roots."
UNIVERSITY OF SOUTHERN CALIFORNIA.

"Without the use of dynamite in tree-planting the roots soon meet with the smooth and compacted sides of the hole, through which they have great difficulty in penetrating. The tree is in about the same situation as if it had been planted in a large tub. When dynamite is used cracks are formed in the soil to distances of five or sometimes six feet on all sides. This makes the very best conditions for the continued growth of the tree. For tree planting dynamite is recommended confidently as the best method of preparing the soil."
U. S. BULLETIN No. 38.

Make this test of Giant Powders

By *using* the Giant Farm Powders you can demonstrate their superiority for tree planting and orchard tillage. Fill out the trial order blank in the coupon to the right. We will have our nearest distributor supply you—at lowest market price—with a 25- or 50-pound case of either of the Giant Farm Powders. Test this in comparison with any dynamite. The results will show you why fruit growers in every section insist upon having the Giant Farm Powders for orchard tillage work.

Giant Farm Powders and other Giant blasting supplies are sold by distributors everywhere. Your own dealer has them or can get them for you. If he offers you a substitute, write us and we will see that you are supplied with the genuine. Giant Powder is the trade name of explosives manufactured by The Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine.

Care of Litter

Treatment of Pigs to Avoid Disease

By E. J. Fjeldsted.

At the age of from 3 to 4 days catch each pig, and with the aid of a pair of pinchers, remove the black teeth. In removing these teeth be sure to break them off. Never pull them, as this would leave a wound open to infection. The above precaution will materially reduce the canker sore mouth trouble so common among your young pigs.

Do not allow your little pigs to become excessively fat. In the event they begin to show excessive fatness around the throat, reduce the dam's feed materially. If this condition is not checked a disease commonly known as "thumps" will result. This disease is very difficult to cure, though it is easily prevented. Lack of sufficient exercise will oftentimes result in thumps. Provide an opening leading from the dam's quarters which will allow the pigs to escape at any time. If the weather is such that the little pigs can not leave the quarters, either of the following methods has proved effective: Keep them moving in the pen by the aid of the whip, from a quarter to a half of an hour each day until normal conditions are restored; or provide a barrel of sufficient size to accommodate the litter, placing the pigs inside, closing the end with slats close enough to prevent the pigs from escaping, though providing abundant air. If these precautions are followed thumps will cause very little loss.

When the pigs are two weeks old they should be taught to eat. Provide a trough and a feeding floor out of reach of the dam, but accessible at all times for the little pigs. Keep skim milk in the trough most of the time if possible. Sprinkle oats on the feeding floor. If you have no oats, cracked wheat or shorts may be used. It will be found that the pigs will soon be regular visitors to the feeding quarters, and at the time of weaning, eight weeks, the pigs will be taking a full ration. By following this system the usual check at weaning will be prevented.

At seven weeks of age, all males that are not purebred and eligible to registry should be castrated. This operation is very simple and, with sanitary precautions, the loss should be very small.

Veterinary

Dr. S. B. Nelson

I have a mare that has been bred several times but still is not with foal. —M. T.

Tonasket, Wash.

There are so many things which cause sterility in mares that it is difficult for me to answer your question in this column with its limited space. Therefore if you will write me personally, giving more detailed symptoms regarding the mare, I will be glad to answer you with a personal letter.

I have a cow that freshened four or five days ago that gives bloody milk from one teat, the milk having a chocolate color. The milk from the other teats seem O. K.—M. S. G.

Issaquah, Wash.

I do not know the cause of the condition which you mention—there are a good many causes for it. I am going to recommend that you try giving your cow a teaspoonful of hydro-sulphite of soda in a quart of water once daily for 10 days to two week's time. Give the cow a purge of 1 1-2 pounds of epsom salts in three quarts of water also.

I have a six-year-old horse that has not been eating his hay for two weeks. He eats 10 pounds of oats and carrots a day. The horse is losing flesh rapidly. Had a veterinarian examine his teeth and he said they were in perfect order.—H. M.

Orcas, Wash.

From the very simple symptom that your horse does not eat his hay and the fact that you have had a veterinarian examine the horse's teeth, and you say they are all right, I have no symptoms from which to make a diagnosis. I regret that I can not be of service to you.

I have a large 3-year-old colt that got a bad sprain by getting her foot on a timber. The cords above the pastern joint are puffed. There is no swelling or inflammation or soreness anywhere else. She has been lame for three weeks. She has been out in the yard during the day. G. M. C.

Grandview, Wash.

Rest is the proper thing for a sprain. I would advise the shoeing of the mare on the lame foot with a shoe with a high one-inch heel, large, so that it will not sink into the dirt any more than is necessary. Raising the heel an inch will rest the tendon. After two or three weeks' rest of this kind I would apply a blister, or have a veterinarian fire the tendon and blister it, after which I would rest her for two or three weeks longer and then gradually begin to let the heel down. It will take from two to three or four months for the mare to get well, I think.

Rheumatism.—What is wrong with our hogs? First, they show lameness, then they get worse as if they might have rheumatism, then after a time they get down in their backs and unable to walk.—G. F. S., Uniontown, Wash.

Answer.—The disease which you describe has some of the earmarks of rheusatism. I would advise providing dry quarters, which they may already have, without draft. Be sure and eliminate the drafts. If they are on a board floor see that there are no cracks in the floor. Then give from one to two ounces of castor oil to each hog, the following day begin giving 15 grains of potassium iodine to each animal for a week or 10 days. Give this once daily.

Warranted to Give Satisfaction.

Gombault's

Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

Government Tests *prove* Sharples claims:

ALABAMA POLYTECHNIC INSTITUTE AND AGRICULTURAL EXPERIMENT STATION

Auburn, Ala., Jan. 5th, 1917.

M. I. Bloch,
Agent Sharples Separators,
Selma, Alabama.

On August 2nd, 1916, we made a series of tests with the Sharples Suction-feed Separator at our creamery, with the following results:

Revolutions per minute	Per cent cream	Per cent skim milk
35	28	.01
45	27	.01
55	26	.02
60	26	.01

So far as my knowledge goes in working with separators, the Sharples Suction-feed is the *only* separator that will give a uniform test with cream and skim-milk at varying speeds of the handle, and that it is the *only* one that does not lose more butterfat at low speed than at the proper speed.

H. C. Ferguson
Instructor in Animal Husbandry

skims clean at all speeds

SHARPLES
Famous Suction-feed
Skims clean at any Speed
SEPARATOR

—the *only* separator that will skim clean at widely-varying speeds
—the *only* separator that gives cream of unchanging thickness—all speeds
—the *only* separator that will skim your milk quicker when you turn faster
—the *only* separator with just *one* piece in the bowl—no discs, easiest to clean
—the *only* separator with knee-low supply tank and once-a-month oiling

Over a million users! Made by the oldest and greatest separator factory in America. Write for catalog to Dept. 49.

SAW 10 LOGS WITH AN AMERICAN SAW MILL

AND GET LUMBER WORTH $25 TO $40

Ten 16 foot logs averaging 14 inches thick make 1000 feet of lumber, worth $25 to $40 in your local market. Costs you only $4 to $5 to saw 1000 feet with an "American" Portable Saw Mill. Think of the profits! Why, that timber on your wood-lot is just like wheat. Reap it with an axe. Harvest it with an inexpensive, light running "American" Portable Saw Mill you can operate yourself. No experience needed. An 8 H. P. gas engine and an "American" mill saws up to 2500 feet per day. Get an "American" because it saws more and better lumber with less help and power than any other. Make big money every winter when the farm doesn't need you. Hundreds of farmers are doing a paying lumbering business with "American" mills. You can do the same, for there are wood-lots around you if you have none yourself. Read enthusiastic letters from farmers in our free Book No. 7 that tells all about farm lumbering.

HIGGINS MACHINERY CO., 315 First Ave. South, Seattle, Wash.

A. B. NYSTROM, Editorial Contributor

Questions
Are Answered by A. B. Nystrom

Will you please tell me how to ripen cream ready for churning without keeping it too long? Is there not some commercial ripener, such as the creameries use, which I can obtain? —Mrs. J. R., Springdale, Wash.

I believe you will have little difficulty in ripening the cream if you will heat it to a temperature of 70 or 75 degrees Fahr., and introduce some sour milk, leaving it stand at this temperature for some six to eight hours. You can make a commercial starter by taking some clean glass jars that have been thoroughly scalded and putting into these some clean milk. Set them away at a temperature of about 75 degrees F. until they coagulate. Then taste each jar and see which one has the cleanest flavor. Select this one to use as the starter for your buttermilk.

Fattening Aged Cow.

I have a Jersey cow 8 years old with a R. O. M. record of 478 pounds fat. She freshened in January and has only averaged about 2 gallons a day of 5.5 per cent milk since. She is thin and her hair is rough. She eats well, but does not look thrifty. I wish to sell her if possible and would like to know what to feed her to bring her to greatest possible flow of milk and more fleshy condition. I have been feeding alfalfa hay and large feed of mill-run shorts, dry, with some oil meal, soy bean meal, and beet pulp. Have no roots. I do not care about the economy of her feetd ,but wish to get her in selling condition.—B. E. S., Opportunity, Wash.

It is very difficult to fatten an old cow in the condition that you state this one is. I wonder if you have not had her tested for tuberculosis. In case you have not I would suggest that you would, and if she passes the test then begin to feed her to put her in better condition. I do not believe you will be able to fatten her as long as she is giving milk. Feed the cow plenty of good nutritious hay, such as alfalfa or clover and soak your beet pulp. It is not necessary to get any roots. In fact, I believe you can get as god results from feeding the soaked beet pulp. Give her linseed oil meal to keep her bowels open and be sure to give her plenty of exercise. Aside from this I can give you no further suggestions.

Two Money-Making Cows.

During March M. H. James of Ebeys prairie, in Island county, Washington, milked two cows, sold $33.38 worth of butter fat and $3.60 worth of milk to home customers. There is no need to add that Mr. James keeps cows which test well in butter fat and practices the best methods of feeding.

Those Having Silos.

The manager of the Pend Oreille creamery at Sandpoint, Idaho, says that it is noticeable that patrons having silos are keeping their output up to the mark in spite of the hay famine.

Value of Oil Meals in the Ration

To the Editor: In figuring a balanced ration for dairy cows, which kind of oil meal should be purchased—linseed, flaxseed, or cottonseed—and what are the different values?

H. D. P., Kelso, Wash.

It makes very little difference whether you buy linseed meal or cottonseed meal for feeding dairy cows if it is a matter of furnishing protein. However, you will find that the linseed is more laxative than the cottonseed and perhaps a mixture of the two would give the best results. This will depend somewhat upon the other feeds you are using in connection with it. I should not advise feeding ground flax seed, but rather the linseed oil meal, which has the oil pressed out. We find different grades of linseed meal and different grades of cottonseed meal. You should insist on having one with a high protein content; for, no doubt, you are feeding this expensive feed for the purpose of furnishing protein rather than any other nutrient.

Henry and Morrison, in their "Feeds and Feeding," give the following compositions of these feeds:

Digestible Nutrients in 100 Pounds.

	Crude protein.	C. H.	Fat.
Cotton seed meal, choice	37.0	21.8	8.6
Cotton seed meal, good	31.6	25.6	7.8
Linseed meal, new process	31.7	37.9	2.8
Flax seed meal	20.6	17.0	29.0

DAIRY CATTLE
No Shortage Expected in Oregon.

"There is no shortage of dairy cattle likely in Oregon," said Dairy Commissioner J. D. Mickle, in reply to a question as to the truth of the rumor that there was danger of such a condition.

"We have made inquiry at the principal slaughter houses throughout the Willamette valley," he continued, "and, while the percentage of cows coming in is heavier than it was last year, still, investigation shows that they are culls, old or with defective udders. These are the unprofitable cows, anyhow—the cows everybody has been urging the farmer and dairyman to get rid of.

"As nearly as we can tell about 8000 cows of dairy type have gone through the Portalnd Union stockyards in 1916. Compared with the 200,000 dairy cows which are supposed to be in Oregon, this is not a great reduction. In the first two months of 1917 the number of cows of dairy type received were double those received in the cofresponding months of the preceding year, but as these are not first-class animals it is evident that there is no real danger so far of a serious reduction of milk cows. The high prices offered for beef animals have brought this inferior stuff in and it is, in the main, a good thing.

"I think the farmers are realizing that it does not pay to kep an inferior type of dairy cow and have wisely taken the opportunity of disposing of their poor producers at a time when prices are the highest."

Welch Secretary of Dairy Show.

Frank Welch, formerly secretary of the Oregon state fair, and well known to the live stock men of Oregon, has taken the position of secretary of the Oregon Dairy show. George H. Dammeier resigned on account of the demands of his business.

Jersey Cow's Record.

The Jersey cow, "Owl's Golden Queen," belonging to E. L. Brewer of Satsop, Grays Harbor county, Washington, made a test production of 110.38 pounds of butter fat in March.

PATRIOTISM DEMANDS
That All Butter-Fat Waste Be Stopped

President Wilson's powerful appeal for the conservation of the nation's resources is still ringing in our ears. "The supreme need," he says, "of our own nation, and of the nations with which we are cooperating, is an abundance of supplies, and especially of foodstuffs;" and again, "Upon the farmers of this country, therefore, in large measure rests the fate of the war and the fate of the nation."

Wastful methods must be abolished. Every device that makes for the saving of time and labor on the farm must be utilized. Every plan that makes for the conservation of our food products must have the farmer's hearty cooperation.

And nowhere is there greater opportunity than in the production of dairy products, particularly butter-fat.

"Fats, fats, fats, more fats," that is the demand of the warring nations in Europe. The men who toil and the men in the trenches must have fats. They are the fuel that the human machine must have.

And no fat is so palatable or so easily assimilated as butter.

When it was simply a question of the farmer's own loss of profit, the tremendous waste of butter-fat on American farms was bad enough, but under present conditions such waste is nothing short of criminal.

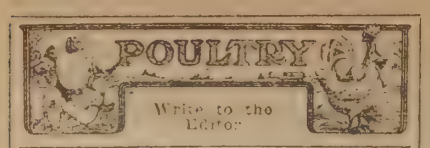
And it is wholly unnecessary.

It is conservatively estimated that about a million cow owners in the United States are still skimming milk by some wasteful "gravity" method.

At an average of four cows to the farm, and an average waste of thirty-five to fifty pounds of butter-fat per cow, all of which could be saved by the use of a De Laval Cream Separator, this alone represents an annual waste of at least 140,000,000 pounds of butter-fat.

Then there are, perhaps, a million inferior or half-worn-out separators in use whose owners could save fifteen to twenty pounds of butter-fat per cow by replacing each machine with New De Lavals; and this represents another waste of at least 60,000,000 pounds of butter-fat annually.

Also there is the loss of time and labor that a De Laval would save and which could be better devoted to other productive work on the farm. This waste is hard to compute, but it is almost as important as the loss of butter-fat.



These are startling statements, but any dairy or creamery authority will agree that these estimates of waste are really very conservative.

Shall this tremendous waste continue? Will the loyal American farmer permit such waste when he appreciates the duty that is laid upon him to conserve the one article of food that above all others is necessary to the life and health and energy of the men who serve the nation in the field, the factory, the mine—and soon in the trenches?

We have always had an abiding faith in the American farmer, and we believe that if he is made to appreciate the full purport of the president's appeal to him, the appeal will not be in vain; and when he further appreciates what the De Laval can do to save the butter-fat which is now being wasted, and that his patriotic duty demands that such waste be stopped—NOW—our plants will not be big enough to take care of one-half the demand for De Laval Cream Separators.

Incubator Chicks.

To the Editor: All my life I have wanted an incubator, yet I never even saw one in operation until a month ago when I set my own. I can hardly realize that I am the happy foster-mother to 50 lively chickens and in another two weeks will have at least 100 more.

I fixed up an old smoke-house for a brooder house, eight feet square with ceiling six feet. I tacked papers thick on the walls, laid a new floor over the old with several thicknesses of paper between and set in a small heater. The brooder is simply a box three feet square, with a drop lid, on the lid are tacked flannel strips double, two inches apart each way.

I cut a heavy paper a little larger than bottom and tacked lightly, over this I laid newspapers, so I can keep their quarters fresh. I carry the brooder outdoors pleasant days and they soon learn to go in when they get cold. I warm it with quart jars filled with boiling water and a woolen sock slipped over each; a jug is better, but the jars just fit in my brooder and being apart prevents crowding. A chicken fountain is so simple, just a tin can or bucket with a lid two inches larger in diameter. With a nail punch a hole three-fourths of an inch from the top of can. Clap on the lid, turn upside down, and there you have it, fresh water all the time and they can't get into it.

MARILLA KIDWELL.
Garfield, Wash.

Poultry Preparedness and Kale.

Preparedness is one of the first essentials of the poultry campaign. The successful poultryman must lay out his campaign months ahead. He should now prepare for his summer and fall campaign for more eggs and better profits by planting kale or other green food crops. Where kale thrives as it does in western Oregon and Washington there is no better and more profitable crop to grow for poultry. For summer and early fall use it should be planted just as soon as possible now. For winter use it is planted in July from seed sown in May or June. A hen will eat about as much kale by weight as grain if she has no other green food of any kind. If the fowls have range or are kept in yards where they have more or less green food they will not eat this amount. With more or less range about 200 plants, averaging 20 pounds to the plant, will be sufficient for 100 hens for a year if planted so that it will come to maturity during the different seasons. The fowls eat a little more than half the weight of the plant, the balance being stalk.

The plants are set about three feet apart each way. The ground should be well fertilized and well cultivated. A piece of rich, well cultivated and well watered soil, 16 by 100 feet, should furnish about enough green food for 100 hens for a year; but to be sure of a sufficient supply this area had better be doubled. The kale will also furnish shade for the fowls in summer, as well as food. It will help to reduce the feed bill; at any rate it will help to make the feed more efficient for egg production.

Prepare for the egg campaign by planting kale and more kale. J. D.

Was Probably Over-Fed.

To the Editor: One of my geese went on the nest in the morning as if she were going to lay. At 5 o'clock p. m. it was still on the nest, which caused me to think that she was setting. At 6:30 I found the goose lying on her back dead. We found a shelless egg in the goose and she was quite fat. I had been feeding the geese one handful of wheat to each pair three times a day and all the carrots they would eat. They had been running out in the water and snow six hours a day.

T. G., Wallowa, Ore.

So far as the letter describes the symptoms the trouble was probably due to the feeding. If the goose had not been laying the feeding was too heavy. Geese should not be heavily fed on grain or concentrates. They live largely on roughage or pasture. They should have all the vegetables or roughage they will eat, such as kale, alfalfa, mangels, or anything of that nature. Another point, they should not be fed much whole grain. A feed of mash in the morning and a light feed of grain in the evening is all the feeding they should have during the laying season, and at other times less food. Mix the mash with milk or buttermilk and give them milk to drink. In the absence of milk a little beef scrap may be fed during the laying period only. They should also have grit and oyster shell before them at this season. J. D.

Might Be Tuberculosis.

To the Editor: Some of my chickens get paralyzed in their legs and can't walk. They eat but they soon die. Could you tell me any remedy for it?

A. D.

North Powder, Ore.

It is impossible to say positively what the trouble was without further information. The only symptoms mentioned might indicate tuberculosis, but it would be little more than a guess. Cut one open and let us know what you find. Look for spots on the liver and tubercules on the intestines. J. D.

Chicks Die.

To the Editor: Can you tell me why three weeks' old chicks are dying. Their feathers all seem to be growing the wrong way, and they will hang their wings down a few days and then die. What can I do for them?

MRS. R. R., Rosalia, Wash.

There is nothing here to indicate any one special chick disease. If the correspondent will write us giving fully her system of brooding and feeding and general care it might be we could find a clue to the trouble and suggest a remedy. It might also be well if the trouble appears to be epidemic to send one or two of the sick chicks to the state experiment station for examination. J. D.

To Correspondents.

In writing about poultry diseases, correspondents should be very explicit in giving the symptoms. A great many letters are coming in now regarding losses in small chicks, but very few of the letters give information enough to enable one to decide what the trouble is or to suggest treatment. All the symptoms should be fully described, then the fowl should be dissected and the internal organs examined. The feeding and methods of brooding should also be given, fully and clearly. Even then it will not be possible in all cases to tell what the disease is. That can only be done by an expert examination. J. D.

Tells why chicks die

E. J. Reefer, the poultry expert, 4665 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

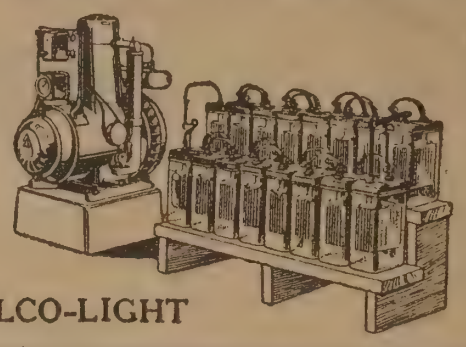
REAL HOMES at Milan Farms

on Great Northern Railroad, only 25 miles from Spokane, the metropolis of the Inland Empire and live stock, fruitgrowing and grain center of the Pacific Northwest.

Especially adapted to dairying, diversified farming, stock and poultry raising. Free rural delivery daily, excellent schools, splendid roads, long distance telephones and near fine lakes and streams. Soil rich, with ample moisture.

Every acre put on the market last year was sold, indicating attractiveness of our proposition. Additional acreage now ready at prices from $7.50 an acre up, on terms to suit purchaser.

SPECIAL OFFER TO JUNE 1



All purchases to June 1 secure service of man with team, stump puller and carpenter for one week free.

Write for attractive folder giving exact facts about these lands and the best opportunity for securing the most attractive farm home in the northwest.

DELCO-LIGHT

ELECTRICITY FOR EVERY FARM

DELCO-LIGHT

"The Best Lighted Farm in the County"

One prominent farmer says:

"Delco-Light has actually added to the value of my farm—

"The neighbors speak of it as the best lighted farm in the county—

"But it is more than that—it is the best place in which to live—and to raise a family."

Delco-Light brings city comforts and conveniences and economies to the farm.

It lights the house and barn—it furnishes power to pump the water, wash the clothes, churn the butter, separate the cream—run the vacuum cleaner and the electric fan.

It is so simple that a child can operate it and so economical that it actually pays for itself in time, labor and fuel saved.

Attack Blight Now

Cut Out Every Evidence of Canker

By T. O. MORRISON,
State Horticultural Commissioner of Washington.

At this season of the year it is particularly important that all orchard owners in the fruit districts of the northwest east of the Cascade range examine their trees for fire blight to determine whether or not there are any holdover cankers present.

Just before blossoming time the rise of sap in furnishing food and moisture stimulates into activity all blight bac-

(Continued on page twenty-six.)

THE FARM GARDEN

ARTICLE 11.

CUCUMBER GROWING

Advice on the growing of cucumbers should begin with an —emphasized Don't.

Don't plant cucumbers till the ground has warmed up, even though all danger from frost may have passed. Cucumbers will not come up well unless the ground is warm, and those that do get through will be stunted till they probably will not be thrifty.

They are among the most sensitive garden plants from the standpoint of frost. The slightest frost kills them.

Cucumbers should have rich soil, but not a heavy clay soil. Where small patches are all that is desired, increased yields may be had by burying an old can of stable manure at the side of each hill and watering them through this can, which must have holes in the bottom.

The hills should be from four to six feet apart, and five or six seeds should be planted in each to insure a stand of about three strong plants. While the vines are young, frequent, shallow cultivation is advisable, but after the vines begin to run cultivation must be done very carefully. The vines are very sensitive, and can not be handled roughly without injury. Above all, dirt should never be allowed to be thrown onto the leaves while they are wet from dew or irrigation. Too much watering with a hose or springler is not advisable after the bloom appears, as it tends to wash off the pollen, without which fruiting can not take place. In many instances this practice accounts for vines having many blossoms, but few cucumbers.

Opinions differ as to the proper time to pick cucumbers, but all authorities are agreed that to allow them to stay on the vines till they begin to show signs of ripening greatly reduces the bearing of the vines during the rest of the season. The young cucumbers are more suitable for pickling, and probably should be picked when about half the stage of ripening, though this is a matter for personal choice. They develop with great rapidity, and the picking should be done every day that the older ones may be gathered before approaching maturity too closely.

Gives any speed you want-instantly

CEDAR RAPIDS SPEED GOVERNOR

—as low as $12.00

Includes line shaft, pulleys and hangers, attached to heavy plank

—the speed governor of a thousand different speeds. Every turn of the hand wheel gives a different speed and each speed is absolutely steady and uniform.

Install it yourself with a screw driver. No figuring pulleys, no chance of installing it wrong for it runs in either direction, attached to the floor, the wall or the ceiling. It's *as cheap as an ordinary line-shaft* with the governor pulley thrown in.

THE Cedar Rapids Speed Governing Line Shaft is as cheap as the average friction-clutch pulley, yet it controls the speed of several pulleys at once without stopping your engine. The engine operates the governor—the governor controls the line-shaft.

The governor absorbs all jerky vibration. The power transmitted is steady and smooth. Runs all machinery at uniform speed. If you own an engine you need the Cedar Rapids Speed Governing Line-Shaft. One man saved enough labor fanning 50 bushels of clover-seed to more than pay for his governor outfit.

Go To Your Dealer and see it. He'll demonstrate it and he'll show you what a profit-producer it will be for you. Get ALL THE FACTS. THEY ARE WORTH KNOWING.

CEDAR RAPIDS FOUNDRY & MACHINE COMPANY
432 Second Street, West
Cedar Rapids . . Iowa

Controls Them All

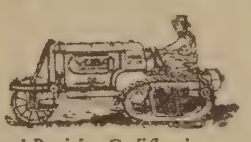
Cream separators require starting at slow speed. The Speed Governing Line Shaft *makes any separator run smoothly.*

Butter Churning necessitates slowing down the machinery to gather the butter. It regulates this.

Your Grindstone can best be run from a pulley on the Speed Governing Line Shaft.

Lighting plants require regular power without "miss-fire" or "break." Controlled by the Speed Governing Line Shaft.

Your Washing Machine should be operated slowly when washing large pieces. The Governing Line Shaft controls it.



$50 in Cash Prizes

to be awarded July 1st. Present *owners* and *prospective buyers* should write for full particulars.

It sells best to the best informed.

May Do Community Buying

Purchases at Wholesale to Secure Better Prices for a Large Number of Farmers Is Plan Under Consideration

MALAGA, Chelan County, Wash., April 27.—A move is being made here with the farmers to buy their supply through the grange. Every one here plans to put in all the plowable land to potatoes, beans and corn. There are so many things that will help the farmer on the high cost of living. The greater part of the grange talk now is on the plan of increasing the production of foodstuff. A committee was appointed through the grange to find out what can be raised here. Farm help has been very had to get here this spring, but the farmers are trying a plan of getting along on less help than they ever have before. So many of the farmers were keeping a hired man the year 'round when the farm hardly paid the man's wages in the winter time. What the farmer needs and is trying to accomplish is more system and less manual labor. Very few farms here can afford to keep a man the year 'round. Most of the spring wheat is in and some of it is up. Gardening is under way now and it will be on a larger scale than ever before. The spring rains have made the outside pasture good, so the stock look fine.

MRS. O. ALLENBAUGH.

Community Plans Work.

KENNEWICK, Benton County, Wash., April 19.—There is a great scarcity of help to do the spring work and especially to handle an increased production of food supply. The Prosser community is working on a plan about as follows: Close the stores one and one-half hours each day. It is expected that this plan will make a great deal of town help available for work on city lots and land adjoining the town. It is planned to organize the forces from the business houses into companies, with a captain and lieutenants. The citizens will be asked to sign an agreement to report for work at any time at the call of the lieutenants. The profits from the growth of these crops will be used for Red Cross work; to assist the families of those who enlist for army service, or something of that kind. The farmers are paying much higher wages than usual; the labor is more efficient, because since the state went dry there is a much smaller per cent of the classes who want a job but who do not want to work. A diversified farm of 30 or 40 acres is generally necessary to warrant employing a man the year around. The weather is still very cold for this time of year, and the crops are still being delayed. This is not detrimental, however, to the fruit, although the weather in the early part of the spring was very detrimental to fall wheat. Live stock are in good condition.

LEE M. LAMPSON.

Uncle Sam Competes.

GIG HARBOR, Pierce County, Wash., April 19.—There is very little seen of the farm "hired man" in this neck of the woods. The ranches are mostly small and the work done mainly by the owner and his family. Help is occasionally hired by the day. It is, as elsewhere, an uncertain quantity and is but little depended on in this region. Wages are at least 25 per cent higher than "before the war." The hired man's efficiency here is not gaged so much by his intimate knowledge of farm operations as by his willingness to work and his general ability to turn his hand to all sorts of rough labor that farming under these conditions calls for. In the river valleys among the berry, truck and dairy farms where much more help is required, the conditions are far from satisfactory this season. Uncle Sam, while trying hard to help the farmer, is certainly a hard competitor on the labor question. He wants thousands of men in all lines of service, hundreds of ships built, with a vast acceleration of all industries directly and indirectly conected therewith. Is it any wonder that the farmer has hard work to hold his help?

Weather is cold and wet and the season is quite backward, but there is still ample time for all crops that are grown here. The freeze last fall seems to have done quite serious injury to the raspberry and loganberry canes in the Puyallup and Sumner valleys. Butter fat, eggs and feeds are about neck and neck in the race upward, but the dairyman who also has to buy hay, wears a long face these days.

W. D. BOYNTON.

Winter Wheat Resown.

CENTERVILLE, Klickitat County, Wash., April 20.—The farm labor question is going to be a serious affair here soon and at the present time everybody is doing just as much as they can, as all the available extra men are leaving to join the army or for other places where wages are higher than here. We are giving $45 to $55 per month, but I am afraid it will not hold the help at that. We hire help, as a rule, by the year, generally hiring for about four months at a time. The average help wants steadier work, consequently they are shifting around all the time. It would probably take a 400-acre ranch to make it very profitable to hire help all the year round. The weather at present is very rainy, hindering the spring work considerably, which is at least a month behind now. Very few potatoes have been planted yet. Everybody is rushing the reseeding as hard as the weather will permit. The crop prospect at present is changing for the good, as there has been a great deal of resowing of the winter wheat crop. The stock are going on to the summer ranges with a fair amount of feed for the season.

CLARENCE A. LESTER.

Grow Beans and Get Rich.

METHOW, Okanogan County, Wash., April 21.—Farm labor is equal to the demand, wages being 50 cents higher per day; most men being fairly efficient. Small homesteaders are restless to put in potatoes and beans and get in the rich class. A farm able to keep a man the year round must have at least 20 head of milch cows or 100 head of stock cattle. The weather is cold and rainy. Crop conditions are fairly good. The writer's red winter wheat looks 75 per cent good, but the white amber, so far, doesn't look over 50 per cent good. Live stock conditions are good. The green grass on the Columbia breaks is six inches high and cattle are doing fine. Prices for steers are 9 cents per pound and 14 1-2 cents per pound for hogs at Pateros.

CHARLES GRANT.

Need More Live Stock.

FAIRFIELD, Spokane County, Wash., April 17.—There seems to be plenty of farm hands just now, but as no farm work has been done yet it is hard to predict what the future will be. Wages are from 25 to 50 per cent higher than last year. Our present cropping system makes it impossible to keep the farm help the entire year. More live stock on the farms would remedy this condition very materially. Fall sown wheat is coming through in good condition. Live stock is in good shape. There is plenty of feed to carry all the stock until spring opens. Spring is a month late so far.

ROY G. ADAMS.

To Build Elevator.

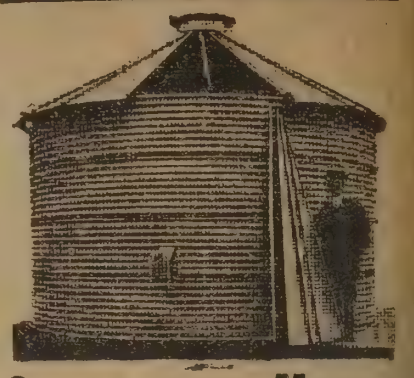
PLAZA, Spokane County, Wash., April 19.—This is a very late spring and very few farmers have been plowing so far, as the ground is too wet. Feed is getting scarce, hay selling at $25 per ton and very little offered at that. Farmers are selling off most of their cattle, due to shortage of feed. Plaza is going to build an elevator this year, which will be a great benefit to this neighborhood, and grain can then be handled in bulk and do away with the sacks, which have always been a great expense. Many farmers are planning to build a private elevator on their farms. Great interest is being taken in the pea growing plan; some farmers are going to sow as much as 150 acres, which will be sown on summer fallow and will be harvested in time to sow the winter wheat in the fall. This will save much land from lying idle, as it is all good farm land. Every farmer ought to produce something on every foot of land tillable.

MRS. LENA HARDESTY.

Seed Prices Troublesome.

PORT ANGELES, Clallam County, Wash., April 28.—The tendency in this section is to plow and put into grain, oats, barley and peas all available land, including thin meadows and pastures. There is quite a good deal of activity displayed in potato growing, although the high price of seed may keep down the large acreages. The cultivation of town lots is receiving considerable attention at Port Townsend. Mr. Drake, superintendent of schools, has been instrumental in having a large number of vacant city lots placed under cultivation. In Port Angeles the commercial club and the secretary of the merchants' associaton have taken an active hand in this matter, which has resulted in many vacant lots being placed under cultivation.

O. T. M'WHORTER.



Fruit Trees in Bloom.

PROSSER, Benton County, Wash., April 21.—The weather is too cold for crops to grow much. Apricots are in full bloom; peach blooms are not out yet, but alfalfa is getting a good start Farmers have to pay from $40 to $50 per month for help and the men don't care to work for that. The farmers can't afford to pay that price on 20 and 40 acre tracts. A farmer must have at least 100 acres in the valley or 150 acres on the upland to keep a man the year around. Wages on the farm are from $10 to $15 higher than previous years. My way would be to farm just what I could farm myself without any help, or exchange work with the farmers in my community in haying and harvesting time, and in this way no money is paid out. G. W. WILGUS.

Hire Men by the Day.

GRANDVIEW, Yakima County, Wash., April 24.—There are not many farmers who hire help by the month and only one or two that hire by the year. For day work men are scarce. Most of the farms are small and only need help for a short time. The laborers seem restless and only stay long enough to get a few dollars and then go. I think a farm of 60 to 100 acres, with stock, could keep a man the year round. The weather is cold, with some frosty nights. The crops are a month late; live stock is in good condition and in bigger demand; hogs are very scarce.

Momentous Events

Of War Vitally Affect the Farms

The United States is lending to the allied governments of Europe that are at war with Germany $2,000,000,000, with which to finance their war operations.

Claims have been made that in one recent week submarines sank enemy shipping vessels, including some belonging to this country, with a total carrying capacity of 400,000 tons.

Congress has been asked to pass legislation looking toward government control of prices of foodstuffs and seems practically certain to do so.

A nation-wide campaign is under way designed to bring about the greatest possible production of foods and supplies.

Legislation providing for creation of an army of 2,000,000 or more soldiers through the system of cumpulsory service is practically enacted.

These and other events too great and far reaching for the human mind to grasp in their full significance are transpiring in the world today, and not a man or woman or child in the world is untouched by them. The farmers of Washington are directly and vitally affected by them. The farms of the state must be cultivated as never before to produce crops, the prices for which depend in large degree on the control to be exercised by the government. Not an article that the farmer buys for himself or his family but bears the mark of war in its quality or its cost. Labor shortage is felt and will be more keenly felt as a result of enlistment, and many of the boys who have driven the plow or the drill will go to wear the uniform of their country and perhaps lay down their lives on the altar of humanity.

The course of the world is undergoing change impossible of prediction. Whether for better or for worse, the human race and the governments expressing its thought and ideals will emerge from the crucible of this unprecedented period a different race and different governments.

The Washington Farmer is not unmindful of its readers' interest in the momentous problems of civilization that are being solved through the relentless rampage of a war that has long since gone beyond the control of the nations involved in it. While the war lasts it will continue each week to give a digest of the week's leading events. It believes confidently that out of the struggle the world will emerge freed of much of its errors; that humanity will replace injustice; unity replace contention and jealousies; democracy replace despotism and militarism; world peace come in the stead of war, and as a result of the conflict the time come quickly when "the war drums throb no longer and the battle flags are furled in the parliament of man, the federation of the world"—and, again quoting the vision of the great English poet, "The common sense of most shall hold a fitful realm in awe, and the quiet earth shall slumber, lapt in universal law."

Solving the Submarine.

All the nations now fighting Germany openly admit that the submarine menace is threatening their existence, and that the one great thing they must do if they are to win the war is to discover some method of combatting the undersea boats. Especially active in this investigation is the naval advisory board in this country, appointed several months ago. It includes some of the most noted scientific men in the country, including Thomas A. Edison, the famous inventor of the phonograph record and many noted electrical appliances.

May Have a Weapon.

Reports from this advisory board indicate that an effective means of fighting submarines is about to be discovered. Absolute secrecy is maintained as to the character of the means to be used, but official statement from the board expresses confidence that the submarines can now be successfully met.

Senate Would Send T. R.

The senate will insist on the enactment of a measure by which Theodore Roosevelt would be permitted to conduct an expeditionary force of American soldiers to Europe to join the allies. The house has rejected such a proposal. This will be fought out this week, likely.

Measures Before Congress.

The selective conscription bill, under which a large army would be drafted into service, continues to be the one most interesting subject before congress. While both houses of congress have agreed to the conscription idea, they are not agreed at this writing on the ages between which men would be drafted. Originally the senate placed the ages as 21 to 27 years, while the house of representatives asked that the higher age limit of 40 years be placed. It is expected that this week will see an agreement at either 21 to 30 or 21 to 35 years.

Food Control Coming.

Another measure to be considered is that of control of food prices, and it seems practically certain that congress will take some action designed to regulate and standardize the prices of food products.

An important measure being considered is that desired by the administration of President Wilson placing in the hands of the government enlarged espionage powers.

Vaughan's Portable Drag Saw

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 3½ H. P. gasoline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cards of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $150 f. o. b. Spokane and common points.

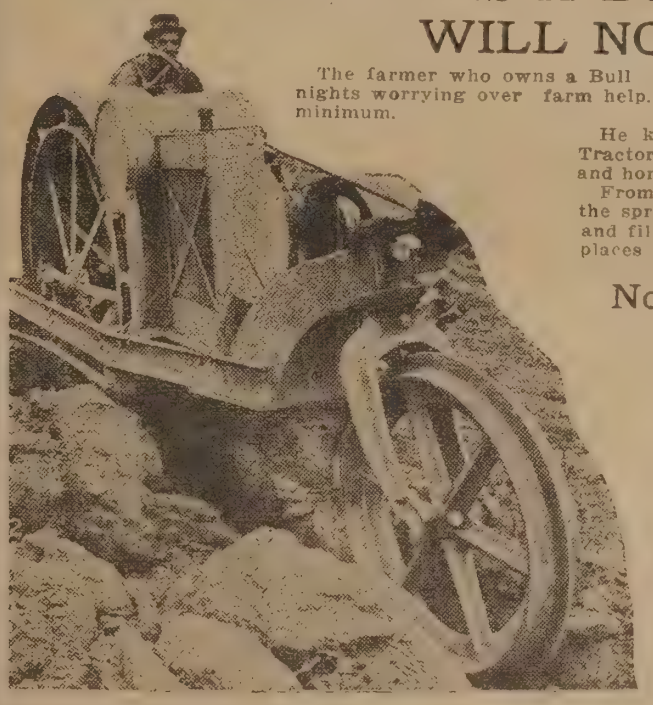
WHO WILL TILL AND HARVEST YOUR CROPS?

The Washington farmer is face to face with the most serious problem in years—THE PROBLEM OF FARM LABOR.



With the greatest scarcity of "hired help" in years already confronting him, what will be the condition next fall when the crops must be harvested, under what government officials promise to be the greatest labor shortage in the history of the country.

The past two months have seen thousands of Americans answer Canada's call for help. The United States government has already adopted conscription and is at work raising her first army of two million men for the European battlefield.

This means that the progressive farmer must adopt every expediency to overcome the labor shortage.

HE WHO OWNS A BULL TRACTOR WILL NOT WORRY

The farmer who owns a Bull Tractor will not spend any sleepless nights worrying over farm help. His labor problem is reduced to a minimum.

He knows from experience that the Bull Tractor will do the work of a dozen men and horses—better and cheaper.

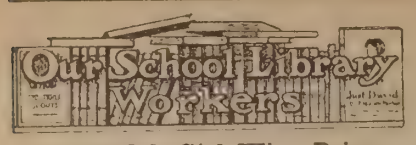
From plowing, discing and harrowing in the spring, to digging potatoes, baling hay and filling his silo in the fall, the BULL replaces many men.

No Skilled Labor Needed

The Bull Tractor is mechanically perfect. You or your son can operate it. You need no skilled labor. It is the most simple and efficient tractor on the market today.

The Supply Limited Be Far Sighted

Write today for full details about what the Bull Tractor will do for you. Don't put it off. The labor situation is getting more serious every day. We have a very limited supply of Bull Tractors left, and can not get any more this season. If you act now you may save your crop and thousands of dollars.



What the Bull Tractor Will Do

Clearing Land	Harvesting	Digging Potatoes
Digging Ditches	Threshing	Filling Silo
Plowing	Moving	Shredding
Discing	Baling Hay	Fall Plowing
Harrowing	Loading Hay	Husking
Drilling	Spraying	Hauling
Spreading	Hulling Clover	Pulling Stumps
Dragging Roads	Hauling Crops	Stretching Wire
Grinding Feed	Grinding Tools	Loading Logs
Sawing	Pumping	Operate Machinery
Irrigating	Shelling Corn

Chewelah Girl Wins Prize.

Miss Dorothy Rauch of Chewelah, Wash., is the winner of the first prize in the individual prize contest for the pupil in the state of Washington securing the largest number of subscriptions up to the first of May, 1917, through individual effort in the Washington school library contest. This secures to Miss Rauch the $5 gold cash prize.

Dorothy Rauch, who wins $5.

Miss Bessie Webb of Ford, Wash., is winner of the second prize, a $1.25 book of her own choice. Loval C. R. Snyder of White Swan, Wash., is winner of the third prize, a $1.00 book of his own choice.

These pupils have worked very earnestly in their own districts to secure these prizes and we take this opportunity to congratulate each one for the success which has come through their efforts. These prize winners have not only added much to the value of their own school libraries through their work, but at the same time have secured these small mementos for their own personal use.

Pupils from other schools have done earnest and sincere work and all are entitled to much credit for the same. Eighty-nine schools in the state of Washington to date have secured books for their school libraries through the Washington school library plan, and we know that all the pupils who have aided in securing these books in their own school districts will enjoy them to the fullest extent

88 Bu. Oats Per Acre

Mr. A. Taylor writes: "I had **315 acres in oats** that averaged 88 bushels an acre, 30 acres in **wheat** that averaged 50 bushels an acre, 20 acres in **barley** that averaged 50 bushels an acre." This is **only one of thousands** of good reports from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected, centrally located lands **close to the railway,** that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the **best grain land,** land also adapted to **dairy** and **mixed farming.** Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.

Free Homesteads

If you have not the capital to buy land you can still get one of the **recently surveyed 160 acre fertile Homesteads** along the Canadian Northern Railway, the newest transcontinental railroad, 'The Road to Opportunity."

Free Book Be sure to write today for a free copy of the "Home-Seekers' and Settlers' Guide," full of complete and authentic information. A fortune is waiting for you.

The Motor Car
On the Farm

A few weeks ago the sales depatment of a big middle western factory that makes spark plugs received an order for a carload of plugs to be shipped to a dealer in the Pacific northwest. This was the largest single order from one firm the factory had ever received. The sales manager took it to the president of the firm, and other officers of the institution as well as the credit man were called into hasty conference.

"Have we been doing much business with this Pacific coast concern before?" the president wanted to know.

"A little," replied the sales manager. "This house has ordered something like a million of our plugs during the last few months."

"My eye, you don't tell me!" cried the president. "And what do you reckon they do with so many spark plugs away out there in that neck of the woods? Is the firm ordering them financially and otherwise sound?"

"Pay their bills right on the dot when they don't discount for cash with order," answered the credit man.

"Well, well," said the president with a keen show of interest. "They must be mighty hard on plugs out there or else the several hundred car owners must be buying them in gross lots."

"Several hundred car owners, did you say?" politely inquired the sales manager. "Why there are something like a hundred and forty thousand motor cars in the three states of Washington, Oregon and Idaho right now, not to mention a quarter of a million or so of gas engines and several thousand tractors!"

"Whee, whee!" chuckled the president. "Send 'em along, send 'em along." And the gathering of officials dispersed.

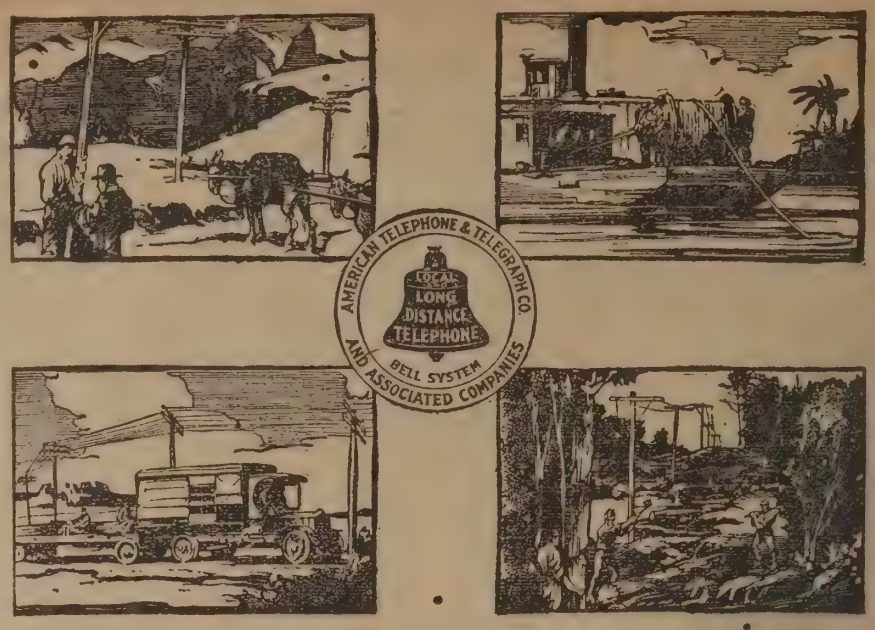
About a month later came another order for another carload of plugs from the same Pacific coast dealer. Again the president and the sales manager conferred.

"I've been looking up that strip of territory beyond the Rockies," said the president, "and I find only two or three cities out there and not more than a dozen sizeable towns. What's bothering me is who is driving all those cars around."

"This might help to explain," replied the sales manager, taking out his notebook and removing therefrom a newspaper clipping.

The president adjusted his glasses, picked up the clipping and read it carefully through.

WALLA WALLA, Wash., May 3.—George Drumheller, Walla Walla county's largest wheat rancher, yesterday added another to his fleet of automobiles. He has six other high priced cars. Drumheller recently received a check for $245,000 for last year's wheat crop.



"That explains it," he said with a sigh of relief.—"If one farmer out in the northwest owns seven motor cars, I can begin to understand something of that market. Some day I'll have to go out and look that country over. Anyhow, I'm going to read up a bit on it. Let me know whenever you get any more news of this kind." And as the sales manager went out the president was saying, "Some market, some market!"

Care Means Economy.

"Probably the best advice, and one of the most important things for the motorist to do is carefully to maintain their tires at the required pressure for the size of the tire and load carried," says a representative of the B. F. Goodrich Rubber company. This can be done accurately with a tire caliper gage. "A much neglected care is the examination of the tires for cuts and tears on the tread and side walls. Too much attention can not be given, for a neglected cut will allow dirt and sand to separate the tread from the fabric, with the sure result of moisture working in and rotting the cotton framework of the tire."

WASHINGTON FARMER SUITS.

To the Editor of The Washington Farmer: I can't praise The Washington Farmer enough. It's the best agricultural school in the U. S. A. I can't see how a farmer can keep up with his neighbors who read The Washington Farmer. Every farm and land owner should subscribe for it. It's worth its weight in gold. I will boost for The Washington Farmer all I can in our district. —G. H. HAUVER, Three Forks, Wash.

Meeting the Universal Need

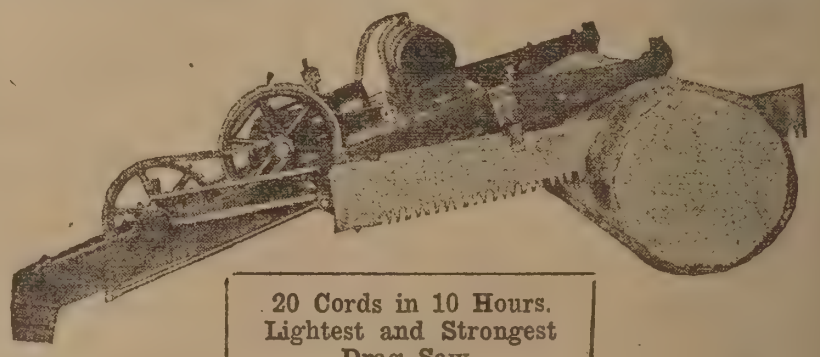
In the high passes of the mountains, accessible only to the daring pioneer and the sure-footed burro, there are telephone linemen stringing wires.

Across bays or rivers a flat-bottomed boat is used to unreel the message-bearing cables and lay them beneath the water.

Over the sand-blown, treeless desert a truck train plows its way with telephone material and supplies.

Through dense forests linemen are felling trees and cutting a swath for lines of wire-laden poles.

Vast telephone extensions are progressing simultaneously in the waste places as well as in the thickly populated communities.



These betterments are ceaseless and they are voluntary, requiring the expenditure of almost superhuman imagination, energy and large capital.

In the Bell organization, besides the army of manual toilers, there is an army of experts, including almost the entire gamut of human labors. These men, scientific and practical, are constantly inventing means for supplying the numberless new demands of the telephone using public.

Price Control

Arouses Farmers of the Northwest

(Continued from page three.)

the present time to stop speculation in all food stuffs.'

Douglas County.

One of the representative farmers of Douglas county, Garfield Cox of Mansfield, is "opposed to government control of prices of agricultural products unless we also have government control of prices in all other lines of production and of wages. Any other course is unjust to the farmer." Mr. Cox adds: "In my opinion, government control of prices of farm products would eventually have the effect of increasing prices, unless the government prices were extremely high it would lessen production."

Grant County.

W. J. Blanchett, one of the wheatgrowers of Grant county, writes that he is not in favor of the government control of prices of farm products unless manufactured and other products are also controlled by the government.

George DeBolt of Adrian, not only favors government during the war, but after the war as well.

Ed Tiedt of Soap Lake favors government control, "as it ought to cut out some middlemen."

Benton County.

E. H. Dunning of Richland, Benton county, who is practicing diversified farming, including dairying, says: "I believe in government control of prices of all staple farm products, provided that the government find market for the same."

George Sellick of Kennewick: "I am most emphatically in favor of government control of food prices during the war, as surely the government can effect a more equable and reasonable state of affairs than now exists."

E. O. Rice, Prosser: "I am not in favor of control of prices of farm products, unless at the same time the prices of farm machinery, clothing, tools, implements, household furniture, groceries and wages are likewise controlled."

H. S. Smith, Prosser, another representative farmer of Benton county, is also in favor of government regulation of all staple and necessary products of farm, factory and mine during the war."

J. R. Ayers, prominent member of the grange at Kennewick, Wash., believes that government control of prices is necessary to keep speculators from taking advantage of the people during the time when all our resources are to be taxed to the limit.

Okanogan County.

An Okanogan county farmer, W. H. Blackler of Pateros, has not decided on the matter, but is inclined to believe he would not favor control, with the exception possibly that of guaranteeing a minimum price to the priducer.

Wellington French of Conconully is "afraid the question is beyond me."

U. E. Fries of Brewster "will gladly submit to any regulation our government will deem wise to adopt in order to help our cause and the nation as a whole, even to the control of prices of different kinds of farm products; in return for that control I expect there will also be a control on the profit the middleman will be allowed to take from the consumer, also the price we farmers must pay for farm machinery."

Spokane County.

One of the farmers on the rural route out of Spokane, C. W. McReynolds, writes: "I do not favor government control of staple farm products during the war or at any other time, unless they follow it up on all products of every kind."

One of the representative farmers in the vicinity of Latah, D. Michel, is in favor of government control because "we farmers would get just as good prices for our products and it would cut out lots of speculation and gamble on grain and other staple products and be better for the consumer."

Julius M. Fisk, farmer and stockgrower of Spring Valley, believes government control would be better for both producer and consumer.

K. A. Speith of Spokane county writes: "Within the last five years I and all my neighbors have been unable to dispose of our crops, at least some of them, at a price that would pay to haul to market. Did we 'holler'? NO. There was no asking of the government to regulate prices. It is my opinion that what needs regulating is the speculator. If these city chaps don't like their jobs, let them get out on the farm and dig in the dirt from 5 a. m. to 9 p. m. and get some of this 'easy money' we are getting."

Walla Walla County.

O. A. Montgomery, Walla Walla county, writes: "Make a standard price for everything—$1 for wheat is high enough, $1 a sack is enough for potatoes, $1 per hundred for barley, corn, oats and all grain, and $10 to $12 is enough for a ton of hay. Equalize the price between producer and consumer. Congress should appoint a committee to take charge of all foodstuff, arrange, pay and establish a standard price that would give the producer a living price and that would give the consumer the goods at a living price. Take it way from the rich syndicates and distribute it out to the needy at a living price—$1 for wheat, $1 per hun-

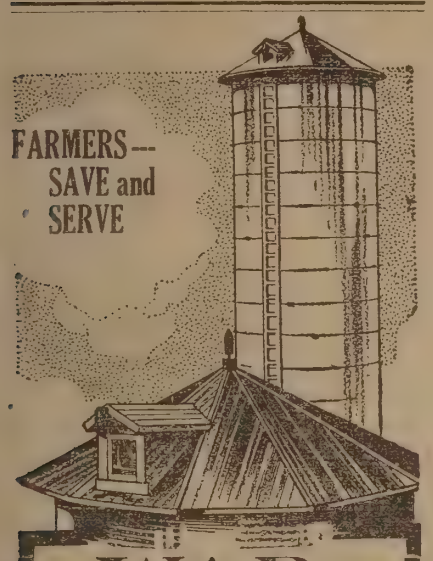
(Continued on page twenty-six.)

Farm Labor

Wages According to the Season

To the Editor: I have been reading the articles written by Dr. E. A. Bryan and others concerning the wages for farm help and consider them very interesting. I think in regard to this matter that the wages should be paid according to the season, the ability of the man, and to the locality in which he is working. I do not believe that ranchers in this section of Washington, where diversified farming is carried on extensively, can pay the wages that the ranchers in the great wheat regions can afford to pay.

I find it more difficult to get men to do diversified work than it is to do one or two kinds of labor, as I am located in Stevens county, where diversified farming is practiced, and find it very difficult to get men for my work. I am engaged in raising Shorthorn cattle, Percheron horses and Berkshire hogs. Sometimes I get men who can attend to the horses fairly well, but who know absolutely nothing about the care of cattle and hogs. The most of the men I get from Spokane are good to work in the field, can use the plow, harrow and most of the farm implements, but can not do the chores, nor attend to the stock satisfactorily.



I have lived in several different states and after 14 years' residence in Stevens county firmly believe that this is the most pleasant and satisfactory place that I have ever been in, as the price of land is very reasonable, the climate is good, with no extremes of hot or cold weather, no deep mud nor any electric storms. The soil and climate are suitable for the production of all kinds of farm products, as wheat, oats, fruit, barley, peas, alfalfa, clover, timothy, garden vegetables and crops grow in abundance. Fine corn is grown in some localities.

Food Preparedness Is Not a Scare; Crisis Faces Country

George E. Ferrill of the United States department of agriculture is making a tour of the country to study crop and fruit conditions for the government. According to Mr. Ferrill, present indications are that by next winter there will not be enough food in the United States to feed the nation's own people, let alone sending supplies to the suffering multitudes of Europe. The only salvation lies in the planting of millions of additional acres to foodstuffs and in cutting off all wastes.

Use of baseball parks, golf links and all greenhouses for the growth of garden products was recommended by L. W. Hill, president of the Great Northern railroad. They are not playing golf in Berlin, nor spending the afternoon shouting at ball parks," he said Saturday.

"The government should commandeer men to work the nation's farms if necessary," says Colonel Theodore Roosevelt, because "in the next few months farm work will be just as necessary as any military work."

The education authorities of Idaho are considering a proposition of closing the schools from the eighth grade up for the balance of the school year so that the scholars may help out the farm labor situation.

Do You Know That

You should not work from sun to sun no matter how much you have to leave undone?

Prefers Medium-Sized Potatoes True to Type

To the Editor of The Washington Farmer: I know by experience that if I take a potato with only one protruding knob and cut out the knob and throw it away and cut up the rest of the potato and plant it that invariably all the potatoes that grow from it will be knobby and unsalable. I find that nothing but the choicest kind of selected seed potatoes are fit to use. I use medium sized potatoes, true to type, from one-half to two and one-half inches long. The small ones I use whole, the others I split once and plant the pieces 12 to 14 inches apart, and the rows three and one-half to four feet apart. I plow eight to ten inches deep and plant the spuds as I plow. When through planting I give the patch an extra good harrowing, then go over it with a clod smasher. When the spuds commence to peep out of the ground I give them another good harrowing, and all I do after that is to pull out the weeds. I planted 100 pounds last year and dug five and one-half tons planted that way, only I did not pull the weeds, as that was too much work, besides I only wanted enough to do us.

CHARLES H. DAVIDSON.
Thorp, Wash.

STRAWBERRY PATCH
What to Do With Old Foliage.

To the Editor:—I have a strawberry patch which I set out last spring, and they are doing fine. There are lots of new foliage coming out now, but the old foliage of last summer is still there. What can I do with the strawberries to keep the vines in good trim? —E. H., Port Orchard, Wash.

The foliage of last year's growth will do no harm to the present season's growth, and may be used, in part, as a mulch around the base of the plants to prevent the fruit from falling on the earth, and in that way becoming covered with sand and soil, says O. M. Morris of the department of horticulture of the state college of Washington. In districts where the leaf blight is becoming widely spread go over the strawberry fields with a mower in late autumn or after midsummer, and then turn over the entire field. In all probability there is no need for that in your case.

If you can use straw, hay or leaves that are practically free from weed or grass seed, as a mulch along the sides of the rows you will do a great deal to protect your plants from the soil that will be thrown up by the operations of tillage, and by this means you may even delay tillage until after the crop is harvested.

Live Improvement Club at Riverside

At the annual meeting of the Good Roads and Improvement club at Synarep, Okanogan county, Wash., T. J. Harrah was elected president, B. F. Cubbage vice president, C. J. Clepper secretary and G. S. Brown treasurer. The following district committeemen were chosen: A. Hosheit of Upper district, J. L. Rickle of Synarep district and E. E. Stowe of lower district. Frank Utzinger received the highest number votes cast for road foreman.

Good Shipment of Hogs.

J. L. Briggs of Carlton, Ore., shipped a car of 100 hogs recently. Among them was a Poland-China animal that weighed 780 pounds

"I Do Certainly Like The Washington Farmer"

I do certainly like The Washington Farmer. It gives so much interesting information that is so much needed and to the point. No need of any one being ignorant in many things if he will read The Washington Farmer.

THE GRAIN TANKS WITH THE DOUBLE WALL
Low In Cost — Last a Lifetime
Of course, you'll store your grain in bulk this year and in the seasons to come. The experience of the past few years has proven to every northwest wheatgrower the NECESSITY of bulk storage.
Build "BIG BENDS" and Build to Last!
DOUBLE WALLS. NO HOOPS

"Big Bend" grain tanks and granaries for bulk storage are designed on a double wall principle that makes a permanent, weather-resisting tank that will not buckle nor bulge under any strain. Made entirely without hoops, but STRONGER THAN A HOOPED TANK COULD BE. We guarantee this.
Trouble-Proof—Tight as a Drum
"Big Bend" tanks and granaries are literally "tight as a drum" and THEY STAY THAT WAY—proof against trouble and severest weather conditions. The portable sizes weigh fully one-third less than the old-style steel-hooped tanks, and are THREE TIMES AS STRONG. They are low in first cost and cost much less per year of life than any other tank made.
Scientific Construction
No hoops nor girders, inside or out; nothing to get loose; nothing to be tightened up.
Securely fastened at right angles to upright staves with barbed nails is our special 3-8-inch wood binding, lapping and fitting perfectly from bottom to top, every joint protected by a galvanized steel plate, covering it securely and thoroughly.
That is "BIG BEND" double wall construction—a tank within a tank.

Write quick for illustrated circular describing this remarkable tank and showing authority for every statement we make about its great strength.
PACIFIC TANK & SILO CO.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER X.

For company we had a tame old cream-colored pony we called Chub, a cat, part of the time a black hound of monstrous size and appetite, the chickens and a pile of magazines and papers.

The years sweep by with amazing swiftness as I look back on my boyhod in the Big Bend. I can see myself at several ages, amusing myself in various ways, but always alone. Most distinctly of all I see myself as a boy of 10 or 12, unused to playmates, and grown so shy from playing always alone that I had developed somewhat the attitude toward boisterous, merry children that is seen in an aged couple which, having lived childless all their lives, "don't like children because they muss the house up."

As far back as I can remember clearly I was reading, or trying to read, magazines and newspapers and tagging at mother's heels clamoring to know what the "big words" meant. I think children with hearts set on learning a thing, learn it much more quickly than do grownups, for example, I doubt if ever I failed to remember the meaning of one of the big words when once it was explained to me clearly.

Along with the meaning of big words I wanted to know how to pronounce them, and I wanted to know where they came from. Words were to me most fascinating things. As I grew older I traced each new, big word that crossed my mental horizon clear back to its Latin, Celtic or other foundation. The words stood before me as mysterious, connecting links between the now and the mysterious, fascinating long ago, dating clear back, maybe to King Arthur and the round table. Finding a new word I traced it clear back to its beginning as industriously and persistently as a cat stalking a bird, and with an appetite for my task every whit as keen. Back at the beginning of my words I began to study their historic environs, that is, mediaeval and ancient history, and the more ancient the history was the better I liked it. The forefathers of many of my big words were discovered in hiding among the ancients, and it was with a feeling of awe that I looked upon and eventually sought to make use of words of such illustrious lineage.

My mania for words provoked from my mother a story of slave days in the south. It was of an aged darkey who came to his master and asked to know the meaning of the word "pecoolar." Having been told the meaning of the word, that is, peculiar, he said:

"It's jest this way, massa. I has to use the word a heap, so I thought I betta' know its meanin'."

A good deal of what I read I failed to understand, of course, for I waded into everything—political news, financial, society, foreign correspondence, all! And assailed my parents, visitors and passersby for explanations of the things I read.

For weeks I devoured every scrap of print that came my way about the approaching battle between John L. Sullivan and James J. Corbett for the championship of the world. The day of the fight I was so wrought up that I could hardly eat. It was several days later that the news reached our pioneer neighborhood, for we had no dailies and mail only once a week. When finally the news of Corbett's victory reached our section every bachelor's cabin resounded with heated arguments. One side of the argument held that in his blooming youth John L. could have knocked Jim Corbett to kingdom come in one round; the other faction held that Jim Corbett belonged to a new school of pugilists and could have taken care of John L. any day. These arguments at times became acrimonious.

One of our bachelor neighbors who had the interior of his ten by twelve cabin papered with pink sheets of the old Police Gazette, used in lieu of wall paper, was an enthusiastic fight fan, and in an argument could illustrate his points by reference to the pictures and reading matter on his walls.

The summer I was 11 father went away to work in the harvest fields of the Walla Walla valley, 160 miles away, leaving mother and I alone on the claim. For company we had a tame old cream colored pony we called Chub, a cat, part of the time a black hound of monstrous size and appetite, the chickens, and, what meant much to me, a pile of magazines and papers. I read and reread them; when tired of reading I used to mount old Chub and ride over the prairie "just to be riding." There was no place to go and no one to see, for our neighbors, near and far, bachelors mostly, had also gone away to the harvest fields to earn a "grubstake" for the winter, leaving their small, boxlike cabins deserted.

I rode over to Charley Gifford's cabin one day, pretending I was going to see Charley. Charley was gone, of course, but I was just pretending that I was going on a visit. There was an empty water barrel in the yard, the staves of which were beginning to show large cracks between. If it didn't rain soon, Charley would be minus a water barrel when he got back, I reflected. There was a pine box by the door, and on it sat his wash pan and a partly used cake of tar soap which was warped and dried by he sun.

As the crowning courtesy of my call, I thought I would ride up and look in the window, which I did. The single sash of the window was partly covered by a yellowed newspaper, and it was the newspaper, not the interior of Charley's cabin that caught my eye and held it. I made Chub stand beside the window while I read through the glass, every word in the paper. It was the first chapter of a wonderful story—a story of giants, queer animals that snorted fire from their nostrils and had spear-headed tails, a beautiful girl whose father was an ogre of a most ogrish kind, and a sorcerer—my, what a sorcerer! He could prophesy all things; and when engaged in prophesying he smiled and grinned broadly to himself. When his grin was most broad he called an assistant sorcerer to come and measure his grin; and the dimensions of the grin was the key to his prophesy and mysterious divinations, by which he never failed to knock a three-bagger.

My soul was athirst for the rest of the story. I peered in at the window and saw a big pile of papers and magazines on a box in the corner of the cabin. For a long time I sat there on Chub, pondering what to do. Two ways of getting the papers inside the house were available. One was to dig under the foundation and come up through the dirt floor inside, which I could do with a broken handled spade lying in the yard. The other was to go in through the window, which also was easy. The window was the kind which can be shoved to one side in loosely fitting runways at top and bottom. Charley had bored an auger hole in the lower runway, placing the hole so that a peg dropped into it would come flush against the window sash and keep it from being shoved aside from outside; but there was a broken pane! All I had to do was to reach in and lift out the peg.

I debated the question mentally. Had the door been unlocked I could have gone in with good conscience. A stranger who came along was at liberty to enter the unlocked door, cook his meal, eat it, rest and depart. He

Ye Have Heard That It Was Said by Them of Old Time

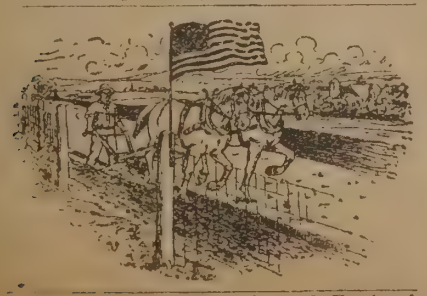
THE NAME OF GOD.

"Thou shalt not take the name of the Lord, thy God, in vain; for the Lord will not hold him guiltless that taketh His name in vain."—Exodus 20:7.

Perhaps of all the Ten Commandments none is broken more persistently and carelessly than this. Nor is it characteristic of this age in particular; if we search history and literature of every age, we find every page interlarded with strange oaths.

It is a common belief that profanity is peculiarly a country vice. This we do not believe; we find it everywhere. It is almost universal.

Of all the commandments, it forbids the most useless and senseless of things; profane language, even vulgarity or extreme slang, does harm. It does not add force to what we say to fill our speech with protestations. It steals away the purity of our native tongues.



"But what is the harm?" somebody asks. Anything which destroys the fiber of purity and high homage for God is assuredly harmful. Swearing does not perceptibly affect our physical well being, but it has an insidious and harmful effect on our souls.

With many men profanity has become a habit, and they curse without knowing it. Swearing is silly and foolish; it is impolite and degrading; it is wrong and wicked. It has no redeeming feature.

The punishment for the violation of the third commandment is sure, though deliberate. It comes as a weakening of moral stamina and a general coarsening of our beings. The finer touch, the finer sense, the closeness with the beauty and harmony of good and great things goes from us.

Britain's Appeal Applies to U. S.

The national department of agriculture is sending out a letter issued by the British premier, David Lloyd George,

addressed to the people of England, conveying "advices distinctly applicable to the United States and which should be heeded by every one who can do anything to produce food of preserve food from waste." In his appeal the British premier says: "We have now reached the crisis of the war when to insure victory the heroism of our armies at the front must be backed by the self-sacrifice and loyal labor of every one at home. To this end the products of each quarter of wheat ad oats and of every bushel of potatoes is of vital importance." The appeal closes with the following sentence: "The farmers of this country can defeat the German submarine, and when they do so they destroy the last hope of the Prussians."

We Live Because Millions Have Died

By GRANVILLE LOWTHER.

A few weeks ago the winter was passing, the spring was advancing, the sun was warming the valleys, melting the snow on the hills, and shining with beautiful splendor on the pure white mountain peaks. As I breathed the warm air and thought of the approaching summer, I felt that mysterious longing, the back to the land hunger. How this instinct originated in human nature I do not know, but it was probably induced by the habits of our ancestors who felt nature responding to their efforts by giving back to them in return for their labor the comforts and blessings of life. But, however it may have come into our lives, there is in every normal soul the desire to get near to nature from whence we have sprung; the soil whose elements give us the bodies in which we live. Then too, there was the social stimulous of the movement taking form all over the country; a movement to produce more food, to compensate for the shortage of crops, the scarcity of labor caused by the war, and the losses that will probably occur on account of the submarines sinking our merchant ships.

A kind of world patriotism impelled me, so I grabbed my shovel and went to digging in the garden.

As I turned up the rich brown earth, every now and then I would strike a spot darker and richer than the mass of the soil in which I was digging. Why were there these differences? The answer is simple. It was because two years ago we had put on a very heavy coating of barnyard manure and had turned it under with a plow. The dark spots were those where the manure had not been well distributed and, therefore, had not yet become completely mixed with the soil. Last year the benefit received from this fertilization was much greater than the first year, after the manure was turned under, and this year it seems like it would be greater than last year.

What is that which, when added to the soil, gives it power to produce larger, better forms of life than it would otherwise grow? In this particular case we can trace it, for the manure was made from alfalfa hay. The alfalfa represented a form of life. We cut it, the life passed out of it, and we say it died. In this dead form it is of no value as a fertilizer. Before it can fertilize it must decay. This is what scientists call disintegration or disorganization, because the elements taken from earth and air and organized into forms become disorganized and are set free to return to the sources from whence they came. Had disorganization not occurred, the alfalfa would have obstructed rather than aided fertility. It was because the elements that were organized could become disintegrated that the horses could get out of the alfalfa the food substances necessary for their life. It was because the excrements from the horses could be further disorganized that it enriched the soil and made it produce better vegetables. This raises the question, if there were no deaths how long could the earth sustain the life manifest upon it, and if there were no decay or disorganization, how long before there would be no organization.

We live because countless millions have died.

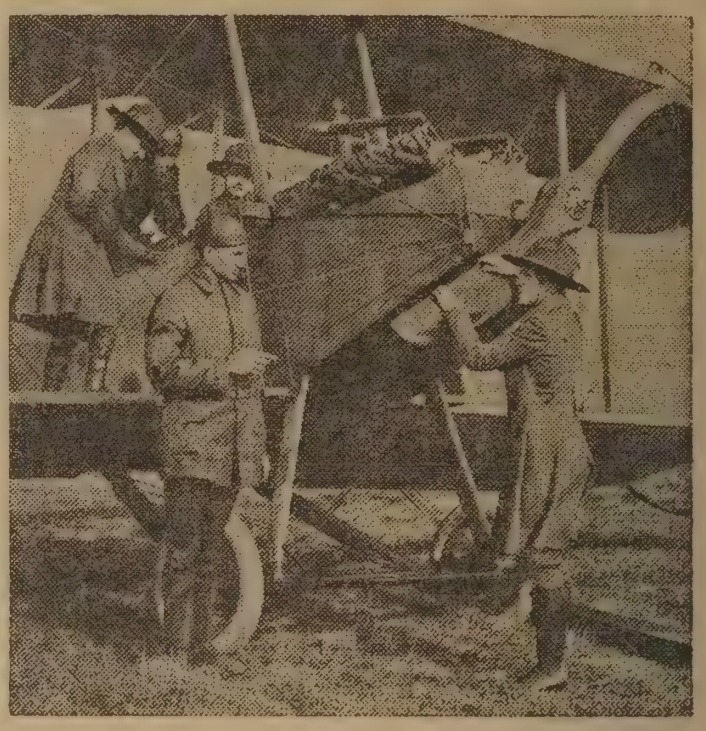
A few months ago, while in Arizona, I saw that one reason why the process of reclaiming the Arizona desert without irrigation is so slow is in the fact that the air is so dry that dead vegetable and animal bodies live for years upon the surface of soil without decay. Tufts of grass, broken stems of grease wood, bodies of animals and other forms of life lie bleaching in the sun in an atmosphere too hot and too dry for disintegrating bacteria to live. Oxygen, hydrogen, nitrogen, potassium, sodium, and other elements upon which life seizes in order to organize forms for its habitation must be set free in order that other and higher forms may be organized, and adapted to the higher conditions of evolving life.

May it not be then that organization and disorganization, integration and disintegration and what we call life and death are two aspects of the same thing?

I know this is philosophy, that it is more or less speculative, and that some very practical folks do not like to think in this sphere. Well, let it be so, but if we went to raise the best potatoes, cabbages, and crops in general, put on the manure, turn on the water, aerate the soil, set the chemical elements free, and the new forms of life will feed upon them and feed you. Not a germ or bacteria or leaf or flower or blade of grass or vegetable or animal has lived without contributing something to make this world richer. We live and die for others as others have lived and died for us, and this is one of the lessons we are now being compelled to learn by the great world war.

All the World's a Stage, and All the Men and Women Merely Players

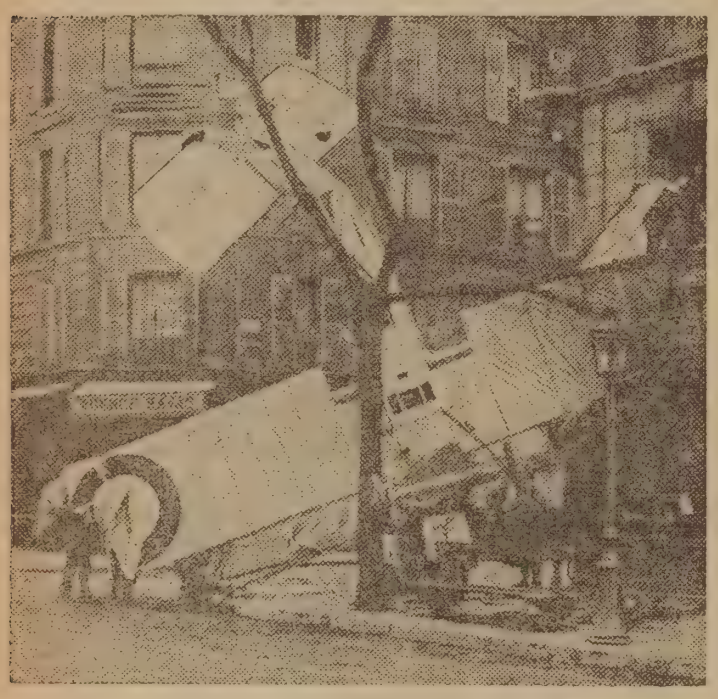
House Speaker in a New Role



Speaker Champ Clark, who has been reelected, is shown in the picture above, in a new and interesting role. He is holding his infant grandson, Champ Clark Thomson, as carefully as any grandfather can. The picture was made on the occasion of the speaker's recent visit to his daughter, Mrs. Genevieve Clark Thomson, at New Orleans.

Plans Regiment of Women

A cavalry regiment of women combining the attributes of Joan of Arc and Annie Oakley has been suggested to the military authorities by Miss Marion Weston Cottle, a former student at Wellesley and the Boston University Law school and now a member of the Massachusetts bar. Miss Cottle wants to enlist and believes that she could raise a dashing cavalry regiment among the horsewomen of greater Boston. She applied at a recruiting station and found that clerical work seemed to be the only opportunity for women in the service.



New York Women Learn Aviation

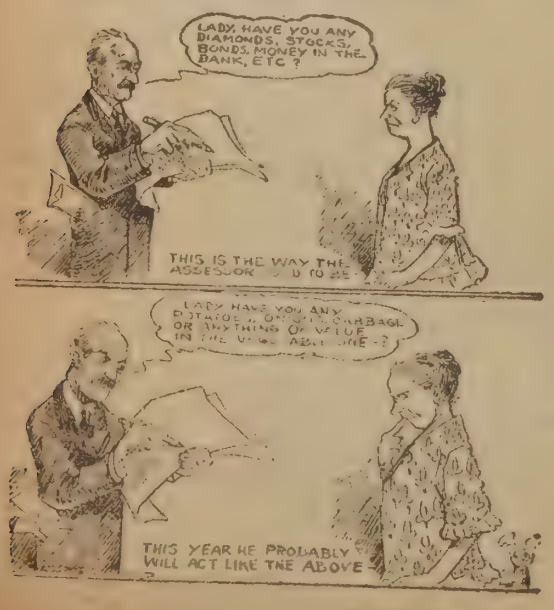
—Photo by International Film Service.

Women members of the newly organized New York flying corps learning how to operate an airplane at the Speedway, Sheepshead Bay, N. Y. Mrs. Waldo Pierce of New York, an aviatrice, has offered to train a corps of women aeroplane pilots and to supply several machines.

Ruins of Airplane in Paris Street

—Photo by International Film Service.

The wreckage of a French aeroplane in one of the streets of Paris is shown. The machine was one of an aerial patrol that took the air on receipt of reports that a squadron of German planes was approaching. A French machine in some manner met with an accident in the air and crashed to the street. The pilot was seriously injured.



China Ready to Enter the World War

—Photo by International Film Service.

As fit, man for man, and in equipment, as any army now engaged in the world war, is the modern Chinese army which may be drawn into the conflict almost any day. The photograph just received in this country, shows what a fine body of men compose the army of the celestial republic.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XVIII.—(Continued.)

Henry really liked, or, rather admired, Brandon, as had often been shown, but his nature was incapable of real affection. The highest point he ever reached was admiration, often quite extravagant for a time, but usually short-lived, as naked admiration is apt to be. If he had affection for any one it was for Mary. He could not but see the justice of his sister's position, but he had no intention of allowing justice, in the sense of right, to interfere with justice in the sense of the king's will.

"You have been playing the devil at a great rate," he said. "You have disobeyed your brother and your king; have disgraced yourself; have probably made trouble between us and France, for if Louis refuses to take you now I will cram you down his throat; and by your own story have led a good man to the block. Quite a budget of evils for one woman to open. But I have noticed that the trouble a woman can make is in proportion to her beauty, and no wonder my little sister has made so much disturbance. It's strange, though, that he should so affect you. Master Wolsey, surely there has been witchery here. He must have used it abundantly to cast such a spell over my sister." Then turning to the princess: "Was it at any time possible for him to have given you a love powder; or did he ever make any signs or passes over you?"

"Oh, no! nothing of that sort. I never ate or drank anything which he could possibly have touched. And as to signs and passes, I know he never made any. Sir Edwin, you were always present when I was with him until after we left for Bristol; did you ever see anything of the sort?"

I answered "No," and she went on: "Besides, I do not believe much in signs and passes. No one can affect others unless he can induce them to eat or drink something, in which he has placed a love powder or potion. Then, again, Master Brandon did not want me to love him, and surely would not have used such a method to gain what he could have had freely without it."

I noticed that Henry's mind had wandered from what Mary was saying and that his eyes were fixed upon me with a thoughtful, half vicious, inquiring stare that I did not like. I wondered what was coming next, but my curiosity was more than satisfied when the king asked: "So Caskoden was present at all your interviews?"

Ah! Holy Mother! I knew what was coming now, and actually began to shrivel with fright. The king continued: "I suppose he helped you to escape?"

I thought my day had come, but Mary's wit was equal to the occasion. With an expression on her face of the most dove-like innocence, she quickly said:

"Oh! no! neither he nor Jane knew anything of it. We were afraid they might divulge."

Shade of Sapphira!

A lie is a pretty good thing, too, now and then, and the man who says that word of Mary's was not a blessed lie must fight me with lance, battle-ax, sword and dagger till one or the other of us bites the dust in death, be he great or small.

"I am glad to learn that you knew nothing of it," said Henry, addressing me; and I was glad, too, for him to learn it, you may be sure.

Then spoke Wolsey: "If your majesty will permit, I would say that I quite agree with you; there has been witchery here—witchery of the most potent kind; the witchery of lustrous eyes, of fair skin and rosy lips; the witchery of all that is sweet and intoxicating in womanhood, but Master Brandon has been the victim of this potent spell, not the user of it. One look upon your sister standing there, and I know your majesty will agree that Brandon had no chance against her."

"Perhaps you are right," returned Henry.

Then spoke Mary, all unconscious of her girlish egotism: "Of course, he had not. Master Brandon could not help it." Which was true beyond all doubt.

Henry laughed at her naivete, and Wolsey's lip wore a smile, as he plucked the king by the sleeve and took him over to the window, out of our hearing.

Mary began to weep and show signs of increasing agitation.

After a short whispered conversation the king and Wolsey came back and the former said: "Sister, if I promise to give Brandon his life, will you consent decently and like a good girl to marry Louis of France?"

Mary almost screamed, "Yes, yes; gladly; I will do anything you ask," and fell at his feet hysterically embracing his knees.

As the king stooped and lifted her to her feet he kissed her, saying: "His life shall be spared, my sweet sister." After this Henry felt that he had done a wonderfully gracious act and was the kindest-hearted prince in all Christendom.

Poor Mary! Two mighty kings and their great ministers of state had at last conquered you, but they had to strike you through your love—the vulnerable spot in every woman.

Jane and I led Mary away through a side door, and the king called for de Longueville to finish the interrupted game of cards.

Before the play was resumed Wolsey stepped softly around to the king and asked: "Shall I affix your majesty's seal to Brandon's pardon?

"Yes, but keep him in the Tower until Mary is off for France?"

Wolsey had certainly been a friend to Brandon in time of need, but, as usual, he had value received for his friendliness. He was an ardent advocate of the French marriage, notwithstanding the fact he had told Mary he was not; having no doubt been bribed thereto by the French king.

The good bishop had, with the help of de Longueville, secretly sent Mary's miniature to the French court in order that it might, as if by accident, fall into the hands of Louis, and that worthy's little, old, shriveled heart began to flutter, just as if there could be kindled in it a genuine flame.

Louis had sent to de Longueville, who was then in England, for confirmation of Mary's beauty, and de Longueville grew so eloquent on the theme that his French majesty at once authorized negotiations.

As reports came in Louis grew more and more impatient. This did not, however, stand in the way of his driving a hard bargain in the matter of dower, for "the father of the people" had the characteristics of his race, and was intensely practical as well as inflammable. They never lose sight of the dot—but I do not find fault.

Louis little knew what thorns this lovely rose had underneath her velvet leaves, and what a veritable tartar she would be, linked to the man she did not love; or he would have given Henry four hundred thousand crowns to keep her at home.

CHAPTER XIX.

So the value received for Wolsey's friendship to Brandon was Mary's promise to marry Louis.

Mary wanted to send a message at

(Continued on following page.)

Now Is the Time to Kill Coyotes

Spread of Rabies Makes Their Destruction Imperative

The idea that the coyote is merely a chicken thief and a sort of picturesque relic of pioneer days is rapidly being abandoned, and should be altogether. The coyote is the most costly predatory animal in America. He destroys thousands of sheep, calves, pigs and even colts every year, and it is estimated that he costs the stockmen of the western territory, including Washington, Idaho, Oregon, California, Nevada and parts of adjoining states a million dollars annually, largely through the rabies which he spreads.

Therefore, says E. F. Averill, federal representative for Washington and Oregon of the United States biological department, "swat the coyote." Inspector Averill has a force of two or three score experienced trappers and poisoners at work the year round in this territory, and they are destroying large numbers of coyotes, bob cats and cougars, but they are urging the farmers and ranchers to take up active warfare against the pests.

Right now is the coyote denning season. In scores of coves and waste patches, even on the wheat farms of the northwest, litters of from four to 12 coyote pups are being reared and now above all times is the opportunity to destroy them. Special effort should also be made to capture the old also, but never again will it be so easy to destroy half a dozen predacious animals as it is right now and the opportunity should not be overlooked.

Rabies a Real Scourge.

Inspector Averill declares the rabies to be a real menace, such as to warrant the utmost effort of everybody, whether owner of live stock or not, to stamp out. The history of the spread of the present rabies epidemic is easily traced, according to Mr. Averill. He says:

"The first cases of rabies developed about four years ago in Asotin county and spread fanlike into Oregon, where large herds of sheep run the ranges. Many of these herds later are driven through Washington into the Okanogan district to graze on the ranges there. The rabies epidemic is slowly but surely following this trail up the Columbia river basin and is at its worst now in the Columbia valley in central Washington. It is unquestionably carried by the dogs, which have been bitten by coyotes with the disease, and they are always fighting.

"There is probably not a sheepman in Oregon who does not have at least one dog a season develop rabies. Rabies do not develop for some weeks after an animal has been bitten and in the meantime the dogs may follow the herds into another section of the country and in this way the disease is spread. The Indians moving from place to place between Oregon and Washington with their dogs have also contributed no small part in spreading the epidemic. There was a time when rabies could have been suppressed in the northwest.

"It was done in England by muzzling all the dogs and keeping them muzzled. The worst is yet to come. The thing has just started. We are carrying on a campaign of education among the live stock men to secure their active cooperation and are increasing our trappers in an effort to keep steadily at work in the long hard struggle.

In the winter the coyotes come down around the feed lots on the ranches and that is where the trouble begins. One coyote often bites 25 to 30 head in one herd. Instances are reported where live stock men in the west have lost 200 head of choice cattle in a season through the depredations of coyotes with the rabies.

"Dogs and coyotes do not go mad spontaneously as some people imagine. Rabies can be spread by a bite of one animal to another and in no other way. The animal must be mad at the time it bites or rabies will not develop.

"It is a common fallacy that animals or people bitten by a dog that subsequently goes mad will also go mad. That is not true.

"An animal suffering from rabies never lives more than six days, usually only three or four, and talk about mad dogs being at large for weeks is nonsense. There is a period of two days only during the time when the animal is inclined to bite. This is during the irritable period when he snaps and bites at everything within reach and spreads the infection."

Inspector Averill has organized a force of expert trappers and poisoners, and the methods they use will be described in another article on this subject to appear soon in the Farmer.

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from preceding page.)

once to Brandon, telling him his life would be spared, and that she had made no delay this time—a fact of which she was very proud—but the Tower gates would not open until morning, so she had to wait. She compensated herself as well as she could by writing a letter, which I should like to give you here, but it is too long. She told him of his pardon, but not one word upon the theme he so wished yet feared to hear of—her promise never to wed any other man. Mary had not told him of her final surrender in the matter of the French marriage, for the reason that she dreaded to pain him, and feared he might refuse the sacrifice.

"It will almost kill him, I know," she said to Jane that night, "and I fear it is a false kindness I do him. He would, probably, rather die than that I should marry another; I know that I should rather die, or have anything else terrible to happen, then for another woman to possess him. He promised me he never would; but suppose he should fail in his word, as I have today failed in mine. The thought of it absolutely burns me." And she threw herself into Jane's arms, and that little comforter tried to soothe her by making light of her fears.

"Oh! but suppose he should?"

"Well! there is no need to borrow trouble. You said he promised you, and you know he is one who keeps his word."

"But I promised, too, and think of what I am about to do. Mary in heaven, help me! But he is made of different stuff from me. I can and do trust his word, and when I think of all my troubles, and when it seems that I can not bear them, the one comforting thought comes that no other woman will ever possess him; no other woman; no other woman. I am glad that my only comfort comes from him."

I was permitted to see Brandon at once.

"I hoped that I might have been some comfort to you; I have tried hard enough," said Jane, who was jealous.

"Oh! yes! my sweet Jane; you do comfort me: you are like a soothing balm to an aching pain," and she kissed the hands that held hers. This was all that modest little Jane required. She was content to be an humble balm and did not aspire to the dignity of an elixir.

The girls then said their prayers in concert and Mary gently wept herself to sleep. She lay dreaming and tossing nervously until sunrise, when she got up and added more pages to her letter, until I called to take it.

I was on hand soon after the Tower gates had opened and was permitted to see Brandon at once. He read Mary's letter and acted like every other lover since love letters first began. He was quick to note the absence of the longed for, but not expected, assurance, and when he did not see it went straight to the point.

"She has promised to marry the French king to purchase my life. Is not that true?"

"I hope not," I answered evasively; "I have seen very little of her, and she has said nothing about it."

"You are evading my question, I see. Do you know nothing of it?"

"Nothing," I replied, telling an unnecessary lie.

"Caskoden, you are either a liar or a blockhead."

"Make it a liar, Brandon," said I, laughtingly, for I was sure of my place in his heart and knew that he meant no offense.

I never doubt a friend; one would better be trustful of 99 friends who are false, than doubtful of one who is true. Suspicion and supersensitiveness are at once the badge and the bane of a little soul.

I did not leave the Tower until noon, and Brandon's pardon had been delivered to him before I left. He was glad that the first news of it had come from Mary.

He naturally expected his liberty at once, and when told that he was to be honorably detained for a short time, turned to me and said: "I suppose they are afraid to let me out until she is off for France. King Henry flatters me."

I looked out of the window up Tower street and said nothing.

When I left I took a letter to Mary, which plainly told her he had divined it all, and she wrote a tear-stained answer, begging him to forgive her for having saved his life at a cost greater than her own.

For several days I was kept busy carrying letters from Greenwich to the Tower and back again, but soon letters ceased to satisfy Mary, and she made up her mind that she must see him. Nothing else would do. She must not, could not, and, in short, would not go another day without seeing him; no, not another hour. Jane and I opposed her all we could, but the best we could accomplish was to induce her for Brandon's sake—for she was beginning to see that he was the one who had to suffer for her indiscretions—to ask Henry's permission, and if he refused, then try some other way. To determine was to act with Mary, so off she went without delay to hunt the king, taking Jane and me along as escort. How full we were of important business, as we scurried along the corridors, one on each side of Mary, all talking excitedly at once. When anything was to be done, it always required three of us to do it.

We found the king, and without any prelude, Mary proffered her request. Of course it was refused. Mary pouted and was getting ready for an outburst, when Wolsey spoke up: "With your majesty's gracious permission, I would subscribe to the petition of the princess. She has been good enough to give her promise in the mattey of so much importance to us, and in so small a thing as this I hope you may see your way clear toward favoring her. The interview will be the last and may help to make her duty easier." Mary gave the cardinal a fleeting glance from her lustrous eyes full of surprise and gratitude, and as speaking as a book.

Henry looked from one to the other of us for a moment and broke into a boisterous laugh.

"Oh, I don't care, so that you keep it a secret. The old king will never know. We can hurry up the marriage. He is getting too much already—400,000 crowns and a girl like you—he can not complain if he have an heir. It would be a good joke on the miserly old dotard, but better on 'Ce Gross Garcon.'"

Mary sprang from her chair with a cry of rage. "You brute! Do you think I am as vile as you because I have the misfortune to be your sister, or that Charles Brandon is like you simply because he is a man?" Henry laughed, his health at that time being too good for him to be ill-natured. He had all he wanted out of his sister, so her outbursts amused him.

Mary hurriedly left the king and walked back to her room filled with shame and rage—feelings actively stimulated by Jane, who was equally indignant.

Henry had noticed Jane's frown, but had laughed at her and had tried to catch and kiss her as she left, but she struggled away from him and fled with a speed worthy of the cause.

This insulting suggestion put a stop to Mary's visit to the Tower more effectually than any refusal could have done, and she sat down to pour forth her soul's indignation in a letter.

She remained at home then, but saw Brandon later, and to good purpose, as I believe, although I am not sure about it, even to this day.

I took this letter to Brandon, along with Mary's miniature—the one that had been painted for Charles of Germany, but had never been given—and a curl of her hair, and it looked as if this was all he would ever possess of her.

De Longueville heard of Henry's brutal consent that Mary might see Brandon, and, with a Frenchman's belief in woman's depravity, was exceedingly anxious to keep them apart. To this end he requested that a member of his own retinue be placed near Brandon. To this Henry readily consented, and there was an end to even the letter-writing. Opportunities increase in value doubly fast as they drift behind us, and now that the princess could not see Brandon or even write to him, she regretted with her whole soul that she had not gone to the Tower when she had permission, regardless of what any one would say or think.

(To be continued in the next issue.)

Ups and Downs of a Bunch Grass Boy

(Continued from page seventeen.)

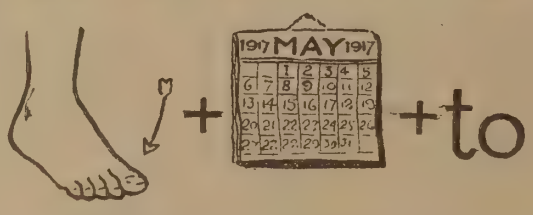
must leave the woodbox as full of cut wood as he found it, and leave the water pail also full; and he must wash the dishes. That was all—he was not even expected to write "Thank you" on a slip of paper for the houseowner to read when he returned.

But that was a wholly different proposition from slipping a man's window peg and going through the window. Uncle Daddy Utt would have stated the case this way:

"Verily, verily, I say unto you, he that entereth not by the door into the sheepfold, but climbeth up some other way, the same is a thief and a robber."

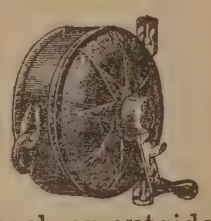
So it took me a long time to make up my mind to go into Charley's "sheepfold" by the window in lieu of the door. I knew that Charley would not care if I did so; knew also that if I did not take the papers home the mice would make nests of them before Charley returned; so finally went in through the window and took possession of the papers, and so fine reading I had the rest of the summer.

I read in these papers about the execution of a number of criminals. As I remember it, there must have been two sets of criminals, one set being hanged and the other guillotined. My boy's imagination was fired by what I read. Squirrels were thick in the prairie and were making costly inroads on our small garden. I conceived the idea of treating the squirrels like criminals, and laid cunning plans to catch and execute the criminals. They were fairly easy to catch. I would lay a loop about a squirrel hole and back 50 feet at the other end of the string, would wait for the criminal to put forth his head from his lair, which soon he did, and then I yanked the string! I had him!



Then came the execution. I decided to hang them. From descriptions I read, I built a scaffold, then worked out what I thought was a first-class hangman's knot, and proceeded to execute a half dozen of the criminals.

They were quite expert with their teeth, which were sharp as needles, and had a way of connecting up with my fingers as I worked the hangman's noose around their furry necks. However, I persisted, and finally halted their biting by slipping on "black masks" made of the toes of stockings I had cut out, thinking I likely would not need the stockings any more.



But criminals of this type hung by their necks quite comfortably and one by one either clawed or chewed the strings in two and escaped under the house, where presently they also clawed off the "death masks" and capered about quite joyfully and safe beyond the reach of the hangman.

To the uninitiated my pastime will seem cruel, but remember, please, the troubles we prairie boys had with ground squirrels. They infested the bunchgrass range by the million and descended upon our small crops and gardens in droves. We fought them with poison, traps, guns, every conceivable way and many times futilely. It therefore did not seem at all cruel to kill squirrels. Doing so was not classed as idle pastime or play—it was a small boy's principal and at times very tiresome business.

Add This Up and Get a Prize

Any person sending the correct answer to the above question before May 17th, together with $2 in the form of money order, 2-cent stamps or personal check, will receive THE WASHINGTON FARMER for three years and one of our special Star clothes reels described below. The reel is worth $1.25 at retail, while the subscription costs $1.50 even at our special rate, a total value of $2.75.

The Star Clothes Reel

With the Star Clothes Reel you can pull out 75 feet of strong, braided clothes line or reel it up instantly. Hang up clothes in kitchen, attic, porch or outside. When not in use cord is wound up in dust-proof metal case which is easily attached to casing, post or wall and easily taken down. Worth its retail cost of $1.25 in the steps it saves every month.

If you are not awarded the prize your money will be refunded. The subscription may be new or renewal, for yourself or some one else. Address

Compensations

One Only Has to Look for Them

What is the quotation or what are the words which have helped you in the journey of life? Send it to the editor of The Farmer and let it help another.

To the Editor: Many quotations have influenced my life, but I think nothing has meant more to me than this simple line, "For compensation's the law of life." Particularly do I apply it to the weather, and when it seems too bad to endure without complaint I try to recall some of the sunny days that have been and to look forward to the ones that I know must be in store for us. Every day has its compensations if we but look for them.

School Day Fun

When Four Girls Lived Together

To the Editor: I think the most interesting years in my life were the two years between 16 and 18. As we had always lived in a thinly settled country our school consisted of one room and all grades from one to seven. At the age of 14 I finished the seventh grade, as I was the oldest scholar. I then stayed home for two years waiting for my sister to finish so we could go to high school together. In the fall of 1910 she was ready, and also two girl friends of about our age. But disappointment came. Our fathers could not leave their ranches to move to town, and we had no friends in Greenwood, B. C., the town which offered us the best school service. We were just about in despair, when our school teacher took a hand and told us her mother had a two-room apartment to rent in Greenwood and she would act as a kind of chaperon for us. Our parents decided to give us a trial. They gave orders to the landlady never to let us go out at night and have no beaus.

Our first investment was a big Queen cook book, and we decided to take week-about with the cooking. Our folks supplied us with all the vegetables, butter, eggs and fruit and also brought us groceries from our home town. Such fun as we had, and such banquets—and sometimes such failures with that old cook book.

We never could get sugar enough. Our allowance was just five pounds a week, and whenever we had any spare money it went for sugar. Then a few invitations to a few schoolmates and a big taffy pull in the evening. For those two school terms of nine months each life was just a girl's dream. In the summer after school hours we would get one of our girl friends to loan us her mother's ice cream freezer, and after a long afternoon walk or tennis game we all (generally about six of us girls, our landlady was strict on the "no males allowed" rule) would go to our apartment and turn that freezer until our arms ached; but, My! how good it tasted, though! Sometimes the cake that accompanied it was burnt and sometimes heavy. The suppers most appreciated by our city schoolmates were on the days when father would bring in some young fries and perhaps some home-baked pies. I don't think those girls have forgotten their glimpse of country life yet. I have never seen them since, as we came to Washington the summer of 1912.

However, with all the fun I had during those two years of city life, I still love the farm best.

IVY DRENNAN.

Marble Wash.

The Farmer welcomes the above writer ipto its Experience Circle and will be glad to print interesting bits of experience from other readers.

A Swat at H. C. of L.

To the Editor: This spring more than ever before, farm housewives experience great difficulty in thinking up something to cook "for a change." Before the garden is ready for use we all have a hunger for something green. So few housekeepers seem to realize the possibilities of greens, nor the many different kinds of wild plants that can be utilized in this way. Earliest of all, perhaps, are the nettles. Though they are disagreeable to gather, if the hands are encased in heavy gloves their stings are not so noticeable. Parboiled with a pinch of soda, then boiled until tender with a few slices of bacon, they are really delicious. Wild mustard, dandelion leaves, mangels that have been thinned out and would otherwise be thrown away, radish tops, turnip tops, beet tops and lamb's quarter all make excellent greens and are certainly a swat at the high cost of living. A few of the tender stalks and leaves of the rhubarb plant make a nice seasoning when cooked with any variety of greens.

Ferndale, Wash.

To Make Vinegar

No Need for Farmer's Wife to Buy

By Mrs. L. T. Hall.

There is no need for the farmer's wife to buy vinegar when she can make it so easily and in much better quality at home. Vinegar may be made from various fruits and cereals, such as grapes, apples, pears, prunes, peaches, raspberries, apricots or crabapples, also corn or navy beans, all make good vinegar. While apple and crabapple vinegar are considered the best standard vinegars they are not to be compared for flavor with peach vinegar, which is best of all to an epicurean. Prune vinegar is fairly good, but better if mixed with apple or peach.

Take a 50-gallon hogshead and put into it three gallons of pure water (pure rain water, filtered if possible, and not from a cedar roof); fill the barrel to within eight inches of the top with fruit juice; put in one pound of raisins and a pinch of yeast (not quite half a cake). If the juice be pear or prune add two pounds of brown sugar or white beet sugar will do. The barrel must, of ccuse, be headed. Set in a warm room, with bunghole up. Leave bunghole open, but tack a wire screen over it.

As soon as the vinegar has ceased working place the barrel in a clean cellar, with bung lightly corked, so that any gas will be able to escape. It should set a year before being sold, as it does not acquire the desired quota of acid until thoroughly ripened, and the inspector often destroys good vinegar simply because in his ignorance he does not know how to distinguish the unripe article from that adulterated with water. If you are out of vinegar and far from market the bean vinegar is quickest made. Take a two-gallon glass jar; fill nearly full of water and sweeten it quite sweet with brown sugar. Wash a large teacupful of navy beans and put into the sweetened water, and set in a warm room where the sun will strike it most of the day. In a week you can strain and use. Corn meal vinegar is made the same way; instead of the beans add to the sweetened water two cups of corn meal. Apple, crabapple, pear and peach vinegar are good for all purposes. Raspberry vinegar makes a good summer drink, especially combined with unfermented pineapple or orange juice, and sweetened ice water. Cherry vinegar, like peach vinegar, is fine for making sweetened salad dressing for fruit and nut salads. The bean and corn vinegar are also good for general use, and, being perfectly clear, are preferred by some for such salads as cucumber or artichoke.

Vinegar is usually made from raw juice, but when one has no press and wishes to make a small quantity the apple and peach parings may be cooked in a minimum of water and put through a jelly bag, then a little sugar, raising and yeast added in proper proportions. I have made a pint at a time, and set it away to ripen in a fruit jar, and have helped my father make hundreds of gallons.

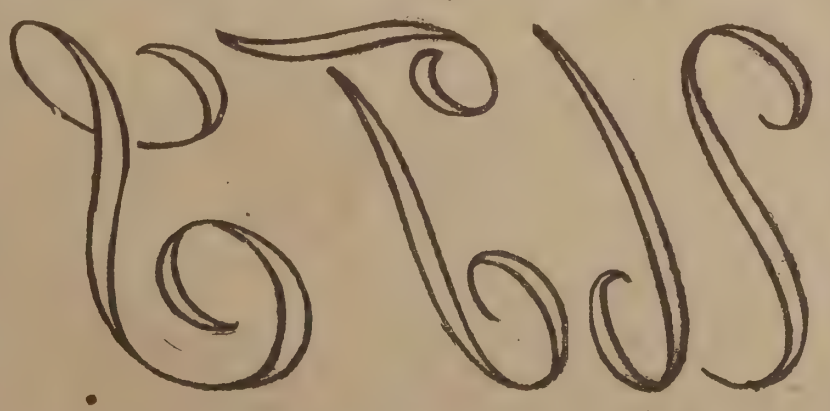
Sweet are the uses of adversity,
Which like the toad, ugly and venomous,
Wears yet a precious jewel in his head;
And this, our life, exempt from public haunt,
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything. —Shakespeare.

BABY'S WELFARE

Much Depends Upon Surroundings.

The welfare of the baby depends largely upon the condition of its home and surroundings, says a bulletin on "The Care of the Baby," issued by the extension department of the university of Minnesota:

A satisfactory home for a baby should provide plenty of fresh air and sunshine. Much of the baby's time should be spent out of doors after it is 3 months old, on a porch or in the yard. A healthy baby should be kept out of doors at least four hours each day, even in winter, except when it is colder than 22 degrees F. During the summer a newly born baby may be taken out of doors in the first week. During the winter months the baby should be gradually accustomed to the outside air. A good plan is to begin with an outing of 15 minutes at noon and gradually lengthen the time into the forenoon and afternoon, until the baby is out from 10 a. m. to 2 p. m. The baby must be properly clothed according to the weather.

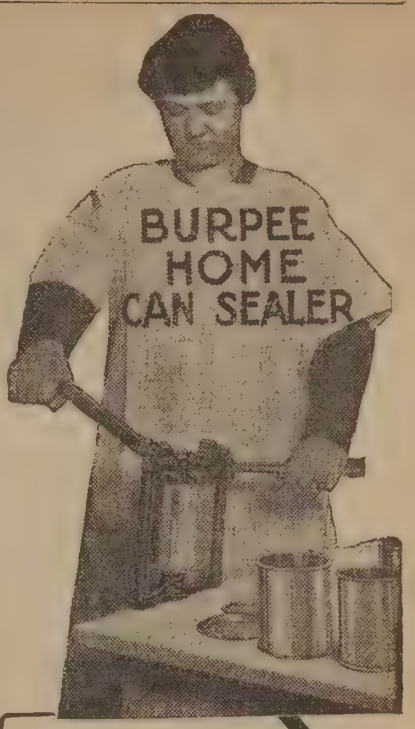


The surroundings of the home should be free from uncovered garbage, rubbish and manure. All of these attract flies and other disease-carrying insects.

Washable Window Shades.

Take unbleached muslin, with the length and width of window, allowing for hem in the bottom for stick and a very narrow hem on each side; wash, starch, iron and tack on roller the same as any shade.

Have found these shades most satisfactory and a great help in keeping the kitchen clean, as I can launder them easily and keep them free from grease, and they make the kitchen nice and bright.—Philadelphia Record.



Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

ARE YOU READY FOR HARVEST

Fruits and vegetables will soon be ready for market. Are you sure that you can sell all you produce? Insure yourself against glutted markets, waste and loss by buying a

BURPEE HOME CAN SEALER

The strongly built, simple, easily operated machine for sealing sanitary tin cans without acid or solder. Clamps on any kitchen table.

It will save all those fruits and vegetables you might have to feed the hogs. It will start you in a new and highly profitable business. Made and guaranteed by one of the biggest canning machine manufacturers in the country. Cans easily secured. Free book of canning recipes, compiled with the assistance of the U. S. Dept. of Agriculture, with each machine. Write today for information.

BE SURE TO GIVE NUMBER AND SIZE.

Not Disconcerted.

The new maid would not rise early enough. Gentle reproof seemed vain, and finally the master and mistress tried the inferential method of blame, and left the damsel asleep while they prepared the breakfast for themselves.

"We'll shame her to it," said the master.

Not a word was said until 9 o'clock the same evening, when the girl tapped at the dor of the sitting room.

"Is there anything else I can do, mum?" she respectfully inquired.

There was nothing, and she turned to go to bed, but at the door remembered something.

"If you're down before me in the morning, mum," she observed, "you'll find the eggs in a box in the scullery."—Exchange.

Compromise.

A little colored girl, newcomer in Sunday school, gave her name to the teacher as "Fertilizer Johnson." Later the teacher asked the child's mother if that was right.

"Yes, ma'am, dat's her name," said the fond parent. "You see, she was named for me and her father. Her father's name am Ferdinand and my name is Liza. So we named her Fertilizer."—Boston Transcript.

Home Helps

Making a Home More Homelike

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

When we moved from a mill camp, where my husband and I had been working for the better part of a year, it certainly was not very encouraging to find the house on the farm we had leased, badly in need of paint within and without, the paper badly soiled and torn.

The owner did not feel able to have the house repapered and painted and I did not think I could live two years in the house the way it was. I did not have much money to work on and no one to help me. So this is what I have done:

I bought a few rolls of cheap wall paper, a gallon of lacquer, a half gallon of good furniture varnish and a quart of linoleum varnish. Our furniture was rather badly worn, for we have moved more than the average and then I had bought some second-hand furniture that was substantial, but had the new worn off.

The living room had a coarse wainscoating about two and one-half feet, which I removed. The woodwork was all painted white, which was yellowed and dirty.

The walls were papered with what had been a light paper, but was far from light now, as it had been several years since the paper had been put on, and there had been four or five different families in the house in that time.

I repapered the ceiling and walls with a light tan paper with a tiny rose in it. The doors and other woodwork I stained with a gloss lacquer that could be put over the white paint. For curtains I used some cheap unbleached muslin, usually known as house lining, which I stenciled.

I had only a rag carpet for the floor but my room looks as homey and comfortable as any one could desire.

The dining room and kitchen also received a new dress of wall paper and paint, the furniture a new coat of varnish and with my scrim (?) curtains, the three rooms are greatly improved. The paper and paint for the three rooms did not cost more than $6 or an average of $2 a room, and I know we are over $6 happier and cleaner than before.

I did all the work myself although I only weigh a little over 100 pounds. I really believe most any one can improve their homes at a very reasonable cost. If my experience will help even one woman who needs it I shall be very glad I have shared it.—N. B., Elgin, Ore.

Sidelights

Now They Don't Speak.

"What did you say that your age was?" he asked between dances.

"I didn't say," smartly returned the girl, "but I've just reached 21."

"Is that possible!" he consoled. "What detained you?"

That's the Point.

Lawyer—On the night in question, Mr. Witness, did you not have several drinks of whisky?

Witness—That's my business.

Lawyer—I know it's your business, but were you attending to it?—Boston Transcript.

Progress.

"How's your boy Josh getting along in college?"

"Fine," replied Farmer Corntassel. "He has studied so hard that he thinks he knows more about how the school ought to be run than the teachers themselves."—Washington Star.

Wanted to See It Work.

As a reward for good conduct Johnny was taken to the zoo by his mother. Just before starting Johnny and his Aunt Mary had a decided difference of opinions as to what did or did not constitute clean ears and a clean neck.

Arriving at the zoo they soon came across a curious-looking animal.

"What's that?" asked Johnny.

"That's an anteater, dear," said his mother.

A determined look came over Johnny's face.

"Say, mummy," he said, "tomorrow let's bring Aunt Mary out here."—Ladies' Home Journal.

There's Profit in HOME CANNING

Turn you surplus products and time into money this year and have a business of your own—home canning. There is good money to be made in home and community canning every year, but there never was a better year than this to start.

START RIGHT.

Don't experiment with makeshifts, do your canning by steam pressure; "the safe and only thorough way to sterilize." By our new selling plan you get all your supplies from one source. We furnish retorts, cans, modern can-sealing machine, instructions—everything for canning work in home, orchard or community, showing how to market your product to best advantage. Outfits include 60-page book of recipes on goods you can put up.

Simply send a postal for free literature on how to can for profit.

P. O. Box 735, Portland, Ore.

My Dear Children: We had some splendid letters in the last contest, didn't we? I read them all, 621 of them. Can you imagine getting so many? But some of you did not follow the rules.

You must write on one side of the paper only. You must be very careful of your writing and spelling. Try and have your paper neat and clean. You must write your name and address plainly. I am going to ask you to put your age on each letter; that will help me a great deal. Even though you have put your age on previous letters just add it each time you write. You may put it after your name and address.

Answering one of the cousins' questions: There is no charge for printing your letter. Some member of your family must be a subscriber to the paper and you must write your own letter. I wonder how many of the cousins can spell "write" right. This word is misspelled more often than any other. Now, let's see how many can spell it correctly in their next letters. Don't you remember, we had a motto a long time ago that read something like this: "We are going to do something better today than we did it yesterday." Perhaps some of our newer cousins can think of a better one. If you can, I should like to have it, and maybe some time we can have it at the head of our page. Lovingly,

AUNT NELLIE.

Every Season Has Its Fun.

Dear Aunt Nellie: My favorite book is "Black Beauty." If you are always kind to a horse when they are colts until they are grown they will be your friend always, but if you are unkind to them they will be your enemy. I don't always think of this rule, but will try to hereafter. I think most children who have read the book will sympathize with me. I live in a country called the Methow valley. In the winter it gets about 13 or 14 degrees below zero and generally there is over three feet of snow. There are lots of mountains and hills around here so we have lots of fun coasting. In the spring, after the snow goes off, there are lots of flowers of all kinds. The hills are real pretty with the grass and sunflowers on them. In the summer all kinds of berries get ripe. I hate to see fall come because all of the pretty leaves and flowers are killed by Jack Frost, but we have lots of fun gathering in the fruit and vegetables.—Maud Burns, Twisp, Wash.

Planning for a Swimming Dock.

Dear Aunt Nellie: I am 12 years old and my birthday is January 28. I am in the sixth grade and my teacher's name of Mr. Gwin. I have read all of the cousins' letters since September, 1916, and I enjoyed they very much. I know three of the cousins. They are, Harry Burke, Cora Kanouse and Mamie Jennings. My best friend is Aaron Kanouse. We go swimming in summer; we are planning to make a swimming dock for the coming summer. The farm I live on contains 17 acres. We have two horses, four milch cows, a heifer, a calf, three little pigs and one large pig. The horses' names are Trig and Fanny." The cows' names are Brownie, June, Bessie and Susie. The heifer's name is Topsy and the calf's name is Beauty. My home is in Astoria, Ore., but I live in the country for the present.—Oscar Berg, Box 29, Elma, Wash.

Hopes We'll Read Her Favorite Book.

Dear Aunt Nellie: One of the best books I have ever read is "Little Lord Fauntleroy." It is a story of a sweet, innocent little boy, who has never been ill-used and his friends, though poor, all think much of him. His mother is his dearest friend and he has contracted the habit of calling her "dearest," which was the term he had always heard his father address her. His father had been the son of an English earl who was so angry when his son married an American lady that he disowned him and while the little boy was yet a baby the father died. The old earl has other sons, but they die also, and then the little boy suddenly finds himself heir to the rich English castles which belong to his uncle, whom he has never seen. Although his uncle is a cross, grouchy old gentlemen and has never been heard to speak a kind word to any one, Cedrick, for such is the boy's name, has an idea that his uncle is the most kind and generous man in the world. Cedric is very sorry to leave his friends and go to England, but at last he goes away. His mother is with him and although she can not stay in the palace with him, she is installed in a comfortable little cottage. His uncle, the earl, loves the boy and when news comes that Cedric is an impostor and the real earl is waiting an interview, he discredits it and at last it eurns out that Cedric is the real earl and in response to the little lord's wishes he has his mother come to the palace and the earl, who has become good tempered and generous, is made very happy by the little boy, and he declares that he is fitted in every way to be an earl or even a king.—Calla Foster, South Bend, Wash.

Had to Shoot the Old Pet Horse.

Dear Aunt Nellie: We had an old horse. Her name was Nellie. She had a cancer and papa had to shoot her. She was 26 years old. She was our pet. We live on an 80-acre farm. I have one sister. Her name is Ima. I have three brothers. Their names are Earl, Leslie and Lloyd. I am 10 years old. My birthday is the 18th of September. I go to school and I am in the fourth grade. My teacher's name is Miss Frazier. I like her very much. There are 32 pupils in our room. We have one cow, one little calf, three horses and 32 hens. I have one mile and a half to go to school. I go to Sunday school every Sunday except when I am sick. I can tat and crochet some. I help with the housework and make the light bread.—Hazel Slinkard, R. F. D. 2, Rockford, Wash.

Springtime's the Happiest of All.

Dear Aunt Nellie: I have been reading the Children's Corner for a long time, and I like to read the many interesting letters. I am 10 years old and in the fourth grade. I like the spring, when all the flowers are in bloom and the birds are singing. I like to go on the hill with my father and gather Easter lilies while he hunts. It does not take long before I have my arms full of flowers and then I bring them home. I like to go barefooted and play in the creek which runs behind our house. I have a large dog who likes to play with me. I think that the springtime is the happiest time of all. Don't you think so, too?—Myrtle Veronica Faye, Monroe, Wash.

Pearl Is One of Our New Cousins.

Dear Aunt Nellie: I am 11 years of age and my birthday is January 16th and I am in the fifth grade at school. I take music lessons and like it very much although it is quite hard. I live on a farm of 18 acres. We have a nice big house with 10 rooms in it and two halls, one downstairs and one upstairs. We have two cats, two cows and one calf. The cows' names are Spotty and Reddy. The calf's name is Blossom. We have one horse. Her name is Fannie. We also have chickens. I have one sister 13 years old. Her Birthday is February 22, George Washington's birthday. Her name is Ruby. I have four brothers also, Horton, Vernon, George and O'Neil.—Pearl Sarff, Puyallup, Wash.

"Mildred" Is Inez's Favorite Book.

Dear Aunt Nellie: I have written many times before. This time my subject is going to be "My Favorite Book." My favorite book is "Mildred." This is the story of a child that was adopted by an old judge and it turns out to be his grandchild and Mildred does not see her father until she is 20 years old. I have read many other books, but can't just remember the names of all of them just now. I am reading at present "The House of Seven Gables." Every time the Farmer comes I always go to the buggy to meet father when he comes from town. I read all the stories in the Farmer and I like the continued story. —Inez Lockwood, Raymond, Wash.

So Mischievous She Had to Sell It.

Dear Aunt Nellie: Once a poor little crippled sheep was given to me, it not being able to follow with the herd. After faithful nursing and tender care it soon was well again. I had good pasture, and so it soon was fat and sleek and, worst of all, was very mischievous, which made me very angry sometimes, so I thought I would sell it, which I did one day. The section foreman of the railroad gave me $3.50 for it. This was the first money I ever earned by myself. I used it in the purchase of jewelry, of which I am very fond.—Laura E. Hatley, R. 2, Waitsburg, Wash.

Interested in the School Exhibits.

Dear Aunt Nellie: I have been reading the Corner for a long time and I like it very much. I was 15 years of age, February 22. I went to school that day and when I came home mama had a nice big cake made for my birthday. I do most of the work at home. I like to work at home. I go to the Deer Creek school. Our teacher's name is Miss Hamilton. She is certainly a lovely teacher. I missed an awful lot of school this term because of so much sickness in the family. There are only five pupils in our school now. My father takes The Farmer and he and mama are very deeply interested in it. I am very much interested in the school exhibits. We raised some rutabagas that took the first prize at the exhibition at Leahy.—Florence Cox, Leahy, Wash.

There's a Nice Orchard on the Farm.

Dear Aunt Nellie: I would like to join the Corner. I am a little girl 9 years old and in the third grade. My birthday is May 3. My teacher's name is Miss Loretta Hinckly and I like her fine. I live on a 40-acre farm. We have three calves, five cows, three horses and 80 chickens. We have a nice orchard of apples, pears, plums and cherries. I have two brothers and sisters. My sister wrote to the Farmer, too. My best friends are Yerda Johnson and Viola Wilson. There are 42 pupils in our room, 22 in the third grade and 20 in the fourth. We have a dog and a cat for pets. I go to Sunday school nearly every Sunday. I would like to correspond with Rita Helen Knerton or any girl of my own age.—Ruth Forsman, Rochester, Wash.

Made Tomato Boxes Last Summer.

Dear Aunt Nellie: I am 9 years old and in the fourth grade. My birthday was on the 26th of February. I saw all the nice letters in the Children's Corner so I thought I would send a letter to you. I have three pet cats. They are Dapple and Spot and Snowball. I have a brother younger than I and a sister older than I. She is teaching school and she is 19. I live on a 10-acre ranch on the Columbia river. I live three-quarters of a mile away from school and I walk. We have one horse and one cow. My riding horse and both of my dogs were killed on the railroad. The horse's name was Daisy and the cow's name is Bossy and the horse's name that got killed was Bobby. We have 21 hens. I have $2.50 making tomato boxes last summer.—Charles G. McDonald, Longview, Wash.

Myrtle Had to Muzzle Her Dog.

Dear Aunt Nellie: My little friend is over here tonight and she is going to write to you, too. Today my sister was over in the domestic science room sewing, and as she was trying to pull a thread out of the goods she accidentally run a needble through her finger. My daddy and mother went to lodge tonight and just my sister, my friend and myself are here. I have two sisters married and they each have a little boy. Their names are Gordon Oman and Wilbur Gilbert. I have a pony named Buck, a cow named Bell and a dog named Snow. I have muzzled him now as that is the law.—Myrtle Sodorff, Johnson, Wash.

Piled Sagebrush for Her Money.

Dear Aunt Nellie: I am 7 1-2 years old and am in the second grade. I have had to miss two weeks of school because I have the whooping cough. I have two sisters and one brother. I will tell how I earned my first money. Papa bought 20 acres of new land near my home and had to clear the sagebrush off of it, so he gave me 5 cents a day to pile it up for him, and he told me I could buy a pair of bantam chickens with my money. My sister is going to buy a pet rabbit with the money she earns. We each have a little pet pig and feed them on a bottle.—Gertrude Park, Cowiche, Wash.

First Time We've Heard From Marie.

Dear Aunt Nellie: I am 9 years old and I am in the fourth grade. My birthday is the 17th of August. My teacher's name is Miss Turple. We have one cow, a pig, a dog and a cat. I have one sister and one brother. My sister is 6 years old and my brother is 12 years old. My brother's name is Wilhelm and my sister's name is Ruth. This is my first letter to the Corner.—Marie Anderson, Redmond, Wash.

To Have a Nice New Schoolhouse.

Dear Aunt Nellie: I enjoy reading the cousins' letters very much. I am 8 years old and in the fourth grade. My teacher's name is Miss Neill. I like her very much. I go to the Lambert's school. I go across a deep canyon to school. Maybe we are going to have a new schoolhouse. Our schoolhouse is an old one. I would like a take the trip Inez had. I would like to correspond with any of my cousins about my age. I have a cat. His name is Pepper. He is white, orange and black. We have about 35 chickens, three cows and two horses. The horses's names are Dandy and Ginger.—Mildred Widmer, R. F. D. 2, Ridgefield, Wash.

Going to Raise Some Geese.

Dear Aunt Nellie: I enjoy reading the cousins' letters and also like to write to the Corner. I live on a 640-acre farm. I have two geese. I am going to raise geese this summer. My little sister, Alice, and I go to school every day. My sister, Lyda, has been sick and can't go for some time. I like my teacher and my school friends. There are 18 pupils going to our school. Our school will be out the 25th of May. The 15th of May will be my birthday. I will be 14 years old. I weigh 102 pounds.—Viola Augst, Box 30, Beebe, Wash.

Had a Chicken Dinner at School.

Dear Aunt Nellie: I like to read the letters in the Washington Farmer. I am a girl 8 years old and in the second grade. My birthday is June the 23d. We have three teachers. My teacher's name is Miss Leota McLaughlin. We live on a 20-acre farm. There are 23 pupils in our room. I have two sisters and their names are Florence and Lela. I have a brother and his name is Glen, but my little sister and brother are not big enough to go to school. We had a chicken dinner at our school the other night. —Josephine Edna McAndrew, Box 141, R. F. D. Winlock, Wash.

At Last Maud Has Found a Twin.

Dear Aunt Nellie: I like to read the letters. I have been reading them quite a while and at last I have found my twin. I am 13 years old. My birthday is August 26. I am in the eighth grade. I have three sisters and four brothers. My oldest brother is in Alaska. He works on a boat there. He likes the work very much. He is 17 years old. My sisters are all smaller than I am. We have two pets, a cat and a dog. My smallest sister is 3 years old. She likes the cat and dog very much.—Maud Winston, 406 Wood street, Snohomish, Wash.

Necia Hasn't Missed a Day of School.

Dear Aunt Nellie: I have not written to the Corner for a long time. I like to read the other children's letters. I want to see if I can write one just like them. I have not missed one day of school. I haven't been late either. We had one week vacation in school. My teacher is in Spokane this week. We have seven little pigs—Necia Hire, Odessa, Wash.

Deo's Father Runs the Warehouse.

Dear Aunt Nellie: I am 10 years old and I am in the fourth grade. My papa runs the warehouse. We have three big horses and two little colts. My mama runs the postoffice. I have one big black dog with brown spots on him. I have two sisters and two brothers. There are nine scholars in our school. —Deo Weir, Hanmer, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Esther Anderson, Irene Mae Hett, Laura Smith, Beulah Coatney, Kathryn Tattler, Jennie Peterson, Ruby Werz, Frank Saeger.

The Bible Says:

Join the New Regiment

The regiment of young people who enter our school every year for a summer course in bookkeeping, shorthand and typewriting.

We train you for a real money earning position—and help you secure it after graduation.

Write for free catalog.

Northwestern
Business College
Spokane, Wash. M. M. Higley, Pres.

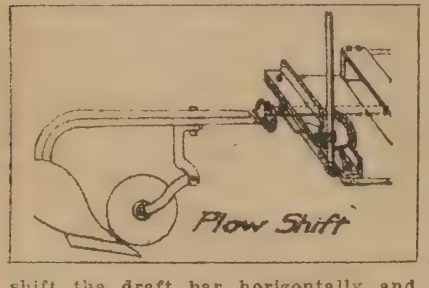
WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

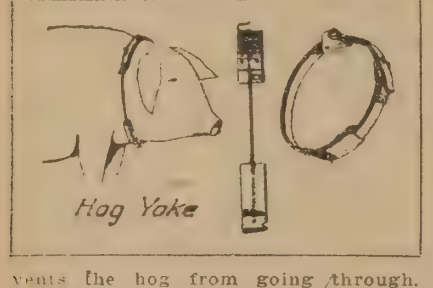


Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Plow Shifting Mechanism for Tractors.



With this mechanism to the frame of a tractor, the operator is able to

shift the draft bar horizontally and hold it in any desired position.

Hog Yoke.

This yoke consists of two curved metal bands held in place by a stout wire, each band carries a hook which engages the wires of a fence and pre-

vents the hog from going through. The yoke on the right is somewhat similar but is attached by means of a leather strap.

How He Felt.

After the battle of Mons an officer congratulated an Irishman on his conspicuous bravery under fire.

"Well, Pat," he said, " how did you feel during the engagement?"

"Feel, captain," answered Pat. "I felt as if ivvery hair on me head was a band of music, and they were all playing 'Home, Sweet Home.'"—Everybody's.

With Open Palms.

"He went to get a change of air
In Florida bewitching,
And found along his pathway there
The spreading palm was everywhere,
And every palm was itching!"

FARM LANDS—FOR RENT 657

HAVE YOU AN OUTFIT FOR WHEAT farming? If not, don't answer this ad. I own twenty-five hundred acres of deep rich soil in best farming section in Saskatchewan ready for the plow; want right party to go there and farm; shares, crop, or cash payment, long time. R. E. Pratt, Kennewick, Wash.

IRRIGATED LANDS—For Sale 663

IRRIGATED STOCK FARM FOR SALE.
The best bargain in Idaho. Good free and forest range for all stock. Good alfalfa, grain and potato land. Good markets, certain crops. Ample free water with independent ditches. Newton Hibbs, Salmon, Idaho.

Grain and Produce Markets

Chicago Grain.

CHICAGO, May 5.—Offerings of wheat today were so meager that it took only scattered anxious buying to cause a material advance. Lightness of stocks formed one of the chief bullish factors. There was an unsettled close, 3¼c to 6c net higher, with May at $2.78½ and July $2.25 to $2.24½. Corn gained ½c to 1½c and oats ¼c to ⅞c.

Provisions finished unchanged to 25c lower. Concern over difficulties of securing ownership of enough wheat to fill outstanding contracts for May delivery was evident throughout the session.

Announcement that British government representatives at Winnipeg had made liberal concessions in regard to purchase terms on cash wheat seemed to have considerable bullish influence on the market here. In this connection it was said necessities abroad were so urgent that demand would equal whatever ocean tonnage was available.

Corn hardened in value with wheat. Besides there were complaints that owing to the cold weather corn germination was poor.

Oats were helped upward by purchases that were attributed to seaboard interests. Gossip was current that 1100 cars had been ordered here to convey oats away for export.

Active commission house demand for lard upheld prices on that product. Pork and ribs lacked support.

Pacific Northwest Grain.

TACOMA, May 5.—Wheat—Bluestem, $2.75; fortyfold, $2.70; club and fife, $2.70; red Russian, $2.67.

SEATTLE, May 5.—Wheat—Bluestem, $2.75; turkey red, $2.76; fortyfold, $2.71; club, $2.71; fife, $2.71; red Russian, $2.69.

PORTLAND, Ore., May 5.—Grain—May delivery: Wheat, bluestem, $2.75; forty-fold, $2.72; club, $2.70; red Russian, $2.68.

Oats—No. 1 white feed, $52.75.

Barley—No. 1 feed, $52.50.

Sales, 100 tons; May oats at $53.

Futures—June — Bluestem, $2.75; fortyfold, $2.72; club, $2.70; Russian, $2.68.

June oats, $52.75; barley, $50.

Portland Market.

PORTLAND, Ore., May 7.—The wool market has opened up in eastern Oregon. Several hundred thousand pounds were contracted for in the last week at 40 cents for fine and better than 45 cents for coarse. Growers, however, are not selling freely. They want 45 cents for fine and 50 cents for medium and, unless they get it, will hold the bulk of their clips for the regular sealed bid sales. The demand for Oregon wool is very keen and dealers expect to soon pay the prices now demanded by sheepmen.

In the Willamette valley small lots are being marketed at 46 to 50 cents. Wool shearing is general there, and in eastern Oregon is progressing around Echo, Heppner and Arlington.

Mohair is not sharing in all the strength of wool; in fact dealers claim the prices asked by growers, around 70 cents, are fully 15 cents too high. Very little of the goat clip has been sold to date. Where pools were offered, the bid prices of 65 to 67 cents have been usually rejected.

The potato market is easing off. Buyers are offering $3 to $3.50, where a fortnight ago they were paying as high as $4.10. The local as well as the eastern demand is slack and jobbing prices are being scaled down.

Egg speculators are still competing for the libural receipts and the market is slightly higher than a week ago.

Butter is also firmer and stocks are regularly cleaned up on outside orders. Cheese prices are expected to weaken as the spring make increases.

Oats—No. 1, $53 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $44 per ton; shorts, $47.

Barley—No. 1 feed, $52.50; brewing, nominal; rolled, $59.

Hay—Buying prices: Timothy, eastern Oregon, $26@30; alfalfa, $23; grain, $18@19.

Eggs—Oregon ranch, case count, 32@32½c per dozen; candled, 33@34c.

Poultry—Hens, 18@18½c; ducks, 22@23c; turkeys, live, 20@22c; dressed, 28@28c; geese, 12@14c.

Butter—City creamery, prints, 36½@37½c per pound; cubes, 34½c.

Cheese—Oregon triplets, 25c; young Americas, 26c.

Dressed meats — Veal, 14½@15c; pork, 19c.

Hops—1916 crop, 3@6c per pound.

Potatoes—Oregon jobbing price, $4@4.25.

Wool—Eastern Oregon, fine, 40c; coarse, 45@47c; valley, 46@50c.

Beans—California small white, 16½c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Seattle Market.

SEATTLE, Wash., May 5.—Spuds are weak. Probably the most pronounced concession from growers to a bear market are quotations today at $70 f. o. b. for No. 1 gems. There have been a few inquiries for locals from the east, but no bids over $50@55 Seattle basis have been made. The potato market since the last break has declined $10@15 per ton. All holders are desirous of cleaning up.

Receipts of eggs are normal with a surplus showing daily. A little storage is still going on, but theoretically the season is closed.

Poultry will be a trifle lower next week. Receipts have been heavy and buyers are not spending the money that they did a year ago in this division of the wholesale food trade.

Just where the butter level will rest for the season is the problem that city creamery men are endeavoring to solve. Concensus of opinion is that the market is today resting on the bottom and that futures must be built up from present quotations. Cross currents of weather, uncertainty as to what the yield of cream will be, erratic markets in Oregon and a tendency in California to quote higher for Seattle account are factors which are driving wholesalers from one viewpoint to another.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers. The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 32@33c per dozen.

Poultry—Live hens, fat, over 4 lbs., 21c per lb.; 3 lbs. and under, 21c; old roosters, 12c per lb.; springs, 22c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 16c per lb.; broilers, live, 30c lb.

Butter fat, 41c per lb.; dairy butter, 27c per lb.

Beef — Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 15@15½c per lb.; do heavy, 10@12c per lb.

Veal—Fancy light, 13@14c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb. salt kip, 22c per lb.; salted calf, 32c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 36c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 25@38c per lb.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $4.25 cwt; new potatoes, 12½c lb.

Seed Potatoes — Early Ohios, 4c lb; Early Rose, 4½c lb; white potatoes, 4c lb; Early Six Weeks, 5c lb.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; Y. N. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwood, 40c lb; Solid Pack, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $9.50 case.

Live Poultry — Hens, 20c lb; old roosters, 10c lb; ducks, 13@14c lb; turkeys, 20@25c lb; geese, 11c lb.

Dress Poultry—Hens, 23c lb; springers, 21c; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Seattle Wheat.

SEATTLE, Wash., May 5.—All forecasts of wheat market conditions and plans for the future were shattered on Friday when the announcement of the government to commandeer wheat and fix minimum prices reacted on the Chicago wheat pit. Sympathetic emotions were roused here and, while the fluctuations as to prices were reasonably calm, the feeling that went with it was oneof extreme nervousness. Traders were not frightened, as they had been hoping for descending prices and now desire to know something about where they stand.

Grain dealers are in a peculiar position, and the proposed action at Washington has added to the burden. The market has been in such condition all week that a trade consummated today spells a loss when the grain is delivered. Buyers fear to operate or to take any stocks of size. This does not necessarily carry a bearish feeling, trades declare, but it is worse in the uncertainty of what lies right ahead.

Erratic and nervous sentiment followed all trading through the week. Brokers were so badly scared at the opening Monday that they were at a loss for a level on which to start the bidding at the opening session. The first tender made was $2.60 for prompt bluestem.

New high records for the week carried wheat only 3c to 4c over the highest point of the preceding week. Declines were intermittent, but with one or two exceptions only nominal. The undertone was unsettled.

No Duty on Wheat

Between This Country and Canada

How it came about recently that the tariff on wheat and wheat products imported from Canada into the United States was suddenly removed without act of congress has caused some questioning throughout the country. The explanation lies in the reciprocal agreement between the two countries under which each maintained a duty on these articles as long as the other did. Canada, by act of its parliament, removed the duty on United States wheat, with the result that the duty in this country on imports from Canada was automatically removed.

It is worthy of notice that the removal of these duties had comparatively no effect on the wheat market, except for a few hours, when a drop of several cents in quotations at Chicago resulted.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., May 5.—Hogs—Receipts, 9500; steady. Heavy, $15.35@15.75; mixed, $15.20@15.50; light, $15.10@15.60; pigs, $13.50@14.75; bulk, $15.15@15.60.

Cattle—Receipts, 200; steady. Native steers, $9@12.75; cows and heifers, $7.50@10.15; western steers, $7.55@11.25; Texas steers, $7.50@9.50; cows and heifers, $7.50@9.75; canners, $5.50@7; stockers and feeders, $6.50@10.50; calves, $9.50@12.50; bulls, stags, etc., $7@9.55.

Sheep—Receipts, 100; steady. Yearlings, $13@14.50; wethers, $12.50@14; ewes, $11.75@13.25; lambs, $16.25@17.35.

At Chicago.

CHICAGO, May 5.—Hogs—Receipts, 10,000; weak; market 5c under yesterday's average. Bulk, $15.50@15.75; light, $14.65@15.70; mixed, $15.25@15.80; heavy, $15.20@15.80; rough, $15.20@15.40; pigs, $10@13.75.

Cattle—Receipts, 400; steady. Native beef cattle, $8.90@13.40; stockers and feeders, $7.15@9.90; cows and heifers, $6.25@11.15; calves, $8.75@13.25.

Sheep—Receipts, 20,000; steady. Wethers, $14.25@13.75; lambs, $13.50@17.65.

At Seattle.

Butter fat, Portland delivery, No. 1 sour cream, 37c; No. 2, 35c.

Farm Power

WHEN an engine is bought for the farm it has nothing to do but work. Too many makers forget this and sell you an engine that would be more at home driving a pleasure car.

Nichols & Shepard don't forget what a farm engine is for—*just work*. For steam they build from 13-40 to 25-85 h. p., in five sizes and fifteen variations burning wood, coal or straw. For Oil-Gas from 25-50 to 35-70 h. p., full power on kerosene. All in the

Red River Special Line

Either kind will buckle down and *work*—not snort around and swell the expense account. Use your automobile when you want to burn up power for fun, but buy an engine that has no nonsense about it when it goes to work.

The final test on a farm engine is to hook it to a grain separator. That will require steady and reliable power to do paying work. Send to the Nichols & Shepard branch house that is nearest to you for a little paper that shows your own neighbors' letters on the farm power question. Any one of them will give you a money-saving tip. The handsome general catalog of the Red River Special Line will come with the paper if you ask for it.

Price Control

Rouses Farmers of the Northwest

(Continued from page fifteen.)

dredweight for feed stuff, $1 per hundred for vegetables, and other things in proportion. Sugar corn can be produced at $5 per hundred. Cut this thing of allowing supply and demand to govern prices, establish a standard price on everything."

Whitman County.

The Rosalia section of Whitman county has many representative farmers. One of these, L. H. Howell, believes in government control of prices of farm products, and gives as one reason "in case the government sets a price, we, the producers, would know then how to make arrangements for selling."

R. V. Perringer of Belmont, who is farming extensively, writes: "I would favor a maximum price for farm products, beyond which they must not advance. It seems almost like a species of robbery for farmers and speculators to get $2.25 per bushel for wheat and $4.50 per bushel for potatoes. Such a state of affairs is absolutely unjust to the great mass of consumers whose incomes have not increased proportionately. Ordinarily, I would favor the idea of allowing the law of supply and demand to operate naturally, feeling that the farmer is entitled to the sweet, as well as the bitter, of which he has had a plenty, but the present abnormal world condition justifies control."

J. S. Klemgard, than whom few farmers and landowners are better known in Whitman county, writes: "I am not in favor of government control of wheat and other crops unless they also fix prices on farm implements and other articles required in producing the crops," and adds, "should the government fix a price now for the coming crop, also on labor and the things required to produce a crop, I should like to see it tried out."

Clallam County.

"Yes, I do favor government control of prices of farm products, also of other products that farmers have to buy just during the war," is the way that P. A. McNamara of Sequim, Clallam county, looks at it.

Another representative farmer of Clallam county, Charles Palmer of Forks, says that government control of prices seems "about the only solution for the city people, yet if they do not control what the farmer has to buy it would be distinctly unfair."

Yet another representative farmer in Clallam county, Homer Hart of Dungeness, believes in government control of prices of all food supplies, also prices of all farm machinery.

Klickitat County.

Peter Conboy of Glenwood, Kickitate county, is a well-known farmer, who favors all around government control of prices, adding: "I think if the government regulated prices the speculator would be a thing of the past."

C. M. Babcock, another representative farmer of Glenwood, is greatly in favor of government control of farm products, "providing the government will also take over and control prices on that which we farmers are obliged to buy."

Thinking that "it would be better for both the producer and the consumer," F. S. Calvin of Goldendale favors government control of prices on all staples.

A. P. Bertschi of Glenwood does not have convictions on the subject, but thinks if the prices of farm products are fixed by the government the prices of things the farmer has to buy should also be regulated in order to give a fair deal.

One of the representative farmers of Wahkiakum county, F. O. Hampson, of Skamokawa, has several reasons for government control of prices: It would stop speculation; it would stop exporting to some extent; it would enable the poor people to live like the wealthier classes; it would enable the farmer to secure cheaper mill feed for his dairy stock.

W. N. Meserve of Grays River believes that the subject of production of farm crops will solve itself "if you let the prices be high long enough to make farming profitable."

I. B. Crungstad of Skamokawa declares "the farmer will not be the loser; it will be the middleman and speculator that will lose by government control."

Alvin Anderson of Oneida favors the government control of prices of food stuff, "especially so after they have left the hands of the producer,."

Snohomish County.

N. J. Bishop of Snohomish, Snohomish county, is a believer in all around government control of prices, while Nick Pierson of Monroe does not favor government regulation for the reason that he does not believe "that the farmers will respond very readily to the government call for larger crops unless they fix a price so he is assured of making a fair wage for his labor."

Charles Roth of Arlington says that all the farmers ask is a guarantee for expenses, "no profit, no interest on the investment, and we were gently turned down," referring to a meeting at the county seat, where the bankers and merchants and lawyers wanted the farmers to plant more than ever before.

Grays Harbor County.

Two representative farmers of Grays Harbor county, both of Elma, rural route No. 1, make replies. Fred Rosmond would have all around government control, while O. M. Gordon would answer "no," if the broker and commission man is allowed to demand the profit that they are taking.

J. T. Chambers of Elma thinks the government control of prices "would be a great thing, because the farmers are not getting the prices paid for potatoes, wheat and so forth. It is the middleman. The sooner it comes direct from the farmer the better.

Fight Blight Now

Advice of Horticultural Expert

(Continued from page eleven.)

teria that have lived through the winter. Those familiar with fire blight know that the work of the disease during the previous season produced the characteristic blight cankers, and in the margins of these cankers the bacteria rests in a dormant condition until temperature and moisture conditions in the spring become favorable to stimulate their activity and development. As a result of their activity about the margins of old cankers a form of fermentation is set up, and as a result a gummy, sticky ooze is produced, resulting from the fermentation. Later on during the growing season this exudate will, in most cases, be present in active cankers throughout the season. Unless all the holdover cankers are carefully cut ont now the ooze will bgein to flow within a short time. This ooze will contain countless millions of bacteria, and as it is somewhat sweetish to the taste it will be attractive to insects.

Many of the flower visiting insects, as well as aphis, ants, bark boring beetles, etc., will feed upon this exudate, and as they move about over the trees may spread the infection. The nectar of apple and pear trees seems to be a good medium for growing blight bacteria, and it is in this way that the insects, in feeding on the ooze and visiting the flower blossoms, transmit the bacteria for the many new infections which may occur if conditions are favorable. In some cases the infection may be spread by means of pruning, the tools becoming infected and not being disinfected before making other cuts.

In the control of blight there are a number of things important and necessary.

1. It is important that the entire community appreciate the seriousness of the disease and act accordingly by removing all hold-over blight cankers immediately.

2. It must be remembered that hold-over cankers are a source of infection for any fire blight that may show up during the next few weeks, and that in order to prevent the new infection from taking place every hold-over canker should be cut well below any visible signs of discoloration.

3. It is important that in the cutting operation the work be done under surgical conditions; that is, that the pruner use a solution of corrosive sublimate in which to disinfect the tools after each cut is made. This solution should be carried in a glass vessel and not in a metal container on account of the fact that the corrosive sublimate is acted upon chemically in the presence of metal and its disinfectant principles weakened.

4. All the prunings should be burned in order to destroy any cankers or diseased timbers that may have been cut from the trees, and if the grower is not supplied with a regular brush burner, the pruning should at least be thoroughly scorched by piling them over a supply of straw and burning the straw.

We should all bear in mind that blight could be eradicated theoretically if every hold-over blight canker were destroyed before the blooming season comes on. In most blight-infested districts it has been the experience that at least some hold-over cankers have been overlooked in the spring, and generally most all the blight can be traced to hold-over cankers in that vicinity.

Winners Next Week

Information Contest About Over

By THE CONTEST EDITOR.

If the contest editor's eyesight does not fail him examination of the farm information papers will be completed this week in time to announce the winners in the next issue of The Farmer. The final announcement is somewhat contingent also upon the ability of the contest editor to hold fast to his mental equilibrium, for, after having added thousands of figures, counted many more thousands of dots on dotted lines and waded through stacks and stacks of answers to the 60 questions, I feel it would not be safe for me to meet the office squirrel without adequate means of defense. If I am not a nut now, a few more ordeals of this character certainly will make me a full-fledged candidate.

A great deal of wisdom and near wisdom has been displayed in the farm information contest. Some of it has been dug out of almost forgotten school books and I am sure there has been a careful search of the scriptures in many farm households of late. Some insisted such a book as Hezekiah was not to be found either in the old or the New Testament. How about it?

Just what to call young rats has puzzled not a few. One contestant answered this way: "You don't have to call them; they come without calling." Those living in districts where apples are not well known had some trouble with question No. 30. One contestant evidently is much impressed with Germany's spy system because he said an apple having the same name as a high political position in the United States is called the "Spy." Another one thought such an apple should be called a "plum" inasmuch as most political positions are regarded as plums.

Old Brindle has had to undergo a most careful examination of her upper jaw lately. One contestant, after completing the operation, answered the question by saying a cow's upper front teeth are as scarce as hen's teeth.

Most everybody was able to name the common ailment of chickens. One person said the common ailment is "epidemics" and I guess those who have tried to raise them in cold, wet weather will agree that that just about discribes it.

Ever hear of Robert Strahorn mustard? I never did, but a lot of the contestants saw fit to honor the well-known Inland Empire promoter by giving him the distinction accorded the late James J. Hill.

A large number failed to find the key of the Bastile. Several said it was in the jailer's pocket.

A good many people would go into the business of buying $99.99 money orders if they could be picked up as cheaply as some of our contestants say they can. Thirty cents is the prevailing quotation.

Well, it's been good, clean fun, hasn't it.

Prize Winners Get Checks.

While it isn't Christmas I know of a few persons who experienced the sensation of finding a well-filled stocking week before last. August Anderson, R. F. D. 1, Pullman, Wash., was one of them. He received a $275 check because he won first prize in the dot puzzle. Here is what he says:

To the Contest Editor: I received your check for $275 today and wish herewith to express my gratefulness to you for the generous prize I received. The check was received unexpectedly. I did not think I would win, for just after I had mailed the solution upon looking at an old, nearly worn out chart I noticed I could have changed my line and thereby secured four additional dots. I surely enjoyed the figure puzzle, but the best and most interesting one was the tie-deciding dot puzzle, which was simply a dandy. I want to commend the management for the fairness in which the contest was conducted and thanking you again for your liberal gift I am yours truly,

AUGUST ANDERSON.

Mrs. N. M. Lauby of Nez Perce, Idaho, who won second prize, writes as follows:

To the Contest Editor: I am in receipt of your letter of the 26th inst. inclosing check for $145 in payment of second prize in the Dot Puzzle Contest, for which accept my thanks. I wish to say the work was very interesting to me and particularly so in the end when I received a third puzzle to break the tie for second place. Thanking you for the courtesy shown me and for the fair treatment received I am yours very truly,

MRS. N. M. LAUBY.

160 ACRE FARMS IN WESTERN CANADA FREE

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat at over $2 per bu. offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops

You Can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed Farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

There is now an extra demand for farm laborers to replace the many young men who have volunteered for service in war. The government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

Is It Nobody's Business

But Ours What We Do With Our Own Property?

By E. L. POTTER.

That the present emergency will demand of the stockmen their utmost effort goes without question. There was a time when preparedness was conferned only with guns and military revolutions, and armies were expected to "forage" for their living, but the enormous scale of the present war makes the production and distribution of food stuffs assume an importance not surpassed by the production and distribution of munitions; in fact it is maintained by many that the war will be eventually won by the side best able to solve the food problem.

It is therefore going to be up to the live stock man to put forth his very best efforts, and the man who prevents the loss of a good steer or a fat pig, or who converts into meat, feed that would otherwise have been wasted, will be performing a patriotic duty of fundamental importance to the nation.

Generally speaking, war does not tend toward any great increase of live stock. Grain prices and hay prices usually go so high as to discourage the live stock men. We doubt, if in a serious emergency, whether a marked increase in live stock in the United States would be desirable, since it would have to be supported with grain that might be more valuable in some other form. It will, however, be necessary that we do not allow our supply of stock to become depleted. We have great quantities of grass and hay, along with stubble fields, fence corners, and other wastes, which, converted into live stock become most useful to our nation, and to the world at large. We let thousands of animals die from neglect, that a little care would have saved. We ship half fat stock to market and practically sacrifice it, when a little more time would have made them not only more profitable to the producer, but to the country. We are a rich country and can afford to waste things, at least that is the common argument, but the hour of trial is at hand and it is for us to show what we can do. It is not for ourselves that we must do these things, but for our country. A prominent stockman said to me the other day, "the waste of the average sheep camp will support a family." If this is the case, and it seems to be, there must be changes. That waste must be conserved. The sheep men are not the only wasteful ones; they merely do business on a little bigger scale. The man who lets a pig chill to death at farrowing time is just as guilty. There is no getting around the fact that the man who lets a colt die with navel ill is helping the enemy. No longer can we say, "it is nobody's business what I do with my own property." Whenever live stock or any agricultural or other useful product is wasted, the enemy gains by just that much.

Now is not the time for the stockman to get excited and start off on a lot of new schemes. It is the time to buckle down, work harder, produce more, and save more than ever before. We must not overlook that proposition of work. Every man wo does not get to the front in this war is going to have to do two men's work at home.

We should not forget, however, there is a great service to be performed right now before the big call for soldiers is made. We are having the most backward spring known, yet we are facing our greatest need for agricultural products. The young man who is planning to do great things for his country can do no greater service right now than to pull off his coat and help get in the spring crop. What a splendid thing it would be if the city boys who expect to enlist could spend the next two or three months on the farm. They would do their country a great service, and at the same time would be getting a physical training that would shorten by just that much the time they would have to spend in the military training camps. It appears now that there will be about time to get the crop in and possibly to do some farming before there are military camps ready to receive an enormous number of men.

NEWS FOR BREEDERS

Portland Stock Yards Completes Building

The new building of the Portland Union Stock Yards company at North Portland is completed as shown in the accompanying picture. The building itself cost about $75,000 and by the time it is completed the total cost will amount to somewhere near double that figure. It is 188 feet in length by 90 feet in depth and stands three full stories high. It will be occupied officially the coming Saturday.

The building is said to be a model in every particular, containing, among other things, a convention hall which will seat nearly 400.

Besides the offices of the Portland Union Stock Yards and the allied offices of the live stock show, the publication and the like, the building will house a postoffice, telegraph office, telephone station, producers' traffic bureau, stockmen's state bank, joint railroad agency, offices of the United States inspector, brand inspector, veterinarian and the buyers for the packing houses.

Demand Registry Certificate.

The Farmer has received a communication from Frank D. Tomson, editor of The Shorthorn in America, and a trustee of the American Shorthorn Breeders' association, in which he gives this valuable pointer:

"We are advised that frequent injustice has been done to western ranchmen who have accepted the word of dealers and shippers of bulls from the middle west as to their eligibility for registartion. The only safeguard is to require of the seller the registry certificate. It happens that a great many grade bulls are assembled and shipped west and the sellers find it to their advantage to pass them on as 'full blood' bulls or 'eligible to registry.' This assurance on the part of the seller naturally encourages a little higher bid from the purchaser, but such practice is a gross injustice. In short, it is a fraud.

"In certain western states legislation has been enacted which makes it unlawful to run a grade or non-registered bull on the open range. This is a positive step in the right direction, but can only be effective when there is satisfatcory assurance that the bulls purchased as purebred bulls are what they are represented to be—in other words, when the certificate of registry is transferred with the animal."

JERSEY SALES COMING.

A rather unusually large number of sales of Jerseys will be held in the Willamette valley this spring and the man who wants a high-class foundation herd will have opportunities for selection such as seldom occurs in one season. W. A. Forrest, whose sale will be held at his home, one-half mile from Whiteson, Ore., has set the date for his sale for Thursday, June 14. Mr. Forrest will have 37 head in the sale. Twelve of the cows have official records averaging 510 pounds of butter in a year. They are on test again and milking still better. Mr. Forrest only milked twice a day and the cows stood in 3½ foot stalls. Six of the cows were sired by Oonan's 23d grandson, sire of one of the money winners in the famous four months butter test at the St. Louis world's fair. The herd bull is Pussy's Noble, an Island bred bull. The young stock are sired by him and are good, typy bulls and heifers. Mr. Forrest's postoffice is McMinnville, Ore.

Henry Zorn, whose big farm is at old Champoeg, his postoffice Aurora, and the nearest shipping station is Donald, will sell about 50 head. The date is not yet set, but it will probably be early in June. Mr. Zorn will sell about six head of Ed Cory breeding, from some of the best cows in the herd, and probaby 20 of the heifers will be bred to a Cory bull, out of St. Mawes' Koffe Violet, that has record of 916 pounds of butter in a year, and is a grandson of St. Mawes' Susie, with 938 pounds. His herd bull, Beauty Lad, is out of Beauty of Browndale, going back to Hood Farm breeding.

W. B. Davis, Shedd, Ore., will sell 90 head. His date has not been set, but will probably be before the middle of June. He has about a dozen granddaughters of the great bull Golden Glow's Chief, sire of about 30 Record of Merit cows and at least three proven sons. He also has a line of Melia Ann's King breeding that have given him equally as good results as the others. Mr. Davis will have a sufficient number to allow of buying a foundation herd all of bred heifers, heifer calves or mature cows, and all of approved producing breeding.

McArthur & Stauff, Independence, Ore., but the farm close to Derry station will have a dispersion sale in June if it is determined that congress will adjourn in time so Mr. McArthur can be at home, otherwise the sale will not be held till fall. They will sell every cow in milk and keep only the daughters of their bull, Holger. This bull is proving himself a great sire and they intend to confine their breeding to the one line. Every one of their cows has a good Register of Merit record, at least one being over 700 pounds. It will be a uhique sale in this respect.

A request for a catalogue addressed to the owner will have you put on the list for any of the catalogues as soon as issued. Further reviews of the cattle to be sold will be given later.

H. A.

SHIRES CHANGE HANDS.

W. R. Ledbetter of Alicel, Ore., recently sold his great Shire stallion, Gore's Fashion, to James Sturgiss and Mr. Campbell of Pendleton, Ore., who have put him in the stud there. Gore's Fashion has been grand champion at the Union Stock show several times, at the Oregon State fair twice, and at the Northwest Stock show at Lewiston, Idaho, once. Mr. Ledbetter has purchased Wilson's Idol, a Shire that was fourth at the Chicago International in 1916. He will be 4 years old this spring. Mr. Ledbetter also purchased two very fine young Shire mares, all from the Blue Ribbon stud at Colfax, Wash.

HORSES AND MULES

Purebred Stallions

We have for sale a few 1-year-olds, 2 this spring, Shire stallions, our own breeding; also a 5-year-old and an 8-year-old Shire stallion, both brown; a 3-year, a 7-year-old and 1 aged Percheron stallion, all black; one 2-year-old Brown Clyde stallion, bred by Canadian government. We sell at the barns only, and tell you all we know about each and every horse, guaranteeing them to be as represented or refund your money.

Our horses won all firsts and champions at Spokane Interstate Fair, N. W. Live Stock Show, Lewiston, Ida., and Pacific International, Portland, Ore., last year. If you need a horse, or want to exchange, write us or come and see before buying. It will pay you.

G. M. WILSON, WILBUR, WASH.

The Road to Happiness

The automobile has come into your life permanently—or it soon will—to serve your convenience and pleasure, day in, day out, on down through the years.

Its appeal is irresistible.

It is a fundamental factor in modern every day life.

It rides the road to happiness.

If you purchase a car this season, there are *new* facts for your consideration which should simplify the task of selection.

This year Willys-Overland Motor Cars comprise the most comprehensive and varied line ever built by any one producer.

The economies of our greater production are shared alike by every car in the line.

In thus broadly applying the established Willys-Overland policy of greater production—greater economy, higher quality, lower price—we extend the benefits of our economical advantages to include virtually every class of purchaser.

The Willys-Overland dealer is in a peculiarly pleasant position to frankly and honestly discuss with you your needs and requirements in a motor car.

For whatever your need he has the car to fill it and he is prepared to demonstrate to you that he is offering you the dominant value among cars of its kind.

See him today—talk it over—let him show and demonstrate the car you ought to own to ride the road to happiness.

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 20. MAY 17, 1917. WEEKLY.

Europe Asks U. S. for Food, Munitions and Men

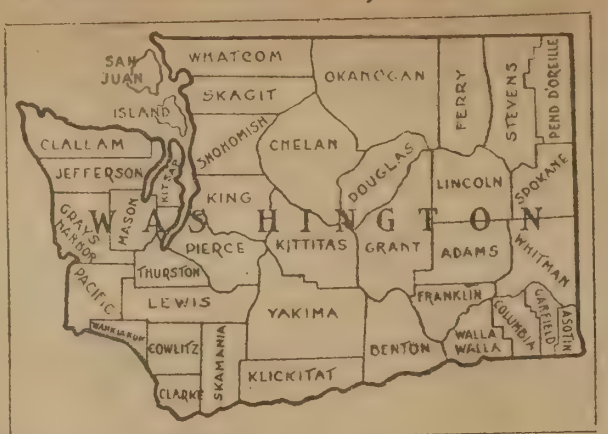
—Photographs by Underwood & Underwood.

The war-weary people of England, France and their allies have appealed to the people of this country for aid in combating the menace of German frightfulness. The men whose photographs are shown above are their messengers, come to lay their needs before the American people and bare the national secrets of their countries to the government at Washington that America may avoid the pitfalls that they found through the bitter experiences of the first three years of the war. They have brought to the people of this country an appeal for food, for munitions, for naval vessels, for soldiers, and for the Stars and Stripes on the battle fields of Europe.

From left to right these messengers are: Arthur J. Balfour, British secretary of state for foreign affairs; General Joffre, head of the French military advisory council and the officer whose mastery of military affairs saved France in the early days of the war; and M. Viviani, former premier of France.

For two weeks these representatives have joined with President Wilson and other United States officials at Washington in one of the most far-reaching councils of war in the world's history. They have consulted and advised with this government on the ways and means of most successfully conducting the war against Germany. Largely through this conference the efforts of all the nations now aligned against Germany will be coordinated with a view to early and permanent peace. And in large degree through this conference will come a coordination of national sympathies and ideals that will guarantee future generations against the inhumanities of war such as the present struggle has so well illustrated.

Government Will Mobilize Boys for Farms



The United States very soon will put into operation a definite organization through the bureau of labor at Washington for the enlistment of high school boys and the older grade school boys for work on the farms. The state of Washingon, through its department of education, bureau of labor and department of agriculture, will cooperate. Last Tuesday these state departments and the agricultural advisory council of the state held a meeting at Tacoma at which practical plans were laid for the work. The county superintendents, principals and city superintendents, many of the boys themselves and many farmers who need laborers are entering into the movement loyally. There are 10,000 or more boys of from 14 to 19 years of age in the schools of the state who will be affected by the agricultural preparedness move.

In a telegram from Washington, D. C., in reply to inquiry from The Washington Farmer, W. E. Hall, national director of the boy labor division of the department of labor, announced the plans for this state. His telegram to The Farmer reads as follows: "We will work through the state organization and boys' organizations where they already exist. Boys must be 16 and pass medical examination and be placed under competent leaders when worked in farm camps. Badges with United States seal will be given when a short term of service has been performed, and a bar giv-

Continued on page four.

Cannery Wants Lots of Beans

Gardening Is the Order of the Day Now; Lumber Mills Require Many Men, Leaving Boys to Do Farm Work

SOUTH BEND, Pacific County, Wash., May 2.—Every one is making garden. A new cannery is nearing completion in South Bend that will can fruit and vegetables. They want lots of beans. Farm labor is scarce. The mills are offering $3 a day for unskilled labor and it is almost impossible to keep sufficient help on the farms. Maybe the best solution to the problem will be to hire the school boys from 14 to 20 years of age to work after school hours and during the summer vacation. The weather is still cold and wet, only a few spring-like days. Early potatoes and peas are up. These with beans will constitute the most favored crops this season. Beef and dairy products are high in price. Eggs are 40 cents per dozen and will not get cheaper. Local radishes and onions have appeared in the markets.

MRS. WINNIFRED BUCKINGHAM.

Spraying Will Be Late.

HUNTERS, Stevens County, Wash., May 3.—Farm labor in this section is nearly equal to demands as the farms are small and a great deal of help is not hired. Wages are about the same as last year or a little higher. It is only on farms where much stock is kept or where dairying is engaged in that a hired man is kept the year around. Hired men are pretty well contented. Those, however, who board themselves and have families keenly feel the high cost of household necessities. The season is very late and most of the spring seeding of grain is yet to be done. Fruit trees are not yet in bloom and spraying will be much later than in average seasons. ELIAS NELSON.

Finance Seed Buying.

OLYMPIA, Thurston County, Washington, April 27.—Funds have been secured to help those who are willing to furnish land, work, etc., but are not financially able to buy seed. Data secured to date show great willingness to increase acreage wherever possible. Shortage of horse labor is a big factor in certain localities against such an increase. The great majority of farms here are small, one-man farms normally, and I do not believe it would be practicable, nor in many cases possible, to keep an all-year round man.

C. H. BERGSTROM.

Much Grain Reseeded.

LACROSSE, Whitman County, Wash., May 1.—The acreage of grain for this year is possibly slightly larger than in former years, with the bulk in spring grain. Very little fall wheat is left, possibly 20 per cent of what was seeded last fall. Some farmers estimate less than that. Winter wheat conditions are poor. Possibly 50 per cent of a normal stand. At least 175 per cent or more of this year's crop is spring seeding. Crops were put in in excellent shape and the worst drawback will be the extreme lateness of the season. The month of April was very wet and cloudy and cold, although the temperature at no time went lower than 29 degrees. The precipitation was 3.26 inches, being exceeded only once since 1884. In 1893 the precipitation was 3.52 inches. The cattle are in a very poor condition, as there is practically no pasture.

M. E. SCHRECK.

Promising for Dairymen.

VADER, Lewis County, Wash., April 27.—This is the most backward spring we have had for several years. There is still snow in the hills between Vader and the Columbia river. But little planting has been done yet on account of so much bad weather. Farmers are nearly all one month late with their spring work. The dairymen are the only ones here who hire help on the farm the year around. The hired man on a dairy farm has a good home, good board and usually lays up more money than the man who works in a mill or logging camp with larger wages. Many of the farmer's sons go to the logging camps to work, but they soon get shiftless going from camp to camp and are not much good for the farm after that. But few farm hands are thoroughly efficient. Wages are about the same as usual. Lands here are rapidly being cut up into small homes of five or ten acres, on which the family do most of the work. The men usually work in the mills or camps. Stock of all kinds got through the winter in fairly good shape. Hay is scarce and hard to find at any price. Butter fat is high. The coming season looks promising to the dairyman and the high price of butter fat will soon bring up the price of dairy cows.

S. S. WILSON.

Plant Many Potatoes.

MARIETTA, Whatcom County, Washington, May 2.—The high prices are having a tendency to make farmers raise larger crops. Most everybody has already started a larger field of potatoes this year than formerly. Persons in small towns and even in Bellingham that never before thought of raising vegetables have taken the idea of raising small gardens. It would not be practicable to build a home for a hired man as most of the acreage is too small in this vicinity. Farmers are looking for better weather now. In some places the ground has been too damp to seed. Rainfall for the month of April was 4 1-2 inches. S. B. MAYHEW.

Plan Food Increase.

CHIMACUM, Jefferson County, Wash., April 27.—This part of the county is not a grain country, but there is an increase in what is planted over other years. Potatoes will be about twice the acreage over other years, also hay and root crops will be greatly increased for the cows. Most everybody has planted a garden to increase the food production. I think that if every farmer would build a small home for a married man there would be less trouble in keeping men on the farms.

JOHN VAN TROJEN, JR.

Increase Tillable Land.

PORT ANGELES, Clallam County, Wash., April 26.—The recent high prices of farm products will encourage the farmers over here to spend considerable money for clearing land, and while all of this new area will not be available for this year's crop, it is estimated that producing soil will be increased about 5 per cent. The most of this will be planted in potatos, as raw land gives excellent returns in tubers. It could be made practicable for a farmer to build a small home for a year 'round hired man and his family, I think, but this is true in a general way and not in a hard-and-fast fashion, inasmuch as so many things enter into this phase of farm life.

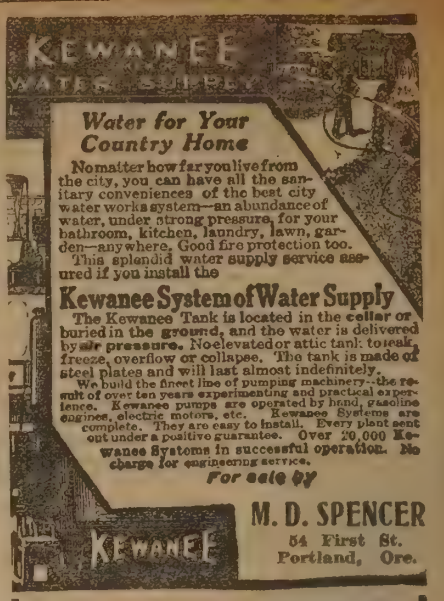
J. P. CHRISTENSEN.

Hired Man's Home Practical.

MONTBORNE, Skagit County, Wash., April 30.—As a result of the high prices farmers in this community are increasing the acreage of grain and hay crops, and also potatoes and garden vegetables. A larger amount of roots and tubers are being planted for feeding of live stock next winter than ever before and there are a good many silos being contemplated. Housewives are figuring on canning considerable fruit and vegetables. In order to increase our soil to a greater production we are placing greater stress on the preparedness of our seed bed and the selection of our seed, and also to supply the ground with such fertilizer as the soil is deficient in, which is principally lime. Where a farmer hires a man the year 'round it is practicable to build a small, comfortable house and let him have a garden spot on which to raise his own vegetables for table use. One can, as a rule, get a better farm hand and one that will be contented if provided with a home. There are a number of large dairy farms and chicken raisers in the Skagit valley who find it profitable to do this. As a result of our cold, wet spring very few farmers have more than a small portion of crops yet planted.

JOHN B. PETERSON.

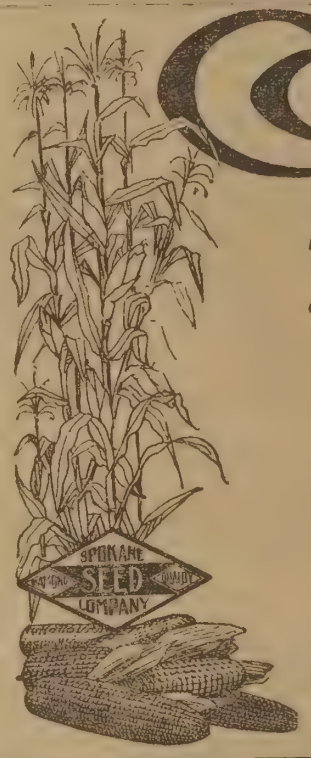
Plant Larger Acreage.



OMAK, Okanogan County, Wash., April 21.—There seems to be plenty of help for farmers and wages are about the same as usual. There is not much demand for farm help in the winter except where considerable stock is raised. The season is unusually late, but the soil is in good condition. There will be much larger acreage planted this spring. J. O. WOODS.

New York's Unique Burglar.

New York's unique burglar, the Count, is back. He takes only odd things that catch his fancy, regardless of their value. In his last haul he took a shark skin cigaret case and left a $500 snuffbox.



A CORRECTION

Last week's issue of this paper contained an advertisement of Vaughn's Portable Drag saw by the Washington Machinery and Supply Co. of Spokane, in which the price was quoted as $150 f. o. b. Spokane. The correct price is $140, a reduction of $10 from the former price. The Farmer is glad to make this correction.—Adv.

Don't Neglect Live Stock

World Is Threatened With Shortage of Meats

By E. J. IDDINGS.

In a recent issue of The Farmer attention was called to the necessity for carefully organized plans to effect the greatest possible agricultural production and wise use and distribution of products of the soil. This movement has received widespread support and effective measures for realization of its aims of the campaign are almost under way.

There is grave danger, however, that in the general desire to increase the supply of cereals and other staple foodstuffs the animal side will be neglected. The need of meat for food and of animal oils and fats both for household and army uses has been found in European experience to be of fundamental importance. It is a necessity from the standpoint of national effectiveness that we maintain live stock production during the coming months with special reference to quality.

There are several facts that point to a possibility of serious live stock shortage. In the first place, the homesteading of western range land has during the last 10 years operated to withdraw from grazing a large portion of the west's free range. This has operated to decrease the available supply of beef cattle and sheep. The hog situation was vitally affected by the low prices that prevailed 15 months ago and by the high prices paid for wheat and other grains during the last two years. In many sections of the west the number of hogs has fallen off more than one-half during the last two years. On a certain irrigation project, where an accurate census has been made, there are 46 per cent fewer hogs than one year ago.

In a former issue of The Farmer there was a statement of serious live stock losses in large areas of the western range territory. In some districts feeds purchased at four to 10 times normal prices have been a saving factor, but the total loss is unquestionably large and very serious for the people of the nation, in view of the vast enterprise in which we are now engaged. More losses are almost certain to take place. Horses are thin, and in some districts will not be able to endure hard spring service. Cattle, weakened by starvation and with vitality at a low ebb, will go too early on "washy" spring grass, and loss under such conditions must be expected. Lambs have not had sufficient milk from ewes that are under-nourished, and lamb weights can hardly be expected to be normal. Lambing percentages run from 10 to 50 per cent below normal, depending on location, available feed for ewes and shelter and care.

This is all of utmost importance in relation to our food supply problem. Further and additional difficulties, however, seem to be facing the stockman. Hay and other feed supplies are probably at the lowest ebb for many years. In the face of no surplus to be carried over the supply for the coming fall and winter does not now promise well. Pastures are late, and, due to lack of other feed, will receive hard use and early fall feeding may be necessary. Due to high grain prices and the national need of cereal production,

Purebred Jerseys Average $100

Shady Lawn Dairy Closes Out at Farm Near Fairbanks

Compelled to quit the dairy business in eastern Washington largely because of inability to secure competent and permanent help, A. G. Woodward of Fairbanks, Wash., disposed of his entire herd of 40 purebred Jerseys and about the same number of good grade cattle at auction on May 10.

The purebreds averaged slightly less than $100 each, a comparatively low price, while the grades averaged slightly above $70.

The crowd was small, presumably, because of the rush of spring work. Only persons interested directly in the purchase of dairy stock were in attendance.

J. W. Hughes of Forest Grove., Ore., conducted the sale.

The sale marks the passing of one of the excellent dairies in the Inland Empire, built up to a remarkable standard of efficiency by Mr. Woodward. Some animals of excellent records as milk and butterfat producers were among those sold.

The following is a list of the registered stock sold, buyers, prices, etc.:

Margie of Shady Lawn farm 269187, calved March 15, 1910—J. H. McCoy, Oakesdale, Wash., $125.

Doris of Shady Lawn farm 372861, calved August 30, 1914—J. D. Carson, Pullman, Wash., $120.

Dolly III. of Shady Lawn farm, calved January 18, 1916—J. D. Carson, $55.

Polly's Jude 285833, calved October 11, 1910—J. D. Carson, $120.

Jersey Isle Hazel 283714, calved December 10, 1908—J. D. Carson, $100.

Ethel of Shady Lawn farm, calved April 8, 1915—Waikiki farm, Spokane, $75.

Molly II. of Shady Lawn farm, calved November 17, 1915—J. D. Carson, $60.

Miss Isabelle of Shady Lawn farm 341447, calved September 17, 1913—Fred Blood, Palouse, $87.50.

Florence of Shady Lawn farm 259531, calved October 15, 1909—Fred E. Middlestodt, Malden, Wash., $107.50.

Golden Louise's Lois 331408, calved April 6, 1913—T. S. Griffith, Spokane, $146.

Lisbet of Shady Lawn farm 341449, calved October 4, 1913—J. A. Anderson, Colfax, Wash., $85.

Suzanne of Shady Lawn farm 345125, calved October 1, 1914—T. S. Griffith, $112.50.

Cornitia 285837, calved May 18, 1911—J. D. Carson, $115.

Nelly of Shady Lawn 299340, calved November 6, 1911—Waikiki farm, $105.

Santa Claus' Josephine 374631, calved January 4, 1915—J. Hepton, Spokane, $60.

Nelly's Gilda of Shady Lawn 341450, calved October 7, 1913—Waikiki farm, $150.

Cherry of Shady Lawn farm 306230, calved May 14, 1912—J. A. Anderson, $90.

Madge of Shady Lawn farm 269186, calved March 12, 1910—T. S. Griffith, $130.

Janch of Shady Lawn 299341, calved December 14, 1911.—T. S. Griffith, $105.

Dorothy of Shady Lawn farm 306231, calved May 29, 1912.—T. S. Griffith, $150.

Ruby of Shady Lawn farm 269190, calved July 15, 1910.—C. W. McCabe, Oakesdale, Wash., $80.

Rosa of Shady Lawn farm 306226, calved March 11, 1912.—C. F. Eigenberry, Spokane, $35.

Golden Louise II. 379733, calved August 21, 1915.—Waikiki farm, $95.

Shady Lawn Daisy 285835, calved April 2, 1911.—Waikiki farm, $140.

Bridget of Shady Lawn farm 317570, calved September 24, 1912.—G. Hepton, $100.

Peggy of Shady Lawn farm 345124, calved September 18, 1914.—G. Hepton, $67.50.

Lady Betty of Shady Lawn farm 317517, calved October 21, 1912.—G. Hepton, $80.

Juliet of Shady Lawn farm 345123, calved May 25, 1914.—T. S. Griffith, $100.

Pride's Blue Bell 285838, calved July 8, 1911.—J. D. Carson, $112.50.

Edith of Shady Lawn farm 379932, calved June 9, 1915.—G. Hepton, $55.

Emeline of Shady Lawn farm 379434, calved September 14, 1915.—J. D. Carson, $95.

Gertie of Shady Lawn farm 379735, calved January 9, 1916.—J. D. Carson, $50.

Prinn of Shady Lawn farm 317572, calved November 6, 1912.—J. D. Carson, $135.

Judith of Shady Lawn farm 379739, calved October 18, 1916.—Waikiki farm, $51.

Dorcas of Shady Lawn farm 379740, calved November 16, 1916.—Waikiki farm, $51.

Nettie of Shady Lawn farm 372862, calved October 28, 1914.—Waikiki farm, $115.

Heifer, not catalogued, to Fred Blood, $65.

Bulls.

Sultan of Rockland 121150, calved October 20, 1913.—T. S. Griffith, $205.

Jersey Isle Hazel's Sultan 151014, calved August 3, 1916.—E. C. Scott, Harrington, Wash., $40.

Doris' Jolly Boy 151013, calved August 1, 1916.—Fred Blood, $40.

Crop 480 Acres as Their "Bit."

Yakima Republic: Plowing 480 acres of sagebrush land with as large a number of tractors as can be secured and working the tractors in 10-hour shifts day and night are the means taken by W. L. Lemon, J. H. Dills and W. A. Bell to do their "bit" in the matter of increasing the amount of land under cultivation. The farm to be operated by the three men is 12 miles west of Wapato and composed entirely of raw land. All of it is to be planted this season, the sections first plowed being put into grain and those prepared later put into fall vegetable crops.

Only Exclusive Turkey Farm.

Press, Waterville: Douglas county has the only exclusive turkey farm in the state of Washington. It is owned and run by Edward Stauffer, who lives on the river and whom everybody knows. Ed has the business down to a science and last year raised over 1000 turkeys after losing 600 or 700 from the depredations of coyotes and bobcats.

The Washington Farmer Will Always Be Found Exposing Swindling Schemes

To the Editor of The Washington Farmer: It may not be without interest to you to know of the very general approval manifested by the farmers of this county of the stand you are taking in exposing and condemning the various schemes practiced to cheat and defraud the man on the farm. Every man with whom I have talked, or who has expressed his views in my presence upon this phase of your policy in publishing a paper for the farmer, has expressed his very great satisfaction at finding at last a publication willing to stand out boldly against all such schemes and practices.

They realize that as a class they are so situated that it is practically impossible for them to thoroughly investigate and dig up the true condition and ascertain the actual facts in regard to the many propositions that are and will be put up to them. They feel that now they have some one upon whom they can depend who is able to make these necessary investigations and fearless and independent enough to publish the result. I can assure you the people of this section are with you. Many of them know from personal investigations made a number of years ago that what you have said of the Northwest General Trading company is true without a doubt. They also feel that what you have said as to the $21,500 sale at Portland was also justified.

Mead, Wash. GEORGE HINGSTON.

Washington Portraits No. 15.

W. W. Wrenn.

W. W. Wrenn of Castle Rock is considered one of the most substantial farmers of Cowlitz county, having the faculty of combining common sense with hard work and making them win. He has lived in the county for 12 years and the state a lifetime, and his farm buildings are the best in that part of the country. Mr. Wrenn is president of the Castle Rock Farm Loan association and a prominent member of the grange.

The next in the series of Washington portraits will be that of C. D. Mitchell of Richland, and will be given in next week's issue of The Washington Farmer.

Publish Dairy News

Inland Association to Run Paper

The Inland Empire Dairy association, formed several weeks ago in Spokane, has announced that very soon it will begin the publication of a monthly dairy newspaper to be known as The Inland Empire Dairy News. The paper will be sent to the 200 or more members of the association, and to large numbers of other dairymen of the Inland Empire whom it is desired to enroll in the association. The paper will carry news and information designed to assist the dairymen in building up their industry, especially waging a campaign looking toward better prices for dairy products to the producers.

"People see shoes and bread and flour and meat boosted in price from 50 per cent to several hundred per cent and do nothing more than complain a little," says B. E. Smead of Opportunity, Wash., secretary of the Inland association. "But let the dairymen raise their price a few per cent and they make organized protest. Nevertheless, the dairymen must secure more for their milk or go out of the business, for a great many of them have been operating at a loss for several months. The people must pay the increase or do without milk and cream, for the dairymen cannot produce them for the old prices." Secretary Smead will be editor of the Dairy News.

Get Busy With Spade and Hoe.

Monitor, Monroe: It is up to you small town man and woman, boy and girl, to get busy. Green grass and smooth lawns are nice to look on, but they will not fill your stomach next winter. Get busy with the spade and hoe.

A Chance to Demonstrate.

Times, Sedro-Woolley: Culturists who never cultivated anything but roll-top desks and chairs to match now have an opportunity to demonstrate their knowledge of agriculture by raising a patch of spuds.

Washington Has "Soldiers of the Soil"

Farmers of State Respond to the Call for Greater Food Production

The Washington Farmer sent out a circular letter to representative farmers over the state asking: "Are you or your neighbors attempting to increase your crops this year? If so, what crops, and how?" The following replies will serve in the nature of pointers as to the hearty response the farmers of the state are making to the urgent call for food preparedness:

EASTERN WASHINGTON.

GEORGE DE BOLT, Adrian — There will be one-third more wheat put in this spring than usual. Wheat is the main crop in this part of the neighborhood. All the winter wheat is being sown over.

C. M. BABCOCK, Glenwood—We are endeavoring to increase in wheat, oats, hay, pork, beef and spuds.

E. O. RICE, Prosser—It does not look at this time as if a much greater crop than usual will be raised in this vicinity, the reasons are scarcity of help, high price of seed and unfavorable weather conditions. Considerable work is being done to get the farmers to raise more, but the conditions on these irrigated farms do not promise an increase in crops.

DAN KREHBIEL, Lind—Every farmer is seeding as much ground as possible and it seems also that the seeding is done very carefully. High prices for farm products in the last few years have increased the acreage for wheat in our vicinity 10 per cent. This year considerable land not cultivated for a number of years will be plowed again.

DANIEL MICHEL, Latah—We are attempting to increase our crops, as we will not summer fallow much this year. We will raise field peas and potatoes on land which we otherwise would leave idle.

L. H. HOWELL, Rosalia—There is some movement among the farmers here to increase the farm production to a limited extent, especially along the line of growing peas.

OTIS ROBINSON, Lantz—We are trying as we always have to produce all we can—wheat, oats, barley, rye and potatoes with some corn.

M. R. FOX, Hatton—The farmers here are doing all they can to produce a bumper crop of wheat this year, and with an abundance of April rains prospects are good. Seeding is now done and farmers will summer fallow all they can do profitably for the next crop.

GARFIELD COX, Mansfield.—In this locality we are not increasing our production this year to any extent for two reasons. First, any increase in crops must be provided for a year in advance; second, most of us are now producing all we can with the scarcity of labor.

ED TIEDT, Soap Lake—I have only a quarter section to farm. I am putting in about 30 acres of oats and 10 acres of corn more than before. My neighbors are seeding over quite a little winter wheat that is making them a little late.

K. A. SPIETH, Route 2, Spokane—I am more than doubling the acreage of crops and I think my neighbors are putting in a maximum crop also this season. I am planting 20 acres to peas.

J. S. KLEMGARD, Pullman—Some attemps would have been made to increase acreage this season, but on account of the lateness of spring I doubt if it will be up to the average.

R. V. PERINGER, Belmont—Every-

(Continued on page twelve.)

Government Will Mobilize Boys

Nationwide Enlistment for Farm Labor Is United Plan

(Continued from page one.)

en for a year. Will announce soon the director for your district, to be located at Seattle, and a state director from state council of defense. Local and federal agricultural departments will cooperate in finding places for workers."

Mrs. Josephine Preston, state superintendent of schools, has announced that the department of education will not oppose an extension of the summer vacation through September and part of October if it is found necessary to allow the boys to work longer assisting in harvesting the crops. Commissioner E. F. Benson of the state department of agriculture, and Commissioner C. H Younger of the state department of labor, express hearty approval of the movement, and are taking active part in putting the plans into effect.

Henry M. White, immigration inspector at Seattle, has taken an active part in the work of enlistment of both boys and girls in the schools of the state. He has asked that a special day, probably May 18, be set aside as enlistment day in all the schools. He declares that the state should have 25,000 boys and girls actively enlisted in food production work.

SCHOOL PRINCIPALS FAVOR.

In last week's issue of The Washington Farmer an article was published advocating the enlistment of high school boys. In reply to inquiries as to the practicability of the movement, a large number of school principals and superintendents expressed warm approval. Extracts from some of the replies follow:

H. F. Hunt, Tacoma high school—I feel very sure in my own mind that the plan is a good one, providing we are not too optimistic in our belief that all high school boys, or that any large per cent of high school boys, would make good. I know from actual facts that many of the boys of this high school have made good, and do make good, every summer on the farms of western and eastern Washington, but there are a good many boys in every high school who have never been tested anywhere yet by the requirements of any serious job. I am, of course, speaking from the standpoint of a large city high school.

R. T. Hargreaves, North Central high school, Spokane—I get quite varying reports from the farmers. Less than a week ago one man told me that he had two high school boys on his ranch last year and they were no good as farm workers. On the other hand, we are constantly receiving inquiries from farmers asking us to recommend boys who are willing to go out on the farm for the summer.

Otto L. Luther, Queen Anne high school, Seattle—I think your suggestion an excellent one; I think the boys will respond generously to the appeal; I think the high school boys under proper direction would prove serviceable to the farm and should, of course, command a reasonable wage. An adequate organization is absolutely indispensable in carrying out the scheme.

E. T. Robinson, Toppenish—There are thousands of high school boys in this state who would gladly respond. The average high school boy can and will render a valuable service on the farm if given a chance.

F. E. Schmidtke, Hoquiam—The average high school boy can do about two-thirds of a man's work if he has good, common sense and ambition. The only question of success that comes to me as I write is whether any considerable number of the boys would get "cold feet" when their hands got sore and their backs ached the first few days of breaking in.

A. E. Heaton, Elma, Grays Harbor county—Our boys all have their jobs for the summer.

H. J. McMacken, Marysville, Snohomish county—Our boys do know how to work and would make good at farm work.

A. C. Roberts, Everett—At a recent high school assembly we asked for a showing of hands of the boys who would be willing to go east of the mountains and work this summer and about 50 boys responded.

WHAT THE FARMERS THINK.

The following are extracts from some of the letters received from farmers on the subject of high school boy labor:

Philip J. Ochs, Winona—Boys from 16 to 18 years are the stuff for me, knowledge or no knowledge of farm work. As long as a man keeps cool and don't get rattled things will go all right. About eight years ago I worked some boys. I kept one extra chore boy to change off with the other boys when they got too tired or a little sick. In harvest I gave them a lunch about 9:30 o'clock in the morning and again about 3:30 in the afternoon, and things went finer than silk. The high school boys are all right. I will try the boys this summer and I know they are all right.

H. W. Desgranges, Kennewick—A willing boy 16 to 18 years old will fit in in many places on the farm, especially on the smaller farms, where diversified farming is carried on. He can soon learn to run the cultivator or wield the hoe, feed the pigs and milk the cows, and in the strenuous outdoor life he can soon develop an amazing appetite and in the fall he will return to his studies with some money in his pocket and with a greater value in robust health.

F. C. Beindorf, Richland, Benton county—I could not afford to pay over $12 to $15 per month.

L. J. Campbell, Walla Walla—I find that there will be about 150 boys here ready to go to the fields as soon as school closes. You can bank heavily on the boys this year. If a boy ever wanted to make good it is now.

A. C. Eriksen, St. Andrew, Douglas county—Harvest here is pretty hard work even for a grown man. One or more boys in a crew makes it harder on the rest of the crew. I would suggest that a dairy country would be a better place to send boys.

Will Give Credit for Work on Farms

Boys who lose time out of school this year working on the farms to assist in the food preparedness campaign, will be given full school credit for it. This is the announcement of Mrs. Josephine Preston, state superintendent of schools, in a statement made to The Washington Farmer. Mrs. Preston is enthusiastic over the possibilities of farm labor from the school boys, especially of the high schools. To the Farmer she says:

"With approximately 14,000 boys of 15 years of age, or over, and with the fine spirit of enthusiasm in this state regarding the agricultural production, these high school boys should be able to contribute valuable service to the food production of our state.

"Full school credit will be given every boy who renders an honest service in the harvesting of this year's crops."

Both Farmers and Boys Must Bear Responsibility

Under the systematic methods being put into practice for the enlistment of workers and farms needing their help, the coordinated authorities in charge are placing blanks in the hands of both the boys and the farmers. These blanks, when signed, virtually constitute contracts between the workers and the employers.

WHAT THE BOY MUST DO.

The following are the points of information which the boy enlisting must give:

Name, address, name of parent or guardian, name of school, class, age, height, weight, physical condition, experience if any previously had in farm work, what other kind of physical labor he is used to, and what particular line of farm work he is best suited for.

The blank which he signs must also bear a statement of the wages to be paid and a pledge of faithful service similar to the following, which is being used in some states in these exact words:

Wage Scale—The following wage scale is established: Class A. (Able bodied boys 16 years old or over, who have had satisfactory farm experience) shall receive a minimum wage of $27.50 per month and board, or if capable of doing regular farm or harvest hands work shall receive going wage for the same. They shall receive going wages for any piece work, such as picking apples by box, etc.

Class B. (Able bodied boys 16 years old or over, who have not had satisfactory farm experience) $17.50 and $22.50 per month and board respectively for the first and second month's service or the going wage for piece work or work in which the place or regular farm or harvest hand is satisfactorily taken. After two months' satisfactory service all class B men shall be graduated to class A.

Class C. (Boys and girls of any age not capable of doing regular farm work, but qualified for berry picking, work in canneries, etc.) shall receive going wages for the class of service in which they are employed.

Enlistment Pledge—I hereby enlist as a member of the United States boys' working reserve and pledge my services to the country as a farm laborer, to the end that the nations now engaged in war for the preservation of democracy may be adequately fed, I will continue my regular school duties while school is in session unless assigned to active service, but I will hold myself in readiness to respond immediately to assignment to duty. I am willing to accept the wage scale as printed hereon. I offer my services in the spirit of patriotism. I will stay with the job and endure hardship like a patriotic American.

WHAT THE FARMER MUST DO.

The blank which the farmer desiring help must sign in order to secure the help of enlisted boys must contain the following information:

Number of men (or boys) wanted, kind of farm work to be done, approximate dates when such help will be needed, railroad point to which employe should go, and the location of the farm.

The farmer must also sign a statement pledging reasonable wages and working conditions, the following being the exact wording of the blank in use in certain states:

"I agree to pay at least the minimum wage scale for men enlisted in the Boys' Working Reserve, and to provide clean, wholesome quarters and sufficient clean, wholesome food for those in my employ and not to require to exceed 12 hours' actual labor per day."

He must also give the names of two neighbors as reference to his character and means of properly caring for the persons whom he employs.

Schoolgrounds to Potatoes.

Empire, Waterville: The boy scouts are going to plant the schoolgrounds to potatoes, and to encourage them in this work the Douglas County bank has loaned them the money, without interest, to buy the seed.

THE BEST FARM PAPER.

To the Editor of The Washington Farmer: I will say that The Washington Farmer is the best farm paper that I ever read. It gives me great pleasure and good information to read its columns. I think all farmers should read it. It would do them good. I can not praise your paper too highly.—L. S. WILSON, Vader, Wash.

Cooperative Egg Association Wins

The recently organized Washington Cooperative Egg and Poultry association, with headquarters in Seattle, has already begun to catch its pace. Its membership has increased steadily until now there is an enrollment of about 550, while the eggs handled have increased from 500 cases the first week to nearly 1000 the last week of April.

"It is too early to say that our fight is won," says J. H. Guffey, general manager, "but nothing but an entirely improbable setback can keep us from making good even beyond the hopes and expectations of our charter members. There has been some unpleasantness in the course of this growth, naturally, but we are not putting much emphasis on that. The point is that we are making good, and that we are doing it by handling the best eggs procurable anywhere, by grading them honestly, and by conducting our business on business principles. I think it is safe to say that we have held the price for our product up from one to two cents from the very first."

Mr. Guffey is just the kind of man to lead an organization of this sort to victory. He has had a broad and successful business experience; he is a farmer, as well as a business man; and he admits that he is enough of an Irishman to enjoy a little argument, when competition forces him into it. It is safe to say that under such capable generalship and with the loyal support of all the members, the association will accomplish for the poultrymen of Washington a work which has long been needed.

Washington Must Face Big Issue

Governor Brings Message From President Wilson to People of This State

President Wilson, through Governor Lister, has thanked the people of this state for their activity in assuming their share of the responsibility of the present international crisis, and urges that every man, woman and child bear with increasing loyalty an increasing responsibility in the cause of their country and humanity.

The governor has just returned from Washington, D. C., where he took part in the national conference of governors and also conferred with President Wilson.

Governor Lister spent a few hours in Spokane Sunday, May 13, and delivered his message to an audience of 3500 persons who packed the armory at that city. He left immediately for Olympia to attend to matters of state and begin a vigorous campaign through all means at his command to arouse the people to a full sense of their responsibility and of the gravity of the situation that has been thrust upon them.

Situation Is Grave.

That the war situation is extremely grave was the governor's central message, and demanded the utmost that the United States could give in the way of men, munitions and foodstuffs. He declared that the shipbuilding resources of the United States would be operated at maximum capacity; that the movement for the creation of a large and effective army would be carried to completion as rapidly as possible, not only to have a large force for home service but to place a powerful force with the allies in Europe; that the railroads were doing their utmost to facilitate transportation of necessary articles; that every waste of every ounce of foodstuffs or of materials or strength of all kinds must be stopped, and that every man and every woman and every child able to do manual labor should do some little or great piece of work to produce something needed.

Must Have Big Crop.

He said that conditions at the present time in this state indicated a short crop, but that the people must not allow such conditions to reduce the output. He urged the need that every available acre of land be seeded to something of food value, and that no land be allowed to lie waste. He said that it was estimated that there were a million family gardens in the United States this year, and leaned over toward his audience and shouted the question to them: "Have you planted yours? Have you done your little part? If not, you are not doing what you might to aid your country in this grave crisis."

He called attention to the large amount of fruit that goes to waste in Washington annually, and urged the planning now of facilities to can or dry this fruit for use when it will be greatly needed next winter, probably in this country as well as in the allied countries.

Prevent Household Waste.

He said that official estimates placed the household waste of foodstuffs in this country at over $700,000,000 a year, which would be an average of $35 a family, and declared that the housewife who used special care in preventing waste now was doing a very vital service to the country.

It is considered probable that May 28 will be designated by the president as registration day for the men who will be subject to army service under the conscription bill about to be enacted by congress, and Governor Lister announces that, in conformity with the president's wish, he will declare army registration day a legal holiday. He said he expected the conscription bill to pass soon, with the ages of eligible men fixed at 21 to either 30 or 31 years.

To Give President War Powers to Control Food Stuffs Situation

Chairman A. F. Lever of the house committee on agriculture has introduced in the house a bill supplemental to the measure previously introduced by him for carrying into effect the recommendations of Secretary of Agriculture Houston as to the food situation.

The new bill deals with all the necessaries of life, including foods, feeds, shoes, clothing, fuel and articles required for their production. The measure is intended to meet only the present emergency. It is limited to the period of the war and a sufficient time thereafter for readjustment. It is based on the war clauses of the Constitution and is applicable throughout the country, irrespective of state lines. The purposes are

To stimulate production;
To reduce rates;
To clear the channels of distribution;
To prevent hoarding;
To assure fair prices;
To eliminate injurious speculation;
To prohibit evil practices on exchanges, and
To protect public against extortion.

The suggested legislation recognizes that the war will disturb the normal course of trade. Accordingly it provides machinery

1. For stimulating production and regulating distribution so as to assure a fair profit to those entitled to it.

2. For preventing the exploitation of necessaries of life by those who aim to take advantage of the war emergency to amass unearned fortune.

The mere conferring of the more extreme new powers, it is hoped, may be sufficient, without its becoming necessary to exercise them. There is nothing in the measure to disturb business activities. If it hereafter appears essential to exercise the new powers, provision is made for prescribing the limitations on the conduct of these activities with such certainly that those affected should experience little difficulty in meeting the requirements. On the other hand heavy penalties are provided for those unwilling to fall in line.

The president is empowered

To effect preference movements by common carriers in order to assure an adequate and continuous supply of necessaries;

To prescribe limitations, regulations of prohibition upon the use of foodstuffs in the production of alcohol and of alcoholic and non-alcohonic beverages, and may require reduction of the alcoholic content of beverages.

To requisition and operate by the government, if it be essential, factories, plants, mines or other establishments engaged in producing necessaries, just compensation for the use being provided;

To purchase, produce or otherwise procure necessaries and sell them at cost;

To compel holders to disgorge and put on the market necessaries held by them in excess of amounts reasonably needed to supply their legitimate individual or business requirements for a reasonable time;

To regulate exchanges, including their practices, quotations and the like, so as to avoid their employment as instrumentalities to effect unjust market manipulations, injurious speculation and undue enhancement of prices;

To fix minimum prices, assuring fair and just returns to producers or owners, whenever, in an emergency, he finds such action essential in order to encourage greater production, the government guaranteeing producers that they shall receive not less than the minimum price prescribed for their products;

To prevent the flooding of American market with excessive importations to defeat the minimum price plan;

To fix maximum prices of necessaries, if essential in order to prevent extortion; making it unlawful thereafter to deal in the article at a higher price.

The secretary of agriculture is authorized

To establish and enforce standards for grades of foods, food materials, feeds, seeds, other agricultural products and fertilizers and for the capacity of their receptacles;

To require proper labeling so as to prevent deception;

To license and control the manufacture, storage and distribution of foods, food materials and feed;

To prescribe the percentages of flour which shall be milled from wheat and, when essential, to increase the food supply to regulate the mixing of wheat, wheat flour or other wheat products with any other cereal, cereal flour or material of vegetable origin in the production of food.

With these objects in view the bill vests wide authority in the government to control the situation.

In last week's issue some interesting opinions from representative farmers of the state concerning price control were given by the Farmer. Others continue to be received and will be published in a later issue.

More Appraisers

Are Named for Farm Loan Bank

A total of 12 farm land appraisers have now been announced to place valuations on land in the northwestern states for the purpose of determining the amount of loans that may be negotiated under the federal farm loan bank organizer at Spokane.

The list of appraisers so far, with others probably to be announced soon, at least for Idaho, which has only one up to this time, are as follows:

Washington: C. B. Kegley, Palouse; A. D. Davison, Stevenson; T. O. Morrison, Olympia; and T. D. Davies, Everett.

Oregon: V. C. Brock, Hood River; Curtis E. Widdoes, Klamath Falls; Clifford K. Crosno, Toledo; S. A. Sanford, Roseburg, and William Galloway, Salem.

Montana: W. D. Graves, Missoula, and T. S. Hogan, Billings.

Idaho: C. E. B. Roberts, Rupert.

Pea Contracts With Farmers

Depend on Fairness and Honesty of the Seed House

"I would like to know your opinion of the contract County Agriculturist Shinn is putting up to the farmers on behalf of a seed company for the growing of peas," writes George Hingston, a well-known Spokane county farmer and former master of Pomona grange.

"I refused to sign it as altogether in favor of the seedsman," continues Mr. Hingston, "and was astonished that Mr. Shinn should present such a contract to the people whose interests he is supposed to be looking after, and is paid for. I believe Mr. Shinn is perfectly honest in the matter, but feel he should be set right. As a personal friend of his, and instrumental in a measure in having him employed, I would like to see him with a better contract for the farmer."

The Farmer has examined the contracts in question. In one of them the growers—

"Agree that if the seeds delivered by me are an acceptable sample and of satisfactory vitality, but require further cleaning, milling or hand-picking in order to make them suitable for seed purposes, ——— (the seed house) may do such extra work at their own expense and settlement shall be made at net weight after such cleaning, milling or hand picking; provided, however, that if the said seeds delivered by me are in such condition that they can not be made acceptable and suitable for seed purposes without an unreasonable amount of labor and expense ——— (the seed house) may reject them and shall not be made liable for any portion of them."

The grower further agrees to plant under this contract such seed stocks only as shall be furnished me by ———, which shall be returned to them out of the crop therefrom when delivered, and that said seed stocks and the crop therefrom shall be and remain at all times the property of ——— (the seed house) and I will in no wise dispose of any portion of them except as provided in this contract, and should the crop through any legal process or any other cause pass from my control ——— may take possession of same wherever found."

Under another clause of the contract "it is mutually agreed that all the splits, damaged grains or other material removed from the crop in order to make it a merchantable sample and suitable for seed purposes, shall be the property of the party to this contract removing it."

Under this contract the grower undoubtedly puts himself at the grace and mercy of the seed firm, and much will depend on the fairness and honesty of the contracting firm. It constitutes itself the sole judge of the quality of the crop. It could winnow out half or any other percentage of the delivered product, pay nothing for the rejected part, and then sell it for table food or animal feed.

Or it could pretend to reject a large part of the product, pay the grower for only a fraction of his crop and yet sell it all as merchantable seed.

Of course an honest house would not resort to such base trickery, and we do not think that any reputable seed house would practice such swindling methods. But the opportunity is there under the contract.

In other words, the grower who signs this contract is in pretty much the same situation as a grower of farm produce who consigns his products to a distant commission house. Everything turns on the uprightness of the firm at the other end. If it wants to eucher the grower it has abundant opportunity to do it.

Another contract form offered by another seed house provides that—

"The crop shall at all times remain the property of the party of the second part, and he or his agents shall have the right at any time to enter the field and make such examinations, selections or rejections as they shall deem necessary for the betterment of said crop, and shall not be liable for any damages done by so doing. Said party of the second part also reserves the right to reject any and all crops that do not show an 85 per cent vitality test; and at any time there is any dispute over vitality of any crop, a sample of said crop shall be sent to the agricultural department of the state in which crop was grown for test, and this report shall be final and binding to both parties to this contract.

"The party of the first part agrees that he will not grow any crop of like nature for any other seed house during the life of this contract; that he will properly cultivate and harvest crop in a thorough and workmanlike manner; to thresh and clean as well as can be done by ordinary farm machinery the entire crop without feeding, wasting or reserving or allowing any portion of said crop to pass from his possession except to be delivered to the SEED CO., to whom complete delivery shall be made at such time as shall be notified and between August 1 and December 15, 19....

"If from any cause the crop should be destroyed, said party of the first part agrees to pay to said party of the second part the amount the seeds comes to at the contract price for crop. It is mutually agreed that all covenants and agreements herein contained shall extent to and be obligatory upon the heirs, executors, administrators and assign of the respective parties to this contract, and that all of the above agreements shall be construed and be adjustable according to Michigan laws."

Suppose the seed house rejects a crop under this contract, or pretends to reject it. What then becomes of the rejected product? Suppose the

The A B C of Road Construction

Two Implements Within the Reach of Every District

By FRANK W. GUILBERT,
Chairman Executive Committee Washington State Good Roads Association.

V.

Two implements within reach of every district, no matter how poor, are a light grader and a split log drag. The grader will cost around $225 and the drag about $5 if made at home.

Without these two tools it is very difficult for any district to keep their roads in any kind of shape.

The grader is for bringing the material from the sides of the road to the center and "turnpiking" the road. This tool, in fact, builds your road, shapes it and puts it in such condition that the drag will keep it packed and in very good shape nearly all the year. Too often drags are used on roads which are not shaped up, and when results are not forthcoming the operator condemns the tool. It must be used persistently and intelligently. No road should be dragged when dry. Gravel can be dragged during a rain. Clay possibly two or three days after the fall of rain, and the other soils range in between. Just as the soil begins to show signs of drying out is the time to use the drag. The "puddling" of the road is the desired result you are after. Each process of dragging after a rain makes your road surface more resistant to the next rain. The drag should have a trail in every community. It will help a lot. Just because it happened to rain soon after you have done the job, don't quit, do it again. Twelve draggings a year, two round trips each time, will only cost you $15 a mile. That is less than you can get results for by any other method.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

The Farmer Wants Closer Relations With the Consumer

Senator Nelson of Minnesota is usually a pretty level-headed, clear-thinking old farmer, but he slipped a cog in a recent senate debate on the high cost of living.

Senator Borah of Idaho had just declared that if the war lasts two years, and extraordinary and sustained effort were not made to meet the food problem, the whole world would face famine conditions. He attacked the packers, saying they made enormous profits, and added that food speculation would not be ended until the speculators are "put in stripes behind the bars."

Then the Minnesota senator got off on the wrong foot. "The packers are getting big profits," he said, "but we farmers and stock raisers, too, are getting them. I sold an old, superannuated cow for $50 or $60 for which I would have been glad to have gotten $10."

In a False Light.

Assertions like that, made in high places and coming from men who are supposed to know what they are talking about, put the American farmer in a false light before the public. He is classed in with the packers as part of a combination that is bent on holding up the consumers. In effect Senator Nelson held the farmers up as saying cynically, "Let the packers and speculators alone; give them a free hand, so long as we can get good prices for our products."

Unfortunately there is always an element in the big cities that has an ever-willing ear to listen to unfair and libelous attacks on the farmer.

Wants Fewer Middlemen.

The truth is that the men and women who feed the nation have nothing in common with the speculators who have grown wealthy by shoving up prices on the consumers. The farmer wants closer relations with the consumer. He wants elimination of unnecessary middlemen. He knows that in the long run he also must pay heavy toll toward the great fortunes amassed by lucky speculators. He would be delighted if he could be assured of prices over a range of years that would maintain himself and family in a fair degree of comfort, let him educate his children and lay by a moderate saving for his old age.

His Occupation Is Hazardous.

Mining probably excepted, his occupation is the most hazardous in the land. He must war perpetually with the elements—with winter frosts, with springtime floods and summer drouth; with insect pests and animal diseases.

When he plants his crops and puts in his labor he can never know what the markets will be. He may have to sell, and often does, his products at prices which fall short of the cost of production.

Against these cares, risks and losses he must have an occasional fat year. It is the only thing that keeps going the great agricultural industries of the world. Take that enticement away and the world would soon go hungry, sure enough.

Quarter Billion Dollar Grain Loss

There is no way of accurately checking up on the actual amount of grain wasted in this country by preventable means every year, but it is enormous. It has been estimated in a semi-official way as high as $250,000,000, a stupendous sum, but altogether possible in the light of the large number of known wastes.

Destructible pests prevent much grain from reaching maturity. In the process of harvesting heads of grain are allowed to fall to the ground and machinery shatters out much of it. Threshers blow much of it into the strawstacks. It is often put into sacks with holes or with the sewing improperly done. Granaries and wagon beds and warehouses have holes or cracks where leakages occur. Mice and rats are allowed to multiply and feed upon the waste grain in the fields and in the storage quarters. Much grain is converted into intoxicants, which many people are agreed is a waste of its food value. Millers convert only a part of the grain into flour, disposing of the other parts as mill feed. In live stock feeding careless methods, such as poor feeding mangers or racks and over-feeding at times result in considerable losses.

Some of these losses are inevitable, but many can be prevented by care. This season, when the world is calling for the maximum output of the farms, every producer and every shipper and every miller and every stockman should make special effort to save what is produced. Stop the leaks. In his message to the people of the United States recently President Wilson made a declaration that is admirably applicable in this connection. He said: "This is the time for America to correct her unpardonable fault of wastefulness and extravagance." It is unpardonable for any one to waste food material either through carelessness or extravagance.

Filling Uncle Sam's War Chest

"War borrowing leads to extravagance; war taxation leads to economy."

So affirms a special committee of the chamber of commerce of the United States that was charged with the task of formulating a schedule of war taxes for recommendation to congress and the president.

The United States ought to take a lesson from the mistakes of England. "We have gone wrong from the very start," declared Sir Alfred Booth, chairman of the board of directors of the Cunard Steamship company, at the recent annual meeting of that company. "We have borrowed where we should have taxed, and now when we have begun to tax we are taxing production and leaving consumption to run riot."

Congress could not go far wrong if it adopted the plan recommended by the committee of the National Chamber of Commerce. It would raise approximately $1,600,000,000 yearly. It would increase the income tax on individuals and the excess profits tax. It proposes a 50 per cent increase in the first-class postage rates, the imposition of stamp taxes, the levy of excise taxes on liquors, luxuries and amusements, and increases in some customs duties.

Some talk is heard in Washington of taxing sugar, tea and coffee, but that suggestion is not popular. A tax on tea and coffee would be economically sound, as tending to check waste and curtail indulgences, but a tax on sugar would be economically unsound, for sugar is needed in great quantities for the precuration of food, and when sugar is excessively high enormous quantities of fruit will be allowed to waste in the orchards of the country.

Washington Gleanings.

June 15th and 16th are the dates for the Waitsburg thirteenth annual exhibition and racing matinee.

State road No. 12, traversing the Methow valley, will get the sum of $10,000 for improvement from the state.

H. B. Carroll of Ellensberg, practical farmer and a graduate of the Minnesota Agricultural college, has been appointed to the position of farm adviser for Whatcom county.

The fruit growers' association of Peshastin, realizing the necessity of more room to take care of this year's crop, have decided to build an addition to their present warehouse.

That the county agricultural agents will be used for agricultural preparedness in war time is the intimation received from government sources by R. B. Coglon of the State college of Washington.

Because dried fruit will be the staple article of diet for soldiers during duty in defense of the country, State Horticultural Commissioner Morrison urges the fruit growers to devote more time to drying and evaporating fruits.

Contracts have been made at Tekoa for more than 3000 acres of field peas for three large seed companies. Seventy farmers have already entered into contracts and 25 or 30 more are expected to do so. It is possible that the acreage near Tekoa will reach 5000.

County Agriculturist O. T. McWhorter of Clallam county reports that five clubs have been organized among the boys and girls of that county. The following boys' and girls' clubs have been organized: Ramapo Garden club, Eden Valley Canning club, Eden Valley Potato club, Fairview Canning Garden club and the B. B. Potato club.

A military highway that would connect the proposed military post at American lake with the navy yards and Sound forts is being proposed. A road for this purpose would have to be hard surfaced and would be used for all purposes and save the counties most of the cost, as the government would probably bear the burden. The route would shorten the distance by half.

The chamber of commerce of Montesano is listing all of its able-bodied men and boys, and whenever any farmer sends in a call for help for either planting or harvesting the committee will announce the call to those who are listed and send them out to the farmer. Every business man is expected to give some portion of his time as well as a portion of the time of his clerks. School boys will also be called upon to serve when needed.

The announcement is made that a number of fruit and vegetable growers in the Walla Walla-Waitsburg-Dayton and Milton-Freewater districts have banded themselves together in an organization to be called the Associated Fruit and Vegetable Growers, with permanent headquarters at the central city of Walla Walla. The present membership of this association is composed of the Milton Fruit Growers' Cooperative union, the Baker-Langdon Orchard company and Leome Orchard company, the Israel company, Pomona Orchard, Taggard Orchard, Morrow Orchard and other large growers in the Touchet, Gardena and Walla Walla sections.

What Others Say

Express, Pasco, Wash.: The growing of spring wheat in this country has been well established, and the opportunity should not be overlooked.

Vidette, Montesano, Wash.: Thomas Jefferson said that in 50 years the sun never found him in bed. His example of early rising, if applied today, would settle the food famine if the riser put in his time before breakfast in wielding the hoe.

Tribune, Lynden, Wash.: Twelve years is just a mere sliver of time, and yet it is just that and no more the "Dozen Years Ago" items tell us, that the town of Lynden turned out to see Arthur Swim drive the first home auto up the streets of the city.

Republic, North Yakima, Wash.: Why tell the farmer to plant more acres unless arrangements are perfected to furnish him the necessary labor? How will the prevention of unjust exactions in food prices be effected unless the governmental authorities be given the fullest powers to enforce their mandates?

Send Men to Europe

American Army Needed in Trenches

Reliable reports from Washington, D. C., say that it is the plan of the president and his administration advisers to prepare a detechment of soldiers for warfare in Europe with the allies against the Germans at the earliest possible date. This probably will not be for a few months, however, owing to the slow movements of congress in enacting the needed legislation.

After a long, bitter controversy in congress, both the house and the senate have agreed to pass the measure allowing former President Roosevelt to conduct an expeditionary force to Europe if such plan secures the approval of the president and the department of war. It is officially stated that Mr. Roosevelt has pledged to such expedition a total of 200,000 men experieced in methods of war.

Congress Acts Slowly.

The unwieldly character of the United States congress and this country's high degree of unpreparedness are brought out in the comparison of action here now and in France at the time of the declaration of war between France and Germany. Thirty-three days after the France-German declaration of war the greatest battle of the war, if not of the world's history from the standpoint of ultimate effect, was fought between the Germans and French on the river Marne. But 40 days after the declaration by congress that a state of war exists between the United States and Germany, the measures to finance the war and to raise an army to fight its battles are still unpassed, and even the people themselves are not aroused to the true seriousness of the situation.

Peace Rumors Persist.

Rumors of peace between various parties to the war are constantly heard, but so far there is no tangible evidence that peace is an early possibility. It is generally conceded that the prospects are for a continuation of the war at least one year and probably several years. Talk that Russia might make a separate peace with the Teutonic powers has been repudiated by representatives of the new Russian government. Talk that Austria was planning to negotiate a separate peace with France also seems virtually unfounded.

Ship Building Important.

The building of large numbers of ships for use in transporting food and munitions, and also men if this country sends an army to Europe, is urged by the government as one of the greatest needs of the present time, second perhaps only to the production of foodstuffs for home and foreign consumption. The government plans to have at least 1000 new ships built within the next 18 months, having a total carrying capacity of 3,000,000 tons. Both wooden and steel ships are to be built. The first contract for the building of steel ships has been let to a California firm under the government's building appropriation.

Sell U. S. War Bonds.

One of the leading financial movements of the country is the disposition of the United Statess war bonds to finance the immediate needs of the war. These bonds are being sold throughout the country in denominations of $50 to $10,000, and bear 3 1-2 per cent interest payable semi-annually. The treasury department is making a special effort to have the mass of the people purchase small issues of the bonds not only to furnish cash for the government, but to insure a patriotic spirit on the part of the people at large through their investment in the government bonds for war purposes. Local banks are cooperating with the government in selling the bonds. Secretary McAdoo of the United States treasury is making a personal trip into the middle west with a view to stimulating purchase of the bonds.

Food Supplies Needed.

The production of a maximum food supply continues to be the most vital proposition of the war period. It is reliably stated that the food situation in the allied countries is serious, and that the submarine warfare is becoming a greater menace as time passes. The government is taking every means possible to induce the people of this country to produce every pound of food material possible.

Submarine Problem.

The naval departments of all the allied nations are still bending their best efforts toward the solution of the submarine problem. Many express the belief that the solution of this problem would mean an early end to the war, as Germany's only hope lies in starving England and France into submission. What progress is being actually made in the combating of the menace is withheld through naval secrecy.

Potato Cultivation in Egypt.

The British government, having in its possession a large quantity of Italian potatoes suitable for cultivation in Egypt, has agreed to deliver them to Egyptian agriculturists who are desirous of growing potatoes on their land, on condition that when the potato crop comes out they will sell to the British government a certain quantity in proportion to the amount of Italian potatoes taken, at $38.93 per ton.

Pea Contracts

Depend on Company's Fairness

(Continued from page five.)

grower disputes the rejection. Who selects the sample to be sent to the state agricultural department? Presumably the seed house.

Here again it all depends on the fairness and honesty of the seed house, for the contract is vague and the grower a thousand miles or more away from his delivered crop would stand at a severe disadvantage.

The Farmer wants to make it clear that it is not charging the seed houses that are putting out these contracts with any such tricky designs. It is simply analyzing the contracts and pointing out the possibilities under them. If it were a grower it would want to have assurance that the other party to the contract had built up a reputation for square dealing with growers in other parts of the country.

After the above was written The Washington Farmer has learned from J. R. Shinn, Spokane county agriculturist, that these contracts have been modified before being signed by the growers, to the extent of receiving and accepting of the seed f. o. b. at the point of delivery by the grower.

This puts the grower much less at the grace and mercy of the seed firm and is a clause which should be insisted upon by every grower.

Argentine Wheat Shortage.

A material shortage in the Argentine wheat crop is one of the factors in the strong world's wheat market. The International Agricultural Institute of Rome estimates the Argentine wheat crop at 77,395,000 bushels, as against 172,651,000 bushels last year.

Patriotic Legion

The following have been enrolled during the last week as members of the Patriotic Legion of Washington: Merrill Kimple, East Sound; Freeman W. White, Wapato.

Fair List Prices — Fair Treatment

GOODRICH

BLACK SAFETY TREAD TIRES

Must Make Good

WHEN a Goodrich Black Safety Tread Tire is sent from the factory of the B. F. Goodrich Company, it carries Goodrich's avowal that it is free from imperfection of material and workmanship.

It is the best non-skid fabric tire, the oldest, largest, most skillful rubber manufacturer can make.

It *must* render service worthy of the good name it bears—the high service Goodrich requires of it.

If, as occurs in rarest instance, it fails, the B. F. Goodrich Company is more eager than you that its shortcoming be made good.

Sixty Pounds Butterfat.

E. A. Doerfler of Silverton, Ore., is feeling pretty good over the fact that his purebred Jersey herd had the highest average of any herd in the Marion County Cow Testing association for January, February and March. The April report had not been made when this was written. Mr. Doerfler has 12 head on test, and they averaged over 60 pounds of butter fat per month, per cow, for each of the three months. Several of them are heifers. The three Foxhall heifers purchased at the late Charles Miller sale have all milked over 45 pounds a day and one as high as 53 pounds.

Butter and Cheese Scoring.

The first of the 1917 Oregon educational scoring exhibits of butter and cheese was recently held at the college dairy department, Corvallis, Ore. There were 19 samples of butter and three samples of cheese sent in to be scored. The judges for the butter were E. V. Ellington of the dairy division, from Salt Lake City; L. B. Ziemer, state creamery inspector; E. B. Fitts and R. I. Scoville of the college dairy department.

The average score of the 19 samples of butter was 90, the scores ranging from 94 down to 85.2, while the average moisture was 13.92 per cent and the average salt was 2.46 per cent.

It is planned to continue these scoring exhibits monthly at the college. Notice will be sent to all butter and cheese makers having entries at this scoring, and any others interested may have information and blanks from the dairy department at Corvallis.

Commends Condensed Milk Law

William Bishop Points Out Features of New Measure

Because of the interest aroused by the passage of a new law effecting the manufacture of condensed milk, The Washington Farmer has endeavored to secure the opinion of various men throughout the state who might be expected to be able to speak authoritatively upon the subject. Some of these gentlemen have shown an unsuspected bashfulness in expressing themselves for publication, so that it is not possible at this time to quote many of them. We are fortunate, however, in being able to give our readers the views of William Bishop, who is not only a successful dairyman and breeder, but who, as state representative, took the floor for the new bill.

"The law just passed is as fair as it is possible to make it," Says Mr. Bishop. "The claim has frequently been made that this new enactment, which aims to make the federal standards effective within the state as well as in interestate commerce, will put the small cannery out of business. This is absurd on the very face of it; if the small concern can put out cheap milk, so can the big one. We can't be expected to pass a law discriminating against any manufacturer, and without that competition must be on the basis of the quality of goods turned out. A law that will let one plant manufacture milk below the federal standard will also let all the others do the same thing. You can't get round that.

"But the biggest point in the whole matter," Mr. Bishop continued, "is one which has been entirely overlooked in most discussions; it is not altogether, 'How will this effect the dairymen,' or 'will the manufacturer suffer from this?' We must consider the public, which buys our milk, and I would like to ask right here if our people here in the state of Washington are not entitled to as high a quality of condensed milk as any people in the country? Why should our canners be allowed to turn out a product which other states or the United States as a whole does not consider the best? The producer has a right to consideration, but not to the extent of forgetting the men and women and particularly the little children who are the ultimate consumers of our food products."

Another Record Broken.

A notice from Malcolm H. Gardner, superintendent of advanced registry, dated April 11, says:

"I am advised through preliminary reports and by wire that the Holstein-Friesian heifer Glen Alex Queen De Kol 275362 has broken the record for fat production in the senior two-year class of the seven-day division, by producing in seven consecutive days 603.8 pounds milk containing 33.88 pounds fat. She freshened at the age of 2 years, 11 months, 20 days. Her sire is Sir Pontiac Korndyke 6th 66229; her dam is Titje Queen De Kol 95772. She was bred by W. L. Keyes of Deerfield, New York, and she is now owned by A. C. Howe of New Hartford, New York."

Speed up the Separator.

Thousands upon thousands of tests made with different cream separators during the last two or three years by government experiment stations and other dairy authorities have proved conclusively that many thousands of dollars' worth of cream were being lost by farmers because they turned their cream separators too slowly. It was shown that in many cases, with a herd of 10 cows, this loss ran from $50 to $100 a year and often more.

First Grade Milk.

The five essentials for production of first-grade milk, as given by Percy Werner Jr. of the Missouri College of Agriculture are: 1. Healthy cows and men. 2. Clean cows and men. 3. Clean cans and pails. 4. Covered milking pails. 5. Cooling milk to 55 degrees or below within an hour after production and holding it as low as possible until delivered.

$3500 Cash Prizes for Potatoes.

One of the closing acts of the 87th annual conference of the Mormon church in the tabernacle at Salt Lake was the offering of $3500 in cash prizes for the best yields of potatoes and spring wheat from acreage supervised this year by ward organizations as a stimulus to increased production of food supplies in the present state of war with Germany. The yield prizes are as follows: Best one-acre yield potatoes, first prize, $1000; second, $500; third, $250. Best five-acre yield spring wheat, first prize, $1000; second, $500; third, $250.

Special Holstein Prizes.

Among the schedule of prizes announced for 1917 by the Holstein-Friesian Association of America are the following:

Idaho.

Gem State fair, Boise, Idaho. Twenty per cent cash to be paid on the general classification.

Idaho State Fair association, Caldwell, Idaho. Twenty per cent cash to be paid on the general classification.

Montana.

Midland Empire fair, Billings, Mont. Twenty-five per cent cash to be paid on the general classification.

Montana State fair, Helena, Mont. Twenty per cent cash to be paid on the general classification.

Oregon.

Oregon State fair, Salem, Ore. Twenty-five per cent cash to be paid on the general classification.

Pacific International Live Stock exposition, North Portland, Ore. Fifty per cent cash to be paid on the general classification.

Washington.

Spokane Interstate Fair and Live Stock show, Spokane, Wash. Forty per cent cash to be paid on the general classification. Dairy department, farm butter, trophy or silver cup to each prize winner, if made from the milk of a registered Holstein-Friesian herd.

Washington State fair, North Yakima, Wash. Twenty per cent cash to be paid on the general classification. Milch cow test, each prize won by a registered Holstein-Friesian will be duplicated; also each prize won by butter made from the milk of a registered Holstein-Friesian herd.

General Classification.

The term "general classification" as used above is held to cover the following classes:

Bull, 3 years and over.
Bull, 2 years and under 3.
Bull, 1 ylear and under 2.
Bull calf, 2 months and under 1 year.
Cow, 5 years and over.
Cow, 3 years and under 5.
Heifer, 2 years and under 3.
Heifer, 18 months and under 2 years.
Heifer, 12 months and under 18 months.
Heifer, 2 months and under 1 year.
And the following herds or groups:
Exhibitor's herd.
Breeder's young herd.

Purebred Registered HOLSTEIN CATTLE.

The broad highway to success is persistent and intelligent application to something worth while. A successful 60 year old dairyman said, "I have made the greater part of my money since I was forty-five. Up to that time I was making mistakes. I corrected a host of mistakes and ideas about cows and have made nearly all the money I have since that time." The difficulty is that some dairymen never wake up. Any farmer who will devote a short time to a study of the supremacy of Holstein-Friesian cattle as profitable milk producers and as dual purpose cattle will be able to turn his dairy operations to a profitable basis. Send for free literature. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklets.

PAPEC CUTTER

A reliable cutter—one you can depend on when time means money. Read this:

"On account of frost killing the corn, we were rushed to fill our 16 x 96 ft. silo, feeding Papec cutter to full capacity. Not least bit of trouble."—H. M. Seivert, Excelsior Dairy, Portland.

Takes less power than big cutters—that means less expense. Read this:

"I surprised a man this Fall with the little Papec. Last Fall he had a No. 40 cutter (another make) and 25 H. P. engine. It took him 18 hours. This year I filled the same silo with No. 13 Papec and 8 H. P. engine in the same time and waited for corn."—Elwood & Morrison, Caldwell, Idaho.

Cuts all kinds of hay and straw—stock eat it up clean. Read this:

"I have enough power and after filling up my silo am using outfit for cutting up all my hay. I find the stock will eat it up clean when cut, where they would leave a large part if fed without cutting."—Charles Robstock, Route 1, Lents, Oregon.

RAISE FALL PIGS.

Is Advice of U. S. Government.

Every breedable sow should be bred to bring a fall litter. It is important that all sows be used to increase the food supply and no sow should be carried over the summer unbred. Fall litters under common sense management are profitable, is the advice from the national department of agriculture. The pigs should come in early fall—September and October—so that they may be weaned and have attained suffjcient growth to shift for themselves before cold weather arrives. The earlier the pigs come in the fall the cheaper their growth will be made on available pastures and the stronger they will be to withstand the winter. The period of gestation for a sow is approximately 112 days, so that a sow bred on May 15 would farrow about September 5. This means the sow must be bred for fall litters during the months of May and June.

All sows should be bred. Scruples over breeding immature sows should be forgotten. While in normal times most hog raisers do not breed the gilts earlier than eight months of age, sows will breed as early as five to six months of age.

Larger litters are obtained by flushing sows before breeding. This is done by feeding in such a way as to have the sows putting on weight at the time of breeding. The suckling sow should have her pigs weaned shortly before being bred. Her udder should be dried up by a reduction of feed. She should then be flushed and in a few days can usually be bred. After breeding, the sow should be watched to be sure she has caught. If she has not, 21 days later she will again show indications of heat and can again be bred.

The pregnant sow should be fed a ration consisting of bone-making and muscle-making feeds. She should gain weight but not be made fat. Pasture with a small grain ration proves excellent for carrying the pregnant sow until she is almost ready to farrow.

Embargo on Wheat.

Executive decree signed yesterday prohibits until further notice the exportation of wheat and wheat flour from Argentina on account of limited stocks and harvest prospects.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years
For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

Dr. S. B. Nelson

Filing of Teeth—I am using mules on my farm with good success, but their teeth seem to get corners on them and I am told it will make them rot to file them down with a rasp.—L. D. R., Mabton, Wash.

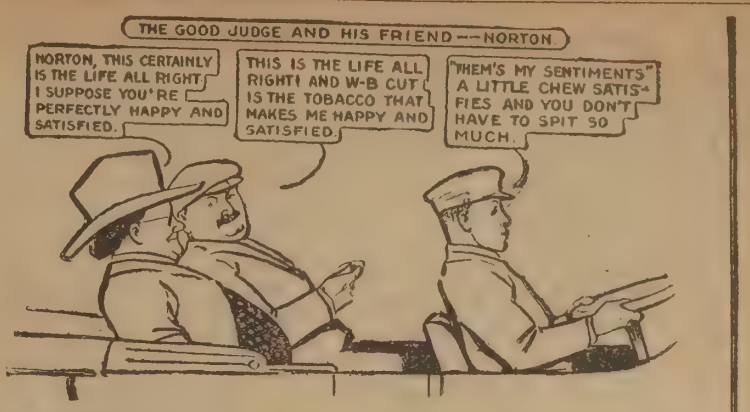
Answer—It does not cause decay in horses' teeth to rasp off the sharp points, which the difference in the hardness of the teeth causes during chewing. It is done in thousands of horses each year with good effect upon the horse and horse's welfare.

Will It Poison Hogs? Will potatoes that have been treated in a solution of formaldehyde, one pound to 30 gallons of water for two hours, poison hogs if fed in small quantities with other feeds.—J. M., Marcus, Wash.

Answer—If the potatoes have been allowed to dry there is no danger from the formaldehyde treated potatoes as a food for hogs. If they have not been allowed to dry and are fed wet, then there may be some danger if the animals are allowed to eat a large quantity of the potatoes. They should not be fed then.

Odor to Milk—Have a young heifer that has been fresh about three weeks. Her milk has rather a "cowie" odor and when added to the other cream and churned the butter does not keep well, and in a few days has a rancid odor. Then just a few days ago she gave several streams of bloody milk from one teat.—H. A. P., Sunset, Wash.

Answer—Give your cow a good purge of a pound to a pound and a half of epsom salts in three quarts of water. Then give your cow one teaspoon full of sodium hyposulphate in a pint of water in the morning. At night give her one ounce of fluid extract of pokerroot in a pint of water. Use the treatment for a week or so.



I have a 3-year-old cow that calved March 18, 1916. She gave 10 quarts of milk daily. On January 20 she was dried up and was due to calve on March 2 this year. February 14 she lost her calf, which would have weighed about 20 pounds. It only lived five hours. The cow was slow to clean and has never given more than a half teacup of milk. We have kept her on good feed, such as oat hay, shorts and carrots, also have fed her one pound of hyposulphate soda at the rate of one tablespoonful each feed. There was never any swelling or fever in her udder. Will she ever give any milk?

Pomeroy, Wash. W. H. W.

It may be possible that there is an inflammatory lesion yet remaining in the uterus, and that might cause trouble, such as you mention, of her failing to give the quantity of milk which you would expect. I think that a physical examination should be made of the womb and see if this is not the case, and then correct treatment administered until the womb is healed. This treatment, of course, would consist of daily uterine injections of disinfectant solutions, which would overcome the trouble in a short period of time. There is no internal treatment that would help her that I know of.

To Disinfect Pen—I bought six nice shoats about three months old, took them straight from the sow and fed them on slop made with middlings and water, also gave them small raw potatoes, apples, etc., and plenty of good water to drink and a warm, dry bed to sleep in. They did fine for a week, then one got sick and died in 48 hours; now three are dead and the other three are dying. They almost totally quit eating, got weak in their hindquarters, some seemed nearly blind, and did not seem to care for anything but water. What was wrong with them, and how should I disisfect the pen?—F. W., Seattle, Wash.

Answer—I am not able to make a definite diagnosis of the trouble affecting your hogs. You do not give me sufficient data upon which to base the diagnosis. I can not tell whether they may have died from hog cholera or whether they have died from being over-fed, which resulted in an indigestion. Regarding your second question as to what to disinfect the pen with, I would recommend disinfecting the pen with a lime whitewash mixed with creolin so that the creolin will be a 5 per cent solution in the whitewash. When I say creolin I would say that any of the coal tar disinfectants in that strength are good. Disinfect the pen two three or four days apart, also disinfect the floor and the feeding trough, and if any yard thoroughly by spraying the whitewash into the soil, onto the boards and into the cracks. This disinfectant you can put on with a spray pump.

THERE is something mighty democratic about rich, sappy tobacco. Now that men have W-B CUT Chewing, a good tobacco, to lend each other, it cements friendship. Common-sense about tobacco is getting mighty general now—no one wants the over sweetened kind when he can get rich tobacco shredded and lightly salted to bring out the good tobacco taste.

The shape or size of the egg has nothing to do with the sex of the chick.

Eggs that are not normal in shape and size should not be used for setting.

Moistening the eggs before hatching is not necessary. The hen attends to that herself.

An infertile egg looks just like a fresh egg, except that it has a larger air space.

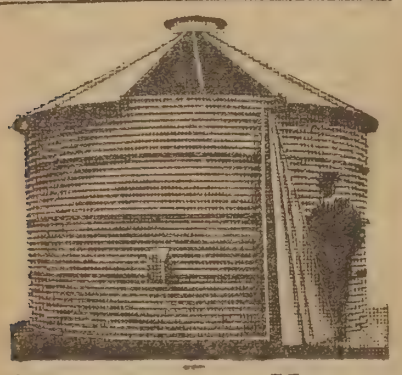
Test the eggs after the sixth or seventh day of incubation, and remove infertile and rotten eggs.

It is well to use the larger eggs for hatching because it will be possible in that way to breed up a strain of fowls that lay large eggs. The size of eggs is a question of heredity very largely.

Experiments have shown that eggs from free range fowls hatch better than those from hens confined in small yards.

Fresh eggs should be used for hatching—the fresher the better. If necessary to keep them a week or two before setting, keep them in a cool, dry place and turn them daily.

J. D.



Feeding Wheat to Chickens.

At this writing wheat and other grains are still climbing in price. The price of wheat is more than double what it was last fall. Will it pay to feed it to chickens? It depends on the kind of hens it is fed to and the way it is fed. With good layers, a profit may still be made at the prices for eggs. Eggs are 60 per cent higher than a year ago in April. If they should be proportionately higher next fall and winter they will reach a price of 85 cents At such prices there will be money in eggs, even at the present high price of feed—if the hens lay fairly well. A nonlaying flock will soon run up a big deficit. The poultryman must keep none but good layers, and then he should study up on the very best methods of feeding. Expert knowledge is in demand now.

Breeding for Large Eggs.

Breeding for size of egg is a simple matter compared with breeding for number. If one wishes to breed for a certain size egg, all he needs to do is to pick out the eggs for setting of the size that he wishes to breed for. He needs no trapnest to do this. If a large egg is wanted, the large eggs should be set, because a pullet that comes from a large egg is likely to lay eggs of good size, assuming that the male also is from a large egg and assuming further that the size of the egg is inherited, which is undoubtedly a fact.

However, faster progress can be made in increasing the size of the egg by breeding, if the pedigree of the breeding stock is known. A hen that lays a large egg may not come from a large-egg family, just as a good layer sometimes comes from a poor layer. But if he knows that the eggs he sets come from a strain or family of large eggs for several generations, he is pretty sure to get large eggs from the pullets hatched from them. Small eggs will not always produce pullets that lay small eggs, but on the average they will. Large potatoes are sometimes raised from small seed potatoes, but if the small seed is selected each year for planting, in a few years the potatoes would be smaller. Like begets like—not always, but on the average. There are variations. Select the large eggs to produce large eggs.

This is a simple matter, but, by following this method, the poultryman will be able to increase the size of egg. It is a somewhat hit or miss method, that is, he is taking some chances. The more certain method is to select not only the large egg, but to keep pedigrees of all the hens. This makes it possible to select for breeding not only the hens that lay large eggs, but those that produce other hens that lay large eggs. In other words, it is a question of selecting breeders of large egg producers. The hen must be a good breeder as well as a good layer. This means trapnesting and keeping pedigree records. Not many poultrymen will do this, but every one can select large eggs for hatching.

He should not necessarily select the largest. Abnormally large eggs should not be used. An egg weighing two ounces fills the market demand. We might select two-and-a-half-ounce eggs and finally get a strain that lays two-and-a-half-ounce eggs, but there would be little, if any, profit in it. The hen that lays the large egg will naturally lay fewer of them, and the poultryman may not get any more for them, speaking of the two-ounce egg and larger eggs.

J. D.

Send the Old Hens to Market.

With wheat at $2 a bushel the old hen should certainly be sent to market. After a certain age she is never a paying proposition, but with present war prices of grain she is eating wheat that had far better be made into flour. It has been abundantly proved by experient that the average hen lays most in her pullet year and that there is a gradual decrease in production each year. A flock that averages 150 eggs the first year will lay about 120 in the second year and 100 or less in the third year. A good hen will make a profit in the first two years, but after that it will pay to replace her with a pullet. Feeding $2 wheat to toothless hens is a waste of ammunition. Crate up the old hens tomorrow and ship them to a reliable commission firm in the city.

The above will not apply in the case of hens that are specially valuable for breeding purposes. If a breeder has trapnested his flock and knows which are the good layers he can cull out the poor layers at the end of the first year, and the good layers he can keep at least three years for breeding. The good layer in the first year is the good layer in the second year in the great majority of cases.

J. D.

Eggs for Cold Storage.

"Could you give me any information of the system by which they put eggs in cold storage?"

Grangeville, Idaho. G. M. G.

This business is controlled by large corporations, that buy up eggs in the spring when they are cheap, and sell them in the fall and winter at the time of scarcity. I do not think much business is done by poultrymen sending their eggs to the storage companies on commission. I doubt if it would pay the poultryman or producer to speculate on storing eggs, under present conditions at least, by sending them to the storage companies. The storage companies do not encourage it as a rule. Before doing this, the poultryman should be assured of an outlet for his storage eggs before putting them in storage. As a rule it is much better for the poultryman to sell his fresh eggs if he has eggs of good quality and can get the price that fresh eggs of first quality should command.

J. D.

Select Breeding Turkeys

"I want to start in to raise turkeys next year. I can get plenty of information on the care and feeding, etc., but I seem unable to learn anything as to how to select the breeding stock. How old should the gobblers be and how old should hens be in order to get the best fertility and to produce the hardiest poults?—Mrs. W. H. L., Tumwater, Wash.

Some of the best turkey raisers use an early hatched Tom (cockerel) to mate with early hatched pullets or yearling hens. The main objection to using older toms is on account of their size. Heavy males are likely to injure the hens. By paring off the spurs and filing the sharp points of the toe nails, there is not much danger in using the heavy males. It is not the best plan, however, to select the largest males or hens for breeding. The medium sized birds are in greatest demand in the market. No immature stock should be used. A good plan is to use yearling hens, or hens in their second year and early hatched fully matured vigorous cockerels. This should produce the hardiest poults. After the third year the turkey hens should be marketed. They begin to fall off in laying the third year. Inbreeding should be avoided.—J. D.

Snohomish Egg Circle Grows.

The Snohomish, Wash., egg circle, which was formed last December reports that their membership has increased from 10 to 50 and the weekly output from five cases to 25 and 30 cases The market demand is growing for their product and they are able to get better prices for their product, which they sell direct to the merchant.

Marsters on Fair Board.

Codling Moth

A Standard Spray for This Pest

It is now nearly time to spray for codling moth. Every year we have directions about how to spray and what to spray with, so that most orchardists know. But some may be just beginning, others may need to be reminded, so here is the formula. Spray after the petals fall and before the calyx cup closes. In order to meet the irregularity of blooming it may be necessary to spray twice for what is called the calyx spray. Use plenty of pressure so as to force the spray into the calyx cup. About 200 pounds is considered enough.

Arsenate of Lead.

Arsenate of lead is the spray mostly used for codling moth, and is recommended to be used as follows:
Arsenate of lead (poison) ....1 lb.
Water .....50 gals.

For newly hatched insects it is not necessary to use it stronger. For old or large insects use double the quantity. Mix the paste well with a small amount of water. Powdered arsenate of lead is about twice as strong as the paste. Do not use arsenate that settles quickly or feels gritty. Agitate while spraying.

Arsenate of zinc powered is about four times as strong as paste lead. It may scorch in a damp season.
Arsenate of lead .....4 lbs.
Water .....100 gals.

It is better to purchase arsenate of lead than to attempt to make it. In mixing, preparatory to spraying, the amount of arsenate of lead for each spray tank full should be worked into a very thin paste having the appearance of milk of lime. It should never be thrown as a mass into the spray tank. This is the standard spray for codling moth and other eating insects. It is possible, however, that we may increase the use of arsenate of zinc in the future. G. L.

Storing Frozen Apples

Last fall, in common with a large number of fruit growers throughout the northwest, we had some apples frozen. The difficulty of getting sufficient labor, enough boxes, cars for shipment, proper storage, and the fact that the freeze came earlier than usual, all combined to cause considerable loss.

We had several boxes of Winesaps that were engaged to a man in Seattle. After the freeze they were as hard as Bethman von Hollweg's head, or, to put it mildly, as hard as bullets. The Seattle man concluded not to take them, and we did not blame him. But we had them nicely wrapped and boxed before the freeze came, so we concluded to put them away carefully in the cellar and leave them until spring. The cellar was not much different from the ordinary home cellar. It was kept as cool as practical during the winter, except we were careful that the temperature did not reach the freezing point.

On the third of May we opened a box and found they had kept as nicely as any of our fruit, and, in fact, there was less tendency to decay than in the apples that were not frozen when they were stored. We then examined several boxes with the same results. I have never seen apple that kept better than these.

The flavor is not the same, and this seems the only injury. They are not unpleasant to the taste, in fact, some might prefer them to the more acid flavor of the unfrozen fruit; but for the choice of the general public they are injured. However, the injury is not comparable to what we generally expect. G. L.

Nicotine Destroys Moth.

In his report to the state department of agriculture Horticultural Inspector F. E. DeSellem of North Yakima, Wash., gives facts concerning his experiences with nicotine spray, which seem to show that this form of spray may be made as effective or more so than the usual arsenate of lead.

"In comparing the results obtained from nicotine with those obtained from arsenate of lead it was found that on plots carefully sprayed at identically the same time and in the same manner with paste arsenate of lead at two pounds to 50 gallons of water there was an average of 97.33 per cent clean fruit as against over 99 per cent for nicotine," he says. "While other factors might explain such a small difference in favor of the nicotine, still in view of the fact that all plots were located in the same orchard, only a short distance apart; and that the trees were of the same age and variety, it seems at least reasonable to believe that nicotine sulphate used at the rate of 1 to 800 is as efficient as arsenate of lead at the rate of two pounds to 50 gallons of water in the control of codling moth. In addition the nicotine possesses additional killing properties against sucking insects."

THE FARM GARDEN

ARTICLE 12.

FOR WINTER USE

It is always a great mistake to plant a garden of radishes, turnips, early cabbage, string beans, lettuce and the like with a view of having garden truck for summer use only. This year it is a greater mistake. The farm garden should provide a large percentage of the food of the family during the winter months. The summer vegetables are all right and greatly to be desired for summer use, and some of them can be canned or dried for winter use the same as fruit. But a garden cultivated without full regard for the possibilities of winter supplies is only half a garden.

The progress of the last decade in canning and preserving perishable food stuffs is remarkable. It is now a fact that almost anything can be preserved in some way—even spinach or dandelion greens. The farmer and his family should plan definitely to produce vegetables that may be stored in some form, for, even though the prices now prevailing should be greatly reduced, it is good business for the farmer to produce food for his own family the year round, and bad business for him not to. The boys and girls can do much toward making the garden a success, but a far-seeing supervision should be maintained by the father or the mother. Gardens this year are a vital part of the farming operations.

There is no reason why the average farm in the northwest should not produce such food articles as these capable of being stored without special preservation methods: Potatoes, onions, dry beans, peas, parsnips, carrots, beets, salsify (oyster plant), pumpkins, squashes, cabbage and the like. Incidentally, why not grow a bushel of popcorn for the winter's evenings?

There is no reason, also, why the average farm should not produce such food articles as these, capable of being canned or dried or pickled or otherwise preserved in first-class condition for winter table use: Sweet corn, green beans, green peas, cucumbers, pickle onions, tomatoes, spinach or other greens and many others that can be grown successfully in many localities.

Methods of canning are not difficult to learn and put into practice. Many farm housewives are already capable in this line. Beginning in an early issue, The Farmer will publish a number of articles dealing with methods, drawing upon the experiences of those who have succeeded and upon the authorities at the college and university experiment stations.

Plant Food.

Plant food consists of 10 essential elements: Carbon, hydrogen, nitrogen, oxygen, sulphur, phosphorus, calcium, magnesium, potassium and iron. Chlorine, silicon and sodium are usually found in the ash, but are not essential to plant growth. If we knew what any particular soil contains and what any particular crop requires we would know what to supply, but here is the secret. G. L.

KILL This Bug
Before it Kills Your Profits

It's Aphis, and is destroying Apple profits everywhere. Already regarded by many growers the most destructive apple insect. It weakens the trees and injures the fruit. You can control Aphis, Red Bug, Leaf Hopper and other soft-bodied, sap-sucking insects with

Black Leaf 40
40% Nicotine
Kills Aphis

Manufactured by The Kentucky Tobacco Product Co., Incorporated, Louisville, Ky. Can be used with Lime-Sulphur, Arsenate of Lead, Bordeaux and other sprays as recommended. May be used separately, if desired, and at almost any time. Mixes perfectly with water. Costs about one cent per gallon diluted for the trees.
Recommended by Agricultural Colleges and Experiment Stations. Guaranteed by us and its manufacturers.

Farmers of State Respond to Call for Great Production

(Continued from page four.)

body in this neighborhood is planning to increase their crops, but the backward spring will interfere very much. Peas and potatoes are the principal lines of increase.

W. H. BLACKLER, Pateros—I think there is a marked tendency on the part of the farmers in this community to increase the acreage of wheat, potatoes, corn, etc.

E. H. DUNNING, Richland—The farmers of this section are attempting to increase their crops this year by putting in more acreage and intensively farming. Potatoes and corn seem to be the leading crops for this year, beans next. Of course, the strawberry is the standard crop here.

JULIUS M. FISK, Spring Valley—If we can only get a normal yield of crops we will have done wonderfully well, owing to the late spring and scarcity of help. I and my neighbors are doing our level best.

PETER CONBOY, Glenwood—We are trying to increase our crops this year by getting more land in cultivation and raising more wheat, oats, hay, potatoes, as well as producing more butter, wool and meat—pork, beef and mutton.

T. R. BOOKE, Othello—We are doing all we can to produce what we can. About the only crop we market is wheat in this locality and that crop is all spring wheat this year. All winter wheat had to be reseeded.

H. S. SMITH, Prosser—There has been an effort inaugurated through the governor's proclamation to put all available lands under cultivation. I believe there is a county central committee with a representative in every community. The crops urged to be grown are the grains, potatoes, etc.

WELLINGTON FRENCH, Conconully—We are trying to increase our crops this year if we can get help, especially potatoes and beans, and, of course, wheat.

U. E. FRIES, Brewster—We are all trying to raise all the wheat and potatoes we possibly can and nobody in this locality is going to let land be idle.

CHARLES PALMER, Forks—We are not increasing our crops. We are 30 miles from a boat landing with no railroad. We keep all the stock we can feed. We raise some potatoes, but unless they are very high we have to feed them to the stock.

HOMER HART, Dungeness—I am putting every foot of land I can in crops of one kind or another. Also breaking up all of my old meadows. I am also keeping all my calves this year, vealing the bull calves and keeping the heifers. A good many of my neighbors are doing the same thing, where we used to knock them in the head as soon as they were born before. I think it is the duty of every American citizen to help the country out in the great problem that is before it at the present time.

A. P. BERTSCHI, Glenwood—I am doing all I can to increase crops by putting them in the best way I know how and clearing and breaking my land and starting a herd of Tamworth hogs. I believe every one here is doing his best towards raising hay, grain, dairy products, meat and potatoes.

J. R. AYERS, Kennewick—In our neighborhood little increase in production can be made, as the land is high-priced, therefore it is made to yield as much as possible every year.

J. T. CHAMBERS, Elma—There is a greater attempt than ever before to increase crop production, especially of wheat, potatoes and pork.

F. S. CALVIN, Goldendale—We are trying to raise more general farm produce and also more stock.

WESTERN WASHINGTON.

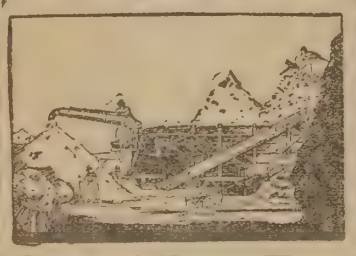
C. L. GELL, Cathlamet.—I intend to increase all my crops this year if I can get help and the weather to do so.

I. B. GRUNGSTAD, Skamokawa.—This is an exclusive dairy section. The dairymen here have a maximum number of cows at all times, so I do not believe there will be any increase in dairy products. As to other farm products there perhaps would have been an increased acreage of potatoes if the season had not been so late.

O. M. GORDON, Elma.—I have just finished clearning a new piece of land for the plow at a cost of $125 an acre. This land will produce oats at from 100 to 120 bushels per acre at a normal price of oats at $25 per ton. I have seen very little new land going under cultivation in this part of the country.

CHARLES ROTH, Arlington.—I have 20 acres more this season than last year. It costs $100 to $250 an acre to clear the land. We are paying from $28 to $30 a ton for hay; $80 for one ton of wheat chicken feed and other things in proportion. As we are in the dairy business mostly, our clearing will go into hay and oats. There will be more potatoes planted than last year. I am going to put in one-fourth acre of beans, also there will be more pigs raised, but not as many chickens.

NICK PEARSON, Monroe.—As for raising more crops in this locality, we are more interested in the dairy business but we are planning to raise crops so as to be more self-sustaining; that is, larger vegetable gardens and more hay and grain for our cows.



P. A. M'NAMARA, Sequim.—I am trying to raise more feed on my place for my dairy, mostly pea and oat hay and silage. Most of my neighbors are doing more plowing and putting in more grain than usual.

OTTO HAMPSON, Skamokawa.—I am arranging to plant a larger amount of corn, potatoes, rutabagas and cabbage, providing Mother Nature will cease the rain for a few days and give us a little sunshine.

M. J. BISHOP, Snohomish.—We are trying to encourage all families of timber workers to grow as much of their own living as possible. We will get behind our county committee. I am trying to increase in milk and eggs. Yours for a well fed common people.

Contestants Must Wait a Week More

The Farmer regrets that publication of the results of the farm information contest will have to be delayed a week. We expressed the hope last week that the prizes would be awarded in time to permit the announcement of the winners in this week's issue. The work of examining the papers has progressed slowly as we have taken great pains to insure fair and just consideration of each and every one.

Silos Too Expensive

So Say Some Who Have Not Used Them

By C. F. MONROE.
County Agriculturist, Montesano, Wash.

A number of farmers and dairymen state as their reason for not using silage, that the silo is expensive in original cost, is too expensive to fill, and the silage cannot be produced cheaply enough. Wishing to be "shown" the writer has secured information from a large number of silo owners.

Computations were made showing cost of silos per ton capacity, cost of filling per ton, and cost of silage per ton. The average cost (including foundation) of 24 silos in Grays Harbor county, Washington, was $2.63 for each ton they would contain. We find that the size of the silo has an indirect relation to cost per ton capacity. The average price per ton capacity of all silos having more than 80 tons capacity was $2.20. For that group of silos under 80 tons in capacity the average cost was $3.06. It would evidently not pay to cut down on the size of silo below the capacity desired just to save on the original cost. There is not a great difference in cost between any two makes of stave silos of equal capacity. The home made stave silo is proven cheaper per ton of capacity than the so-called patent silo. However, ease in getting the silage out and greater convenience in the use of the doors would be advantages of the latter over the former.

The Cost of Filling.

In figuring cost of filling these silos, the actual cost of labor, teams and machinery employed was taken into consideration. This cost varied from 43 cents to $1.76 per ton. This great variation may be better understood when we consider all the factors that have a bearing on the cost of this operation. These factors are size of machine, size of crew, distance from field to silo, management of labor and freedom from machine trouble.

The small machine also requires a smaller crew and less cash needs. The average cost of filling the twenty silos mentioned above was 92 cents per ton. When we consider that this cost was made under all conditions and comparing it with the cost of harvesting and preparing other home grown crops for use as feed, I am sure that it cannot be justly said that the filling cost is prohibitive.

In determining the cost the following factors were considered:

Rent of land, cost of seed, labor in putting in crops, total cost of filling, and depreciation. The latter item was taken as one-fifteenth of the silo cost, considering the life of a silo as 15 years. Rent of land was figured at $15 per acre. Cost of filling was actual cost as mentioned in the previous article. Labor of putting in crops was computed on the basis of $1.50 per man per day and $2 per day's work of a team. Here, as in other cases where labor was involved and where outside help was employed, the actual cost of the labor was considered. The time used in putting in the crops was the actual time as the owner gave it. Seed was figured on the following basis: Oats, 60 cents; wheat, $1.50; peas, $2.50; vetch, $3, and rye, 60 cents, per bushel, and corn at 6 cents per pound where used. The factors mentioned above were added for each silo and divided by the tonnage secured from the 1916 crop. The average cost of silage made in 20 silos in this county was $3.29. There is a difference in cost due to yield of the silage crop. The costs were averaged for all those silos where the crops used exceeded nine tons per acre. This group produced silage at a cost of $3.03 per ton. The other group where yields were less than nine tons per acre made silage costing $3.68 per ton. This marked difference is a great argument in favor of growing those crops that yield the heaviest tonnage.

In summing up the silo investigation, it is clear showing that the cost of a ton of silage depends on the following factors, ranked in the order of their importance:

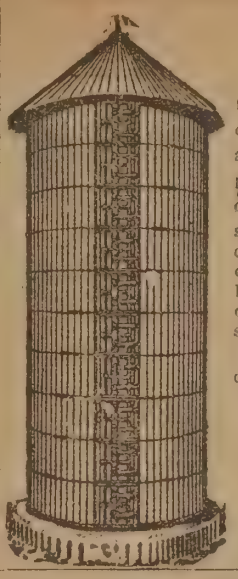
First: Yield per acre, which, of course, determines in large measure the rental charge made against the silage.

Second: Cost of filling the silo.

Third: Labor of putting in silage crop.

Fourth: Cost of seed, and

Fifth: Which is of the least importance in determining the cost of a ton of silage—the original cost of the silo.



Thinning Sugar Beet Crop.

The first work in thinning the Yakima valley's 9000-acre sugar beet crop is in progress, requiring 600 to 800 laborers. German and Russian families have been brought in for part of the labor.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XI.

In which the bunch grass boy tells of his Sunday school experiences, the first district school in his locality and of his several "love" affairs.

Going to church or Sunday school was a rare experience to me during the earlier years of my childhood on our farm in the Big Bend. This was not because my parents lacked in religious inclinations. Preachers and Sunday schools were lacking. After we had lived on our pioneer farm three or four years and I had reached the age of 12 or 13, we had preaching at Hartline, five miles away, once a month. The whole countryside turned out, the irreligious as well as the religious, and I am sure that in the collection plate quarters and half dollars outnumbered nickels and dimes, though these were bad wheat years and the people were dreadfully poor.

One summer Uncle Daddy Utt started a Sunday school in a small school house about six miles from our place. In a radius of six miles from Daddy Utt's Sunday school there were 10 or 12 children of Sunday school age, I being one. The school started out with a fair attendance, but it dwindled away till only Uncle Daddy and I were going.

I know now that those lonely Sunday schools which Uncle Daddy Utt and I held that summer have been a moulding influence on my life of great power. He counseled me to walk not in the ways of the ungodly, nor to stand in the way of sinners, nor to sit in the seat of the scornful. The righteous were like unto trees planted by the rivers of water, bringing forth fruit in season: and the foes of the righteous were but wind-driven chaff, doomed to be broken with rods of iron.

From Daddy Utt I heard the story of Job; and as I look back now to twenty-three or four years ago, I can not help likening Uncle Daddy to the Bible patriarch, Job, who had fourteen thousand sheep, six thousand camels, a thousand yoke of oxen and a thousand she asses. Daddy Utt's herd of live stock consisted only of horses and a large number of Holstein cows he had brought from Wisconsin. He had a huge, patriarchal beard, and in stature was a giant. Job was something like that, I think. But, unlike Job, who had seven sons and three daughters, Daddy Utt had seven daughters and no sons. He was a grand old man and put some great things into my life.

The first district school we had was opened in Pete King's house, which consisted of one 12x16 room. Pete certainly was a public-spirited man. The district was too poor to build a schoolhouse, so Pete moved out and lived with a near neighbor, turning his house to the uses of a schoolroom. Our teacher, Miss Minton, was a westerr bred girl and one of undoubted nerve. Her pupils ranged in size from tiny tots learning their A, B, Cs to young men and women—and some of the boys were pretty bad. One of the boys, who couldn't have been under 19 or 20 years of age, got recalcitrant, and she bravely waded into him with a long ruler, with which she whacked him on the back. In a flash of anger he sprang up, backed her struggling into a corner of the room and, with one hand, took the ruler from her and broke it to bits. For a moment or two he held her there in the corner, apparently not knowing what next to do.

That girl surely had courage. She coolly ran her eyes from one terrified face to another in the room, and finally, smiling as if nothing were wrong, asked one of the big boys if he would help her. The big boy was a coward. He grinned and said he "couldn't handle 'im." Still held there in the corner she again surveyed the situation, and this time quietly asked me if I would ride to Mr. Utt's and tell him that she wished a meeting of the school directors that afternoon. I was out of the room like a shot, and in another moment was fanning the breeze for Daddy's. Daddy Utt and his colleagues on the board arrived in due time, and the bad boy was then and there expelled from school.

The winter I was 14 school opened in the new Hartline school house, and I rode in the six miles, not missing a day, I believe, on account of storm or cold. I got up at 6 and hurried out to feed and saddle my pony, while mother got breakfast and father did the morning chores. At a quarter to 7, or 7 if I was a little slow, I would be in the saddle and away at swift gallop with my dinner pail on my arm. By 8 o'clock, when school took up, I would be in my seat.

There were 20 or 25 pupils, I think. Among them were Ola and Emma Hart, Lew Ames and his sister Ella; the two Dildine girls, who were grown up young ladies: Edna East and her brother Tommy, now cashier of a bank at Brewster. Willie Bundschue was the foot racer and wrestler of the school. Joe Mires' girls just about populated one whole side of the school room, and they ranged in size from tiny, tow-headed tots to quite mature young ladies. Others in the school I can not recall.

It is about as natural for a 14 or 15 year old boy to fall in love as it is for a baby to have colic, I think; and I am sure that I had my share of the 15-year-old colic. My first affinity was Frances. She was a town girl, however, and I plainly was a country jake. In other words, I was beneath her caste. Her father sold lumber and mine sold wheat when he raised any. I met her out in the country, the habitat of the lowly proletariat from which I sprang, one time; and politely doffed my hat. She impolitely turned up her nose. Then and there my love was turned to hate.

The desire for revenge brooded deep in my soul. The teacher let us "spell down" every Friday night; and it was assumed that the members of the country proletariat could not spell, and they were the last to be "chosen" by the leaders—Frances and one other.

But there was one of the plebian crowd in the school that learned to spell in a hurry. I went to bed with my spelling book and got up with it—late, very often. I carried it when I went to hunt the cows. I studied it in school when I was supposed to be studying something else. It was all because I wanted to "spell Frances down." She studied her spelling book too, but there was in my attack a sort of primitive savagery which was too much for her: so all through that term I spelled her down every Friday night as regularly as I had the opportunity.

Years later I matriculated at the state college of Washington, in which one of the requirements for final graduation was the passing of a spelling examination. I sailed triumphantly through the examination at the first trial, missing only one word in a hundred. My error, by the way, was really not in my spelling; for I spelled "crevasse" instead of "crevice." I was all because Frances had turned up her nose many years before, in response to my worshipful salutation.

My next love was Minervy. "Minervy" was the name we and her parents called her. Minerva was her name, of course. And with odds in her favor, she was a worthy namesake of the daughter of Jupiter, old Rome's Minerva, goddess of invention, intelligence, art, and other things, including schoolmasters and school children. I was a school child and she was my goddess for a time, but she plainly preferred another. So, like the psalmist of old, I "watered my couch with my tears" and relinquished this hope of love.

The next, and nearly the last, was Laura. She eventually transferred her facile affections to another, whose superior qualifications seemed to be that he was a famous "broncho-buster." He was in demand for exhibition riding at Fourth of July "scratching matches" and so on. He acquired fame by riding to a finish, one "Boxcar," an outlaw horse of most evil reputation. I couldn't have gone safely into a 10-acre corral wherein Boxcar was tied down. So I again lost in competition for the favor of Beauty. My burning desire after this was "to make something out of myself" so that this girl would regret her choice. But I could not think of any route to fame except broncho-busting, which would enable me to compete successfully with my competitor. In school, the teacher had said that "any boy might be president of the United States if he tried." I thought that an expedient worthy of consideration; though as between the presidency of the United States and "scratching" Boxcar in the presence of an applauding multitude I would have chosen the latter without an instant's hesitation.

In next week's issue, the Bunch Grass boy leads the 12th chapter of his unique remembrances with the following:

"Among the friends of my boyhood in pioneer eastern Washington, I remember none better than Rip Van Winkle, whom we called "Rip." "Rip's" real name was Baskerville, and he was a hunter, a trapper, a "water witch," a teller of bear stories of the kind that delighted the ear of a 10-year-old boy; and a southerner of the old south of the genuine, fire-consuming kind."

Tin Cans and Cold Storage

Food Preservation Was a Long Time Coming

By E. A. BRYAN

In this article Dr. Bryan makes it clear that the establishment of commercial canneries and cold storage plants have been a God-send alike to producer and consumer notwithstanding all the abuses of monopolies and trusts with which the public associates them.

Cold storage monoply and cannery trusts come in for their full share of cursing in a modern world in which "to rap" is the most pleasing occupation of the great majority. Doubtless there are monopolies and trusts in this as in every other field where there is a sharp demand for commodities. This ought not so to be and criminal prosecution and punishment ought to follow this crime against human society. Laws to prevent plans and conspiracies to raise artificially the price of food stuffs to the injury of the many for the benefit of the few are well night a thousand years old in Anglo-Saxon law. "Forestalling," or the purchase of the entire amount of fish or other food on its way to market was a criminal act as early as Edward III., as were any attempts to create an artificial scarcity of food. But no matter what evils have followed on the heels of quantity canning and cold storage, a little consideration will make one see that the processes themselves are unmixed blessings to the human race, of countless value to the vast multitude of producers of foodstuffs— that is to say, the farmers.

The race was a long, long time in discovering means and methods of food preservation. There was found enough for all but it came in gluts and much of it wasted before it could be used. The hunter made a great killing and he and his tribe gorged themselves and grew fat for a time, but the poor attempts to preserve the meat left them the victims of famine before another year rolled around.

Fishermen's luck was to scoop out a net full from a school of fish and fish long and catch nothing.

Native fruits and berries follow the same law.

One of the most useful means of preservation of food stuffs was by drying. Dried meats, dried fish, dried corn and squash, dried fruits and berries early helped to equalize the difficulties of nature's method of preparing a bountiful harvest once a year—and most harvests at the same time of year.

Preservation with salt is very old and with spices, including peppers, likewise old but not so ancient. Four hundred years ago all Europe depended on the pepper and spice trade—for it used cured meats almost exclusively, and peppers and spices were used far more extensively than in modern times to preserve meats or to cover up tastes and odors, that civilized man might not otherwise endure so easily. In fact, Columbus's discovery of America was closely connected with the necessity for these means of food preservation. The importance of the East Indies lay in the fact that they yielded these rich

(Continued on page nineteen.)

Chickadee Is Codling Moth's Doom

At a recent meeting of the Spokane Bird club, Professor J. W. Hungate of the Cheney (Wash.) normal school gave a lecture illustrated with charts showing the food of different birds.

Black-capped chickadee. Length, about 5 1-4 inches.

To show how beneficial are birds in exterminating insects, Professor Hungate stated that the chickadee was known to feed on the female of the codling moth, as many as 80 of them being found on examination in the bird's stomach. As the codling moth lays 185 eggs, the chickadee, eating 80 a day of the pests, performs a great service to fruit men. Other birds, such as woodpeckers and nuthatches, are similarly beneficial.

The lecturer insisted that, a few species excepted, hawks and owls were more beneficial than harmful and should be protected.

Birds like the robin, which have a bad character for feeding on fruit, in a great many cases, Professor Hungate said, more than made up for their forays in gardens and orchards by their usefulness in other ways and that if they had more wild fruit to have access to they would levy less tribute on domestic fruit.

Ye Have Heard That It Was Said by Them of Old Time

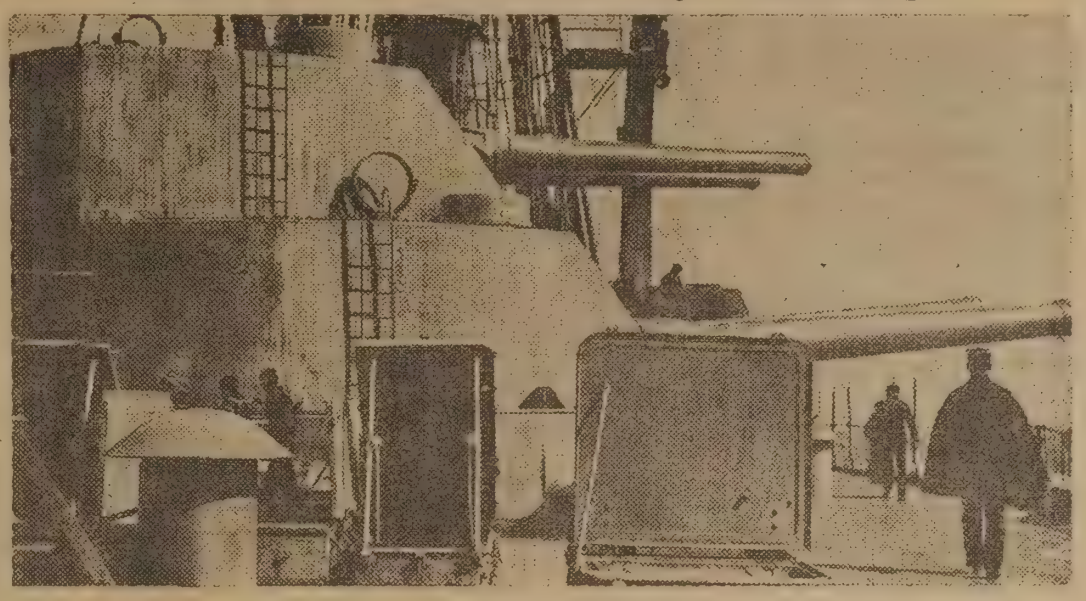
THE SABBATH DAY.

"Remember the Sabbath day to keep it holy. Six days shalt thou labor and do all thy work; but the seventh day is the Sabbath of the Lord, thy God; in it thou shalt not do any work; thou nor thy son, nor thy daughter, thy man servant, nor thy maid servant, nor thy cattle, nor thy stranger that is within thy gates; for in six days the Lord made heaven and earth, the sea and all that in them is, and rested the seventh day; wherefore the Lord blessed the Sabbath day and hallowed it."—Exodus 20:8-11.

We suppose of all the 10 commandments, there is none so utterly disregarded as this one. For every reason that can be mustered up under the sun, we disobey the injunction and command to remember the Sabbath. We are told it is not scientific, and we are told that it does not mean what it says.

We do not do any thundering over it; it thunders enough itself.

A man-made law which has not a penalty attached in plain language is regarded as of no effect. Not so God's laws. There is a penalty, whether it is written or not, and it is enforced rigidly by the very nature of our humanity. If we disobey we pay.—H. H. B.



All the World's a Stage, and All the Men and Women Merely Players

Soon to Become Bride.

Miss Alice Ford Huntington, debutante sister of Mrs. Vincent Astor, whose parents, Mr. and Mrs. Robert Huntington of Hopeland house, Staatsburg, N. Y., have announced her engagement to Charles H. Marshall of New York. Miss Huntington was introduced to eastern society at a ball given by Mrs. Astor last January.

Turret of U. S. Pre-Dreadnaught Battleship

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merrill Co.

CHAPTE XIX.—(Continued.)

Mary was imperious and impatient by nature, but upon rare and urgent occasions could employ the very smoothest sort of finesse.

Her promise to marry Louis of a France had been given under the stress of a frantic fear for Brandon and without the slightest mental reservation, for it was given to save his life, as she would have given her hands or her eyes, her life or her very soul itself; but now that the imminent danger was passed she began to revolve schemes to evade her promise and have Brandon notwithstanding. She knew that under the present arrangement his life depended upon her marriage, but she had never lost faith in her ability to handle the king if she had but a little time in which to operate, and had secretly regretted that she had not, in place of flight, opened her campaign along the line of feminine diplomacy at the very beginning.

Henry was a dullard mentally, while Mary's mind was keen and alert—two facts of which the girl was perfectly aware—so it was no wonder she had such confidence in herself. When she first heard of Brandon's sentence her fear for him was so great and the need for action so urgent that she could not resort to her usual methods for turning matters her way, but eagerly applied the first and quickest remedy offered. Now, however, that she had a breathing spell and time in which to operate her more slowly moving, but, as she thought, equally sure forces of cajolery and persuasion, she determined to marshal the legions of her wit and carry war into the enemy's country at once.

Henry's brual selfishness in forcing upon her the French marriage, together with his cruel condemnation of Brandon, and his vile insinuations against herself, had driven nearly every spark of affection for her brother from her heart. But she felt that she might feign an affection she did not feel, and that what she so wanted would be cheap at the price. Cheap? It would be cheap at the cost of her immortal soul. Cheap? What she wanted was life's condensed sweets—the man she loved; and what she wanted to escape was life's distilled bitterness—marriage with the man she loathed. None but a pure woman can know the torture of that. I saw this whole disastrous campaign from start to finish. Mary began with a wide flank movement conducted under masked batteries and skilfully executed. She sighed over her troubles and cried a great deal, but told the king he had been such a dear, kind brother to her that she would gladly do anything to please him and advance his interests. She said it would be torture to live with that old creature, King Louis, but she would do it willingly to help her handsome brother, no matter how much she might suffer.

The king laughed and said: "Poor old Louis! What about him? What about his suffering? He thinks he is making such a fine bargain, but the Lord pity him, when he has my little sister in his side for a thorn. He had better employ some energetic soul to prick him with needles and bodkins, for I think there is more power for disturbance in this little body than in any other equal amount of space in all the universe. You will furnish him all the trouble he wants, won't you, sister?"

"I shall try," said the princess demurely, perfectly willing to obey in everything.

"Devil a doubt of that, and you will succeed too, or my crown's a stew-pan," and he laughed at the huge joke he was about to perpetrate on his poor, old royal brother.

It would seem that the tremendous dose of flattery administered by Mary would have been so plainly self-interested as to alarm the dullest perception, but Henry's vanity was so dense, and his appetite for flattery so great, that he accepted it all without suspicion, and it made him quite affable and gracious.

Mary kept up her show of affection and docile obedience for a week or two until she thought Henry's suspicions were allayed; and then, after having done enough petting and fondling, as she thought, to start the earth itself a-moving—as some men are foolish enough to say it really does—she began the attack direct by putting her arms about the king's neck, and piteously begging him not to sacrifice her whole life by sending her to France.

Her pathetic soul-charged appeal might have softened the heart of Caligula himself; but Henry was not even cruel. He was simply an animal so absorbed in himself that he could not feel for others.

"Oh! it is out at last," he said with a laugh. "I thought all this sweetness must have been for something. So the lady wants her Brandon and doesn't want her Louis, yet is willing to obey her dear, kind brother? Well, we'll take her at her word and let her obey. You may as well understand, once and for all, that you are to go to France. You promised to go decently if I would not cut off that fellow's head, and now I tell you that if I hear another whimper from you off it comes, and you will go to France, too."

This brought Mary to terms quickly enough. It touched her one vulnerable spot—her love.

"I will go; I promise it again. You shall never hear another word of complaint from me if you give me your royal word that no harm shall come to himt—o him," and she put her hands over her face to conceal her tears as she softly wept.

"The day you sail for France, Brandon shall go free and shall again have his old post at court. I like the fellow as a good companion, and really believe you are more to blame than he."

"I am all to blame, and am ready this day to pay the penalty. I am at your disposal to go when and where you choose," answered Mary most pathetically.

Poor, fair Proserpina, with no kind mother Demeter to help her. The ground will soon open, and Pluto will have his bride.

That evening Cavendish took me aside and said his master, Wolsey, wished to speak to me privately at a convenient opportunity. So, when the bishop left his card-table, an hour later, I threw myself in his way. He spoke gayly to me, and we walked down the corridor arm in arm. I could not imagine what was wanted, but presently it came out: "My dear Caskoden;" had I been one for whom he could have had any use I should have grown suspicious. "My dear Caskoden, I know I can trust you; especially when that which I have to say is for the happiness of your friends. I am sure you will never name me in connection with the suggestion I am about to make, and will use the thought only as your own."

I did not know what was coming, but gave him the strongest assurance of my trustwórthiness.

"It is this: Louis of France is little better than a dead man. King Henry, perhaps, is not fully aware of this, and, if he is, he has never considered the probability of his speedy death. The thought occurred to me that although the princess can not dissuade her brother from this marriage, she may be able, in view of her ready and cheerful compliance, to extract some virtue out of her sore necessity and induce him to promise that, in case of the death of Louis, she herself shall choose her second husband."

"My lord," I replied, quickly grasping the point; "it is small wonder you rule this land. You have both brain and heart."

"I thank you, Sir Edwin, and hope that both may always be at the service of you and your friends."

I gave the suggestion to Mary as my own, recommending that she proffer her request to the king in the presence of Wolsey, and, although she had little faith or hope, she determined to try.

Within a day or two an opportunity offered, and she said to Henry: "I am ready to go to France any time you wish, and shall do it decently and willingly; but if I do so much for you, brother, you might at least promise me that when King Louis is dead I may marry whomsoever I wish. He will probably live forever, but let me have at least that hope to give me what cheer it may while I suffer."

The ever-present Wolsey, who was standing near and heard Mary's petition, interposed: "Let me add my prayer to that of her highness. We must give her her own way in something."

Mary was such a complete picture of wretchedness that I thought at the time she had really found a tender spot in Henry's heart, for he gave the promise. Since then I have learned, as you will shortly, that it was given simply to pacify the girl, and without any intention whatever of being kept; but that, in case of the death of King Louis, Henry intended again to use his sister to his own advantage.

To be a beautiful princess is not to enjoy the bliss some people imagine. The earth is apt to open at any time, and Pluto to snatch her away to—the Lord knows where.

Mary again poured out her soul on paper—a libation intended for Brandon. I had made a dozen attemtps, in as many different ways, to deliver her letters, but every effort was a failure, and this missive met the fate of the others. De Longueville kept close watch on his master's rival, and complained to Henry about these attempts at communication. Henry laughed and said he would see that they were stopped, but paid no more attention to the matter.

If Mary, before her interview with Henry, had been averse to the French marriage, she was now equally anxious to hurry it on, and longed to go upon the rack in order that Brandon might be free. He, of course, objected as strenuously as possible to the purchase of his life by her marriage to Louis, but his better judgment told him—in fact, had told him from the first that she would be compelled eventually to marry the French king, and common sense told him if it must be, she might as well save his life at the same time. Furthermore, he felt a certain sense of delight in owing his life to her, and knew that the fact that she had saved him—that her sacrifice had not all been in vain—would make it easier for her to bear.

The most beautiful feature of the relations between these two lovers was their entire faith in each other. The way of their true love was at least not roughened by cobblestones of doubt, however impassable it was from mountains of opposition.

My inability to deliver Mary's letters did not deter her from writing them; and she was to be married in a few days—de Longueville to act as proxy—she devoted her entire time to her letters, and wrote pages upon pages, which she left with me to be delivered "after death," as she called her marriage.

At this time I was called away from court for a day of two, and when I returned and called upon Brandon at the Tower, I found him whistling and singing, apparently as happy as a lark. "You heartless dog," thought I, at first; but I soon found that he felt more than happiness—exaltation.

"Have you seen her?" I asked.

"Who?" As if there were more than one woman in all the world for him.

"The princess."

"Not since I left her at Bristol."

I believed then, and believe now, that this was a point blank falsehood—a very unusual thing for Brandon—but for some reason probably necessary in this case.

There was an expression in his face which I could not interpret, but he wrote, as if carelessly scribbling on a scrap of paper that lay upon the table, the words, "Be careful," and I took the hint—we were watched. There is an unpleasant sensation when one feels that he is watched by unseen eyes, and after talking for awhile on common topics I left and took a boat for Greenwich.

When I arrived at the palace and saw Mary, what was my surprise to find her as bright and jubilant as I had left Brandon. She, too, laughed and sang, and was so happy that she lighted the whole room. What did it all mean? There was but one explanation; they had met, and there was some new plan on foot—with a fatal ending. The next failure would mean death to Brandon, as certainly as the sun rises in the east. What the plan was I could not guess. With Brandon in the Tower under guard both day and night, and Mary as closely guarded in the palace, I could not see any way of escape for either of them, nor how they could possibly have come together.

Brandon had not told me, I supposed, for fear of being overheard, and Mary, although she had the opportunity, was equally noncommunicative, so I had recourse to Jane upon the first occasion. She, by the way, was as blue and sad-

Gun Is Poor Weapon for Coyotes

Strychnine and Steel Traps Giving Best Results

Government hunters rarely shoot a coyote, even though they have a good opportunity. The reason is manifest. Though the shot may bring down one animal, it arouses in others a suspicion of man that makes them much harder to capture by means of poison and traps. It also requires excellent marksmanship to hit a coyote under ordinary conditions.

In discussing the methods used by the government men in the northwest, E. F. Averill, predatory animal inspector for the district of Washington and Oregon, urges upon hunters, farmers and stockmen to make special effort to kill the old coyotes, at least the mother, at this season of the year when destroying a den. This can be done by the use of traps with a little care and cunning.

If the pups are dug out or smoked out of the den and killed, the old coyotes will come around looking for them and unless they are left so they can be readily found, will linger about the den a few days. Hunters are familiar with the sight of a pair of ears sticking up above a sage brush on a hilltop near the den, or a coyote face peering around the brush, or some other similar protection. This suggests immediately the proper place for traps—behind some such obstruction on the sky line. Another place where the trap may be placed with a chance of results is at the den. While the old animals are wary, and will enter the den only after much precautionary watching and investigations, it is possible to catch at least the mother at the opening. Sometimes, also, says Mr. Averill, she will dig into the den from above a few feet back from the original mouth, or enter through a side entrance that has not been much or any used. Traps at such places may bring results.

Traps must always be hidden from view and must bear no odor of human beings or other enemies of coyotes. To set a trap to meet these requirements is a real art. As an aid in preventing the coyote's caution keeping him away, hunters frequently capture one alive, keep it in captivity for a few days and then scatter "scent" in the vicinity of the trap from the excretions obtained This method has proved highly effective.

How to Use Poison.

Inspector Averill does not recommend the use of poison during the summer months, considering trapping much more effective at this season. Winter is the best time for poisoning.

In poisoning, it is a great mistake to place strychnine in the bait in any other form than capsule. If the poison is placed in the crystal or powdered form, it quickly penetrates all parts of the bait and gives it a bitter taste that the coyotes dislike, and which also puts them on their guard. It is found successful to use No. 2 capsules, which will contain enough strychnine to kill the animal. This capsule should be placed in an animal carcass promiscuously, but in a small piece of fat from some animal, such as a beef or a dead horse or chicken. The fat should be handled at all times with wooden tools if possible, or should at least be dropped with a wooden tool when distributed for the coyote to pick up. If handled at all with the hands, the bait should be dipped in blood before scattering.

Such bait may be used about a half-eaten carcass, or other place frequented by coyotes, and should always be dropped from horseback, as the slightest evidence of human beings puts the coyotes on guard against trouble.

At hog-killing time is an appropriate time to poison. Small bits of the hog offal, occasionally dropping one of the poisoned baits. Equal care should be taken in handling this bait as in the case of the fat balls.

faced as Mary was joyous. I asked her if the princess and Brandon had met, and she asdly said: "I do not know. We went down to London yesterday, and as we returned stopped at Bridewell House, where we found the king and Wolsey. The princess left the room saying she would return in a few minutes, and then Wolsey went out, leaving me alone with the king. Mary did not return for half an hour, and she may have seen Master Brandon during that time. I do not understand how the meeting could have occurred, but that is the only time she has been away from me." Here Jane deliberately put her head on my shoulder and began to weep piteously.

"What is the trouble?" I asked.

She shook her head: "I can not, dare not tell you."

"Oh! but you must, you must," and I insisted so emphatically that she at length said:

"The king!"

"The king God in heaven, Jane, tell me quickly." I had noticed Henry of late casting glances at my beautiful little Jane, and had seen him try to kiss her a few days before, as I have told you. This annoyed me very much, but I thought little of it, as it was his habit to ogle every pretty face. When urged, Jane said between her sobs: "He tried to kiss me and to—mistreat me when Wolsey left the room at Bridewell House. I may have been used to detain him, while Mary met Master Brandon, but if so, I am sure she knew nothing of it."

"And what did you do?"

"I struggled away from him and snatched this dagger from my breast, telling him that if he took but one step toward me I would plunge it in my heart; and he said I was a fool."

"God keep you always a fool," said I prayerfully. "How long has this been going on?"

"A month or two; but I have always been able to run away from him. He has been growing more importunate of late, so I bought a dagger that very day, and had it not one hour too soon." With this she drew out a gleaming little weapon that flashed in the rays of the candle.

This was trouble in earnest for me, and I showed it very plainly. Then Jane timidly put her hand in mine, for the first time in her life and murmured:

"We will be married, Edwin, if you wish, before we return from France." She was glad to fly to me to save herself from Henry, and I was glad even to be the lesser of two evils.

As to whether my two friends met or not that day at Bridewell I can not say; but I think they did. They had in some way come to an understanding that lightened both their hearts before Mary left for France, and this had been their only possible opportunity. Jane and I were always taken into their confidence on other occasions, but as to this meeting, if any there was, we have never been told a word. My belief is that the meeting was contrived by Wolsey upon a solemn promise from Brandon and Mary never to reveal it, and if so they have sacredly kept their word.

On the 13th of August, 1514, Mary Tudor, with her golden hair falling over her shoulders, was married at Greenwich to Louis de Valois; De Longueville acting as his French majesty's proxy. Poor, fair, Proserpina!

CHAPTER XX.

So it came to pass that Mary was married unto Louis and went down into France.

(Again the editor takes the liberty of substituting Hall's quaint account of Mary's journey to France.

Then when all things were redy for the conueyaunce of this noble Ladye, the kyng her brother in the moneth of Auguste, and the xV daye, with the quene his wife and his sayde sister and al the court came to Douer and there taryed, for the wynde was trobious and the wether fowle, in so muche that shippe of the kynges called the Libeck of IXC, tonne was dryuen a shore before Sangate and there brase & of VIC. men scantely escaped iiiC and yet the most part of them were hurt with the wrecke. When the wether was fayre, then al her wardrobe, stable, and riches was shipped, and such as were appoyncted to geue their attendaunce on her as the duke of Norfolke, the Marques of Dorset, the Bysshop of Durham, the Earle of Surrey, the lorde Delawar, sir Thomas Bulleyn and many other knights, Squyers, getlemen & Ladies, al these went to shippe and the sayde ladye toke her leaue of the quene in the castell of Douer, and the king brought her to the sea syde, and kissed her, and betoke her to GOD and the fortune of the see and to the gouernaunce of the French king her husband. Thus at the hower of foure of the clodck in the morenynge thys fayre ladye toke her shippe with al her noble compaignie; and when they had sayled a quarter of the see, the wynde rose and seuered some of the shippes to Cayles, and some in Flaunders and her shippe with greate difficultie to Bulleyn, and with great leopardy at the entrying of the haven, for the master ran the shippe hard on shore, but the botes were redy and receyed this noble ladye, and at the lanndyng Sir Christopher Garnysha stode in the water and toke her in his armes, and so caryed her to land, where the Duke of Vandosme and a Cardynall with many estate receyued her, and her ladies, and welcommed all the noble men into the countrey, and so the quene and all her trayne came to Bulleyn and ther rested, and from thence she remoued zy dyuerse lodgynges tyll she came all most within iii miles of Abuyle besyde the forrest of Arders and ther kynge Loyes vppon a greate courser met her (which he so longe desired) but she toke her way righte on, not stopping to conurse. Then he returned to Arbuyle by a secret waye, and she was with greate triumphe, procession and pageantes receiyued into the toune of Abuyle the VIII day of October by the Dolphin, which receyued her with greate honor. She was appareiiled in cloth of siluer, her horse was trapped in goldsmythes work very rychly. After her followed xxxvi ladies al their palfreys trapped with crymsyn veluet, embraudered; after the folowed one charyott of cloth of tyssue, the seconde clothe of golde and the third crymsyn veluet embraudered with kynges armes and hers, full of roses. After them folowed a greate nomber of archers and then wagons laden with their stuf. Greate was the riches in plate, ieuls, money and hangynges that his ladye brought into France. The Moday beyng the daye of Sayncte Denyce, the same kynge Leyes maried the lady Mary in the greate church of Abuyle, bothe appareled in goldesmythes worke. After the masse was done ther was a greate banket and fest and the ladyes of England highly entreteyned.

(To be continued in the next issue.)

Tin Cans and Storage

Bring in Era of Food Conservation

(Continued from page sixteen.)

spices. The Turks were threatening the caravan routes by which these were brought from the far east and under Selim, the Magnificent, the trade routes were finally cut off. To meet this and save the rich trade of India, the doubling of the Cape of Good Hope was attempted and accomplished by the Portugese, while the bolder spirit of Columbus, believing the earth to be round, sought a western path to the East Indies and found the West Indies and a new world.

Sugar is by no means a very ancient commodity and its production in large quantities is strictly modern. Excellent preservative as it is, its relative costliness has restricted it to a list of dainties in which "preserves" and jams and marmalade and "butters" have played, for some generations, a conspicuous part.

The discovery of a method of preservation by sterilizing with heat and, while hot, sealing in an air tight container, finally ending with the triumph of the tin can as the prince of containers, was a discovery deserving to be ranked with the invention of the cotton gin, the spinning jenney and the power loom in its beneficence to mankind. At first, the use of the canning device was almost purely domestic, and was confined to a few things, chiefly the standard fruits. The other day I ate canned sauer kraut and the boys' and girls' canning clubs will convince you that there are few products—animal or vegetable—that you can not successfully can.

The establishment of commercial canneries was inevitable and has been a God-send, alike to producer and consumer. In regions of good production of perishable products, the only hope for a market lies in taking care of the surplus by drying, canning or other means of preservation. What otherwise would be utterly wasted, ultimately finds its way and at low cost, to the ultimate consumer.

Preservation by cold is not so new as its application in cold storage plants. When I was a boy, a radius of a few miles and a short month were limitations which made the peach crop largely a waste to the producer and an unknown quantity to the bulk of possible consumers. Contrasted with that, the era of cold storage has given to a vast multitude at low cost, relatively, fresh meats, fruits, eggs and dairy products for 12 months in the year. Its effect on stablizing the price of butter, eggs and fruits during the productive season and the non-productive season can hardly be estimated.

The possibilities of cold storage on the farm—I do not now refer to well ventilated cellars and other cool rooms, but to genuine cold storage—has hardly been considered. Wherever small power units are installed on the farm, their use for the production of artificial refrigeration or at least cooling, can hardly be overlooked. Such a plant as every modern small butcher shop now uses is not costly and can be operated as satisfactorily as farm lighting or pumping or grinding can be done.

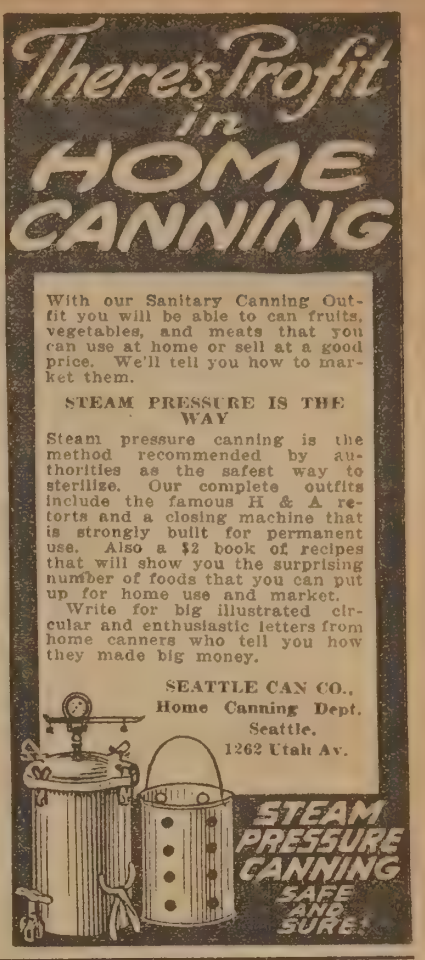
In this day when farm labor will not put up with a fat pork diet day in and day out, but demands its alternation with fresh beef or mutton, a small refrigerating unit would be a matter of economy as well as of comfort on the larger and more remote farms.

Even the farm buys enormous quantities of canned goods in the aggregate and mostly goes without the storage. Both of these means of saving the surplus products and supplying a strong demand on the farm are now available.

The attitude of the farmer toward commercial canning and commercial cold storage should be, from the point of self interest as well as the public welfare, one of encouragement and development. It is a wholly distinct problem from that of monopoly, against which strong blows should always be directly aimed.

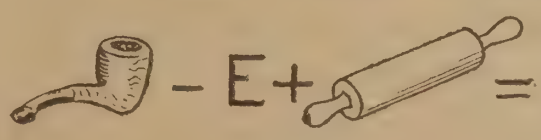
GOES AFTER THE GRAFTERS.

To the Editor of The Washington Farmer: Your paper suits me better than any farm paper I take. I appreciate the market reports and the way you go after grafters, etc. Yes, and the experiences of so many different farmers in different localities, and many other things.—H. E. YEAGER, Monroe, Wash.



No Encouragement.

Brother—Mabel told me this morning she couldn't sleep thinking of me.



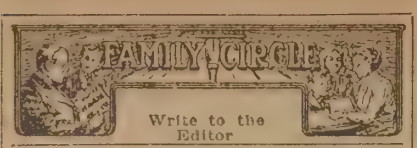
Sister—That means nothing. A lobster, my dear Charley, often has the same effect.—Judge.

Edging Close to the Truth.

A farmer who understood human nature said. "If you ant your boy to to stay at home, don't bear too hard on the grindstone when he turns the crank."—Christian Herald.

STAR CLOTHES REEL IS THE PRIZE

Any person sending the correct answer to the above question before May 22nd, together with $2 in the form of money order, 2-cent stamps or personal check, will receive **THE WASHINGTON FARMER** for three years and one of our special Star clothes reels described below. The reel is worth $1.25 at retail, while the subscription costs $1.50 even at our special rate, a total value of $2.75. If your subscription is paid ahead it will be extended.



The Star Clothes Reel

With the Star Clothes Reel you can pull out 75 feet of strong, braided clothes line or reel it up instantly. Hang up clothes in kitchen, attic, porch or outside. When not in use cord is wound up in dust-proof metal case which is easily attached to casing, post or wall and easily taken down. Worth its retail cost of $1.25 in the steps it saves every month.

If you are not awarded the prize your money will be refunded. The subscription may be new or renewal, for yourself or some one else. Address

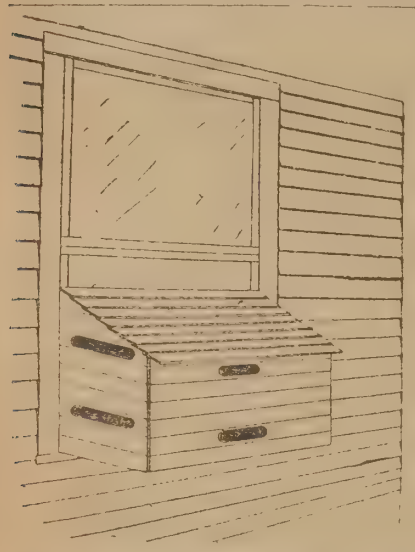
Favorite Mottoes

What is the quotation or what are the words which have helped you in the journey of life?



Send it to the editor of The Farmer and let it help another.

To the Editor: My favorite motto in life is to live for others. We are taught that no man lives unto himself. No matter how he lives, he is living for others, either for good or bad. (Romans 14-17). A. G. BARBER.
North Bend, Wash.

Cold Closet

Box Fastened to the Outer Wall

A properly ventilated cold closet built into an outer wall is an excellent means for lessening the ice bills, especially during the spring and fall months, when the nights are cool, says a bulletin of the University of Missouri agricultural extension service. It is in reality a box fastened against the outer wall with a door opening into the kitchen. Holes for ventilation may be bored through the lower shelves and at the top of the outside wall and these protected by screen cloth. Heavy

Such a convenience saves many steps to the cellar or cave, especialy in the fall and spring when the nights and mornings are cool enough for milk and other foods to remain outside.

screening may be used for shelves instead of the boards. The closet may have double insulated walls, but it is usually a simple box. It may be of any dimensions desirable, but one 24 inches wide, 36 inches high and 15 inches deep is large enough for the ordinary family, and 30 inches from the floor is a good height. The north exposure is the coolest.

A cold closet may be made by removing the lower sash of a window and making the box extension on the outside slightly larger than the opening. Or the sash may be left in place, a curtain adjusted and access gained by raising the window. By such arrangement the light from the upper half of the window is still available.

Cottage Cheese

An Inexpensive Meat Substitute

Cottage cheese is one of the important meat substitutes, say specialists of the United States department of agriculture. It contains a larger percentage of protein (the chief material for body building) than most meats and furnishes this material at a lower cost. In every pound of cottage cheese there is about one-fifth of a pound of protein, nearly all of which is digestible. Meats, on the other hand, usually contain less protein and, besides, have a certain waste, such as bone and other inedible material. A pound of cottage cheese daily would supply all the proten required by the ordinary adult engaged in a sedentary occupation.

The following table shows that cottage cheese, obtainable at from 12 to 17 cents per pound, is much cheaper than most meats in furnishing protein for the diet.

For supplying protein, one pound of cottage cheese equals:

1.27 pounds sirloin steak.
1.09 pounds round steak.
1.37 pounds chuck rib beef.
1.52 pounds fowl.
1.46 pounds fresh ham.
1.44 pounds smoked ham.
1.58 pounds loin pork chops.
1.31 pounds hind leg of lamb.
1.37 pounds breast of veal.

In addition to protein, energy for performing body work must be furnished by food. As a source of energy also cottage cheese is cheaper than most meats at present prices. The following table shows the comparison when energy is considered.

On the basis of energy supplied, one pound of cottage cheese equals:

8 1-3 ounces sirloin steak.
11 1-4 ounces round steak.
11 1-4 ounces chuck rib beef.
10 3-4 ounces fowl.
5 1-2 ounces fresh ham.
5 ounces smoked ham.
6 ounces loin pork chop.
7 1-3 ounces hind leg of lamb.
12 3-4 ounces breast of veal.

Save Bread From Waste

Bread is one of the items most commonly wasted in many American households, say the specialists of the United States department of agriculture. This waste is probably due to the fact that many housekeepers do not think of bread as costing much and are careless about its use or do not know what to do with the odds and ends frequently found in the bread box. A number of recipes for using left-over bread follow:

Vegetable Soup With Bread Crumbs.

One quart skim milk, one cup bread crumbs, salt, small amount spinach or outer leaves lettuce (not more than four ounces), one small slice onion.

Cut the vegetables into small pieces and cook with the bread crumbs in the milk in a double boiler. If a large quantity is being prepared, as in a school lunch room, for example, put the vegetables through a meat chopper. In this case slices of bread may be ground with the vegetables, in order to absorb the juice.

Bread Crumb Pancakes.

One cup crumbs, two and one-fourth cups skim milk, half cup flour, four teaspoons baking powder, one teaspoon salt, one teaspoon sugar, one teaspoon melted fat, one egg.

Soak crumbs in milk for three quarters of an hour. Then add other ingredients and cook on a hot griddle like ordinary pancakes. If sour milk is used substitute a half teaspoon baking soda for the four teaspoons baking powder.

Gingerbread With Crumbs.

One cup molasses, one-half cup boiling water, one and a half cups fine bread crumbs, two-thirds cup flour, one teaspoon baking soda, one and a half teaspoons ginger, one-half teaspoon salt, four teaspoons melted lard or other fat.

Add water to molasses and combine with the dry ingredients mixed together. Then add fat and beat. Bake for about 25 minutes in a hot oven.

Indian Pudding.

One cup fine crumbs, one quart skim milk, one-third cup sugar, two tablespoons melted butter or other fat, one-fourth cup molasses, one-fourth teaspoon ginger, one-fourth teaspoon cloves, one-fourth teaspoon cinnamon.

Scald the crumbs in milk, add the other ingredients, and bake one and one-half hours in a slow oven. This pudding may be made with any kind of bread crumbs, but it furnishes an especially good means of using up corn bread.

Egg Toast With Bread Crmbs.

Six slices bread, one egg, one cup milk, skim milk or water, one-fourth teaspoon salt.

Beat the egg, and add the liquid and salt. Let the bread soak in the mixture until slightly soft. Then fry to a light brown on a hot, well-greased pan or griddle. More eggs may be used if available.

Music Makes Work Pleasant.

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: In reply to your request I will say the most helpful thing to me in the last year, first of all, is a phonograph. That may sound strange, but it is a fact. I set it playing to dish washing, sweeping and dusting, cleaning the floor, etc. It makes work easy and adds cheer to drudgery. It is not an expensive machine, but the records are from the best operas, bands, trios, soloists, etc. I could not work without it now.

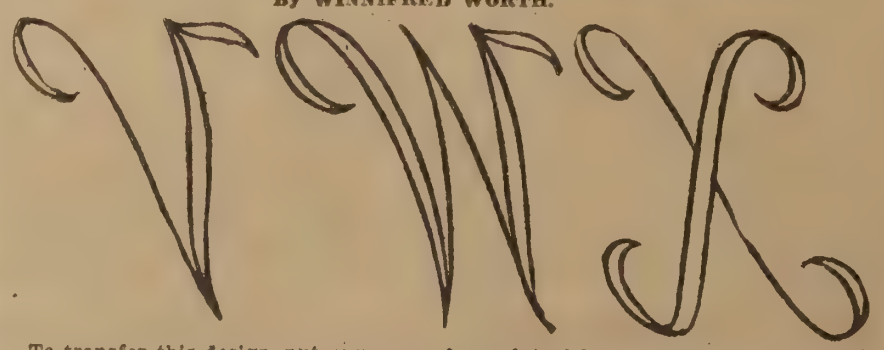
Another thing I learned is to use for cleaning enamel sinks, bath tubs, etc., a swab of kerosene and soda solution. It is much quicker and more effective than any boughten cleanser.

Then in making the drop soft cookies, instead of mixing the dough and cutting out, make same as any cooky, drop from spoon and put raisin in top, cut with knife when baked. This is splendid. MRS. KNICKERBOCKER.
Sheridan, Ore.

Toast Served in Many Ways.

Toast is one form in which partly stale bread can be made attractive. In many families it is served only for breakfast, luncheon or supper, but the custom which many high grade restaurants have adopted of serving thin, crisp, hot toast with the more substantial meals might well be followed at home.

Such dishes as chopped meat with gravy, creamed chicken or fish, poached eggs, melted cheese, cooked asparagus, Swiss chard, baked tomatoes, etc., are served very commonly on toast. Cream or milk toast (that is, toast with a cream sauce or milk gravy, perhaps flavored with a very little chipped beef, salt fish or other savory) may be used as the main dish at breakfast, luncheon or supper.



Slices of toast may also be dipped in water or milk and beaten egg and lightly browned on a hot greased pan. It may be used at breakfast and has the advantage of making the eggs "go further" than if used in a separate dish, or it may be served with cinnamon and sugar, sirup, or any sweet sauce for dessert.

Peeling Potatoes Raw Is Wasteful.

One-fifth of the potato is removed when potatoes are peeling raw, according to an experiment made by the home economics department of the North Dakota Agricultural college. Most of the protein and mineral salts in the potato lie near the skin. These go with the peel when the potatoes are pared raw. So that the loss in food value is more than 1-5. With small potatoes the loss in paring raw was 1-4. The potatoes boiled in their jackets have more flavor too. If the potatoes are wilted, soak before using.

Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

Gather ye rosebuds while ye may,
Old Time is still a-flying,
And this same flower that smiles today
Tomorrow will be dying.
—Herrick.

Leftovers

Small Bits Make Excellent Soup

By Alvara P. Williams.

With all the sharp criticism of her methods occasioned by comparisons with the French and German housewives it will be small wonder if the American housewife does not add a few tricks to her cooking. I myself have been practicing up on the sly, with the result of one permanent addition to my menu, which up to this time has been only occasional.

After much thought I thinned out certain leftovers which do not naturally go well in lunch buckets, and which are too valuable to give to the hens, and determined to start a real French pot-au-feu. There is scarcely room on the average range for a large kettle all the time, and this, more than anything else, had prevented my carrying out this plan before. A five-pound earthenware jar, which butter came in originally, made a much better soup pot, as it takes up only one hole on the range and never burns as most kettles do if left over the fire constantly. It seems to cook much more slowly and thoroughly than any kettle I ever had, and holds plenty for our family of four. A larger family could use the eight-pound butter jar.

I started this with the end of a rump roast of beef, perhaps two or three inches long, cooked slowly with a carrot, an onion, the dried tops of celery and a small handful of barley. This made a delicious thin soup, much more "Frenchy" than anything I had ever achieved. Some of the things which have gone into the soup since then have been potato, hominy, a tablespoonful of canned corn, small bits of bacon and ham, lean portions only, remains of beef cooked in half a dozen ways, tomato, string beans, peas, small bits of cold cereals, macaroni, noodles, rice. There is scarcely anything which does not improve the flavor and consistency, if left long enuogh and thoroughly blended together. This seldom happens with the ordinary soup as cooked by Americans, which takes but an hour or so in its making. Unless you have tried the all-day and day-to-day cooking in a thick earthen jar you can not know the difference between the two varieties of soup.

Why have soup at all? There have been many claims for and against, regarding its nutritive value, its effect on the digestion, etc. Like most other foods, I am inclined to think soup has a value entirely depending on what one puts into it. It may be a thin soup, chiefly valuable as an appetizer, or one with more nourishment in it, taking a large part in the menu for a meal. Its place in the meal must be determined by the other items in that same meal, and it can no more be abused in this respect than can the meat course.

While the greatest skill in soup making is exhibited in the flavoring employed, that is simpler than is sometimes thought. Salt, pepper, onion, celery and perhaps kitchen bouquet offer all kinds of combinations. Decidedly not least in the list of values for the continual soup pot is the fascinating aroma from it all day long, instead of a few minutes a day.

Not His Complaint.

"Read the directions on the bottle, Mandy."

"It sez: For adults, one teaspoonful——"

"Thunder! That ain't what ails me—what else does it say?"

Age Problem.

If to my age there added be
Its 1-2, its 1-3 and 3 times 3,
Three score and four the sum will be,
What is my age, can you tell me?

Crumbs Valuable in Cookery.

There is nothing new in the idea of using bread crumbs in cookery and most housekeepers are in the habit of having some on hand for use in scalloped dishes, stuffing for meat, puddings, etc. Few realize, however, how much more generally they might be utilized. Many commercial bakers use bread crumbs to some extent as a substitute for flour in many sorts of cakes, cookies, puddings, etc. Crumbs may also be used instead of flour and starch for thickening soups and sauces.

Any bits of bread which can not be eaten on the table should be saved and crumbed for use in cooking. Some housekeepers keep two kinds on hand; one, stale crumbs made chiefly from the inside of the loaf and suitable for use in the place of flour, and dried crumbs made from any part of the bread browned a little in a very slow oven and crushed fine to be used in scalloped dishes, for the coating of croquettes or other fried foods, or wherever a crusty, fine crumb is needed. To prevent their growing musty, crumbs should be kept in dry, air-tight containers. Fruit jars are often convenient for the purpose.

The Breeders' Department in this issue contains the names of many prominent live stock breeders. Their offers are worthy your consideration.

In answering advertisements don't fail to mention this paper.

Let Us Do Our Best.

Dear Nephews and Nieces: I wonder how many of our farm boys and girls are making their work a pleasure, trying to do their best and add interest and gain the approval of their parents?

Many of our girls and boys milk cows, set hens and care for the hatched chicks; feed the baby lambs and pigs and calves that have been left motherless, have garden of their own and sell the vegetables; help make soap; build birds' nests so that the cats and preying animals will not get the young; help trap the gophers and moles; have a flower warden in the back yard and make the once eyesore places beautiful with flowers. AUNT NELLIE.

So Glad That She Has Found a Twin.

Dear Aunt Nellie: The other cousins' letters are very interesting to read and are getting more so all the time. In my other letter I forgot to tell you the name of my little sister, so I will tell you what it is now. It is Mary Fay and she is in the third grade. I have found a twin and her name is Marie Born. I can not express how glad I am that I have found a twin. Marie is 5 feet 8 inches tall, while I am 5 feet 1 inch. She is seven inches taller than I am. I now weigh 106 1-2 pounds and Marie weighs 125 pounds. Marie is in the seventh grade, while I am in the eighth. She has blue eyes, light hair and I have also. I now have one more pet than I had when I wrote to you before. I have a little calf. It will run and play with me. Her name is Lady Jane. Lady Jane is black and is a month and eight days old. We have an hour noon now. I expect to write to the Corner again.—Evalena Clement, Tampico, Wash.

Got Her Ankle Burned One Night.

Dear Aunt Nellie: I was getting ready for bed and got my ankle burnt, and it is still sore. That was about three weeks ago. I am 11 years old. My birthday is October 21 and I am in the fourth grade. The school is across the road from here and the name is Mountain View. There are 20 pupils that come to school here and the school has only one room. Our teacher's name is Miss Samko. I have two sisters and their names are Jeanette and Viola. Jeanette is 8 years old and in the third grade and Viola is 1 1-2 years old. I have two brothers. Their names are Kenneth and Sherman. Kenneth is 5 and Sherman is 12 years old. We have a nice Sunday school started here. I love to read the Children's Corner. We have one cow and one horse and 18 chickens. We are living on a 10-acre farm and live two and one-half miles from town.—Edna McClelland, Burlington, Wash.

Grace Has Lots of Relatives Now.

Dear Aunt Nellie: My subject is "The Best Book." I have read quite a few books. I read "Pete, Cow Puncher," "Anne of Green Gables," "The Adventures of Unc' Billy Possum," and "With the Indians in the Rockies." All of them are very good books. I can make beds and wash and wipe dishes, set the table and make a chocolate cake. I am making a crocheted yoke. My father got 225 marbles for us. I have 63 marbles myself. Our daffodils are budding. They are quite high now. Pretty soon the roses and lilacs will be blooming too. I like the great big roses and purple lilacs. Our hired man can play the guitar and mouth harp both at the same time. I am rather lonely and I would like some of the little girls of the Corner to write to me. I have a lot of relatives to write to now as I have joined the Corner.—Grace L. Balsley, Enumclaw, Wash.

Thr[illegible]rses That Ruby Can Ride.

Dear Aunt Nellie: I am 7 years old. I am in the second grade. I have two sisters and three brothers. Their names are Blanche, Kathy, Ralph, Kenneth and Robert. My name is Ruby. There are 16 of us in our school, nine girls and seven boys. My teacher's name is Miss Perry. We have three dogs, one cat, eight horses and 17 calves. We have a pig and 21 cows. We have three horses I can ride.—Ruby Cantrell, Lacamas Stock Farm, Winlock, Wash.

Vere, the Baby Boy, Is Very Cute.

Dear Aunt Nellie: I have read many letters in the Corner, but this is the first time I have written, so I thought I should like to see one of mine in print. I am 8 years old and in the second grade. My teacher's name is Miss Helen Stack. I have three sisters and three brothers. We all go to school except Violet, my youngest sister, and Vere, the baby boy. He is very cute. He is 2 years old.—Gladys Brummund, Connell, Wash.

Tells How to Make a Doll Hat.

Dear Aunt Nellie:: I have been reading the letters of the children and I like them very much. I have three brothers—Marvin, Elworth and Everett. I am going to tell about making a doll hat. First take a custard cup and cover with crepe paper, then cut three strips of the crepe paper and braid lightly, then begin at the top of the crown and going down cover with it (first put on paste). First of all, when you put the crepe paper on the custard cup tuck under the end inside. After all this is done bring out the paper tucked in and cover with the braided crepe paper. Now let it dry and remove from the cup and trim it up. I was 10 years old March 18, 1917.—Imogene Nelson, Mount Vernon, Wash.

Best Composition on "Farming."

Dear Aunt Nellie: We take the Washington Farmer and I like to read the letters from the other boys and girls. I am a little girl 12 years old. I live on a large wheat ranch. I have three brothers and one sister. My sister is married. My youngest brother rides a pony two miles to school. I have been staying in town with my cousin and going to school, but I took sick and came home. I won the prize for the best composition in my room at school. It was about "Farming." I like to help my mother with the work in the house, washing dishes or sweeping the floor. I like to feed the chickens and gather the eggs too.—Clara Burton, Baird, Wash.

Belgian Hares Are Her Favorites.

Dear Aunt Nellie: I am a country girl 14 years old. I live on a farm and love to milk the cows, feed the pigs and go to school. I have one mile to go to the rural school. I have many pets, among them Belgian hares are my favorites. I love to read the children's page in the Farmer so well that papa said I could send you 50 cents and that would pay for it awhile.—Josie Read, R. 2, Touchet, Wash.

Habit of Hanging Up Their Coats.

Dear Aunt Nellie: I am going to write on "How I Earned My First Money." I know I have had money that I did not earn and some that I did earn. When my sister, Clara, and I came home from school we would throw our coats on the floor or any chair. So my auntie said she would give us each $10 if we would hang our coats up all the time and our other clothes as well. Then she thought we would have to wash and wipe our dishes right after meals. We had to keep it up for about a year. We tried and we got into the habit of hanging up our clothes and doing the dishes. We got $10 and we have not spent it yet.—Rubie Amley, Kirkland, Wash.

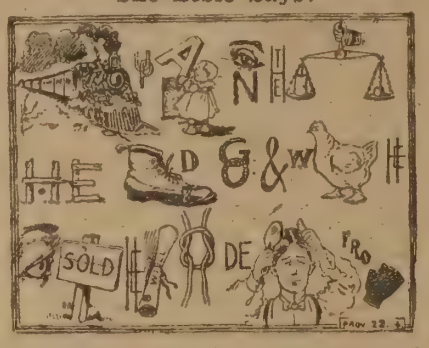
Enjoys the Letters All the Time.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I enjoy the letters all the time. I live on a farm out in the country called Tualco valley. We have six cows, two calves, two working horses and about 16 chickens. I have two brothers, the oldest is Howard and the youngest is Warren. I am the oldest. My birthday is July 9 and I am in the third grade in school. My teacher's name is Miss Ada English. I like her fine. The name of the school which I go to is Tualco school and district No. 7.—Ethel Harriman, Monroe, Wash.

"Springtime" Is Avah's Subject.

Dear Aunt Nellie: The subject I chose is "Springtime." I like spring because everything is green and the flowers are so pretty and the little chickens running everywhere are so pretty. We have two little calves. Their names are Mutt and Jeff. I saw my brother's letter in the paper. I would like to correspond with Inza Staiff and Emma Short if they will write to me. I write to Inez Swanson. I am 11 years old and in the sixth grade at school.—Avah Marie Fox, Cunningham, Wash.

Be Sure to Write Again, Ellen.



Dear Aunt Nellie: I enjoy reading the letters of the other children and I thought they would enjoy reading a letter of mine. I am 13 years old. My birthday is August 26. I am next to the oldest one in the family. I have two brothers and three sisters. My brothers' names are Frank and Thomas. My sisters' names are Rosa, Marie and Gertrude. We do not live very far from school. I like my teacher. Her name is Miss Olive Russel. I am in the seventh grade and will be glad when I am in the eighth.—Ellen Purcell, Pomeroy, Wash.

Live Twelve Miles From Spokane.

Dear Aunt Nellie: My father takes The Washington Farmer. I like it very much as I read the Children's Corner. My father also thinks it is a very good paper. I am a girl 12 years old. I am in the sixth grade at school. I have a sister 6 years old going to school. She is in the first grade. We like to go to school. We have three-quarters of a mile to go. My father owns 320 acres of land. We have chickens, cows and horses. I am 5 feet 2 inches tall. I have light hair and light eyes. The name of our school is Bonser. Our teacher's name is Miss Sherer. We live 12 miles from Spokane. My brother and cousin have a Ford auto. It is a 1916 Ford.—Eva Wees, Cheney, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Pearl Droullard, Selena Elizabeth Dero, Elsie Sanford, Daisy Laird, Ruby Prather, Nina Drunry, Naomi Miller, Marie Anderson, Lloyd Stannard, Gerald Stannard, Lola Stannard, May Milam, Basil Milam, Margaret Kessell.

Hides From East Africa.

During the last 10 years cattle hides from British East Africa and Uganda have become an important factor in the importation of that product into England, France and Italy. The total exportation for the fiscal year ended March 31, 1915 (the last available detailed statistics), amounted to 48,054 hundredweight, of 112 pounds, valued at $1,034,982, of which Great Britain took 55 per cent, France 15 per cent, Italy 12 per cent and Germany about 5 per cent. It is believed that some of these hides reach the United States by reexportation from Liverpool and Genoa, and especially during the last year, when several large shipments were made indirectly.

New Zealand Crop Conditions.

The New Zealand government statistician gives out the average yield per acre of wheat for the 1916-17 harvest at from 20 to 30 bushels, according to location, with a general average for the whole country at 25.15 bushels; while the oat crop is given at from 29 1-2 to 43 bushels per acre, with a general average of 30.88 bushels. The estimated total yield for this season is 5,300,000 bushels of wheat and 5,600,000 bushels of oats, as compared with 7,-108,360 bushels of wheat for the 1915-16 season and 7,653,208 bushels of oats.

Ship Douglas County Broccoli.

Six cars of broccoli have left Douglas county, Ore., during the season for eastern markets. These six cars represent 2430 crates of the product, and on the basis of $1.35, realized by growers last year, will bring approximately $3280.50 of eastern money into Douglas county.

FOR SALE, OR EXCHANGE FOR SMALLer place—My 552-a. stock and grain ranch, 3 miles to town. Address owner, R. E. Warner, Crawfordsville, Oregon.

Grain and Produce Markets

Chicago Grain.

CHICAGO, May 12.—Excited buying of wheat, far from being diminished, took on wilder aspects today because of drastic measures to stop the upward flight of prices. The market rose quicker and farther today than in all the rest of the week put together. There was a flurried close at the top-most point reached, a net advance of 22 3-4c to 29c, with July at $2.73 to $2.75, and September at $2.44 to $2.46. Corn gained 1 3-4c to 3 3-4c, and oats 3-4c to 2 1-2c. Provisions finished unchanged to 12 1-2c higher.

Cash Quotations.

CHICAGO, May 12.—Wheat—Nos. 2 and 3 red and Nos. 2 and 3 hard, nominal.

Corn—No. 2 yellow, $1.67@1.68; No. 3 yellow, $1.65½@1.67; No. 4 yellow, $1.64½.

Oats—No. 3 white, 72½@73½c; standard, 72¼@74¼c.

Rye, nominal. Barley, $1.25@1.63.

Timothy, $5@7.50. Clover, $12@17.

Pork, $38.80. Lard ,$22.37@22.47. Ribs,$20.50 to $24.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $4.00 cwt; new potatoes, 12½c lb.

Seed Potatoes—Early Ohios, $4.50 cwt; Early Rose, $4.50 cwt; white potatoes, $4.50 cwt; Early Six Weeks, $4.50 cwt.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 39c lb; Medo-Maid, 39c lb; Cascade, 39c lb; Gold Leaf, 39c lb; Better Butter, 39c lb; Attalia, 39c lb; Diadem, 39c lb; Hazelwood, 39c lb; Solid Pack, 39c lb.

Cheese—Wisconsin full cream, twins, 23c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $9.50 case.

Live Poultry—Hens, 20c lb; old roosters, 10c lb; ducks, 13@14c lb; turkeys, 20@25c lb; geese, 11c lb.

Dress Poultry—Hens, 23c lb; springers, 21c; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs., 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Seattle Market.

SEATTLE, May 12.—Seattle consumers have been benefited by the avalanche of California asparagus that has flooded the market this week in the fact that they have learned what not to buy. The difference between Californias and locals is so marked and the economic value of the home product so general that prices are being ignored and buyers are insisting upon the full, round, long green stalks, good to eat from end to end, that are packed in boxes bearing the label of Washington shippers.

Potatoes are steady. Jobbers who are short are buying as needed in sack lots and can sell to advantage at $75. Yakimas are dull at $90, the local demand for this stock having reached the minimum. The price differentials for the 1916 crop are still attractive to buyers, as new California garnets at 8@8½ cents are not selling, and jobbers are losing money on them.

Local cauliflower at $1@1.25 per dozen, local celery at 75 cents per dozen bunches and parsley and spinach are being supplied by Washington growers to the exclusion of Oregons.

Live Stock Quotations.

At Omaha.

OMAHA, May 12.—Hogs—Receipts, 6400; market, 5c to 10c higher. Heavy, $15.90@16.15; mixed, $15.75@16; light, $15.60@16; pigs, $12.50@14.50; bulk, $15.75@16.

Cattle—Receipts, 200; steady. Native steers, $9@13; cows and heifers, $7.50@11; western steers, $8@11.25; Texas steers, $7.50@10.25; cows and heifers, $9@13; canners, $7@8; stockers and feeders, $7@10.90; calves, $9@13; bulls, $7@10.

Sheep—Receipts, 400; steady. Yearlings, $14.75@16; wethers, $13.75@15; ewes, $12.50@14.50; lambs, $17.30@19.

At Chicago.

CHICAGO, May 12.—Hogs—Receipts, 10,000; strong; 10c above yesterday's average. Bulk, $16@16.35; light, $15.20@16.30; mixed, $15.75@16.40; heavy, $15.70@16.40; rough, $15.70@15.90; pigs, $15.10@15.40.

Cattle—Receipts, 700; steady. Native beef cattle, $9.40@13.70; stockers and feeders, $7.50@10.35; cows and heifers, $6.65@11.50; calves, $9.50@14.25.

Sheep—Receipts, 500; steady. Wethers, $12@14.75; lambs, $14@19.

At Portland.

PORTLAND, Ore., May 12.—Hogs—Steady; receipts, 267. Bulk of packing grades, $15.55@15.65; heavy packing, $15.65@15.75; light packing, $15.55@15.60; rough heavies, $14.25@15; pigs and skips, $13.75@14.25; stock hogs, $12.25@13.50.

Cattle—Steady; receipts, 539. Steers, prime light, $10.50@11.25; prime heavy, $10@10.50; good, $9.75@10; cows, choice, $9.25@9.85; medium to good, $8@8.50; ordinary to fair, $6.75@7.50; heifers, $9@10.25; bulls, $5.50@8; calves, $8@10.

Sheep—Steady; receipts, 93. Lambs, east of mountains, $13@13.50; lambs, valley, $12.75@13.25; lambs, shorn, $11@11.50; prime wethers, $11.50@12; choice ewes, $10@10.75; heavy ewes, $9@10.

At Seattle.

SEATTLE, May 12.—Receipts—100 hogs, 5 cattle; market strong on all lines.

Cattle—Higher. Prime sters, $11@12; common to medium, $6.50@10; best cows and heifers, $9@10; common to medium, $6.50@8.50; bulls, $1@8.50; salves, $6.50@11.10.

Hogs—Prime light, $15.85@16; medium to choice, $15.50@15.60; smooth heavies, $15@15.30; rough heavies, $14.50@14.80; pigs, $13.50@14.15.

Sheep—Prime lambs, $12.50@13.75; good lambs, $12.25@12.50; wethers, $10.25@10.50; ewes, $9.10.

Spokane Stock Yards Saturday.

Hogs—Receipts, 111; market slow. Prime heavy packing, $15.60@15.75; prime light packing, $15.25@15.55; rough heavy, $14.50@14.75; pigs, $13.75@14.75; stockers, $13@15.

Cattle—Receipts, 351; market steady. There is a steady demand for prime beef steers and cows also for stocker and feeder cattle of the beef breeds.—Prime heavy steers, $10.50@11; prime light steers, $10.25@10.50; good steers, $10@10.25; prime cows, $8.50@9.25; good cows, $8@8.50; common cows, $7@7.75; best heifers, $9@10.35; bulls, $6@8; calves, $8@10.50; stockers, $6@9.

Sheep — Receipts, none; market, stead. Prime lambs, $13@13.50; common lambs, $12@12.50; choice yearlings, $11.25@12; good yearlings, $10.75@11.25; best mutton ewes, $10@11.

Portland Market.

PORTLAND, Ore., May 14.—Egg storers are again out of the market temporarily and this has caused some weakness in egg prices. Dealers do not look for the market to fall under 31 cents, as receipts are diminishing.

Butter is very firm with a strong shipping demand for cubes.

Poultry prices continue to sag. Receipts are not large, but the outside demand has fallen off.

There is no snap to the potato market. The eastern demand has ceased and remaining supplies are more than equal to home requirements. It is estimated that the increased acreage in Oregon will produce a surplus of 10,000 cars of potatoes in the coming season.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $53 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $44 per ton; shorts, $47.

Barley—No. 1 feed, $51; brewing, nominal; rolled, $58.

Hay—Buying prices: Timothy, eastern Oregon, $30; alfalfa, $23; grain, $18@20.

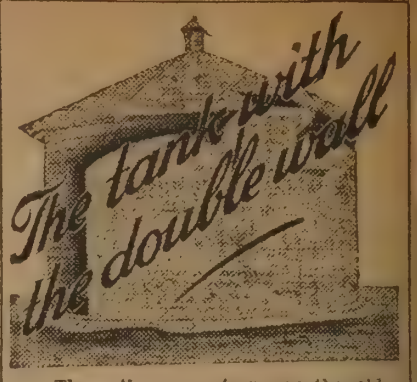
Eggs—Oregon ranch, case count, 32c per dozen; candled, 33c.

Poultry—Hens, 33c; ducks, 20@22c; turkeys, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 38@39c per pound; cubes, 36 1-2c.

Cheese—Oregon triplets, 24c; young Americas, 25c.

Dressed meats—Veal, 15@15 1-2c; pork, 19@19 1-2c.



Hops—1916 crop, 3@6c per pound.

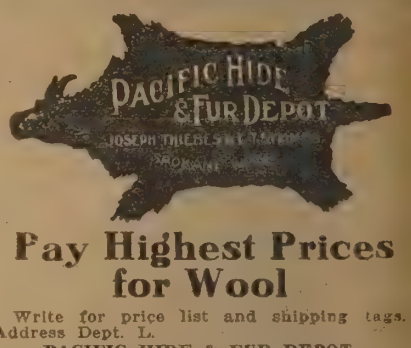
Potatoes—Oregon jobbing price, $3.50@4.

Wool—Eastern Oregon, fine, 40@45c; coarse, 45@50c; valley, 46@50c.

Beans—California small white, 16 1-2c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Three times as strong as the old styled, steel-hooped tanks. Built to last. Proof against wind and weather.



"BIG BEND"

Grain Tanks and Granaries

are built on double-wall principle, without hoops, and "tight as a drum." Low in cost, long in life. Capacities 750 to 10,000 bushels. Write at once for illustrated circular.

Unprecedented Winter Killing of Wheat

Never in our history has there been such an extensive winter killing of wheat in the United States. The government May crop report makes that convincingly clear.

Forty million acres were seeded last fall. Twelve million acres were winter killed and must be turned up and planted to other crops. A shrinkage of 64,000,000 bushels in the estimated yield is the result.

This loss from winter killing more than offsets the gain of nearly 10 points in the condition of the winter wheat that came through.

The severity of this year's loss is shown in the following comparison with previous years:

	Acres Sown.	Abandoned.	Yield.
1917	40,000,000	12,437,000	.....
1916	39,203,000	4,374,000	481,744,000
1915	42,012,000	810,000	673,947,000
1914	33,618,000	1,919,000	523,561,000
1913	33,215,000	6,676,000	399,919,000
1912	32,648,000	3,118,000	430,656,000

The condition of growing winter wheat on May 1 was 73.2 per cent, as compared with a 10-year average of 86.6 per cent. Pacific coast states, with the exception of California, are reported as being well above the general avxerage:

	May 1, 1917.	May 1, 1916.	10-Yr. Av.
Idaho	85	93	96
Montana	84	83	93
Oregon	83	95	96
Washington	80	84	95
United States	73.2	82.4	86.6

Aside from the loss of so much winter wheat the May report is encouraging, as grass lands are in good condition, plowing generally is in advance of a year ago, and, notwithstanding the unfavorable weather conditions, spring planting is farther ahead than the average of the last 10 years.

This is cheering proof that the farmers of the United States are responding splendidly to the country's call and are putting forth extraordinary efforts to make the most of unfavorable conditions. Manifestly they are working long days and driving their work with fine energy.

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

Don't Neglect Stock

Says Observer of the Industry

(Continued from page three.)

meadows and fields have been plowed up and turned over to grain production.

Alfalfa Is Damaged.

Finally, the fact is now evident for the first time that many alfalfa fields in some of the large irrigated belts have been winter killed, with a loss ranging from 25 per cent to total loss of the field as an alfalfa producer. The writer has had first-hand reports from owners, and the situation is in some sections so precarious as to cause farmers to seriously consider the unloading of their live stock.

There is only one constructive way to lend bright color to this dark and unpromising picture. Prompt, thorough and energetic measures must be taken to remedy defects and provide for the future. In the first place, no live stock that is not ready for market should be sent to slaughter. If one farmer has a surplus his neighbors may be able to handle the extra animals. In some districts cooperative ownership of herd sires and joint or cooperative grazing and feeding may save the situation.

Build Up Pastures.

There may be lack of pasture. This can be met by special spring-sown green forage crops, such as rape, kale, peas and oats, vetch and root crops for early fall and winter use. Rape and kale grow rapidly, and when moisture is sufficient last throughout the summer until the fall. The best method of seeding is with a hand or grain drill. The rate of seeding is from three to five pounds per acre. Rape and kale are especially valuable for sheep and hogs, but can also be used for dairy cattle, especially when cut and carried to the cows. Peas and oats make a good summer pasture crop for cattle, sheep and swine and the crop is one easily grown. The peas and oats may be seeded with a grain drill on a well prepared seed bed. The rate of weeding is 60 to 70 pounds of field peas with 35 to 40 pounds of oats. Vetch or vetch seeded with a cereal is used for green forage, especially across the Atlantic.

Silos Especially Advisable.

The preservation of feed in the silo is an approved method of making wise use of the forage. This method becomes especially advisable this year. Corn may be seeded up to the middle of June and is especially desirable as a means of uitlizing summer fallow. Corn silage is considered a staple live stock feed. We have found, however, as a result of two years' experience in growing and feeding on a rather large scale at the University of Idaho experiment station, silages other than corn, that several other silage crops or silage crop mixtures give results fully equal, or almost equal, to results secured with corn. Among crops successfully used for silage are peas and oats, peas and wheat, vetch and wheat and wheat alone. Peas and others have been grown in areas of six to 10 acres, and we consider a ton of peas and oats silage fully equal in feeding value to a ton of corn silage. Peas and wheat gave good returns this year both in yields and feeding value, as did vetch and wheat. Wheat silage was found not so palatable as the silage made from mixtures mentioned. The beginner with silage made from crops other than corn should seed peas and oats, 60 pounds of field peas (preferably Canadian White) and 40 pounds of oats per acre. There is ample time yet for seeding silage crops.

One of the pressing needs is that there may be sufficient dried forage to carry both farm and range live stock through the next winter. There is time yet in all the districts where spring is not forward to seed special crops for hay and dried roughage. As before indicated, the alfalfa and other hays will scarcely suffice for work stock. The ordinary meadow acreage that started into winter was in all probability below normal and in some sections much of the alfalfa is winter killed. Among the many special crops that may be used to replace alfalfa, timothy and other hays are wheat, oats, barley, peas and oats, vetch, vetch and wheat, millet, corn to be cut for fodder and sorghum.

For many years wheat hay and oat hay have been commonly used, and when properly cured such hays make excellent forage. Such cereal crops may be seeded on fall or spring plowed land. If the hay is to be used for sheep, peas and oats make an excellent mixture, seeded 65 pounds of field peas and 35 pounds of well cleaned oats. This hay is also well adapted for dairy cows and brood sows and hogs can derive a considerable portion of winter sustenance from such a hay when it is well cured and properly sheltered. In districts where the alfalfa is badly damaged so that it will not yield a baling crop, oats can be made to yield a good crop of grain or hay. Where the soil is in good condition for working a double disking can in all probability be made to successfully take the place of the laborious and long task of breaking the alfalfa sod. Should considerable alfalfa come and grow with the oat crop the hay crop will be all the more palatable and nutritious for live stock.

Vetch alone or seeded with grain is a crop that deserves more consideration. Millet in the middle west is often most successfully used for an emergency crop, and seeded in the late spring will yield abundant forage. It is not advisable, however, to plan to use millet as a continuous diet for horses. In the districts of lower altitude and earlier spring sorghum is a possibility.

The Motor Car

On the Farm

The other evening my next neighbor and I fell to "chinning" about the evolution that gasoline power has worked in the business of farming.

Our talk was the outgrowth of a purchase he has recently made of a motor truck. I have been a little hesitant about buying a truck because of the love I inherited and have developed for fine horse flesh. Of course, I have to admit that the use of gasoline power has reversed the belief that most of us farmers clung to for quite a long time, namely, that the horse is always a necessity and the motor car, motor truck and tractor always a luxury.

For if the old saying that "time is money" is true of the business man in town it is even more true of those of us who are in the business of farming. Not so many years ago we farmers would spend the better part of a day driving to town on some more or less important errand even though we were only a few miles out. Now a 10 or 20 mile drive in and back in our car is a matter of only a couple of hours.

Those of us who had considerable land to break had to keep a lot of horses and had to be satisfied with the plowing of as many acres in a day as an ordinary tractor will do in a fifth of the time.

Nobody appreciates and likes good horses better than I; but there is no side-stepping the plain fact that with hay anywhere from $20 to $30 a ton and other feed proportionately high the horse is doubly expensive; first because of what it costs to keep him and second, because of the time he consumes in getting things done.

Just take the hauling problem for example. My neighbor has a truck capable of hauling three tons. At one load he can haul as much as I could haul over our roads with two average two-horse teams. He can travel at least three times as fast, too. So that in the same length of time he can get three times the amount of hauling done with his truck as I do with two teams.

His truck requires one driver; my teams two drivers. And when it comes to upkeep I frankly confess that he has me badly beaten. They say that sentiment has no place in business, and even though we all know it has there is no getting around the fact that motor driven machinery makes the efforts of the very best, most faithful and most hard working of horses look slow and inefficient. So I'm going to dispose of most of my horses and buy a truck for hauling and a tractor for plowing, keeping only two or possibly only one team for odd jobs. Such a plan, I believe, will enable me to do with less help and enable me to operate my farm on a much better margin of profit.

There are always two sides to any question and if some other lover of horses disagrees with me I should like to hear from him through this department of the Farmer, especially if he has made any comparisons between horse power that is produced with hay and oats and horse power produced with gasoline fed to a motor.

NEWS

At a Bargain

Twice-a-Week Spokesman-Review Offered With "The Washington Farmer" at Worth While Saving

This Combination of Papers Brings You the News of the World as Well as the News Regarding the Agricultural Developments of Your State

TWICE A WEEK.

THE Twice-a-Week Spokesman-Review cultivates a different field from that tilled by THE WASHINGTON FARMER. The two papers together form a combination which has been welcomed in thousands of homes throughout the state. As all our friends know, THE WASHINGTON FARMER devotes itself to the agricultural activities, events, hopes and personalities of this one state. The Twice-a-Week Spokesman-Review cultivates the world as its field, and every Tuesday and Friday brings a clear, accurate, condensed, conveniently arranged review of what is happening at home and abroad. We are pleased to be able to offer the saving below. Paid ahead subscriptions can be extended.

OUR SPECIAL OFFER

Twice-a-Week Spokesman-Review, 1 year $1
The Washington Farmer, 3 years if subscribed....
for a year at a time, would cost $3

$4

Our special offer for both papers together $2.00

The Washington Farmer, Spokane, Wash.

NEWS FOR BREEDERS

Union Stock Show.

The Union, Ore., stock show association has adopted as its slogan this year "The best we'll breed for America's need," a slogan that means much and has a catchy ring to it. It was submitted by Lulu McDermott Smith, librarian of the public library at Baker, and was selected out of over 100, offered from Oregon, California, Idaho and Colorado.

While the Union Stock show was primarily a horse show, and for several years the horses made almost the entire show, and while it will be a great horse show this year, it is now certain there will be a cattle show many times greater than ever before, one that will be surpassed or equaled in the state only by the Oregon State Fair and Pacific International at North Portland. This will be principally a beef cattle show, with Shorthorns predominating. Fifteen exhibitors of Shorthorns are expected, and they will make a show worth going far to see.

While the old plan of free feed and free stall room will be continued for the first time cash premiums will be given. It is practically certain that the county fair money will be given the show, as there is no longer a county fair. The American Shorthorn Breeders' association has recognized the show to the extent of $250 and an equal amount is promised from the stockyards, the commission men and the packers of North Portland, making the Shorthorn prizes worth striving for.

Amusements in the way of riding, roping and other buckaroo stunts will furnish all the thrills any one can ask and the greatest show yet given by this great "Union International" is absolutely assured. H. A.

Fine Shorthorn Heifer.

One of the fine Shorthorn heifers owned by W. O. Minor, the well-known breeder of Heppner, Ore. She sold in the Portland sale April 3 for $570.

PERCHERONS AND SHORTHORNS.

Mulhall's first annual sale of Percherons and Shorthorns will be held on their farm joining the town of Fenn, Idaho, located on the Camas Prairie branch of the O.-W. R. & N. and N. P. R. R., eight miles west of Grangeville, Idaho, and about 50 miles southeast of Lewiston, Idaho, on Wednesday, May 23, 1917.

SALE DATE CHANGED.

On account of conflicting dates the date of the complete dispersal sale of Jerseys of W. A. Forrest of McMinnville, Ore., has been changed to June 12.

is not safe in working under irrigation.

Special forages may be used entire to sustain the flock or may be sowed only for the purpose of supplementing permanent pastures. For early spring pasture, fall seeded rye and wheat are well adapted. Peas and oats, peas and barley, rape and kale, seeded rather early in the spring, yield abundant late spring and summer feed. Where summer moisture for germinating the seed and starting the growth of the plans can be depended upon, rape, kale, or peas and oats may be seeded in late spring or early summer for late summer and fall forage. This plan is followed by some sheep men. If moisture conditions are satisfactory, one may range a series of forage crops for sheep as is done in England. Crops are seeded according to their adaptation to season and are seeded at such times as bring on a succession of green forage from early spring until late fall. The last crop of the fall under the English system is roots.

Clean Up Waste Places.

In addition to permanent or annual pastures especially provided as suggested, the flock may be used to clean up underbrush, clean out lanes and other uncultivated areas, do well on aftermath of meadows and, in general, save for the farmer forage either of no value for other live stock or that could in no other way be so well utilized. If the flock is of much size, however, it can not be entirely maintained on the basis of utilizing waste material. Sheep make mighty good use of rough forage and poor pasture, but too heavy dependence on the flock in this direction often results in abuse. Forcing the flock to rustle" sometimes brings it near to starvation. In general, the keep of the flock in summer is a comparatively light charge. Enough pasture must be provided to maintain the ewes in thrifty condition, keep them milking well and give opportunity for the lambs to supplement their milk with grass.

In many sections pastures get short and dry in midsummer. Specially sowed crops before mentioned can be used to advantage to tide over this period In using pastures containing alfalfa or clover in at all large amount, the animals should not be turned to pasture when extremely hungry. It is also safer to keep them off legumes directly after rains or heavy dews. In non-irrigated sections mixtures with clover and alfalfa prominent are safe for sheep if precautions mentioned above are observed.

Sheep need water and should have it at frequent intervals. Clean and, if possible, fresh water is most advisable. As spring days become warmer and summer is at hand, the flock prefers to graze in early morning and later afternoon and evening. If permitted a choice in the matter, sheep spend the heated portions of the day quietly in a shady place. Shade trees or special structures permitting free circulation of air suffice for this purpose. Protection from the sun in summer during the middle hours of the day is necessary if the flock is to do well.

The rams should be kept separate from the ewes in summer. Otherwise the sheep man may later find himself possessed of some fall lambs.

PUREBRED ASSOCIATION.

The breeders of purebred live stock in Union county, Ore., have recently organized a purebred live stock association, with 32 members. They include breeders of horses, beef and dairy cattle, sheep and hogs. Union county is the home of the Union stock show, and there is already much interest in improved live stock. One of the first things the assoociation did was to issue a little directory showing the addresses of the members and the kind of stock bred. Later on some community advertising will be done.

Long Wool Breeds Larger Sheep

Mature More Slowly; Flesh Inferior to Downs

ARTICLE 3, by E. J. IDDINGS.

The Long Wools bring size and length and weight of fleece to the farm flock. They are somewhat more leggy and rangy and are larger framed than the Down breeds. On account of their size and conformation they are a little later in maturing. The matured animals tend to lay an external fat, and on account of this tendency the carcass is not so highly regarded by meat specialists. The wool is long, strong and rather coarse in fiber. It grades as coarse combing and for two years has been in great demand at good prices for army clothing and other cloth of coarse texture. Present conditions indicate a continued popularity for the longer wools.

The Cotswold.

One of the most popular Long Wool breeds and one of our oldest breeds of sheep is the Cotswold. It was so named from "cots" or small houses used to shelter sheep and "wold" or rolling upland pasture. The improving blood was Leicester.

The modern Cotswold is a massive sheep of impressive bearing. The body is long and deep and the back broad and level. The head is carried stylishly and notwithstanding the size of the sheep the body is smoothly turned. The face is white or gray and the legs of the same color. The wool is long, finer than that carried by most breeds of this type and covers the body well. A marked characteristic is a foretop of spirals, which in well-bred specimens hangs almost to the tip of the nose.

This breed ranks high among wool breeds in grazing, but individuals in it are sometimes found none too vigorous. They stand especially high as milkers and are consequently good mothers. Some of the Idaho sheepmen claim that Cotswolds are the best mothers of all the breeds. On account of these qualities Cotswold blood is especially desired in the ewes. In prolificacy the breed is average. Good flocks should shear an average of 12 to 14 pounds per head.

The Lincoln.

The Lincoln came from the north of England and is considered by many authorities to be our largest breed of sheep. Improvement was brought about by selection in the use of Leicester blood. The breed is larger and more rugged of frame, the head somewhat coarser, the back broader and the bone heavier than that of the Cotswold. Likewise the fleece is longer, not infrequently reaching from 15 to 18 inches in length after a year or more of growth, and the fiber is coarser. The rams occasionally weigh 400 pounds and the ewes 300. Good average weights are 275 to 300 pounds for mature rams and 230 to 275 for mature ewes. Ram fleeces run 16 to 22 pounds and ewe fleeces 12 to 15. This breed lacks the spiral hanging from the forehead but has in their place a tuft of wool.

Lincolns bring weight and substance and ruggedness to a flock, and are especially well adapted to the farm where plenty of feed is available. They also bring increased weight of fleece and length of staple. The annual increase from average ewes is 125 per cent to 135 per cent.

Both Cotswolds and Lincolns are later in maturing than the Downs. Both, however, have been of great value in giving size, substance and length and weight of fleece to range flocks. Both breeds do well on the farm, the Lincoln excelling in size and weight and length of fleece and Cotswolds standing first as mothers and in quality of fleece.

Pasture is the foundation of successful flock husbandry. Pasture means reasonable cost of ewe keep, adequate milk flow from the ewes, and more vigorous growth of lambs. The kind of pasture is not so material since it may be in the form of permanent grasses, seeded pastures, or special forage crops seeded annually for the sheep.

In some of the irrigated districts blue grass and white clover, watered at 10-day to three-week intervals, has been found to yield a wealth of feed. On the Gooding, Idaho, experiment station, it has been found that 15 to 25 head of sheep can be carried per acre on mixed irrigated pasture. There a mixture of Kentucky blue grass, orchard grass, smooth grown broom grass, meadow fescue, timothy and white clover has been used. Irrigation water is used each 10 days. On the University of Idaho farm at Moscow, Idaho, a mixture of timothy, orchard grass, blue grass, clover and alfalfa has been found successful for sheep pasture.

But little alfalfa should be seeded in a mixture intended for sheep, and alfalfa, even in a very small amount,

FOR SALE— Percherons, Shire Stallions and Mares

Jerico 110196, a dark iron gray Percheron stallion, 3 yrs., wt. 1850; sire Jube 81251 by Coco, dam, Bird 81977 by Brilliant Jr. His 1st, 2d and 3d dams are close descendants of Brilliant. Winnings at Northwest Live Stock show, Lewiston, as suckling colt, first in class and Percheron society gold medal as best stallion under three years, owned and bred by exhibitor. As 2 yr. old, 1st in class and champion under 3 years, three Society medals, best under three years owned and bred by exhibitor, grand champion and best stallion owned and bred by exhibitor and in open class reserve grand champion.

Aaron 117566, a 2-yr.-old half-brother, dark bay, wt. 1550. Sire Salvador 51340 by Calypso. Equally good, (some say better). He has never been shown.

Callie 88642, a dark gray mare, 6 yrs. old, wt. 1750. Sire Apollon 26130. She is very strong in Brilliant blood; has mare colt by Halicite.

Lady Grace II., 15452, a 3-yr.-old Shire, bay, white face and white hind legs, wt. 1650. Sire Imp. Toga VII. 9283; dam Bay Lily 13577, by Imp. Greenham Champion.

All first class in every respect, mostly our own breeding, reserved for our own special use.

On account of the death of one of the partners, must sell to close estate.

FOLLETT & SCHOOLER, Genesee, Idaho.

Will Not Call Army Till Early in Fall

Draft Bill Favors Farming Industry; Farm Workers to Be Exempted in Many Cases

The army conscription bill fixing the ages of men to be drafted into the service at 21 to 30 years has finally been passed and has become law.

Simultaneously came the announcement from Secretary of War Baker that the first call of men to the colors under the new law would not be made until about September 1, which announcement has had the effect of relieving much of the fear of extreme harvest labor shortage.

"The matter of obtaining labor during the harvest season is a very important one, and is now receiving very earnest consideration by all the departments of the government." said Secretary Baker. "Owing to the depleted state of our supplies, it will not be practicable to call out the first 500,000 under the provisions of the army act until about September 1, so there will be no appreciable interference with the labor supply of the country until that date."

Farm Labor Exempted.

The army draft bill is calculated to interfere as little as possible with the operations of the farms and the other staple industries of the country. One provision of the measure is the exemption from service, at least for the present, of young men who are actively engaged in the farming industry, considering that the cultivation of the farms of the country is of equal importance to the training and operation of an army.

By special proclamation President Wilson has designated June 5 as registration day throughout all the states. Local officials will assist in the registration, which will be conducted by precincts in much the same manner as elections or registration for elections are held. President Wilson's selective draft proclamation will be found on page 4 of this issue.

The Army Bill.

The chief provisions of the army bill are as follows:

Raising of armed forces by the selective draft system, imposed upon all males between the ages of 21 and 30 years, inclusive.

Increasing the regular army to maximum war strength.

Drafting into the federal service of national guard units.

Raising of an initial force by conscription of 500,000 men, with addition of 500,000 if deemed necessary.

Raising, if the president sees fit, of four divisions of volunteer infantry, designed by its framers to permit the sending abroad of the expeditionary force proposed by Theodore Roosevelt.

Newton D. Baker, who, as secretary of war, has announced that the first draft of soldiers under the new conscription bill will not be made till about September 1.

Increasing the pay of all enlisted men, as follows: Fifteen dollars additional monthly for those now receiving less than $21, comprising the bulk of the army, graduated downward to $6 additional monthly for those receiving $45 or more.

Prohibition of liquor sales at or near army training camps, and otherwise protecting morals of the soldier.

Following the proclamaton by the president, Governor Lister has designated June 5, Army Registration day, as a state holiday, and has appointed Lieutenant Governor Hart as director of registration.

Governor Lister's statement says:

"While June 5 will be declared a legal holiday, it will not be so declared for amusement purposes, nor for fixing a day for rest, but rather so that it may be used to the fullest degree as a day of service for our country. Many states have already informed the federal authorities that registration will be handled as a volunteer service and accomplished without cost. I am sure Washington will be no less patriotic in this matter than other states.

Registration Officials.

"In the different counties the details of registration will be in charge of a board consisting of the sheriff, the county auditor and county physician. In counties having no regularly appointed county physician, the sheriff and county auditor will be authorized to appoint a physician as the member of the board.

"The registration cards and certificates are already in the hands of the sheriffs. An extra supply has been received by the governor for distribution to counties whose supply furnished direct from the war department is insufficient to meet the needs of the county. As the supply of cards furnished is based on the 1910 census and there has been a marked increase in population in many of the districts since that time, it will be necessary to conserve carefully the supply furnished. Any cards left on hand in the different precincts at the close of registration must be returned to the county sheriff, as these will be used in making up duplicate sets of the registration cards. A careful following of instructions by the registrars and a cheerful loyal cooperation on the part of all citizens will make the registration in the state of Washington a success."

Farmers Will Can Vegetables

Interest in Movement to Store Away Greater Food Supply Means More Gardens In Vicinity of Ephrata.

EPHRATA, Grant county, Wash., May 11.—The acreage of grain in Grant county will be approximately the same as other years. Possibly a 10 per cent increase, owing to the exceptionally wet spring and the high cost of grain. The acreage of potatoes will be very materially increased, possibly 150 per cent increase. Peas and beans will probably be increased to the amount of 500 per cent. Hogs are very scarce, however, many wish to purchase a pig or two to keep for breeding purposes. Must interest is being manifested in the canning of vegetables for home use next year. This will mean that more gardens will be raised on the farms in order to grow the vegetables that can be canned. A number of the farmers are building small houses on their ranches in order to keep a man and family on the ranch the year round. They feel that by this method they will be able to get more efficient and dependable help than by the old method of hiring a single man. Also a number of the farmers who are hiring single men are putting up better bunk houses and giving them better accommodations than heretofore.

H. W. REAUGH.

Beans and Buckwheat.

GIG HARBOR, Pierce county, Wash., May 10.—While this is not at all a grain country, there is an earnest effort this season to grow the greatest possible amount of chicken feed and pig feed—mostly oats, peas and wheat—to be threshed out by hand or to be fed in the bundle. There is also a much stronger effort than common to grow enough roughage for the home stock. The potato crop will surely be well attended to in this section, as the farmers had mostly retained plenty of seed, which will no doubt be lacking in many parts of the country, and which must certainly go far toward preventing an over-planting, as many seem to fear. The two crops which may yet be pushed in this section of the state are beans and buckwheat, and it is to be hoped that the farmers will take advantage of the fact that these are late crops and may be safely planted up to June first.

There is occasionally a farm hereabouts that is equipped with a little house suitable for the occupancy of a tenant laborer. Odds and ends of lumber suitable for the building of such houses are so cheap here on the Coast that it is surprising that more farms are not thus equipped. It is a decided advantage to the farmer who has to have more or less labor outside of his family.

W. D. BOYNTON.

Greater Production Is Slogan.

CASTLE ROCK, Cowlitz County, Wash., April 27.—The question has often been asked whether it would pay or not to build a house with a good size garden lot enclosed, suitable small buildings for a few chickens, and a pig or two for the farm help, hiring only married men. This question is answered by citing a number of cases where it has been tried out to the disappointment of the farmer. In Cowlitz county our help consists mostly of men that are looking for the best wages and do not hesitate to pick up and travel if they hear of a better place, so in that case the house would be left empty. However, farmers as a rule manage to get their crops in the ground in suitable season. Greater production is the motto, and the farm papers help materially in this by studying out the experiences of others. In the towns in the county the back and front dooryard is spaded up, raked over, and some kind of a seed is put in the ground, some say "scabbing on the farmer." Be it this or that, there is plenty of room for all.

The high prices have a tendency to speed them up; potatoes, $5 per hundred; eggs, 35 cents; flour, $13 per barrel; beans, 13 cents a pound, and even rice has come up with an ante. But the farmers are planting apparently as much, if not more, regardless of the high price of seed, cutting the potato a little smaller giving two eyes to the piece planted, which will give the plant growth, making a bushel plant nearly twice as much as the old way of cutting in half. Twenty-five silos have been sold in the county to to be placed in readiness for the fall crop. Corn will be the principal crop for the silo. Dairy products are demanding that every available means be used to conserve the food supply for the cows. Sheep and some goats are used for the stump land pastures. We are up against it for plaster and lime. Several carloads have been ordered in the county and but few delivered. This will have a tendency to reduce the crop supply as this stimulant is what most of our soils lack for growing a crop. The slogan for the county is "greater production at least cost."

C. C. BROWN.

High Water Is a Handicap.

LITTLE ROCK, Thurston County, Wash., April 30.—High prices do not seem to have the effect on the acreage being put into crops that the high water does. This has been an unusually wet spring and lots of the low ground is covered with water. It is common to see signs tacked up: "No Hunting or Trespassing" over a piece of ground that resembles a lake. The upland is nearly all planted. No one crop seems to be leading in acreage. Every effort is being made to raise as much food as can possibly be grown. Every foot of available ground is being used and more ground being cleared. There is some increase in meat production, but not as great as should be. Farmers in this locality are bothered by coyotes, coons, skunks, weasels, rats, hawks and owls, which do a great deal of damage to sheep and poultry. If these pests were killed off there would be a greater increase in sheep and poultry. The coyotes and hawks are the hardest to get and do the most damage. Only a very few farms could afford to build a home for a hired man and his family and keep them the year 'round.

LEE KEGLEY.

Plymouth Rocks Lead.

FERNDALE, Whatcom County, Wash., May 5.—This section of the state has just completed one of the longest winters on record. Since May 1 the weather has been pleasant and farm work is being rushed. Nearly all the farmers have finished planting their oats and early potatoes are making a splendid showing. Oats and vetch and corn will be grown by silo owners this year, as they have proved to be the most practical filling for silos here. Corn grows remarkably well along the Nooksack river, where the soil is sandy. Mangels and kale are also staple crops. Milk is selling at $2.50 a hundred and butter fat brings 48 cents a pound. The men are not the only workers this spring, as the farmers' wives are raising more chickens than ever before, besides doing the gardening. More Plymouth Rocks are raised than any other kind of chickens. MRS. JACK PLASTER.

Few Pigs; Fewer Sheep.

CHEHALIS, Lewis County, Wash., May 7.—We have had a fine winter here of seven months, about the longest ever known. Hay and all feeds started in high and have steadily gone higher, with the exception of the big drop in hay in January and February, followed by a steady advance to $30 a ton. Wheat is $80 per ton, oats $60, potatoes $60, peas 5 cents per pound, beans 10 cents per pound, onions 10 cents per pound, butter fat 39 cents per pound, eggs 35 cents per dozen, milk $2.35 per 100 pounds, calves $1 to $4 each, cows $25 and up. There is scarcely a sheep in Lewis county and not many pigs. Hens are going to the butchers at 17 cents per pound. Every vacant patch of ground will go into gardens as soon as the weather permits. If we have a good crop season we will gather decidedly the largest supply ever known of grain, hay, potatoes, garden stuffs and fruit for the canneries. Women, children and business men all seem determined to do everything possible to supply better tables at less cost. Housewives are preserving lots of eggs for winter use and in season will can a double supply of fruit and garden products. The hired help question for years has been a vexation and is growing worse. Most of the larger farmers would gladly build cozy cottages for permanent help, but help is so changeable it does not work. A good man working with his family three to five years on the same farm, can start farming for himself in less than 10 years, and be worth more than three or four men that are roving the country for high price jobs.

L. K. COGSWELL.

Need Cheaper Money.

OTHELLO, Adams County, Wash., May 14.—The acreage of grain has not materially increased because of advanced prices. The grain is practically all out of the hands of the producer, a few belated loads brought the lucky ones $2.75 per bushel. Because of $4.75 per sack for seed very few spuds were planted, really less than last year. Early plantings are now coming up. One farmer here is planting some 15 acres of corn. There is practically nothing out of the usual in the way of increased food production. Many isolated tracts of land could have been prepared for next season crops but for lack of funds and difficulty in getting loans to meet the expense. Interest is high and banks demand gilt edge security and farmers are reluctant to bind their stock and tools to get the loans, hence many tracts that had been farmed are weed patches. Here is where government aid could increase the crop production to a marked degree. We are urged to be patriotic and do our utmost to prepare to feed the hungry, but the finances of this vicinity has prevented hundreds of acres from being prepared for seed. No farmer here hires by the year, as the farm help is mostly either of the home grown boys or transients who migrate when the notion takes them. Wages here are $40 to $50 per month, an average of about $45. The wage for harvest will be $3 to $3.50 per day, although the transients are agitating for $5 per day. Many farmers will do their own work and use machinery to reduce expenses.

A. O. LEE.

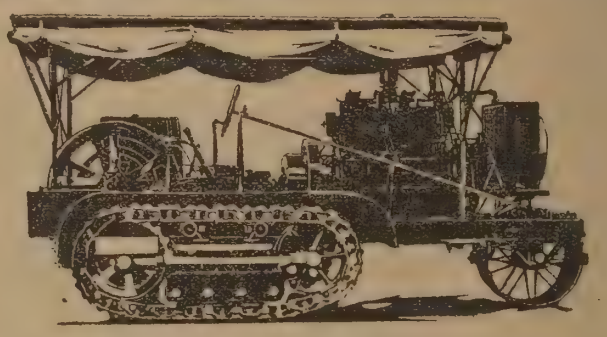
Lightest Known Wood.

Balsa wood, found in Central America, is said to be the lighest known wood. It is lighter than cork, and has an average specific gravity of only .104.

It Takes Punch In the Power To Do Farm Work

TOY tractors have fooled a great many people, makers and buyers alike. Theory won't plow a stony field or steadily drive a threshing machine. Nothing but strength, weight and power will do this kind of work. The Nichols & Shepard Co. build *work* engines and build them so that you get *paying results* when they are at work.

Red River Special Line



Two sizes of Oil-Gas Tractors, 25-50 and 35-70 H. P., full power on kerosene.

Your neighbor is running an engine of our make that will exactly fit any need you may have. He bought it because he wanted the best and he has written to us to say that he got it. His letter is published in a little farm paper that our nearest branch house will be glad to send to you free with a complete catalog. Write for them and secure reliable home information before you buy a power outfit of any kind.

Must Not Sacrifice Breeding Stock

High Prices and Feed Shortage Tempt Many to Let Stock Animals Go

Are high prices, feed shortage and the nationwide demand for increased production of grains for food manufacture a menace to the live stock industry of the northwest, or, in fact, of the entire nation? Such statements as the above from President Daughtrey of the Portland yards indicate such a menace.

A widespread agitation against the slaughter of breeding animals and immature stock has been launched and there is evidence that this agitation is bearing fruit and that there is a rapidly increasing tendency among owners of live stock to cling to their breeding stock with a view of assuring a supply of meat animals as well as work horses in years to come.

Roberts Is Optimistic.

With a view to learning the true facts, the Washington Farmer secured interviews with some of the men most closely in touch with the industry. It is gratifying to be able to report the declaration of W. D. Roberts of the Spokane union stock yards that the tide of cows and sows and ewes to the slaughter in the territory of the four states tributary to Spokane is being checked, and that farmers are beginning not only to hold such stock, but to buy to replenish their breeding herds. Mr. Roberts stated that the Spokane yards are doing everything in their power to induce owners to hold their stock, and that when such animals are received at the yards for sale to butchers or packers effort is made to resell them to farmers who will take them and use them for purposes of increased production. The Spokane yards have now a number of applications for breeding stock, and when such come in notice is immediately sent to such applicants. Recently a carload of small stocker hogs were shipped into the Wenatchee district from Spokane, and were eagerly competed for by the farmers of that region to replenish their depleted herds.

Are Selling Dairy Cows.

B. E. Smead of Opportunity, Wash., secretary of the Inland Dairy association, is less optimistic. Mr. Smead says that the dairymen are unloading many of their cows by way of the butcher's block because high prices for beef tempt them, and because high prices of feed and comparatively low prices for milk and cream make it unprofitable to keep anything but the very best producers. He is agreed with both Mr. Roberts of the Spokane yards and President Daughtrey of the Portland yards, that where cows that are not profitable producers are slaughtered, it is probably a good thing for the dairy business.

The following is the reply of President Daughtrey to the inquiry of The Farmer:

"With an ordinary dairy cow, in fairly good condition bringing from $75 to $125, it is a hard matter for most farmers to withstand the temptation to dispose of them, especially with the present high cost of feed, taking a chance later on when they expect prices might be lower to replace them. Carload after carload of what appears to be fairly good milch cows are coming here to the yards. In many cases, perhaps, these cows have been tested, and found wanting in butterfat—if this is so, they should be sold, but in other cases cows give evidence of heavy production.

See High Prices Ahead.

"The same thing is happening with breeding sows, many of which are selling on the market from $30 to $60 and $75 per head, according to weight.

"I do not care to prophesy, but can see nothing but high prices for breeding stock for several years to come—prices probably 50 per cent higher than at the present time.

"Every farmer who possibly can should save his best breeding animals. We know of no means to prevent farmers from marketing their breeding stock; we can only appeal to their common sense.

Government Control?

"The question of the government's prohibiting the sale of breeding stuff would be very difficult to handle and under many circumstances might work a disastrous hardship. No doubt the biggest tendency causing farmers to market their live stock is the fear that the present high prices will not be maintained. Experience in the past has taught them that there are ups and downs in prices—they are not willing to take a chance on a lower market. This brings up the question of the government fixing a minimum price for a long period of years on all farm products. A few months ago this proposition would have been dismissed without a thought, but at the present it looms large in the immediate future.

"Packing house and stock yards facilities are such that there is no danger of overproduction in this northwest country. Live stock will always have a fair value and is one of the most liquid assets on the farm."

Associations Are Active.

In common with others actively interested in the live stock industry, the pure bred live stock associations are urging their members to conserve breeding stock. The following is in part a letter sent out to its members by the executive committee of the Washington Pure Bred Live Stock association, made up of Charles M. Talmadge, F. M. Rothrock, J. H. McCroskey, G. M. Wilson, J. N. Clise and J. L. Smith:

"The members of our association can do their country no greater service at this time than by lending their aid in a concerted effort to prevent the marketing for slaughter of immature live stock and especially pregnant females. Also, we want to emphasize the necessity of the prevention of the sale of heifer calves for veal.

"The live stock men of our state have made a splendid start in pure bred live stock and as members of our association, we should do everything possible to prevent the needless slaughter of breeding animals. There is a dearth throughout the nation of mature stock. This is particularly true in the state of Washington.

"What is needed most is the influence you can bring to conserve our herds and to encourage and keep on the farms all breeding stock that will be needed during the war and after it is ended."

Information received from F. C. Sharkey of the Seattle Union stock yards, indicates that there is little tendency at the present time in the territory tributary to Seattle, for breeding stock to be placed on the block.

New York Largest City.

New York is the largest city in the world, according to the census of 1910.

Steam Pressure

Makes for Success in Canning

By PAUL E. TRIEM.

Now that the drive for increased food production is on in earnest it will be well for professional and amateur gardeners to consider the important matter of preserving the surplus from the vegetable and fruit areas. We Americans are a notoriously wasteful nation in this respect.

The remedy for past mistakes lies; first, in planting largely those vegetables which can be preserved in one way or another, provided there happens to be a surplus above present needs; and, second, in learning how to preserve or "can" this surplus so that it will keep. E. F. Benson, Washington state commissioner of agriculture, has suggested, under the first head, that we will find corn and beans of greater value as actual supporters of life and energy than potatoes. Corn, peas and beans are types of the really substantial food materials that can be realized in the garden, as contrasted with radishes, turnips, etc., which are of value chiefly for their mineral salts.

Plant a generous acreage of peas, beans and corn; and after you have made this beginning follow it up by preparing to care for the surplus. All of these food crops can be preserved by drying, but much of their flavor is sacrificed in this method of holding over. Canning is undoubtedly the best method of preservation.

There was a time not so far back when the average housewife would tell you that peas, beans and corn couldn't be canned successfully; that they would ferment, bulge the covers, and even explode the cans in spite of the most careful canning. The fact of the matter is that all of these garden crops furnish an ideal camping ground for the germs of fermentation and putrefaction; but that if these germs and their spores are really killed by heat, and if the sterilized corn or beans or peas is sealed air-tight in a sterilized receptacle fermentation is a scientific impossibility.

All the misunderstanding has arisen because of a lack of knowledge of some of the peculiarities of spores, which may be roughly called the "eggs" from which the germs of fermentation develop. These spores are incredibly resistent to the action of heat. Boiling for half an hour or so merely warms them up and makes them feel good, although the average germ is rendered harmless by this treatment. Now, remember that a spore is a germ in embryo, that it will soon hatch out into a germ; and see what happens when beans or corn are canned in the usual manner of boiling for half an hour or even an hour. The germs are killed, but the spores are merely hastened toward hatching.

Long-continued boiling is one of the remedies. Three hours' submersion in water at a "jumping boil" will do the work. Where time is a consideration, however—and it usually is in the kitchen—the steam pressure method presents the great advantage of cutting down the time of sterilization to about 40 minutes. The principle involved is that there is a gain in effectiveness of 2½ degrees in temperature for every pound of pressure, so that with the modern pressure canning outfit it is possible to raise the temperature to which the cans are subjected to a point where even a spore can not long retain vitality.

In addition to pressure outfits for the small or the large kitchen moderu manufacturers are now turning out a home sealer for tin cans, which puts the housewife on an equal footing with the biggest factory, as far as the effectiveness of equipment goes. Tin cans are cheap, easily stored, can be shipped by parcel post and do not have to be held from one season to another.

Chemawa Indian school girls and their fair exhibits of canned goods.

May Leave Fruit Unwrapped

Paper Prices Too High, Claim Orchardists

Large quantities of fruit in the northwest will be marketed in some way without wrapping unless the price of paper is reduced, declare growers throughout the fruit districts.

"A producer can not afford to wrap the cheaper grades of fruit at all at the present prices of paper," said C. J. Webb of the Spokane Fruit Growers' association. Mr. Webb added that the fruit organizations were going to fight the alleged combine of paper companies to a finish, and that the office of district attorney and the federal trade commission would probe the charges to the bottom.

Already through the agitation that has been begun a noticeable reduction in the price of paper has been made, though it is claimed to be still far in excess of what conditions justify.

Boost Prices Simultaneously.

It is claimed that several months ago the paper concerns raised their prices simultaneously to as high as 75 per cent to 100 per cent above the prices of last year. Even now the increases range from 35 per cent to 75 per cent above last year's quotations, it is claimed. Paper of the most commonly used variety which sold last season at 4 cents a pound is this year offered at 6 cents. The higher grade, which sold last year at 8 cents, can now be contracted at about 10 1-2 cents per pound.

May Mean Evaporators.

One result of the excessive prices of wrappers probably will be an enormous increase in the fruit canned or cried this season, as much fruit of other than strictly high grade will be marketed as a byproduct rather than as packed fruit. An unusual interest is being manifested in the development of byproducts plants in the northwest, and it is believed that many growers will lay early plans for the conversion of their fruit rather than contract their wrapping paper at present prices.

The unusual demand for investigators of the federal department of justice to handle the foreign spy situation and other matters coming up in connection with the war has caused the investigation of the paper charges to be delayed, but efforts are being made to complete the inquiry before the fruit season in order to determine the grounds, if any exist, for the enormous increase in prices, and to secure justice to the fruit men if such increase is found without adequate justification.

A Profitable Bantam.

L. T. Gibson of North Roseburg, Ore., has a Buff Cochin bantam pullet that has won for herself a place in the egg-laying contests. At six months of age she began laying and for 84 days without a break enriched the family egg basket with an egg each day. Then she was set on 14 eggs and hatched 14 chicks.

Wheat Sales.

Club wheat reached $2.10 at Walla Walla, April 19. W. P. Hill sold 4200 bushels of wheat to the Harrington Milling company for $2 a bushel last week. John S. Schmick of Endicott, Whitman county, Wash., sold 10,000 bushels of wheat at $2.07 1-2 last week and H. J. Miller sold 23,000 bushels at $2.01.

Selective Draft Proclamation

President Calls to Colors Young Men 21 to 30 Years, Inclusive

With the passage by congress of the selective draft bill comes the announcement from Secretary of War Baker that the first call of men to the colors under the new law would not be made until about September 1.

President Wilson's proclamation putting into effect the selective draft provision of the war army bill follows:

Whereas, congress has enacted and the president has, on the 18th day of May, one thousand nine hundred and seventeen, approved the law which contains the following provisions:

Section 5—That all male persons between the ages of 21 and 30, both inclusive, shall be subject to registration in accordance with regulations to be prescribed by the president; and upon proclamation by the president or other public notice given by him or by his direction stating the time and place of such registration it shall be the duty of all persons of the designated ages, except officers and enlisted men of the regular army, the navy and the national guard and naval militia while in the service of the United States, to present themselves for and submit to registration under the provisions of this act, and every such person shall be deemed to have notice of the requirements of this act upon the publication of said proclamation or other notice as aforesaid given by the president or by his direction; and any person who shall wilfully fail or refuse to present himself for registration or submit thereto as herein provided shall be guilty of a misdemeanor and shall, upon conviction in the district court of the United States having jurisdiction thereof, be punished by imprisonment for not more than one year, and shall thereupon be duly registered; provided further, that in the case of temporary absence from actual place of legal residence of any person liable to registration as provided herein such registration may be made under regulations to be prescribed by the president.

Registration Duties.

Section 6—That the president is hereby authorized to utilize the service of any or all departments and any or all officers or agents of the United States and of the several states, territories, and the District of Columbia and subdivisions thereof in the execution of this act, and all officers and agents of the United States and of the several states, territories and sub-divisions thereof, and of the District of Columbia, and all persons designated or appointed under regulations prescribed by the president, whether such appointments are made by the president himself or by the governor or other officer of any state or territory to perform any duty in the execution of this act, are hereby required to perform such duty as the president shall order or direct, and all such officers and agents and persons so designated or appointed shall hereby have full authority for all acts done by them in the execution of this act by the direction of the president. Correspondence in the execution of this act may be carried in penalty envelopes bearing the frank of the war department. Any persons charged as herein provided with the duty of carrying into effect any of the provisions of this act or the regulations made or directions given thereunder shall fail or neglect to perform such duty; and any person charged with such duty or having and exercising any authority under said act, regulations or directions, who shall knowingly make or be a party to the making of any false or incorrect registration, physical examination, exemption, enlistment, enrolment, or muster; and any person who shall make or be a party to the making of any false statement or certificate as to the fitness or liability of himself or any other person for service under the provisions of this act, or regulations made by the president thereunder, or otherwise evades or aids another to evade the requirements of this act or of said regulations, or who, in any manner, shall fail or neglect fully to perform any duty required of him in the execution of this act, shall, if not subject to military law, be guilty of a misdemeanor, and upon conviction in the district court of the United States having jurisdiction thereof be punished by imprisonment for not more than one year, or, if subject to military law, shall be by court-martial and suffer such punishment as a court-martial may direct.

Register on June 5.

Now, therefore, I, Woodrow Wilson, president of the United States, do call upon the governor of each of the several states and territories, the board of commissioners of the District of Columbia and all officers and agents of the several states and territries of the District of Columbia and of the counties and municipalities therein to perform certain duties in the execution of the foregoing law, which duties will be communicated to them directly in regulations of even date herewith.

And I do further proclaim and give notice to all persons subject to registration in the several states and in the District of Columbia in accordance with the above law that the time and place of such registration shall be between 7 a. m. and 9 p. m. on the 5th day of June, 1917, at the registration place in the precinct wherein they have their permanent homes. Those who shall have attained their 21st birthday and who shall not have attained their 31st birthday on or before the day here named are required to register, excepting only officers and enlisted men of the regular army, the navy, the marine corps and the national guard and naval militia while in the service of the United States and officers in the officers' reserve corps and enlisted men in the enlisted reserve corps while in active service. In the territories of Alaska, Hawaii and Porto Rico a date for registration will be named in a later proclamation.

Absentees Must Register.

And I do charge those who through sickness shall be unable to present themselves for registration that they apply on or before the day of registration to the county clerk of the county where they may be for instructions as to how they may be registered by agent. Those who expect to be absent on the day named from the counties in which they have their permanent homes may register by mail, but their mailed registration cards must reach the places in which they have their permanent homes by the day named herein. They should apply as soon as practicable to the county clerk of the county wherein they may be for instruction as to how they may accomplish their registration by mail. In case such persons as, through sickness or absence, may be unable to present themselves personally for registration shall be sojourning in cities of over 30,000 population, they shall apply to the city clerk of the city wherein they may be sojourning rather than to the clerk of the county. The clerks of counties and of cities of over 30,000 population in which numerous applications from the sick and from nonresidents are expected are authorized to establish such subagencies and to employ and deputize such clerical force as may be necessary to accommodate these applications.

Whole Nation Must Fight.

The power against which we are arrayed has sought to impose its will upon the world by force. To this end it has increased armament until it has changed the face of war. In the sense in which we have been wont to think of armies there are no armies in this struggle. There are entire nations armed. Thus, the men who remain to till the soil and man the factories are no less a part of the army that is in France than the men beneath the battle flags. It must be so with us. It is not an army that we must shape and train for war; it is a nation. To this end our people must draw close in one compact front against a common foe. But this can not be if each man pursues a private purpose. All must pursue one purpose. The nation needs all men; but it needs each man, not in the field that will most please him, but in the endeavor that will best serve the common good. Thus, though a sharpshooter pleases to operate a trip hammer for the forging of great guns, and an expert machinist desires to march with the flag, the nation is being served only when the sharpshooter marches and the machinist remains at his levers. The whole nation must be a team in which each man shall play the part for which he is best fitted. To this end congress has provided that the nation shall be organized for war by selection and that each man shall be

(Continued on page seven)

Home Canning Habit

Charles Briffett, principal of the Fife school in Pierce county, is a great believer in home canning for home consumption.

"I don't look for home canning to make much of a change in the market for canned goods," says Mr. Briffett, "for the reason, among others, that the bulk of this kind of trade calls for a medium-priced article and there the big canner can dominate the field. Home canning, when it is done right, turns out a quality product; and if quality prices can be obtained, the transaction will be successful.

"However," continues Mr. Briffett, "it is not necessary that home canning should open up a big commercial field in order to make good. Its greatest service to the world will be in saving to the producer those fruits, vegetables and meats which would otherwise go to waste. Recently, for instance, one of the farmers near here butchered a good sized calf and, after disposing of about half the meat by immediate use in the family and by giving much away, found that he had half the veal left. More as a joke than anything else, he said to me: 'I suppose I ought to can the rest of this meat.'

"'Why not?' I asked him.

"We took one of the pressure canning outfits and a home can sealer to the farm, cooked the meat till it would slip off the bones and canned it, then boiled the bones and canned the liquor when it was ready for soup stock. That is an illustration of the real value of home canning, to my mind, it makes for better living on the farm."

Would Freeze Out Speculators

Let Government Fix Prices of Farm Products Is General Opinion

"Do you favor government control of prices of wheat, potatoes, butter, eggs, wool, cotton and other staple farm products during the war?"

Replies to this question, sent out by The Washington Farmer, continue to pour in. No subject has stirred our readers more profoundly. Most of the additional replies favor government control of prices of staple farm products, provided the prices of supplies bought by the farmer are also fixed by the government. More vitally interesting reading follows:

Minimum Price Guaranteed.

To the Editor of The Washington Farmer: I favor the guarantee by the government of a minimum price for staple farm products and for the reason that it will enable the farmer to so shape his farming operations for a period of years that a maximum yield would be secured. If we are to have maximum production of food products, the elimination of gamble will do more to this end than anything else. For example, we need more meat and to produce any real amount of meat takes capital, special equipment and years of time. It would be foolhardy to enter the business with a possibility of no fair and adequate return.

I favor too, the simplication of the present methods of distribution of food products. Briefly, we need cheaper, better methods of transportation, better rural roads, and in the cities of handling quantities of products for distribution of dealers by street cars of some similar means. We also need better cold storage and warehouse terminal facilities, the same could be available at reasonable cost. We need to handle food products in greater bulk and a less number of times.

The farmer needs more for what he sells and the consumer should pay less for what he gets. To this end food products must be handled more easily and through less hands.

In this section, a strictly wheat-growing section, all available land is being sown. In towns potatoes and other garden truck are being planted on vacant lots.

HARRY LOVEJOY.
Waterville, Douglas County.

Will Make Times Easier.

To the Editor of The Washington Farmer: In replye to your inquiry for information will say that I do favor government regulation of prices during the war because:

First—It will prevent some of the people from reaping large profits at the expense of others.

Second—It will make times easier for all concerned.

Third—It will reduce the great expense of the war both for ourselves and our allies.

Fourth—Because if farm products prices are regulated by government control so will other things be regulated accordingly.

Everybody around here is trying to raise more wheat and all are planting more wheat and all are planting gardens to raise as much of their own necessities as possible.

D. A. LENOCKER.
Schragg, Wash.

Other Replies.

No one can doubt the fundamental patriotism of Frank Bean of Winthrop, Okanogan county. "As for myself I stand by the president and cooperate with him in the fullest sense of the word. If he needs me on the lines in France or anywhere else I am ready and willing to go. I have seen four years of service and am a trained soldier; but if I am of more use as a tiller of the soil and a herder of the stock I am willing to serve there. A good soldier's duty is to obey orders." Mr. Bean adds that the farmers in his vicinity are doing their very best in adding to crop production especially along the line of beans and potatoes. He believes in the government control of farm produce, of manufacturers and of railroads and he thinks that the country is about to get rid of the middleman. Even if it does take a bloody war with its shot and shell to do it.

Peter Hanson of Withrow, Douglas county, sums up his ideas in the following: "I believe in government regulation of prices on farm products for the simple reason that it will cut out the speculator and the poor working people will get their rations at a more reasonable price."

Arthur Wells of Okanogan county favors government control because "it would stop the false prices made by grain and other produce gamblers." As to what the farmers are doing in his section he says: "The farmers raise all they can with the help obtainable every year. Do not know of any extra effort. We would be very foolish to kill ourselves working to make big crops and then get less for them than when we have small crops, which is the rule and not the exception."

B. F. Sparrow of Adams county, who has 3500 acres in wheat this year, and who expects "to raise our vegetables also," says in reply to the question of government control of staple farm crops: "Will say that I favor government control of prices on farm produces, mainly for the benefit of those who have families to support and nothing to sell."

Benson Heads Food Products Campaign

Cooperation With State Commissioner of Agriculture Is Towering Demand of the Hour

Active patriotism is not doing what you want to do or what you yourself think ought to be done; it is the doing of what you are told to do and to do it off the bat.

Patriotic talk and patriotic parades must give place to patriotic deeds, and if you are going to have patriotic deeds you must have patriotic leadership supported by patriotic loyalty.

These conclusions remain in my mind as the big result of the Washington State War Food commission meeting at Tacoma last week.

The two most important resolutions brought in by the committee, composed of E. F. Benson, E. E. Flood, W. S. Thornber, W. H. Paulhamus and H. M. White, and unanimously adopted, follow:

Be it resolved that this committee recognizes Hon. E. F. Benson, commissioner of agriculture, Olympia, Wash., the directing head of the agricultural industry of the state of Washington in the present food products campaign, and that in the present crisis we especially call upon the citizens, public officials and organizations of every character to cooperate with Mr. Benson, giving him all possible support, furnish him complete data and information, and carry on such suggestions and instructions as are issued from his office from time to time.

Be it further resolved that we recognize Mr. Henry M. White, the state representative of the United States department of labor, the directing head of the labor problems in this state wherein food products are produced and harvested and call upon all citizens, public officials and all organizations to cooperate with him, lending every aid and help to carry out his suggestions.

This means that in the matter of increased food production in the state of Washington

WHAT BENSON SAYS—GOES

After quite a lot of talk, talk of more than usual seriousness, Mr. Paulhamus sounded the keynote embodied in the above resolutions by declaring: "What we must have in this matter of increased food production is a boss." Nothing could be farther from the mind of E. F. Benson than the objectionable features of "bossing." He has been handing out his orders thus far under the guise of appeals and advice. As a matter of fact, they are not appeals and advice, not simply practical farm information; they are war orders.

Governor Lister searched long for the best man to fill the important position of state commissioner of agriculture, a position which has leaped into one of first importance since the country declared war. Mr. Benson is recognized as a man of wide executive experience, and the fact that he has put forth his war edicts as familiar talks with food producers should not detract from the full significance of those directions as war orders to be loyally obeyed.

Other Resolutions.

Here are the other resolutions adopted at the meeting:

Be it further resolved that we urge upon all citizens of the state the vital necessity of producing the maximum amount of staple food crops and meat products during the year 1917 and until the present crisis is passed: and that this season we especially recommend the planting of the following crops for eastern Washington: Early Bard and Marcus wheat, beans, (both field and string), corn, potatoes and field peas; and in western Washington: Root crops, consisting of potatoes, carrots, beets, parsnips, cabbage and all possible forage crops for milk cows.

Be it further resolved that the State Bankers' association arrange in each and every community for the local bankers to arrange such organizations as is necessary to supply seed to all worthy who are unable to purchase the same.

Be it further resolved that we call to the attention of county officials the fact that there is a serious shortage of horses and men to do the necessary farm work at this period of the year, and we respectfully recommend to such county officials that they discontinue all public works temporarily so as to relieve all available horse power and men during seed time and harvest.

Bt it further resolved that county commissioners of all counties are requested to report to the United States department of labor, either at the head office at Seattle or at any sub-station, as follows: Spokane, Walla Walla, Aberdeen, Tacoma, Bellingham or Everett, their ability to furnish horses or men for farm work; also their demands and needs for horses and men for farm work, separate reports to be made continuously throughout the year.

Be it further resolved that the county commissioners in each county be requested to make a careful survey of farm machinery, especially threshing outfits, and the need for said farm machinery in their counties and to report the conditions existing in their counties to the Washington State college at Pullman, Wash., these reports to be made weekly during the harvest season and threshing season, and call special attention to the farm machinery that is available elsewhere and to the need of additional farm machinery in their counties.

Be it further resolved that we recommend to the county commissioners of every county in the state of Washington the immediate necessity for the employment of a county agriculturist agent and to communicate with the Washington State college of Pullman, Wash., their action.

Be it further resolved that we sound a note of warning to the citizens of the state of Washington against reducing their herds or flocks at this time, calling attention to the fact that the present high prices of grain values is temporary in character and conditions will reconstruct themselves and that the future of the live stock industry is at a critical point and demands careful preservation.

Be it further resolved that we recommend to the public service commission of the state of Washington, that they make a thorough investigation of the possibility of the growers of our perishable fruit being able to obtain cars to move their product in reasonable and seasonable time and that the public service commission report conditions to and consult with the commissioner of agriculture.

Be it further resolved that we recommend that all employers of labor, where it is possible to do so, to employ girls and women to do such work as can be done by them for the purpose of making available men and boys for outside work of strenuous nature.

Be it further resolved that we ask the hearty cooperation of all school authorities in the circulation of employment cards as issued by the labor commissioner, Henry M. White of Seattle, Wash., for employment among the high school students of the state of Washington, both boys and girls, so that their services may be available.

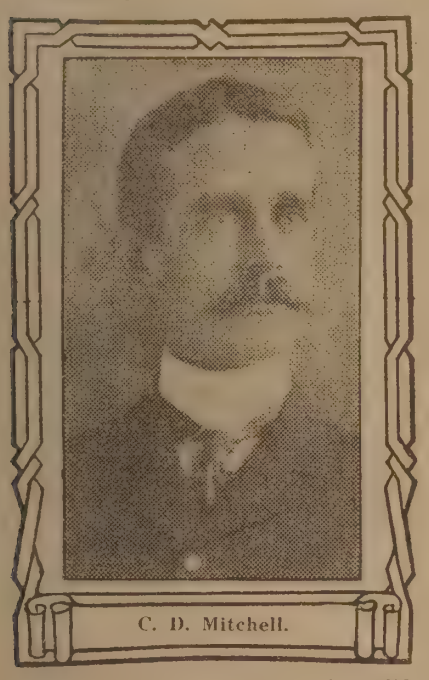
The above resolutions are passed for the purpose of the production of the crops during the season of 1917 and that recognizing the welfare of the state of Washington, and the necessity for continual increased production of all food products in the state, we respectfully recommend to E. F. Benson, commissioner of agriculture, Olympia, Wash., that plans be immediately outlined for a continual increase of the yearly output of all food products in the state of Washington, and we suggest that through the assistance of state and county officials, that an effort be made before the first of the year to locate available agricultural lands in the state not now under cultivation with a view to bring the same under cultivation in 1918.

The members of the food commission present were: E. F. Benson, state commissioner of agriculture; R. B. Coglan, at the head of the county agriculturists of the state; Mrs. Josephine Preston, state superintendent of schools; Professor George Severance, head of the agricultural department of the state college at Pullman; Professor W. A. Linklater, director of the Puyallup experiment station; Professor W. S. Thornber, head of the extension department of the state college; Professor Edwin A. Start of the state University of Washington; E. E. Flood, chairman of the agricultural committee of the State Bankers' association; Ernest P. Marsh, president of the State Federation of Labor; J. P. Powells of Seattle, and Mr. Younger of Tacoma.

Among others present at the meeting were: H. M. White, government representative of immigration, labor and employment; President Beaton of the Harvesters' league of Seattle; Chauncey E. Beach of Olympia; F. W. Rader, C. F. Monroe and C. H. Bergstrom, respectively, county agriculturists of Gray's Harbor, King and Thurston counties; James A. Hayes of the Tacoma Chamber of Commerce; James A. Ford and Charles Hebberd of the Spokane Chamber of Commerce; F. W. Graham of the Great Northern; J. D. Farrell and C. L. Smith of the O.-W. R. & N. company; Walter J. Thompson of Tacoma, President E. O. Holland of the state college, John Hartman of Seattle, W. H. Paulhamus of Puyallup, C. S. Whitmore of the Northwest Horticulturist, and E. A. Smith of The Washington Farmer.

Governor's Urgent Plea.

"The food question is the most important now before the country," said Governor Lister in his address before the Tacoma meeting. The seriousness of the situation as pointed out by the governor:



"When I left for the east I believed, and most of the people of the state believed, that the war would last but a few months. Today, after conferring with many government officials and seeing many confidential reports, I feel that the United States authorities will make a fatal mistake if they fail to prepare for a long, long war.

"Our chief fault as a people is that we have the idea of victory; easy victory, constantly in our minds. We never think of defeat. Right now too many people see an easy victory and too few what defeat would mean to the country. I urge you all to stop and think for a moment what defeat would mean. We have the lessons of Belgium, Serbia and Rumania to study."

In opening the meeting Mr. Benson, as chairman of the committee, stated

(Continued on page twenty-four.)

Washington Portraits No. 16.

C. D. Mitchell.

Always having a liking for farm life and lured by the call of the west C. D. Mitchell, moved to Richland in December, 1908, from the south, after an inspection of several of the fruit districts of the state. He purchased 20 acres of land and set most of it to apples, which are now in bearing. Certain lowlying lands on the Columbia and Yakima river bottoms are best adapted to corn and alfalfa, and dairying and hogs have been very profitable. Nearly all of the farmers keep a few cows to consume the surplus hay and produce manure to return to the soil. On account of the dry climate and the ability to grow good corn, turkey raising has been undertaken on quite an extensive scale by several farmers in the immediate vicinity of Richland and has also been profitable. The greatest success, Mr. Mitchell says, has been made in that country with strawberries and early potatoes, although it has been proven that good apples can and do grow there. However, Mr. Mitchell recommends a diversity of crops with preference in the following order: Strawberries, tomatoes, asparagus, early potatoes, grapes, cherries, apples and peaches.

The next in the series of Washington portraits will be that of John Van Trojen Sr. of Chimacum, and will be given in next week's issue of The Washington Farmer.

Preparing for the Lamb Crop

The Sheep Men Should Follow Definite Breeding System

ARTICLE 4, by E. J. IDDINGS.

The first business of the sheep man on the approach of the breeding season is the elimination of undesirable ewes. Some ewes plainly indicate by their appearance that there is a probability of their not surviving the winter. Others have been found barren, have developed spoiled bags, or in other ways are no longer a source of profit to their owner. Barren ewes are nearly always in good condition and easily distinguished from those that have suckled lambs.

Vigorus Ewes Needed.

Ewe lambs are saved by many to replace ewes that are weeded out, but are not generally bred until yearlings. In late summer good ewes may often be had from those who are changing stock or reducing their holdings. It is one of the essentials of good flock husbandry that a uniform, vigorous, fertile and sound bunch of ewes, whether large or small, should be selected as the first step in the plans for a good lamb crop the following spring.

Ewes come in heat with the cooler weather of late summer and fall. The Dorset Horn is an exception. Ewes of this breed come in season in spring and drop their lambs in early fall. On one occasion on the University of Idaho farm, several fall lambs were dropped by Rambouillet ewes.

In England and some parts of America "flushing" of the ewes is practiced to prepare them for mating with the best results. Many ewes are in thin flesh and low in vitality after their lambs have been weaned. Flushing is a system of good feeding to get the ewe in vigorous condition before conception. Rape, roots, or rich pasture is used quite widely as a feed for this purpose and is sufficient without grain. If grain is used a small feed of oats will be found to give satisfactory results.

Choice of time for breeding should depend on shelter and facilities for lambing, kinds of feed available in spring and conditions under which the lambs are marketed. Lambing in February or March often requires shelter and adequate means of taking care of the lambs and protecting both ewes and lambs from storms. If the ewes suckle their lambs properly they must have grass or other stimulus to milk production within two weeks after lambing. In case of winter lambing, grains and root crops, or silage, must be made to take the place of grass.

If ram lambs are to be sold for fall service they must come early to be big enough for service. In some communities winter or early spring lambs that can be made to weigh 50 to 60 pounds in May find ready sale to the packer at especially good prices. The ewe's average period of gestation is 147 days. The rams should be first used then 21 weeks previous to when first lambs are wanted.

The ordinary method of breeding is to permit the ram to run with the ewes during the breeding season. This results in favoritism to particular ewes and in unnecessary service. It is better to keep the ram separate and turn him in with the flock for a short time at night and in the morning. As each ewe is served she may removed from the flock. By this system a single ram may be made to successfully breed 80 to 100 ewes. Attention must still be paid to ewes served and separated. Some ewes pass through several periods of heat before conceiving. When the ram runs at large with the flock not more than 40 to 50 ewes should be allowed to each ram. A ram can be depended upon for better service if given some grain in addition to pasture.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Half Crop Better Than No Crop

When Governor Ernest Lister of Washington state returned from the national capital, where he attended the national conference of governors and conferred with President Wilson on what the northwest should do to further the nation-wide preparedness program, he brought back a vigorous message.

"That man or that woman who is not planting a family garden this year on the vacant lot or corner is failing by just that much in doing his or her duty in this crisis. Some people will say: 'I know nothing about gardening. I would not succeed if I tried.' But I want to say to such person that if he puts in a garden on a vacant plot of ground and raises only half a crop he has added just that half crop to the food supply of the world in addition to what would have been the supply if he had not put in that garden."

The message was more far-reaching than it might seem. It touches every possible activity of production—whether of food or of clothing or of munitions or of transportation facilities, or whether a matter of waste prevention. Every person, old or young, can do a little, and a hundred littles make one big thing. Every man, every woman, every boy and every girl can feed a soldier.

Individual Effort Is Needed

There is too great a tendency to expect the government or the local authorities or some company—anybody but ourselves—to do the thing that is needed to be done. Individual responsibility is the most needed thing in the economic life.

This year there is need of making practical use of every bit of foodstuffs that is grown. Nothing should be allowed to go to waste.

This applies with particular force to the fruit industry. In all fruit-growing localities, especially the farming districts where fruit is grown for home use only, there is annually a large amount of waste. Thousands of bushels of apples, not first class, but well worth saving, went to waste under the trees last fall or were thrown out of the storage rooms this spring spoiled because improperly cared for. This fruit should be saved—canned or dried. Every farmer and his family can do this saving themselves if they put forth the effort, or they can join in a community effort to do it cooperatively or through a private plant financed by their patronage. It must be done. There must not be a dollar's worth of fruit go to waste this year. There are people starving in this world right now, while large quantities of food are going to waste here. Next fall and winter will see a large percentage of the people of the world reduced to absolute want through the deplorable ravages of war. And every man or woman who fails to conserve every possible pound of edible material will be a party to the suffering, not, of course, because of having helped bring it about, but because of having failed to prevent some little of it.

The Two Great Weapons Are Arms and Starvation

Gifford Pinchot, the man who led the long, hard fight for conservation of the nation's resources, goes to the heart of matters in one of the clearest and most inspiring statements we have seen on the world situation. Mr. Pinchot says:

"The safety of our country just now is in the hands of our farmers. The two great weapons in this war are arms and starvation. The war against German arms will be won or lost in France—the war against starvation in America. The kaiser can not whip French and English armies and the English navy, while England has food.

"If the submarines win, the first item in the kaiser's terms will be the English fleet. With the English fleet he will be master of the world.

"What will happen to us? Every man who stops to think knows the answer. We shall have money, food, labor, land—everything desirable in the world except power to protect what we have. Experts estimate it will take us nine months to get ready to meet a German army of even 150,000 with modern artillery. Under such circumstances, would the Germans treat us better than Belgium and France?

"Even if the armies of our allies should crush German military power this summer before a shortage of food, the world would still need vast quantities of American food.

"If the war lasts beyond this summer the American farmer will win or lose the war, overcome militarism and autocracy, or allow them to spread over and control the world, ourselves included.

"We can greatly increase available food supply out of grain used in making liquors and by reducing household waste. But these two things will not be enough.

"The clear duty of the nation is to guarantee the farmers a fair price and a reasonable supply of labor at harvest. The clear duty of the farmer is to raise food enough to win this war for democracy.

"No such responsibility has ever rested on any class of men since the world began."

Farmers of the great northwest, cut out these words of inspiration and wisdom, and when the day seems long and you are depressed with weariness you will find them a reviving tonic.

"No such responsibility has ever rested on any class of men since the world began." To labor for the great world cause of human freedom. To do your bit to make this war-scourged world safe for democracy and popular government. To know and feel that when the victory is won mankind can go forward to a long and righteous peace.

What an inspiration for the farmer, and his good wife, and his dutiful sons and daughters!

Cooperation Is Very Much Alive

In the development of every big movement three phases of growth usually can be traced. First comes the period of enthusiastic acceptance, when everything connected with the new idea is looked upon with a confidence amounting almost to worship. In due time follows a reaction, during which it becomes the fashion to scoff at the dethroned idol, and to declare that it never was worth considering. Finally comes the period of maturity, when all that is sound and worth while in the movement has been sifted out of the mass of irrelevant detail, so that its potential "horsepower" can be fully developed for society.

"Cooperation," as a social and economic ideal, has passed through the first phase of this series and for some time has been journeying through the second—that of incredulity and disparagement. There was a time when the very word "cooperation" had in it a sort of potency and magic which set men's minds to jubilating. More recently we have had a reaction, during which the whole cooperative idea has been declared impractical and visionary. Looking below the surface, however, it becomes apparent that this factor of cooperation, destined to take so momentous a part in the affairs of men, is even now entering into the third stage of its developmtnt, and is being put to work by sober-minded, practical business men.

Washington Gleanings.

John Galvin, agent for the O.-W. R. & N. has announced that the entire right of way between Centralia and Galvin has been leased for agricultural purposes.

After making contracts for more than 500 acres of fruit and vegetables in Clarke county the Oregon Packing company is after another 200 acres of corn in that county.

C. A. Helmer of Rosalia recently purchased the Orwiler place, a few miles west of Plaza. The farm consisted of 352 acres and sold for $85 an acre, aggregating $29,920.

The Independent National Farm Land bank of Malott was organized at that place recently with 37 applications for loans. The aggregation of the loans applied for totals over $65,000.

It is announced that because of the shortage of tin plate brought about by the war conditions, the Lynden cannery will be unable to handle any vegetables this year and will confine its activities to fruit alone.

Charles H. Greeley of Pioneer hauled the most valuable single load of produce ever taken from a farm in this state, having taken a load of potatoes that sold for $330.20 to Ridgefield recently. The load weighed 8280 pounds.

Mrs. Daniel Setchfield has been elected leader of the club work in Thurston county by the county agricultural board. She will superintend the work of all the clubs of the county, such as gardening, canning, poultry and rabbit and will give demonstrations.

The Indian farmers of the Colville reservation will take an important part in the Okanogan county grange fair to be held in Okanogan October 11, 12 and 13 next. The Indians are putting in an immense acreage this year and many of them are making a special effort to produce exceptionally fine stuff for exhibition purposes.

Several thousand extra acres of land in Okanogan county have been pledged to be placed under cultivation as the result of patriotic meetings held during the past few weeks. From upper Tunk creek alone it was estimated that at least 2500 acres more of grain would be sown, while the acreage of potatoes, onions and beans would be double that of last year.

What Others Say

Press, Waterville: The food speculator is becoming as unpopular as was the "malefactor" in the days of one Roosevelt.

Republic, North Yakima: Nearly everybody has a scheme to conserve something. In order not to appear odd or unusual we hereby offer our suggestion. It is that an effort be made to save the supply of hot air.

East Washingtonian, Pomeroy: To what extent our food supply can be increased under present conditions is but a matter of conjecture, but we are confident Garfield county will take high rank in the per cent of increased production among the grain growing communities of eastern Washington.

Republic, Pomeroy: It hurts like sin to pay $2.50 a bushel for Palouse wheat to be used in reseeding. But there is another side to the proposition. Think what a grand and glorious feeling it will be when a fellow sells the wheat from that seed, perhaps 30 bushels to one, for $2.50 next fall.

Bee-Nugget, Chehalis: Patriotic economy means the elimination of waste and extravagance. It means the conservation of our food products, our natural wealth, our health, our energies, our labor, our very lives. It means putting more efficiency in everything we do so that each unit of money, energy and intelligence may accomplish the utmost.

Will Send Pershing

President Rejects Roosevelt Plan

In connection with the signing of the army draft bill last week President Wilson announced that the war department had agreed to send a portion of the regular army to Europe to join the allies against Germany, and that the expedition of volunteers which Colonel Roosevelt had proposed to raise would not be sent. The army to be sent will be under the command of General John J. Pershing.

President Wilson has designated June 5 as national registration day under the new army conscription measure, and on that day approximately 10,000,000 young men between the ages of 21 and 30 years will be required to register. The full text of the president's proclamation will be found on another page of this issue.

On this page, under another heading, will be found a digest of the duties placed upon Herbert C. Hoover by President Wilson, who has just announced officially Mr. Hoover's appointment as head of the food control movement for the government during the war.

Hoover Given Power

To Direct Food Campaign in U. S.

President Wilson announces that Herbert C. Hoover, who won international fame by feeding Belgium, has accepted the all-important task of food administration.

Moreover, the president has come out squarely behind the views of Mr. Hoover as a substitute for the food control measure devised by Secretary of Agriculture Houston.

Mr. Hoover will administer an agency separate and distinct from the department of agriculture.

It will be his business, according to the president, to do these things:

1. Investigation of the existing available stocks of foodstuffs and of the costs and practices of the various food producing and distributing trades.
2. Prevention of hoarding and control of food by persons other than producers, dealers and traders.
3. Requisitioning, when necessary, of food supplies for public use and necessary handling equipment.
4. Licensing of wholesome and legitimate mixtures and milling percentages.
5. Prohibition of the unnecessary or wasteful use of foods.
6. Establishment of a minimum price.
7. Temporary fixing of reasonable prices, to break up corners and attempts at speculation.

The department of Agriculture will devote itself to:

1. Food production.
2. Food conservation.
3. Marketing of food.

The president asserts the powers are no greater than those lodged in other governments and are intended to stimulate food production and conserve food and not to restrain arbitrarily or injuriously interfere with the normal processes of production.

The president adds:

"It is proposed to draw a sharp line of distinction between the normal activities of the government represented in the department of agriculture in reference to food production, conservation and marketing on the one hand and the emergency activities necessitated by the war in reference to the regulation of food distribution and consumption on the other. All measures intended directly to extend the normal activities of the department of agriculture in reference to the production, conservation and the marketing of farm crops will be administered, as in normal times, through that department, and the powers asked for over distribution and consumption over exports, imports, prices, purchase and requisition of commodities, storing and the like, which may require regulation during the war, will be placed in the hands of a commissioner of food administration appointed by the president and directly responsible to him.

"Authority is asked also to establish prices—but "not in order to limit the profits of the farmers, but only to guarantee to them when necessary a minimum price which will insure them a profit where they are asked to attempt new crops and to secure the consumer against extortion by breaking up corners and attempts at speculation when they occur by fixing temporarily a reasonable price at which middlemen must sell."

Selective Draft

Proclamation Issued By President

(Continued from page four.)

classified for service in the place to which it shall best serve the general good to call him.

New in Our History.

The significance of this can not be overstated. It is a new thing in our history and a landmark in our progress. It is a new manner of accepting and vitalizing our duty to give ourselves, with thoughtful devotion to the common purpose of us all. It is in no sense a conscription of the unwilling; it is rather selection from a nation which has volunteered in mass. It is no more a choosing of those who shall march with the colors than it is a selection of those who shall serve an equally necessary and devoted purpose in the industries that lie behind the battle line.

The day here named is the time upon which all shall present themselves for assignment to their tasks. It is for that reason destined to be remembered as one of the most conspicuous moments in our history. It is nothing less than the day upon which the manhood of the country shall step forward in one solid rank in defense of the ideals to which this nation is consecrated. It is important to those ideals no less than to the pride of this generation in manifesting its devotion to them, that there be no gaps in the ranks.

Day of Patriotic Devotion.

It is essential that the day be approached in thoughtful apprehension of its significance and that we accord to it the honor and the meaning that it deserves. Our industrial need prescribes that it be not made a technical holiday, but the stern sacrifice that is before us urges that it be carried in all our hearts as a great day of patriotic devotion and obligation when the duty shall lie upon every man, whether he is himself to be registered or not, to see to it that the name of every male person of the designated ages is written on these lists of honor.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this 18th day of May, in the year of our Lord, one thousand nine hundred and seventeen and of the independence of the United States of America, the one hundred and forty-first.

By the President.
Robert Lansing.
Secretary of State.

Larger Crops, Says Grange.

The announcement has been made that Whatcom county will employ its new agricultural advisor on May 1, following negotiations between the department of agriculture and the county commissioners. The salary will be $2160 per year and expenses, of which the state college at Pullman will pay $900.

$1195 F. o. b. Racine

Mitchell Junior—a 40 h. p. Six
120-inch Wheelbase

Mitchell SIXES

$1460 F. o. b. Racine

7-Passenger—48 Horsepower
127-inch Wheelbase

Mr. Bate's Lifetime Car

Sturdy—Enduring—100% Over-Strength

The latest Mitchell is the 19th model built under Mr. Bate. It is the final result of 700 improvements.

It is the first car to announce our 100 per cent over-strength. Our former standard was 50 per cent over-strength. In the past three years, that standard has been doubled.

Over 440 parts are built of toughened steel. All safety parts are vastly over-size. All parts which get a major strain are built of Chrome-Vanadium. The gears are tested for 50,000 pounds per tooth. The springs we use—Bate cantilevers—have never yet been broken.

Several Mitchells have already run over 200,000 miles each. The Mitchell of today is built to be a lifetime car.

Costly Extras

This vast over-strength is a costly extra in these days of high-cost steel.

But the Mitchell, in addition, has 31 features which nearly all cars omit. Things like a power tire pump, ball-bearing steering gear, dashboard engine primer, etc.

And this year we have added 24 per cent to the cost of finish, upholstery and trimming. This makes the Mitchell the luxury car of its class.

All Are Free

These Mitchell extras, on this year's output, will cost us $4,000,000. But they cost you nothing, because we save this on our factory cost.

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.

Price $1460, f. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines with 120-inch wheelbase and a 40-horse-power motor—¼-inch smaller bore.

Price $1195 f. o. b. Racine.

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

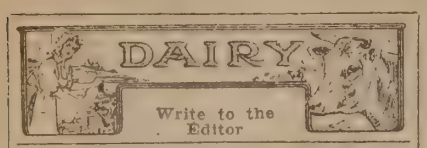
John W. Bate built and equipped this mammoth plant to build this one type economically. He has spent millions of dollars and years of time to do that. His methods have cut our factory cost in two. And the savings pay for these extras.

All the added luxury on this year's models is paid for by savings in our new body plant.

See Our $1195 Six

Mitchell Junior—the smaller Mitchell Six—costs only $1195. Yet the wheelbase is 120 inches. You have never seen anything like this value in a car around this price.

See also the larger Mitchell. Note all its extra values. You will want all these extras, when you know them, in the car you buy to keep.



If you do not know our nearest dealer, ask us for his name.

A. B. NYSTROM, Editorial Contributor

A Jersey cow in New Hampshire last year won a profit test over a flock of 100 hens. The hens beat three other cows entered in the same contest.

This is no time to send the dairy cow to the butcher, if she is a reasonably good animal. "Boarders" should be culled out, to be sure, but a fair producer should not be sacrificed in these abnormal times.

The possibility of certain root crops as valuable winter feed for the dairy cow should not be forgotten while the crops are being planned and planted.

A little study of the silage possibilities now might lead to greater profit from certain lands or certain crops already planted than would otherwise be obtianed.

The best man in the world can not get results from a cow that is not capable of producing results. Neither can a misfit man get results from the best cow in the world.

Shortage of Feed Lowers Standard

The following table gives the names and records of the cows in the Montesano Cow Testing association which have produced more than 50 pounds of butter fat during the month of April, 1917. H. P. Hansen is the tester.

Name of cow.	Breeder.	Breed of cow.	Age yrs.	When fresh.	Lbs. milk.	Pct. fat.	Lbs. butter fat.
The Owl's Golden Queen	E. L. Brewer	Jersey	6	2-16-17	1758.2	5.994	105.39
Lad's June	E. L. Brewer	Jersey	7	3-25-17	1391.7	5.981	83.24
Golden Massy Polo 3d	J. H. Taylor	Jersey	7	2-3-17	1352.8	4.806	86.02
King's Dulcet Primrose	E. L. Brewer	Jersey	3	2-3-17	1126.4	5.539	62.39
Number 26	Murphy Bros.	Grade Jer.	6	2-4-17	1194.0	4.9	58.5
Number 22	Murphy Bros.	Grade Jer.	5	3-22-17	933.0	6.0	56.0
Number 12	Murphy Bros.	Grade Jer.	9	1-23-17	1020.0	5.3	54.1

On account of the shortage of feed and very late pasture there are only half the number of cows above 40 pounds of butterfat in comparison with April, 1916. On April of last year there were 48 cows above 40 pounds of butterfat and 19 above 50 pounds. I am confident that the shortage of feed is responsible for the decreased production, says Mr. Hansen. On account of not being able to obtain hay many of the herds were turned on gress when there was but little value in it. Last April the high cow produced 83.2 in comparison with the accompanying list.

Besides the 50 pounds list the following dairymen had cows as follows between 40 and 50 pounds fat:

J. H. Taylor, five cows; James Foster, three cows; John R. Martin, two cows; Murphy Brothers, two cows; E. L. Brewer, two cows; Porter Brothers, one cow; Parker Askew, one cow; William Peterson, one cow, and H. M. Vogdes, one cow.

Out of the total number of cows in the association 303 cows averaged 594 pounds milk, and 22.3 pounds fat, with a feed cost of $5.21.

Cow Ranks First

As a Food Producing Animal

As food producing animals the cow ranks first, the hog second, poultry third and steer and sheep last of all, says E. L. Benson, Washington state commissioner of agriculture. A 1200-pound steer, ready for market, contains only about 360 pounds of actual food. A fair dairy cow at 2 years of age begins to yield a daily average for 10 months of about 24 pounds of 4 per cent milk or its equivalent, or about 900 pounds of edible nutrients in the year and continues to produce the same amount for seven years thereafter. In all she produces during her actual life about 6300 pounds of the best of human food. Remember these figures do not refer to milk, but to the actual solids—the food contained in the raw product. Beef requires several years of feeding while the dairy cow gives to us in a palatable form, day by day, the food consumed during the previous night.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

Reduces Strained, Puffy Ankles, Lymphangitis, Poll Evil, Fistula, Boils, Swellings; Stops Lameness and allays pain. Heals Sores, Cuts, Bruises, Boot Chafes. It is a SAFE ANTISEPTIC AND GERMICIDE

Does not blister or remove the hair and horse can be worked. Pleasant to use. $2.00 a bottle, delivered. Describe your case for special instructions and Book 5 M free.

ABSORBINE, JR., antiseptic liniment for mankind, reduces Strains, Painful, Knotted, Swollen Veins. Concentrated—only a few drops required at an application. Price $1 per bottle at dealers or delivered.

The LAWRENCE-WILLIAMS COMPANY, Cleveland, O.

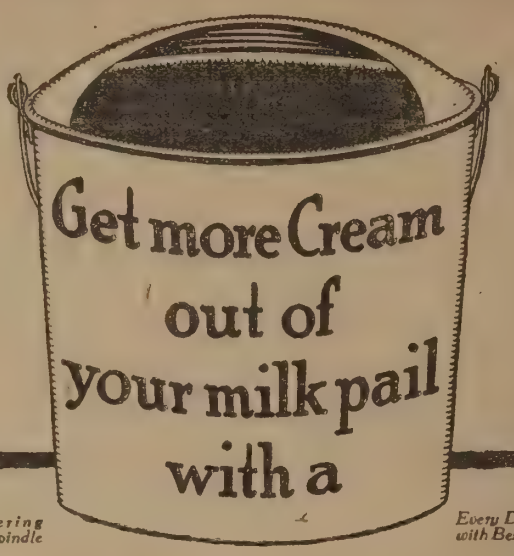
MUST MAINTAIN DAIRIES.

Dairy Products Vital as Food.

Too much stress can not be laid on the necessity of producing cereals and meats to supply the peoples of the world during this critical period, but stress must be laid with like vigor and persistence on the necessity of maintaining dairy production. Milk and cream and butter and cheese of various kinds are among the most valuable foods. Every effort should be made to increase rather than diminish the supply and continued production.

There is great agitation for converting every rod of land into a producing area. It should not be forgotten that alfalfa and clover and corn for silage and all manner of forage crops are as truly products as are wheat and potatoes and beans. They are the basis of the live stock industry, especially the dairy industry, and should not be neglected.

One Year's Butterfat.



The world's record for one year's butterfat production is held by the registered purebred Holstein-Friesian cow Duchess Skylark Ormsby, according to a bulletin of the Holstein-Friesian Association of America. Her figures for 365 consecutive days are 27,761 pounds of milk containing 1205 pounds of butterfat, equivalent, on the 80 per cent basis, to 1500 pounds of butter. The breed has 67 cows that have produced above 850 pounds of butterfat in one year.

Dairymen Win Out.

The Springfield (Mass.) market division of the New England Milk Producers' association has won another victory through cooperation and organization. The majority of the Springfield milk dealers have agreed to accede to the demands of the farmers for 6½ cents per quart for the next two months, a raise of ½ cent per quart. The retail price is to be advanced to 11 cents.

Herd Average of 62 Pounds Butter.

F. A. Doerfler, proprietor of Mellow Lawn Farms at Silverton, Ore., reports that 11 head of Jersey cows on the place were on test during the month of April and that the herd average was 62 pounds of butter, including strippers, heifers and all. Eight cows out of the 11 made 50 pounds of fat.

Has self-centering bowl; detached spindle

Every De Laval equipped with Bell Speed-Indicator

NEW DE LAVAL
CREAM SEPARATOR

THESE are the days when you are getting *more milk in the pail,* and with butter-fat at its present high price you want to be dead sure that you are getting *all the cream out of the pail.*

You certainly can't afford to feed butter-fat to the calves and pigs at from 30 to 40 cents a pound.

All sorts of "*claims*" are made for various cream separators, but what you are looking for is "*proof.*"

Here is the most convincing kind of proof that the De Laval is the cleanest skimming machine:

Fifteen years ago there were a dozen different makes of creamery or factory separators in use.

Today the creamerymen and large milk plants the world over use the De Laval almost exclusively. In fact, it's hard to find a large cream producer or creameryman who will allow any separator other than a De Laval in his plant, no matter what the price.

Why? Because they have found that it makes a difference of several thousand dollars a year to them whether a De Laval or some other make of machine is used. They simply can't afford to use any other machine.

This is proof of De Laval closer skimming that you can't afford to ignore. Even if you don't separate as much cream as the creameryman, you can't afford to waste it any more than he can.

Your local De Laval agent will be glad to let you try out a New De Laval on your own place. If you don't know the local agent, write to our nearest office for catalog or other information.

Shortage of Horses

It is not a labor shortage, but a horse shortage that is puting worry wrinkles into the foreheads of the Palouse farmers these days, according to B. A. Hunter, in charge of the government labor bureau at the federal building in Spokane.

"Horses," he said, "are needed much worse than men in the Palouse. If it were not for the late season this year everything probably would have been all right, but many of the farmers sold off just about all the horses for war purposes that they could possibly spare and now they are being crowded for time because of the lack of them.

Buy Calves in Washington and Raise Them in Oregon

Jabez Warner, stockman, living near Bend, Ore., has made extensive purchases of young calves throughout Lewis county, Wash., the animals ranging from one to five days old, says the Hub of Chehalis, Wash. Prices range from $1 to $5 per head, depending on the breeding. Mr. Warner ships the calves by express to Bend in crates made especially for the purpose. A supply of bottle milk accompanies each.

Veterinary

Dr. S. B. Nelson

Disinfectants—What are disinfectants and how should they be used for tubercular disease in cattle?—Subscriber, Dayton, Wash.

Answer—No disinfectant will do cattle affected with tuberculosis any good. Constant use of the disinfectant may to a certain extent prevent its rapid spread. First, you should get the cows examined for tuberculosis and remove those that are affected. Then the stable should be thoroughly disinfected with first one to 1000 solution of corrosive sublimate in water. This should be followed by a thorough whitewashing of the stable—floors, walls, ceilings, everywhere—and then about once a month the stable should be re-whitewashed and daily slacked lime should be kept in the gutter and on each side of the gutter.

Grease Heel.—There is an epidemic of grease heel among the horses of this locality and it is slowly spreading. Some have had it over a year and with best care and treatment do not recover. The doctors here have so far failed. My horses are free from it, but I expect it any time. Is there a cure or preventive?

J. A. P., Palouse, Wash.

Answer—An epidemic of grease heel as severe as you state the one is in your neighborhood needs very careful attention of a person who can see the diseased animal and make a careful examination of it. If the local veterinarian has failed in the treatment it may be possible that if one of the horses was taken to the veterinary hospital at the college at Pullman that they might make a more detailed examination and give advice to date on such findings. It is nearly impossible in a severe epidemic as you state this is for a person to give you advice by letter.

Hair Falls Out—The hair on the neck and shoulders of my cow gets full of a dry scale then dies and falls out. I can pull the hair out in patches with my thumb and fingers. There is a yellowish scab on the roots. New hair comes in, but it is full of that scale. Will potato parings dry a cow up if fed to her?—H. B. F., Centralia, Wash.

Answer—Try applying to the neck a solution of one to one thousand parts of water and corrosive sublimate. Do this once every three or four days. Then between times rub a little benzoated ointment into the neck. Potato parings will not dry up your cow provided you give them in small quantities along with her regular ration. This time of the year you want to watch pretty carefully that the potatoes have not sprouted, because when the potatoes sprout they form in the peelings a poisonous substance called solanin, and depending upon the quantity this is very poisonous.

Use Lysol Wash—I have a cow that is not doing well. She eats good and is contented, but is not in good shape. Was bred about five or six weeks ago, but I do not know if she is with calf or not. She has a discharge through the vagina of a milky white substance, probably an ounce or two a day.—C. L., Sunnyside, Wash.

Answer—I would recommend the washing out of the vaginal tract with a 2 per cent solution of lysol, followed by a hot solution of potassium permanganate. Use from one to two gallons of the latter solution and have it the strength so that you can see the bottom of the vessel. If you use a bucket or any vessel of that type into the two gallons put about a pinch of potassium permanganate. It would take a personal examination to find out whether or not the discharge came from the womb, but I would not advise attempting this until this other treatment has been tried.

Soft Growth.—My cow has a soft growth like a bag of water under her belly. It begins just front of the udder and extends nearly to the forelegs. Near the udder it hangs down two inches. It does not show when she is dry and is worse just after calving.—E. E. C., Langley, Wash.

Answer.—The condition which you find affecting your cow is due to a disturbance in the circulation when the circulation through the udder is the greatest. Possibly giving her a drachm of tincture of iron in a pint of water once daily for a couple of weeks may be of assistance. It is not a matter that hurts her any particularly.

Small Flow of Milk.—I have a 6-year-old cow which is not giving her usual amount of milk. She was fresh 10 days ago, but made only a small udder. I fed her heavy the last year and all the grain and hay she could eat while she was dry, about six weeks, so she is very fat.—P. M. F., Port Stanley, Wash.

Answer.—Try feeding your cow a fairly heavy, succulent ration, beginning with five to 10 pounds of succulence, and increasing up to 20 to 40 pounds, according to what the succulence is. Try roots or silage or cooked mashes or steamed alfalfa hay, the latter steamed would make succulence, although it also is rich in nitrogen. I do not know anything that would help except to change over to a succulent feed.

Farmers Excused From Jury.

All farmers who can do any planting this season will be excused from attendance as jurors in the district court of Fergus county, Montana, as a patriotic contribution to the country's need.

SANITATION

IS THE RELIABLE METHOD FOR PREVENTING

FOOT AND MOUTH DISEASE

HOG CHOLERA

AND ALL OTHER CONTAGIOUS DISEASES.

You can make all live-stock quarters sanitary by using

KRESO Dip No. 1

The Standardized, Reliable Dip and Disinfectant.

KRESO DIP No. 1 has been used at the large state fairs in the United States for the last ten years to prevent the spread of contagious disease. It has done it, and KRESO DIP No. 1 will do the same for you on the farm.

KRESO DIP No. 1 is reliable. It is easy to use. It is inexpensive.

FOR SALE BY ALL DRUGGISTS.

We will send you free a booklet on the treatment of mange, eczema or pitch mange, arthritis, sore mouth, etc.

We will send you free a booklet on how to build a hog wallow, which will keep hogs clean and healthy.

We will send you free a booklet on how to keep your hogs free from lice and parasites and disease.

Grub Out Trees

Trees That Board Are Useless

By T. O. MORRISON, State Horticultural Commissioner of Washington.

The home orchard has not been of any particular importance up to the present time in our state so far as supplying any great quantity of fruit for the commercial trade is concerned. It has been quite commonly an object of the farmer to plant trees of several varities, in order to secure for his family and hired help sufficient fruit for the season's suply. Generally these orchards have yielded plentifully, and in many cases, after coming into bearing, have proved to be larger than was necessary. Since they were not intended to produce fruit for the trade, there are now some of them double the size required to furnish the family fruit supply. It would therefore seem that some farmers could profitably pull up some of their home orchard, particularly undesirable varieties and individual trees that were not paying for their keep.

The progressive dairyman carefully tests and weighs the milk from each cow, to find out what cows are the money makers and which ones the "boarders." Why not apply the same principle to the home orchard? For in the home orchard, as well as in some of the commercial orchards, there are many trees that must necessarily be classed as "boarders." A small home orchard, consisting only of trees necessary for the home fruit supply, neatly planted, pruned, well cultivated, and carefully sprayed, ought to prove more satisfactory and economical.

THE FARM GARDEN

ARTICLE 13.

The Use of Lime

That lime may be used effectively at this time in the movement for increasing crops is the declaration of Carl Vrooman, assistant secretary of agriculture at Washington, D. C.

The following are portions of a statement recently issued by him in connection with the subject:

Prices of most commercial fertilizers at present are high. Potash is almost unobtainable. Only by most scrupulous conservation of stable manure and an increased use of legumes as green manure and of ground rock phosphate can the commercial fertilizer shortage be met, even temporarily. There remains one thing, however, that may be done to increase yields, which costs no more now than it did before. It may be safely said, I believe, that if all sources of artificial chemical fertilizers failed our total farm output in many sections could not only be maintained, but even increased for a considerable time by the aplication of lime to acreages that now are low in yield or lying fallow because they are too sour to grow profitable crops. Lime can and should be put on all sour land. By a plentiful use of lime we can, figuratively speaking, make our 'war bread' of stones.

"There is, perhaps, no considerable section of the United States without some local supply of limestone, marl or oyster shells. Ground limestone for direct application to the soil costs, delivered on the nearest siding, from $1 per ton up, depending on the length of the haul. If crushed limestone is not available, burned lime, either ground or hydrated for agricultural use or the ordinary lump lime carried by all dealers in building materials, may be used in emergency, though lime in this form is frequently more expensive. On the other hand, if burned or hydrated lime is used the applications should be less than one-half those of ground limestone.

"Thus there is available for almost every farmer at normal cost, in spite of war conditions, a material which, for the time being may avail to increase our agricultural output enormously. The initial returns from the application of lime to sour land are sometimes remarkable. An investment in limestone often pays a dividend of 100 per cent or more the first year if care is taken at the same time to maintain the organic content of the soil.

"It is the duty of American farmers in this national crisis to make the most of this, our cheapest and most easily available agency for speeding up production. War or no war, a carload of crushed limestone where needed is always money in the farmer's pocket at the end of the crop year. And a carload of limestone judiciously used by each farmer whose land is too acid will augment our supply of breadstuffs by a surprising number of millions of bushels."

Strawberry States.

In the circular on the commercial acreage and production of strawberries, issued by the United States Department of Agriculture, it appears that Tennessee produced 1,271,250 crates of strawberries on 16,950 acres in 1916. Louisiana came next with a production of 1,917,100 crates on 16,900 acres. Arkansas produced 1,657,500 crates on 14,100 acres; Missouri, 637,500 crates on 6800 acres; California, 395,800 crates on 1750 acres; Kentucky, 283,300 crates on 2000 acres; Alabama, 156,700 crates on 2350 acres, and Mississippi came last with a production of 119,600 crates on 2050 acres. The total production of these states in 1916 was 5,118,750 crates on a total acreage of 65,900 acres.

The yield per acre ranged from 3400 quarts in Kentucky to 1400 quarts in Mississippi. The average yield per acre was 1864 quarts of strawberries.

The forecast of production for 1917 of strawberries is 4,606,850 crates against 5,118,750 crates in 1916.

Fruit Men Elect McCullagh.

C. W. McCullagh has been elected sales manager for the Hood River (Ore.) Apple Growers' association and began work with the strawberry crop May 1. Previously he was salesmanager for the Yakima Valley Fruit Growers' association.

It will pay you to test Giant Farm Powders in competition with any other stumping powder.

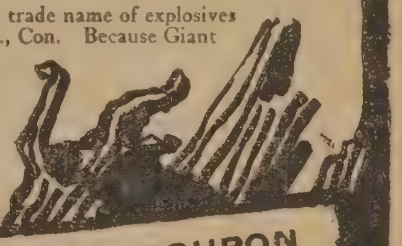
In the last year more than 2,000,000 pounds of these Giant Powders were used for stump blasting in Washington and Oregon alone. The users included farmers in every county in both states, the largest lumber and development companies, and the United States Government. They use the Giant brands because they have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always give satisfaction and do their work at the lowest possible cost and in the most thorough manner.

In the Pacific Coast states the farmers require explosives that will disrupt, crack, split and heave the stumps and at the same time lift and loosen the roots for easy handling. Giant Farm Powders do this because they are made especially to suit western conditions. Because of their wider-spread force, they remove the stumps more economically than powders or dynamites that merely shatter and pulverize.

Test one case. Compare it with any explosive that you have ever used for stump blasting. After you have blasted a dozen stumps you will understand why farmers who have once used them always continue to use the Giant Farm Powders. Fill out and mail the coupon at the right, and we shall arrange with our nearest distributor to supply you promptly at the lowest market price.



There are two Giant Farm Powders—Giant Stumping Powder, used for blasting in wet soil, and Eureka Stumping Powder (which costs a little less) for blasting in dry soil. Both resist cold to a remarkable extent, seven days' exposure to a temperature of 32 degrees failing to freeze them. Ask your dealer for these brands.

THE GIANT POWDER CO., HOME OFFICE: SAN FRANCISCO
CONSOLIDATED *"Everything for Blasting"* ESTABLISHED 1866
BRANCH OFFICES: Seattle, Spokane, Portland, Salt Lake City, Denver

Have You Our Stump Book?

It is the most helpful and interesting book ever issued on Stump Blasting. It tells and shows how to save money and make land-clearing easier. It is written by Western men, from the Western viewpoint, and is full of pictures showing latest methods of blasting. Mark and mail the coupon and get it free. Other books—on boulder blasting, tree planting, ditching and subsoiling with explosives—also free on request. Mail the coupon *now*, before you lay this aside.

Warning. Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by the Giant Powder Co., Con. If your dealer has only ordinary dynamite, write us and we will see that you get the genuine.

Kills Chicken Lice

Sodium Fluorid a New Remedy

One application of sodium fluorid will kill all lice of chickens, entomologists of the department of agriculture have discovered. This inexpensive white powder, they find, will rid a flock of all the seven common species of chicken lice in a few days. One pound, costing only 40 or 50 cents at the time of this writing, is enough to treat 100 fowls, if dusted on. If dissolved in water and used as a dip, the same amount will go three times as far. It is easily applied, economical, gives immediate results, and does not injure the fowls or the poultryman.

The complete effectiveness of the sodium fluorid remedy and methods of using are discussed in Farmers' Bulletin 801 of the United States department of agriculture, "Mites and Lice on Poultry," by F. C. Bishopp and H. P. Wood. The bulletin deals also with mites, the night pests of chickens, which requires a different treatment.

Sodium fluorid—say it plainly to the druggist or you may get sodium chlorid, common salt, which it not only resembles in name but in appearance—may be obtained at most large drug stores.

To apply the material in dust form, place it in an open vessel on a table and with one hand hold the fowl by the legs or wings. With the other hand place small pinches of the chemical among the feathers next to the skin, according to what is known as the "pinch" method, which proceeds as follows: One pinch on the head, one on the neck, two on the back, one on the breast one below the vent, one on the tail, one on either thigh, and one scattered on the under side of each wing when spread. Each pinch can be distributed by pushing the thumb and fingers among the feathers as the material is released. If the chicken is held over the vessel, the material which falls from the fowl during the operation is recovered.

The material also may be applied by means of a shaker, but this method has some disadvantages as compared with the "pinch" method.

Figure Up Costs

The poultryman is doing some close figuring these days. The man who put in a supply of feed last fall, enough to last him a year, is surely in luck. The other fellow who has to buy his supply now may well ask where he is at. It is good to take an inventory and figure up costs. The war is compelling a good deal of bookkeeping. After it is over it is safe to say that the farmer will have a clearer idea of the cost of production. The only salvation of the poultry keeper is to exact the utmost efficiency both in the hen herself and her breeding and in the care and feeding given her.

Does it pay to keep hens now? At present prices of food it does not pay to keep the average hen and it does not pay to give good hens only average care and feeding. With good laying hens at present prices for feed and for eggs there may still be made a profit. At present prices a hen must lay a dozen eggs a month to pay for her feed. Good layers will average in the spring months 15 to 20 eggs a month. The poultryman with such a flock will more than make ends meet. A little later eggs will be higher, and with good feeding the production will keep up well throughout the summer until October, when the chances are that the prices of eggs will be about double what they are now, and with a good grain crop the price of feed should be lower. The man who has a flock of pullets of good laying strain coming into laying in October and November is likely to make a good profit. So keep the pullets growing and kill off the old hens.

The farmer with 50 hens of good laying strain need not worry a great deal about feed prices. The waste food and byproducts found on every farm are an important part of the poultry ration and reduce the feed bill considerably. It is the farmer who must come to the rescue and furnish the poultry and eggs required. J. D.

The Laying Contests.

The New Jersey contest shows an average production of 67.85 eggs per hen at the end of the 23d week. The Storrs (Conn.) contest shows an average of 60.20 per hen in the same period. At New Jersey the highest record of a pen is 1025; at Storrs the highest is 980, with ten hens in a pen in each case. This is very good laying. Were other conditions the same this difference in favor of New Jersey might be credited to the milder climate. At Storrs the winter climate is rather severe. Whatever effect the difference in climate may have on winter production the differences in summer production may be such as to equalize the production. J. D.

Cost of Raising Pullets.

A summary of an experiment at the Indiana station on the cost of raising pullets was given in the Farmer of May 3. The bulletin from which the summary was taken did not give the prices of the feed that were fed. Since then I have received the full report containing this data. The experiments began in 1912 and ended in 1915. The prices on which the cost was based were therefore higher than they are now. Corn ranged from $1.60 to $2 per hundred; wheat $1.45 to $1.60, and other foods in proportion. Meat scrap was $2.50 to $2.60 and skim milk 30 cents a hundred. At these prices the cost of raising a pullet to 25 weeks of age was 43.4 cents. This included the cost of incubation and of the eggs used and the fuel for incubators and brooders, also for labor and feed. Of the total cost some two-thirds was for feed. On this basis the cost of feed was 30 cents per pullet. At present prices of feed, the feed cost would be 60 cents per pullet. Add to this the labor, fuel and other items which totaled about 15 cents and we have a cost of 75 cents for a six months' old pullet.

This does not take into account what may be made or lost on the cockerels. In the experiments a profit of 5 cents was made on the cockerels; so that the net cost of the pullet was 38 cents. At the present prices of feed this profit would run into a loss

It may safely be concluded that should the present prices of feed obtain for the next six months, a good pullet of the small breeds will have cost the grower close to $1.

The earning power of the pullet next year must be greater to pay for the increased cost of raising her. The chances are that it will be. J. D.

THE SUCCESS GOPHER TRAP

"The Car of No Regrets"

KING EIGHT
60 HORSE POWER

You "make hay" when you buy a King

IT is an automobile sufficiently reliable under severe official road tests to have its chassis adopted by the United States Government for armored cars, though it shares this honor with several other good makes of cars, some of higher price.

Its four bodies were designed for unusual grace of line and elegance of finish, and one of them may appeal to you as being more beautiful than any other car among the many attractive models now on the market.

The King is build by a long-established company with a reputation for good cars and fair dealing, ranking high among a number of worthy competitors.

It is a car which may be conservatively described as economical, considering its high power and bigness, and one that "handles" easily,—its all-round road competence, especially on hills, has surprised and delighted many.

In all, we believe the King Eight does offer a quite remarkable combination of power, economy, reliability, comfort and style, which, considered with the price, makes it a purchase absolutely safe for anybody and one thoroughly consistent with our slogan "The Car of No Regrets."

Foursome (shown above), $1700; 7-passenger Touring model, $1650; Sedan, $2300; Roadster, $1585. Prices F. O. B. Detroit and subject to increase at any time. A catalog in color will be sent on request together with the name of a near-by King dealer.

Give Cows a Chance

Common Grade Cow Must Have Fair Treatment

To the Editor: I have followed with interest the discussion on dairying carried on through the medium of your columns, hoping thereby to gain information that would really help the average dairyman or breeder to make his business a success financially.

After analyzing the situation we must come to the conclusion that the average cow is not quite good enough, and must in some way be improved, and that she does not produce enough dollars of butter fat for the dollars of labor and feed expended on her. This is not her fault; you can attribute the difficulty to her breeding. We can not, as one correspondent suggests, slaughter all of these cows that fall below the standard of profitable production. We need them, for they supply a very large percentage of the total of our dairy products.

Improved Breeding.

We can, however, give them an opportunity to repay the feed bill they owe us by breeding them to good bulls and improving the stock in the succeeding generation. This process carried on for a few years, together with the constant weeding out of the poorest, would in a few years eliminate the "boarder" from the cow stable of the country. This can be accomlished only by active cooperation in cow testing and by educating dairymen to realize their stupidity in maintaining that common nuisance, the scrub or grade bull.

There are others, too, who still persist in crossing such breeds as Holsteins and Jerseys, fondly believing that they can secure in the resulting cross all of the good qualities of the parents and none of the defects. In rare cases profitable animals result from such a mingling of the breeds, in the first generation only, but invariably in the second the result is failure.

Indiscriminate crossing of different breeds is always a step downward.

The preponderance of evidence indicates that for the average dairyman there is little or no profit in the production of milk and butter fat. A multitude of reasons, consisting mainly of the various problems of feed, sales and distribution of these products, is elicited in explanation of this phenomenon.

Some of our correspondents have even started nice little arguments among themselves concerning the relative merits of high versus low producing cows. One intelligent (?) farmer even proved to his own satisfaction, if to no one else's, that there is profit in feeding his 180-pound cow at the county's expense. We will grant this, of course, for free feed is the cheapest I know of; but we must dismiss that part of the discussion as sheer nonsense and as having no bearing on the production of dairy products, considered from the standpoint of a legitimate industry.

Some High Records.

Another correspondent rightly takes a crack at some of the high records made by our greatest cows; inasmuch as many of these records are made at the expense of the cow's health as well as the owner's pocketbook when he settles his feed bill.

The modern dairy cow is primarily a machine for the transformation of various farm products into the so-called dairy products. When the value of these products is greater than the feed consumed and the labor expended, we have a profitable cow.

That there are not many such is generally conceded. Lack of intelligent breeding practices is mainly responsible for this condition of affairs.

For many years now the most intelligent breeders, extension workers, dairy papers and our college professors have tried to impress on us all the importance of the herd sire. That the bull is half the herd is a common expression, and that he is much more than that is the belief of well-informed breeders.

The common practice, so much in vogue, of discarding a bull at 5 or 6 years of age and replacing him with a calf of unknown ability as a sire is the real reason for the extremely small improvement in recent years of our dairy herds.

Feeding Versus Breeding.

In this regard, I refer to breeders of purebreds as well as grades. With the great numbers of intelligent men engaged in this industry, the improvement should be tremendous. As a matter of fact, the improvement in production is mainly a question of feeding, not breeding. Too many bulls are purchased for herd headers solely by virtue of their carriage, straight back or proud crest. The blue ribbon of the state or county fair too often sways the judgment of the prospective purchaser.

Wagons That Stand Up

BEAR this point in mind the next time you buy a wagon—**Columbus and Weber wagons are guaranteed to stand up under capacity loads.** You don't have to be a wagon expert to buy a **Columbus** or **Weber** wagon safely. All you really need to know is the weight of your heaviest loads. Buy a wagon marked to carry that load and we guarantee safety and satisfaction worth more to you than all the talking points of all the wagons in the market put together.

Ask any dealer who carries **Columbus** or **Weber** wagons to show you just what we mean by this statement, or write to us for full information. Our wagons have many good features—the International fifth wheel, the sandboard wear plate, link end rods, folding end gate, superior material—more features than you will find on any other wagon. All these help to give the good service, long life and economy that you get with **Columbus** or **Weber** wagons. See the wagon or write to us before you buy again.

Give Cows a Chance

Grade Must Have Fair Treatment

(Continued from the preceding page.)

important, but secondary to production. Not one bull in a hundred is of such a dominating prepotency that he leaves his impress on his descendants for more than a generation or so, and all too many of those that might have proven themselves great were sent to the butcher to make room for some fashionably bred young calf that had impressed the eye of its owner.

A case in point is the recent much-advertised sale of the $21,500 bull calf. The purchaser may have in him a great sire of producing females, but it is extremely questionable, and he may even produce very indifferent progeny.

The best breeding in the world does not necessarily result in a prepotent sire. It does, however, indicate certain tendencies in that direction, but not sufficient to warrant the speculation usually indulged in by dairymen and breeders in their purchases of bull calves. The results of many sales of dairy cattle of various breeds disclose the fact that the buyers literally fall over each other in their efforts to buy calves of unknown value for sires, simply because they are out of good cows, and usually pass up a mature bull of tried ability and recognized worth.

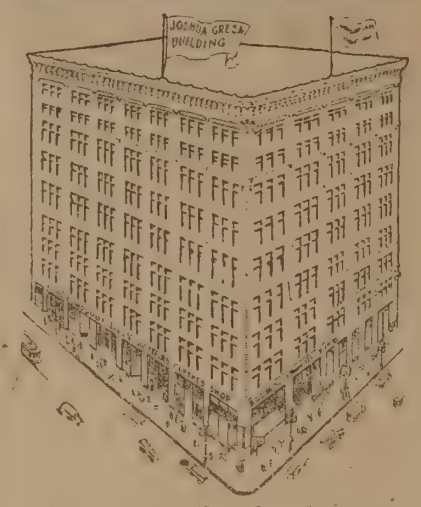
Their loss lies not in the purchase price of the calf, for they are generally cheap enough, but in the lack of improvement in the offspring. They would undoubtedly secure more satisfactory results by the purchase of an aged bull of proven value and be a little more careful in crossing different strains of their particular breed.

I have no intention to discuss the psychology of this point, but simply attribute it to the fact that most of us like to take a gambler's chance, and we do; with the result that a great many of our cows are bred to very poor sires. The resulting progeny does not usually improve the breed. I must say, however, that far better judgment is used in the purchase of young females, for there is no doubt that their relative value may better be gaged than that of the males. This is natural, of course, for the young male's value lies solely in an unborn generation.

An interesting comparison can be made of the methods of our dairy stock breeders with those of the great breeders of thoroughbreds. The English running horse has been brought to the highest stage of specialized development of any breed of domestic live stock. The dominant characteristics are more certainly transmitted from generation to generation than any other breed or class of stock. This result has been attained mainly by the consistent judgment used in selecting their sires and by keeping the blood pure through 150 years of effort.

Ninety per cent of the great sires of the breed were great race horses before they were retired to the stud; and once they demonstrated their fitness as sires they were kept in service until incapacitated by old age. The huge prices paid for such stallions as Cyllene, Prince Palatine and Rock Sand were after they had proved their possibilities as sires, not as colts.

So, also, should it be with the bull; if you are fortunate enough to own one that is producing results indicating an improvement in your herd, by all means keep him in service as long as he continues to secure results. Don't kill him off and try another youngster in a general breeding scheme until he has proven himself on a few cows. That method of slow but sure improvement is faster than would be attained by the use of an occasional poor bull that would result in a very considerable setback.



Fairs and Stock Shows.

Please do not imply from the foregoing remarks that I intend to knock the fairs and stock shows, for there is certainly no better method of educating farmers and stockmen of all kinds in the results to be obtained by intelligent selection. The one exception that I do take, however, is the method of selecting a champion bull, for certainly his only value is in his progeny, and by that he should be judged.

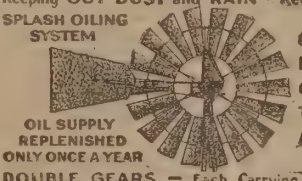
Winners of Contest Are Announced

Farm Information Replies Are Scored and Prizes Mailed

By the Contest Editor.

By the time this announcement reaches you, winners in the Farm Information Contest will be in possession of their prize money. As this is written the auditor is issuing the checks, the largest of which, $200, goes to I. J. Longeteig of Vollmer, Idaho, who, although winner of the second prize, receives more than the first prize winner because he mailed his answers in an earlier period. It will be remembered that those who used the Contestant's Helpful Outfit had an opportunity to try for the larger prizes by sending their answers during the early periods. Mr. Longeteig was one of these. His answers came in the first period. H. N. Whitelaw of Oakesdale, Wash., had the highest score, but as his answers did not come in until the fourth period, his prize was only $175.

Prize winners follow: H. N. WHITELAW, Oakesdale, Wash., box 102, fourth period, $175, score 5959; I. J. LONGETEIG, Vollmer, Idaho, first period, $200, score 5942 1-2; J. T. SULLIVAN, Nez Perce, Idaho, fifth period, $50, score 5929; MRS. J. B. ROSE, Ellensburg, Wash., Route 1, fourth period, $22, score 5872; M. A. TUTTLE, Fairfield, Wash., first period, $20, score 5856; JAMES W. SMITH, Drain, Ore., fifth period, $5, score 5852; F. S. MILLER, Inkom, Idaho, second period, $8.75, score 5851; MRS. T. H. GRAGG, Monroe, Ore., Route 1, second period, $8.75, score 5849; MRS. T. J. GOLDEN, Oakesdale, Wash., Route 1, fifth period, $5, score 5847; MRS. C. L. SOMMER, Boundary, Wash., third period, $7.50, score 5846; J. WESTON MARTIN, Oakesdale, Wash., second period, $3.75, score 5845; H. J. NILLSON, Union, Ore., Box 723, second period, $3.75, score 5841; ANNA L. WEST, Davenport, Wash., $2, score 5840; MRS. FLORENCE E. BEMIS, Deer Park, Wash., Route 2, second period, $3.75, score 5839; M. C. VERSTEEG, Amity, Ore., Route 1, first period, $4, score 5837 1-2; J. R. COWAN, Hooper, Wash., first period, $3, score 5832 1-2; JOHN DENNEY, Monmouth, Ore., fifth period, $1, score 5826; MRS. NORMA WHEATLEY, Sorrento, Idaho, fifth period, $1, score 5779; GEORGE F. RICHARDSON, Ellensburg, Wash., Route 1, second period, $2.50, score 5774; MRS. H. W. REAUGH, Ephrata, Wash., first period, $3, score 5753; MRS. J. H. D., fourth period, $1.50, score 5738; JOHN R. GOW, Roy, Wash., third period, $2, score 5738.



The Correct Answers.

Following appear the questions and the correct answers:

1. (a) In getting up from the ground what part of its body does a cow raise first? (b) horse? (a) rear (b) fore.
2. How many upper front teeth has a cow? None.
3. What letter added to a common ailment of chickens will spell something generally used in smoking? Pip, with "e" added makes pipe.
4. What piece of harness has the same name as a small boat used in pulling a larger vessel? Tug.
5. What weed very common in the northwest is named after a great railroad builder? Jim Hill mustard.
6. What is the heaviest package which can be sent by parcel post? 50 pounds.
7. What domestic fowl requires from 20 to 22 days in which to hatch its eggs? The hen.
8. What is the common name for maize? Corn.
9. In what year was the edition of the Bible known as the "Vinegar Bible" published? 1717.
10. What important part of a wagon has the same name as an important part of the human body? Tongue.
11. When will the moon be full in March, 1917? March 8.
12. What part of a wagon and what

SAY ASIATICS NEEDED TO HARVEST CROPS.

STOCKTON, Cal., May 8.—Directors of the Stockton Chamber of Commerce went on record today asking congress to pass legislation to permit immigration of 100,000 Asiatics to harvest California's crops. A vote on the question will be taken from the chamber membership.

WANT TRACTORS

EUREKA, Cal., Monday, May 7.—Six hundred farmers at a conference adopted resolutions appealing to the State Council of Defense for farm tractors when the time shall come for the harvesting of their bean crop. The bean acreage is thrice that of last year, and the potato crop double.

Can Save Thousands of Dollars If They ACT NOW!

The labor problem is getting more and more acute every day. The appeal for help is coming from all parts of the state.

What will the condition be when the harvest time comes?

Labor-saving machinery is the only solution today.

Just Ten Bull Tractors Left!

Out of the largest shipment of tractors ever brought to the northwest—15 carloads—there are but ten tractors left.

The last two weeks has seen an unprecedented demand for **BULL TRACTORS.**

Wise farmers, looking into the future, have purchased **BULL TRACTORS** to offset the labor shortage in planting now and harvesting later on.

The possibility of the government taking over the railroads in the very near future—the present congestion, car shortage, etc., practically preclude any more Bull Tractors for the northwest this season.

Ten Golden Opportunities Await Ten Wide Awake Farmers

We don't need to tell you what the Bull Tractors will do on the farm. Sufifce to say that there are more Bull Tractors in use on Washington farms than any other make.

Bull Tractor owners in the northwest are always within reach of BULL TRACTOR PARTS—and BULL TRACTOR service.

From planting in the spring to harvesting in the fall, the Bull does the work of a dozen men or horses.

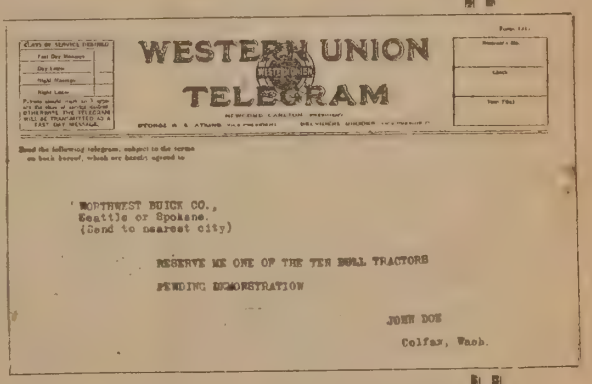
After these ten are gone we can promise no more this season. He who owns a Bull Tractor need not worry about the labor shortage.

Quick Action Necessary

This is no time to hesitate. Labor is getting scarcer every day. What will be the condition when conscription starts?

Many farmers have expressed a desire to buy a Bull Tractor, but are hesitating. Some one will get left. Ten can not supply the demand.

Act Now! Wire the Nearest Branch Today



If you want to harvest your crops surely, get wartime prices, you can't afford to delay. One day may be too late.

To enable those farmers who haven't had a chance to get a tractor—or to see what it will do—we have decided to hold these tractors for those who wire in reservation orders.

Very Important

This wire will hold one of the ten remaining tractors for you until we can demonstrate what it will do for you. You are obligated only to take the Bull Tractor after satisfactory demonstration of what it will do. We are prepared to make immediate shipment from Seattle or Spokane.

Are You Going to Be One of the Ten?

16. How many stars in the American flag? Forty-eight.

17. What grain is used in making graham flour? Wheat.

18. Does the book of Hezekiah come in the old or new testament of the Bible? In neither.

19. Which anniversary of a marriage is known as the golden wedding anniversary? Fiftieth.

20. What breed of chickens bears the same name as the landing place of a group of early American colonists? Plymouth Rock.

21. What farm fowl has the same name as one of the warring nations of Europe? Turkey.

22. Where is the key of the Bastile? Washington's mansion at Mount Vernon, Va.

23. If young swine are called pigs, what are young rats called? Rats.

24. What common bird has a name pronounced the same as a letter of the alphabet? Jay.

25. What will be the cost of running a six-line "want" ad for three times in the Washington Farmer, The Oregon Farmer and The Idaho Farmer? $6.40.

26. How many seconds in the month of February, 1916? 2,505,600.

27. What article of diet is commonly called the "staff of life?" Bread.

28. When did the law go into effect which prescribes the number of stars and the number of stripes which there shall be in the flag of the United States? July 4, 1818.

29. On what horizon does the new moon set; east, west, north or south? Western horizon.

30. What apple has the same name as a high political position in the United States? Senator.

31. The abbreviation of what state means "to launder?" Washington.

32. What breed of swine has a name made up of the names of an Asiatic nation and a European nation? Poland China.

33. What bird with the name of a domestic animal uses the nests of other birds in which to lay its eggs? Cow bird.

34. How many women have been legal rulers of France? Ten.

35. How much must you pay to get a United States postal money order for $99.99? $100.29.

36. The name of what fungus disease extremely destructive to wheat will be changed to the nose of a farm animal if for one letter is substituted the two letters directly fallowing it in the alphabet? Smut.

37. What does the government estimate as the amount of sugar beet seed produced in the United States in the year 1916? 5,211,000 pounds.

38. What root vegetable is most used in making sugar? Sugar beet.

39. What brand of oil widely advertised in this paper is formed by combining a word meaning a very low temperature with a word meaning thin? Zerolene.

40. In six to 10 words tell three reasons why it is beneficial to cultivate the soil around growing plants? Conserves moisture, kills weeds, facilitates root respiration.

41. What great general requested that his heart be buried in one place and his body in another? Francois Christophe Kellerman, duke of Valny and marshal of France.

42. A wagon box 10 feet long, 3 feet wide and 24 inches deep will hold how many bushels of wheat? 48.2 bushels.

43. What member of Wilson's cabinet has the same name as an important city in Texas? Houston.

44. What day of the week was July 4, 1909? Sunday.

45. Why is the cow a useful farm animal? (Scored on a point system, credit being given for the various reasons enumerated as to why a cow is a useful farm animal.)

46. From what fruit are raisins made? Grapes.

47. For what product advertised in this paper is the phrase used, "chases dirt?" Old Dutch Cleanser.

48. Will an iron bar measuring, when ice cold, one inch wide, one inch thick and 12 feet long contain more than 144 cubic inches when its temperature is raised 100 degrees? Yes.

49. Is a subscriber of The Washington Farmer, The Oregon Farmer or The Idaho Farmer guaranteed against loss in dealing with advertisers in these papers? Yes.

50. What is the meaning of the words "E. Pluribus Unum" found on many of our United States coins? One from many, or from many one.

51. What boy's name is also the name of an animal and a device for lifting? Jack.

52. When it is 12 o'clock noon in Washington, D. C., what time is it in Hong Kong? 12:35 a. m. the next day.

53. What is the document called which shows that a piece of land is given as security for a loan? Mortgage.

54. What advertiser in various issues of The Farmer has offered to send an illustrated book entitled "Tree Planting?" The Giant Powder company of San Francisco, Cal.

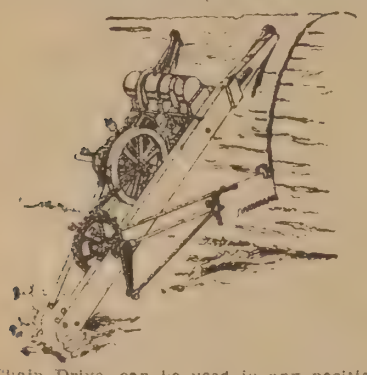
55. How many feet in a surveyor's chain? 66 feet.

56. The name of what farm implement can be formed by rearranging the following letters: R u t y o c t a i l? Cultivator.

57. From what plant is sorghum molasses made? Sugar cane or sorghum.

58. The name of what well-known burden bearer is formed by combining in the proper order the 11th, 5th, 15th, 25th, 4th and 14th letters of the alphabet? Donkey.

59. How many rods around a quarter section? 640 rods.



60. What was the date of the letter in which Abraham Lincoln wrote the words: "My father, at the death of his father, was but six years of age, and he grew up literally without education?" December 20, 1859.

43½ Bu. Wheat Per Acre

Mr. W. Loat writes: "I had 203 acres of wheat that averaged 43.5 bushels an acre, 17 acres of oats that averaged 65 bushels, 25 acres of barley that averaged 50.5 bushels an acre."

This is **only one of thousands** of good reports coming from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected, centrally located lands **close to the railway,** that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the **best grain land,** land also adapted to **dairy** and **mixed farming.** Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.

Free Homesteads

If you have not the capital to buy land you can still get one of the **recently surveyed 160 acre fertile Homesteads** along the Canadian Northern Railway, the newest transcontinental railroad, "The Road to Opportunity."

FreeBook Be sure to write today for a free copy of the "Home Seekers' and Settlers' Guide," full of complete and authentic information. **A fortune is waiting for you.**

Sidelights

Fishing.

"Oh! I just love animals!" cried the enthusiastic girl.

"Perhaps you have noticed that I am a little hoarse," insinuated the young man who had a cold.

No Allurement.

"Some day you'll be rich enough to retire from business."

"Give up my nice pleasant office and stay home?" rejoined Mr. Groucher. "I should say not!"—Washington Star.

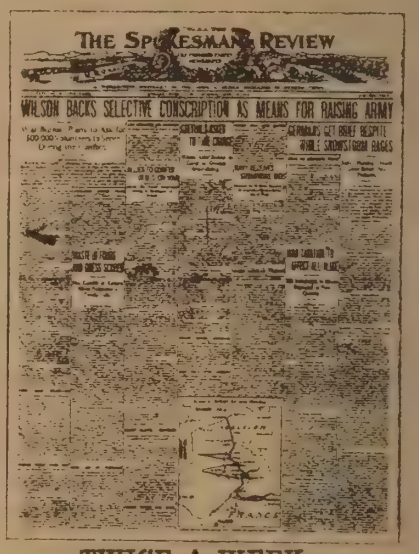
Everybody Knew.

Bridegroom: "What is the matter, driver?"

Coachman: "The horse has just thrown a shoe, sir."

Bridegroom: "Great Scott! Do even the horses know we are just married?"

One Difficulty Overcome.



When Jimmy Martin announced that he was going to give up barbering and study dentistry, his friends gathered to congratulate him.

"Wal, Jimmy," said Uncle 'Si' Grannis, after a period of cogitation, "it'll be about the easiest thing you can take up, I reckon. 'Cause, of course, you already know how t' work the chair."

NEWS
At a Bargain

Twice-a-Week Spokesman-Review Offered With "The Washington Farmer" at Worth While Saving

This Combination of Papers Brings You the News of the World as Well as the News Regarding the Agricultural Developments of Your State

TWICE A WEEK.

THE Twice-a-Week Spokesman-Review cultivates a different field from that tilled by THE WASHINGTON FARMER. The two papers together form a combination which has been welcomed in thousands of homes throughout the state. As all our friends know, THE WASHINGTON FARMER devotes itself to the agricultural activities, events, hopes and personalities of this one state. The Twice-a-Week Spokesman-Review cultivates the world as its field, and every Tuesday and Friday brings a clear, accurate, condensed, conveniently arranged review of what is happening at home and abroad. We are pleased to be able to offer the saving below. Paid ahead subscriptions can be extended.

OUR SPECIAL OFFER

Twice-a-Week Spokesman-Review, 1 year $1
The Washington Farmer, 3 years if subscribed....
for a year at a time, would cost $3

$4

Our special offer for both papers together $2.00

The Washington Farmer, Spokane, Wash.

Enclosed find $2 in payment for three-year subscription to the Washington Farmer, and one-year subscription to the Twice-a-Week Spokesman-Review.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XI.

Among the friends of my boyhood in pioneer eastern Washington I remember none better than Rip Van Winkle, whom we called "Rip." Rip's real name was Baskerville, and he was a hunter, a trapper, a "water witch," a teller of bear stories of the kind that delighted the ear of a 10-year-old boy, and a southerner of the old south, of the genuine fire-consuming kind.

Rip had a claim of some sort far back in the Okanogan mountains, where he and his patient old horse Billy wintered. In harvest he drove in a two-wheeled cart down into the Big Bend country and stacked straw for a dollar a day. He swore that no man living was entitled to more than a dollar for a day's work, and would take no more than that.

Rip's "water witching" was the wonder of our small pioneer neighborhood. He would cut out the fork of a young willow, grasp a branch in each hand with the fork up, and pace about in circles till presently, for some unaccountable reason, the switch would begin to twist downward. When the switch turned down water was below, and Rip said he could tell by the downward "pull" of the switch how deep one would have to dig for water. He witched for my father's well, and staked a spot where we would strike water in 60 feet, he said. My father dug there, though he was a skeptic of water-witching. He struck "signs" of water at 56 feet, and, to his utter astonishment, reached a strong water vein with just four more feet of digging.

My earliest lessons in diplomacy were extracting bear stories from Rip. One summer he had his camp up the ravine from our house, and I spent most of my time either listening to his bear stories or in devising schemes for getting him to talk. I finally worked out a method which was sure fire in getting bear stories, with now and then a yarn about a mountain lion, or an Indian fight, in which Rip had participated on the frontier plains.

I would saunter carelessly into Rip's camp at about 10 in the morning, taking a loaf of bread or a pie which mother had sent. This he would receive with thanks. At the time of my arrival most often he would be undressed except for his red flannel shirt, hat and pipe. He was not quite right in the head, I think.

Rip would finish dressing after I arrived, water old Billy and swear at him for having tried to get away during the night. Then he would come back and sit down near me in front of the tent, and put a fresh charge in his pipe.

As soon as his pipe was going at a good race I would mention having read a story about some hunters who had killed a bear, a lion, a tiger, a rhinoceros—any kind of an animal that fitted the story I had invented. If Rip seemed fairly attentive I would invent further details of the hunt, making the slain animal very fierce and the hunters very brave. I would conclude my narrative with an expression of admiration for the bravery of the hunters, and said that I was glad such fierce animals did not roam at large in the Big Bend.

At this point Rip would break loose with a loud snort. In language wholly unconventional he would swear that the animal I had mentioned, bear, panther, lion, tiger, rhinoceros, or what not, was not fierce at all; was unworthy of the attention of any man who was really a hunter. His wrath gathered momentum. With great oaths he would declare that the only animal in the world that was really dangerously fierce was a "bald-faced b'ar."

Just why Rip had such a wholesome respect for "bald-faced b'ars" I never discovered, but certainly he regarded this beast of the grizzly tribe as a bad one. Of panthers he was unafraid. One had climbed on top of his log house one night in winter and tried to dig through the roof. He awoke just as the beast had made a hole sufficiently large to admit its head. No, he didn't shoot it. He was short of ammunition—had none to waste. He simply yelled at it to "git away." It got. Two or three days later, when he became tired of having the damn thing hollering about his camp at night and trying to dig through his roof he waded out in the snow and shot. He hated to waste a bullet on it, but it was hungry, he reckoned, and he thought he might as well rid it of its misery.

Here he would stop to refill his pipe, and the situation was delicate. If he went ahead I would get a whole afternoon of stories. The trick was to jar him loose, so that he would proceed with his stories.

Usually I would ask him if he could have scared a bald-faced bear from his housetop by yelling at it to "git away." He would say he couldn't—not by a damn sight! No bald-faced b'ar would ever live long enough to get on top of his house, he said, for he could smell one of 'em a mile away. And whenever he smelled one he just naturally began to unlimber the artillery, for it was time to be up and doing.

At this point I would interrupt him to ask if he had ever killed a bald-faced bear. He would glare at me a full minute without winking. Then, with many oaths, would shout that he had killed enough bald-faced b'ars to load up a freight train.

By this time Rip would be warmed up to his job, and it was simply a matter of sitting still and listening. He would begin by telling how he had raided the den of a mother bald-faced b'ar and her six bald-faced cubs. From his description I gathered that the cubs were as large or larger and as fierce or fiercer than their extremely large and fierce mother, whom Rip shot so dead that she never kicked once, and then went after the cubs.

The bears were hived up in their parental den, it seemed, which was open at two ends, and at one end of which Rip kindled a fire and fanned the smoke into the hole, trying to smoke the cubs out. But they didn't smoke out worth a cent. He fanned smoke into the hole for an hour, and the bears refused to come forth.

Finally, he quit fanning smoke into the hole and went around to the other end and looked in. There were those six bears, each with its nose sticking in the earth so that it couldn't smell the smoke. Rip concluded that if the bears were that smart he would just let 'em live, even if they were bald-faced; which he did.

Next would be the story of the bald-faced b'ar that struck an ox with its forepaw, crushing its head to pulp; stories of narrow escapes, of bears he had shot through the heart, the brain, the backbone and all four legs, but which kept coming till they had dropped dead within a foot of him; stories of Indian fights, and, if the pipe lasted, stories of the civil war, winding up with his part in the battle at Pittsburg landing, and his sworn belief that if General Albert Sidney Johnson had not been killed in the fight Grant would have been licked right there. "And the south would be slave today," he would thunder; "and it ought to be; niggers are better off with a master!"

Years later I attended an opera in Spokane, and the leading man sang a song improvised apparently from the legend of Rip Van Winkle and the rhyme of my childhood, "Old Dan Tucker." The song started thus:

"R-r-r-rip Van Winkle was a happy man;
He combed his hair with the frying pan"

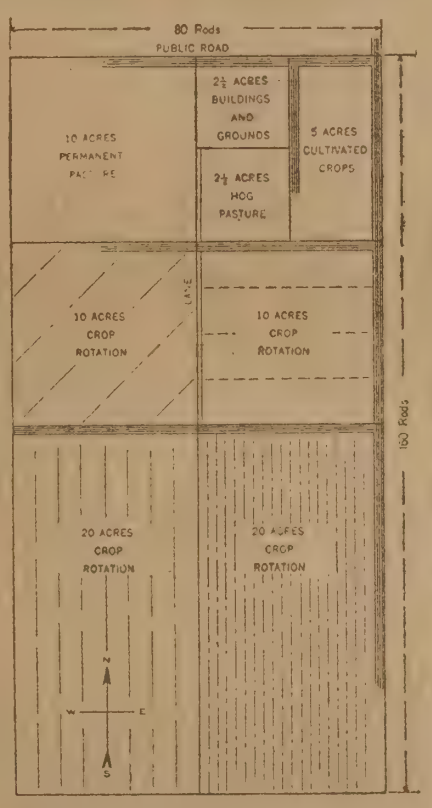
I can not remember more. The song, the orchestra and the capering, singing, prettily costumed dancing girls were a strong contrast to the picture that rose in my mind—old Rip as I last saw him by the fireside in our pioneer home, his black eyes aflash with rage as he said that "they" had been trying to steal his horse, and he was leaving the country for good.

Rip was possessed of the insane notion that some one was ever trying to steal his fat, lazy old horse, that most people would not have taken as a gift. In camp he often did sentry duty till far into the night, watching his horse. He could shoot a nail through a board 50 feet away, four in five shots, and I am certain that if any one had by design or chance approached his horse at night he would have fired instantly to kill.

That evening was the last which Rip spent in our home, and he was never seen again in the Big Bend. Two winters afterward I heard that he had been found dead in his bed on a cold winter morning in the Okanogan, his gun beside him and his boots on. He always said that when he died it would be with his boots on.

"Old Bachelor" a Social Fact

In the next instalment the Bunch Grass boy tells of the "old bachelor" of pioneer days in the Big Bend. Here is a paragraph:



"A few of the old bachelors married young girls of the neighborhood, but this was regarded as hazardous. 'There's old Dave Blank going to marry Hettie Williams and she's just a kid,' remarked one of the neighbor women. 'Why, he'll soon have one foot in the grave and she'll be as spry as a colt, wanting to go to all the dances and things! A fine time she'll have pulling him loose from the fire in cold weather! Mark my words—they won't agree!' They didn't."

Layout for 80-Acre Farm

In the May number of the Reclamation Record I. D. O'Donnell, supervisor of irrigation, gives an 80-acre farm layout where the slope and general conditions favor the farmers in every respect.

The farm is divided to provide two 20-acre fields which may be used for the field crops in a general crop rotation; two 10-acre fields for crop rotation uses; 10 acres for permanent pasture; five acres for cultivated crops; two and one-half acres for hog pasture and two and one-half acres for buildings and grounds.

The permanent pasture could be further divided into two tracts to permit of continuous use by irrigating one part at a time. The other two 10-acre

One way to lay out an 80-acre farm.

tracts could be diverted to use for permanent pasture in turn if desired. The five-acre tract could be used permanently if desired or the production of crops to be harvested by hogs or sheep. The length of farm lane necessary to connect up all these fields is small and no great distance is traveled in reaching any field on the farm.

The irrigation water is shown as entering the field at the northeast corner and the slope is south and west. It would be necessary to run a small farm ditch across the north end of the farm to provide irrigation for the east 20 acres. The main farm ditch would extend down the east side of the farm and carry water for the 60 acres in the four larger fields.

Ye Have Heard That It Was Said by Them of Old Time

A COMMANDMENT AND A REWARD.

Honor thy father and thy mother that thy days may be long upon the land which the Lord thy God giveth thee.—Exodus 20:12.

We doubt if there is any commandment which is more generally forgotten than this. Even those who have read it and committed it to memory disregard it and look upon its violation by others in the light of a small offense. They consider it a violation of good taste and courtesy rather than a commandment which has equal rank with the other nine.

When you boil them down it has equal standing and importance with the others, and we know of no authority which authorizes the observance of one and the disregarding of another.

This commandment is peculiar in it that it promises a definite and plain reward for those who obey it—long life for those who honor their parents. Or, is it long life? Is it, rather, security in one's possessions and peaceful certainty with no fear of the foe about us?

Parenthood is one of the most sacred of all relationships; it has suffered from the hands of iconoclasts, and yet its beauty and mystery persists. It is connected with the deepest emotions and feelings of which we are capable, and hallowed by the most reverential thoughts, or it is disgraced and made the subject of coarse and silly gibes.

We want our children to have the reward of the fifth commandment, and how can they unless we parents are worthy of the honor that is due? It seems that there is a double duty connected with this commandment.

Fatherhood and motherhood should be respected by the offspring, for it is sacred and so declared by the Almighty. A little serious thought about this commandment might prove of benefit to children and fathers alike. Let it not be said of Christian people that they observe one of the principles of their own belief less well than do the heathen. H. H. B.

Recessional.

God of our fathers known of old.
Lord of our far flung battle line,
Beneath whose awful hand we hold
Dominion over palm and pine,
Lord, God of hosts, be with us yet,
Lest we forget, lest we forget!

The tumult and the shouting dies,
The captains and the kings depart,
Still stands thine ancient sacrifice,
An humble and a contrite heart,
Lord, God of hosts, be with us yet,
Lest we forget, lest we forget!

Far called, our navies melt away.
On dune and headland sinks the fire,
Lo, all our pomp of yesterday
Is one with Nineveh and Tyre.
Judge of the nations, spare us yet,
Lest we forget, lest we forget!

If drunk with sight of power we loose
Wild tongues that have not thee in awe,
Such boasting as the Gentiles use,
Or lesser breeds without the law,
Lord, God of hosts, be with us yet,
Lest we forget, lest we forget!

For heathen heart that puts her trust
In reeking tube and iron shard,
All valiant dust that builds on dust,
And guarding, calls not three to guard,
For frantic boast and foolish word,
Thy mercy on thy people, Lord.

—Rudyard Kipling.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

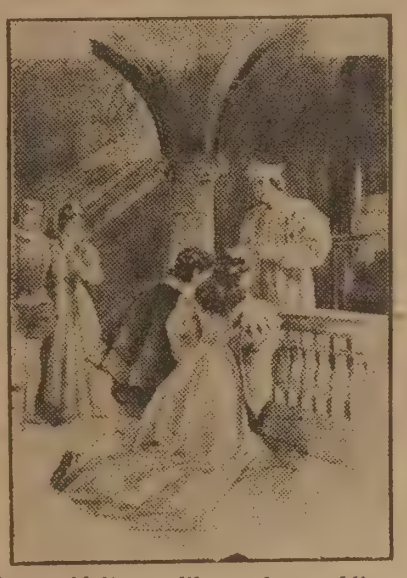
Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XX.—(Continued.)

Madame Mary took her time, since a more deliberate journey bride never made to waiting bridegroom. She was a study during this whole period—weeping and angry by turns. She, who had never known a momen't illness in all her days, took to her bed upon two occasions from sheer antipathetic nervousness, and would rest her head upon Jane's breast and cry out little, half-articulate prayer to God that she might not kill the man who was her husband, when they should meet.

When we met the king about a league this side of Abbeville, and when Mary beheld him with the shadow of death upon his brow, she took hope, for she knew he would be but putty in her hands, so manifestly weak was he, mentally and physically. As he came up she whipped her horse and rode by him at a gallop, sending me back with word that he must not be so ardent; that he frightened her, poor, timid little thing, so afraid of—nothing in the world. This shocked the French courtiers, and one would think would have offended Louis, but he simply grinned from ear to ear, showing his yellow fangs, and said whimperingly: "Oh, the game is worth the trouble. Tell her majesty I wait at Abbeville."

The old king had ridden a horse to meet his bride in order that he might appear more gallantly before her, but a litter was waiting to take him back to Abbeyville by a shorter route, and they were married again in person.



(Again a quotation from Hall is substituted):

Mondaye the vi daye of Noueber, ther the sayde quene was receyued into the cytee of Parys after the order thar foloweth. First the garde of the cytee met her with oute Sayncte Denyce al in coates of goldsmythes woorke with shippes gylt, and after them mett her all the prestes and religious whiche were estemed to be iliM. The quene was in a chyre coured about (but not her ouer person) in white clothe of golde, the horses that drewe it couered in clothe of golde, on her hed a coronall, al of greate perles, her necke and brest ful of Iuels, before her wente a garde of Almaynes after ther fascion, and after them al noblemen, as the Dolphyn, the Duke of Burbon, Cardynalles, and a greate nomber of estates. About her person rode the kynge's garde the whiche wer Scottes. On the morowe bega the iustes, and the queen stode so that al men might see her, and wonder at her beautie, and the kynge was feble and lay on a couche for weakness.

So Mary was twice married to Louis, and, although she was his queen fast and sure enough, she was not his wife.

You may say what you will, but I like a fighting woman; one with a touch of the savage in her when the occasion arises; one who can fight for what she loves as well as against what she hates. She usually loves as she fights—with all her heart.

The Tewesdaye beying the x daye of October all the Englishmen except a fewe that wer officers with the sayde quene were discharged whiche was a greate sorowe for theim, for some had serued her longe in the hope of preferment and some that had

Mary said it was like a play wedding.

honest romes left them to serue her and now they wer out of seruice, which caused the to take thought in so much, some dyed by way returning, and some fell mad, but ther was no remedy. After the English lordes had done their commission the French kynge wylled the to take no lenger payne & so gaue to theim good rewardes and they toke ther leaue of the quene and returned.

Then the Dolphyn of Fraunce called Frauncys duke of Valoys, or Fraunceys d'Angouleme, caused a solempne iustes to be proclaymed, which shoulde be kept in Parys in the moneth of Noueber next ensuying, and while all these thinges were prepearying, the Ladye Mary, the V. daye of Noueber, then beying Sondaye was with greate solempnitee crowned Queen of Fraunce in the monasterye of Caynct Denyce, and the Lorde Dolphyn, who was young, but very toward, al the season held the crowune ouer her hed, because it was of greate waight, to her greuaunce.

So Mary was crowned, and was now a queen, hedged about by the tinseled divinity that hedgeth royalty.

It seemed that she was climbing higher and higher all the time from Brandon, but in her heart every day brought her nearer to him.

There was one thing that troubled her greatly, and all the time. Henry had given his word that Brandon should be liberated as soon as Mary had left the shores of England, but we had heard nothing of this matter, although we had received several letters from home. A doubt of her brother, in whom she had little faith at best, made an ache at her heart, which seemed at times likely to break it—so she said. One night she dreamed that she had witnessed Brandon's execution; her brother standing by in excellent humor at the prank he was playing her, and it so worked upon her waking hours that by evening she was ill. At last I received a letter from Brandon—which had been delayed along the road—containing one for Mary. It told of his full pardon and restoration to favor, greater even than before—and her joy was so sweet and quiet, and yet so softly delirious, that I tell you plainly it brought tears to my eyes and I could not hold them back.

The marriage, when once determined upon, had not cast her down nearly so deep as I had expected, and soon she grew to be quite cheerful and happy. This filled me with regret, for I thought of how Brandon must suffer, and felt that her heart was a poor, flimsy thing to take this trouble so lightly.

I spoke to Jane about it, but she only laughed. "Mary is all right," said she; "do not fear. Matters will turn out better than you think, perhaps. You know she generally manages to have her own way in the end."

"If you have any comfort to give, please give it, Jane. I feel most keenly for Brandon, heart-tied to such a willful, changeable creature as Mary."

"Sir Edwin Caskoden, you need not take the trouble to speak to me at all unless you can use language more respectful concerning my mistress. The queen knows what she is about, but it happens that you can not see it. I see it plainly enough, although no word has ever been spoken to me on the subject. As to Brandon being tied to her, it seems to me she is tied to him, and that he holds the reins. He could drive her into the mouth of purgatory."

"Do you think so?"

"I know it."

I remained in thought a moment or two, and concluded that she was right. In fruth, the time had come to me when I believed that Jane, with her good sense and acute discernment, could not be wrong in anything, and I think so yet. So I took comfort on faith from her, and asked: "Do you remember what you said should happen before we return to England?"

Jane hung her head. "I remember."

"Well?"

She then put her hand in mine and murmured, "I am ready any time you wish."

Great heavens! I thought I should go out of my senses. She should have told me gradually. I had to do something to express my exultation, so I walked over to a bronze statue of Bacchus, about my size—that is, height—put my hat—which I had been carrying under my arm—on his head, cut a few capers in an entirely new and equally antic step, and then drew back

(Continued on the following page.)

Kill Lice

Begin now, in the spring-time—clean up your poultry, keep hens and little chicks free from lice so they will do their best. When hens pick feathers you have a sure sign of lice.

Dr. Hess Instant Louse Killer

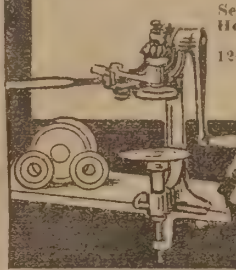
means easy and sure lice riddance. Dust into hens' feathers, about roosts and houses. Put it into the dust bath, both hens and chicks will work it all through the feathers, bringing the Louse Killer right home to the lice. You can do your poultry no better service. Don't neglect them.

Also destroys bugs on cucumber, squash and melon vines, cabbage worms, slugs on rose bushes. Sold in sifting-top cans.

Price, 1 lb. 25c; 3 lbs. 60c (except in Canada).

DR. HESS & CLARK, Ashland, Ohio

There's Profit in HOME CANNING



Profitable whether you put up goods for home use or to sell. Scores of users of our Sanitary Outfits tell us of their success. "I shall never be without a Steam Pressure Canner again," says one. And another: "We have worked up a good sale for our canned goods and intend to increase our plant."

CAN BY STEAM PRESSURE.

It is "the safest way to sterilize" say authorities. Our Complete Sanitary Outfits include the famous H. & A. retorts and can closing machine. Also a $2 book of recipes and directions that tell you what to put up and how to do it. We will tell you where to sell your output.

Write today for illustrated circular.

STEAM PRESSURE CANNING SAFE AND SURE

Tells why chicks die

E. J. Reefer, the poultry expert, 4665 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from the preceding page.)

and knocked that Bacchus down. Jane thought I had gone stark mad, and her eyes grew big with wonder, but I walked proudly back to her after my victory over Bacchus, and reassurred her—with a few of Mary's mesasges that I had still left over, if the truth must be told. Then we made arrangements that resulted in our marriage next morning.

Accordingly Queen Mary and one or two others went with us down to a little church, where, as fortune would have it, there was a little priest ready to join together in the holy bonds of wedlock little Jane and little me. Everything so appropriate,' you see; I suppose in the whole world we couldn't have found another set of conditions so harmonious. Mary laughed and cried, and laughed again, and clapped her hands over and over, and said it was "like a play wedding"; and, as she kissed Jane, quietly slipped over her head a beautiful diamond necklace that was worth full ten thousand crowns—aside, that is, from the millions of actual value, because it came from Mary. "A play wedding" it was; and a play life it has been ever since.

We were barely settled at court in Paris when Mary began to put her plans in motion and unsettle things generally. I could not but recall Henry's sympathy toward Louis, for the young queen soon took it upon herself to make life a burden to the Father of his People; and, in that particular line, I suppose she had no equal in all the length and breadth of Christendom.

I heartily detested King Louis, largely, I think, because of prejudice absorbed from Mary, but he was, in fact, a fairly good old man, and at times I could but pity him. He was always soft in heart and softer in head, especially where women were concerned. Take his crazy attempt to seize the countess of Croy while he was yet duke of Orleans; and his infatuation for the Italian woman, for whom he built the elaborate burial vault—much it must have comforted her. Then his marriage to dictatorial little Anne of Brittany, for whom he had induced Pope Alexander to divorce him from the poor little crippled owlet, Joan. In consideration of this divorce he had put Caesar Borgia, Pope Alexander's son, on his feet financially and politically. I think he must have wanted the owlet back again before he was done with Anne, because Anne was a termagent—and ruled him with the heaviest rod of iron she could lift. But this last passion—the flickering, sputtering flame of his dotage—was the worst of all, but subjectively and objectively; both as to his senile fondness for the English princess and her impish tormenting of him. From the first he evinced the most violent delight in Mary, who repaid it by holding him off and evading him in a manner so cool, audacious and adroit, that it stamped her queen of all the arts feminine and demoniac. Pardon me, ladies, if I couple these two arts, but you must admit they are at times somewhat akin. Soon she eluded him so completely that for days he would not have a glimpse of her, while she was perhaps riding, walking or coqueting with some of the court gallants, who aided and abetted her in every way they could. He became almost frantic in pursuit of his elusive bride, and would expostulate with her, when he could catch her, and smile uneasily, like a man who is the victim of a practical joke of which he does not see, or enjoy, the point. On such occasions she would laugh in his face, then grow angry—which was so easy for her to do—and, I grieve to say, would sometimes almost swear at him in a manner to make the pious, though ofttimes lax-virtued, court ladies shudder with horror. She would at other times make sport of his youthful ardor, and tell him in all seriousness that it was indecorous for him to behave so and frighten her, a poor, timid little child, with his impetuosities. Then she would manage to give him the slip; and he would go off and play a game of cards with himself, firmly convinced in his own feeble way that woman's nature had a tincture of the devil in it. He was the soul of conciliatory kindness to the young vixen, but at times she would break violently into tears, accuse him of cruelly mistreating her, a helpless woman and a stranger in his court, and threaten to go home to dear old England and tell her brother King Henry all about it, and have him put things to right and redress her wrongs generally. In fact, she acted the part of injured innocence so perfectly that the poor old man would apologize for the wrongs she invented, and try to coax her into a good humor. Thereupon she would weep more bitterly than ever, grow hysterical and require to be carried off by her women, when recovery and composure were usually instantaneous. Of course the court gossips soon carried stories of these quick recoveries to the king, and, when he spoke to Mary of them, she put on her injured air again and turned the tables by upbraiding him for believing such calumnies about her, who was so good to him and loved him so dearly.

I tell you it is a waste of time to fight against that assumption of injured innocence—that impregnable feminine redoubt—and when the enemy once gets farily behind it one might as well raise the siege. I think it the most amusing, exasperating and successful defense and counter-attack in the whole science of war, and every woman has it at her finger-tips, ready for immediate use upon occasion.

Mary would often pout for days together and pretend illness. Upon one occasion she kept the king waiting at her door all morning, while she, having slipped through the window, was riding with some of the young people in the forest. When she returned—through the window—she went to the door and scolded the poor old king for keeping her waiting penned up in her room all morning. And he apologized.

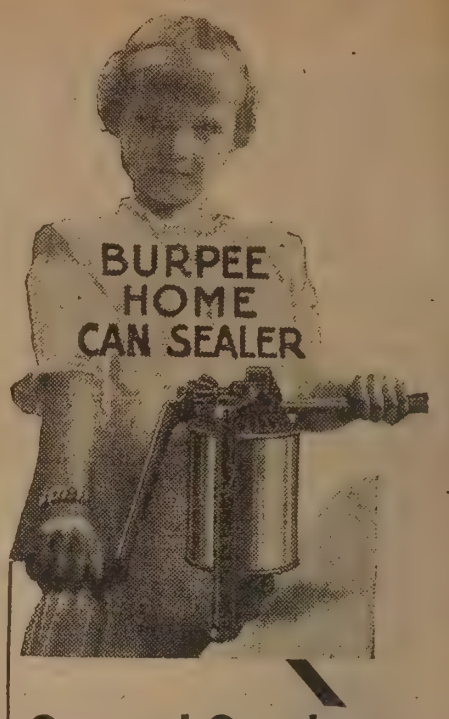
She changed the dinner hour to noon in accordance with the English custom, and had a heavy supper at night, when she would make the king gorge himself with unhealthful food and coax him "to drink as much as brother Henry," which invariably resulted in Louis de Valois finding lodgment under the table. This amused the whole court, except a few old cronies and physicians, who, of course, were scandalized beyond measure. She took the king on long rides with her on cold days, and would jolt him almost to death, and freeze him until the cold tears streamed down his poor pinched nose, making him feel like a half animated icicle, and wish that he were one in fact.

At night she would have her balls, and keep him up till morning drinking and dancing, or trying to dance, with her, until his poor old heels, and his head, too, for that matter, were like to fall off; then she would slip away from him and lock herself in her room. December, say I, let May alone; she centainly will kill you. Despite which sound advice, I doubt not December will go on coveting May up to the end of the chapter; each old fellow—being such a fine man for his age, you understand—fondly believing himself an exception. Age in a fool is damnable.

Mary was killing Louis as certainly and deliberately as if she were feeding him slow poison. He was very weak and decrepit at best, being compelled frequently, upon public occasions, such, for example, as the coronation tournament of which I have spoken, to lie upon a couch.

Mary's conduct was really cruel; but then, remember her provocation and that she was acting in self-defense. All this was easier for her than you might suppose, for the king's grasp of power, never very strong, was beginning to relax even what little grip it had. All faces were turned toward the rising sun, young Francis, duke of Angouleme, the king's distant cousin, who would soon be king in Louis' place. As this young rising sun, himself vastly smitten with Mary, openly encouraged her in what she did, the courtiers of course followed suit, and the old king found himself surrounded by a court only too ready to be amused by his lively young queen at his expense.

This condition of affairs Mary welcomed with her whole soul, and to accent it and nail assurance, I fear, played ever so lightly and coyly upon the heart-strings of the young duke, which responded all too loudly to her velvet touch, and almost frightened her to death with their volume of sound later on. This Francis d'Angouleme, the dauphin, had fallen desperately in love with Mary at first sight, an effect against which the fact that he was married to Claude, daughter of Louis, in no way militated. He was a very distant relative of Louis, going away back to St. Louis for his heirship to the French crown. The king had daughters in plenty, but as you know, the gallant Frenchmen say, according to their Law Salic: "The realm of France is so great and glorious a heritage that it may not be taken by a woman." Too great and glorious to be taken by a woman, forsooth! France would have been vastly better off had she been governed by a woman now and then, for a country always prospers under a queen.



Francis had for many years lived at court as the recognized heir, and as the custom was, called his distant cousin Louis, "Uncle." "Uncle" Louis in turn called Francis "Ce Gross Carcon," and Queen Mary called him "Monsieur, mon beau fils" in a mock-motherly manner that was very laughable. A mother of 19 to a "good boy" of 22! Dangerous relationship! And dangerous, indeed, it would have been for Mary had she not been as pure and true as she was willful and impetuous. "Mon beau fils" allowed neither his wife nor the respect he owed the king to stand in the way of his very marked attention to the queen. His position as heir, and his long residence at court, almost as son to Louis, gave him ample opportunities for pressing his unseemly suit. He was the first to see Mary at the meeting place this side of Abbeville, and was the king's representative on all occasions.

"Beau fils" was quite a handsome fellow, but thought himself vastly handsomer than he was; and had some talents, which he was likewise careful to estimate at their full value, to say the least. He was quite well liked by women, and in turn considered himself irresistible. He was very impressionable to feminine charms, was at heart a libertine, and, as he grew older, became a debauchee whose memory will stain France for centuries to come.

Mary saw his weakness more clearly than his wickedness, being blinded to the latter by the veil of her own innocence. She laughed at, and with him, and permitted herself a great deal of his company; so much, in fact, that I grew a little jealous for Brandon's sake, and, if the truth must be told, for the first time began to have doubts of her. I seriously feared that when Louis should die, Brandon might find a much more dangerous rival in the new king, who, although married, would probably try to keep Mary at his court, even should he be driven to the extreme of divorcing Claude, as Claude's father had divorced Joan.

I believed, in case Mary should voluntarily prove false and remain in France, either as the wife or mistress of Francis, that Brandon would quietly

(Continued on page twenty-six.)

Canned Goods are High Priced!

PUT UP YOUR OWN!

Indications are that canned foods will be still higher. We have a machine which will enable you to easily and cheaply put up your own supply of canned goods in your own kitchen. Use what you need, and sell the rest at Retail Prices.

BURPEE HOME CAN SEALER

A well constructed, low priced, practical machine for sealing the sanitary tin. No dangerous acid nor solder used. Seals can absolutely air-tight. Cans easily obtained from our distributing stations throughout the country.

Fruits and vegetables put up in the home with this machine keep just as well as factory goods—and you know what goes into the can—it's clean and wholesome.

Free recipe book with each machine We guarantee your success. Write today.

REAL HOMES
at
Milan Farms

on Great Northern Railroad, only 25 miles from Spokane, the metropolis of the Inland Empire and live stock, fruitgrowing and grain center of the Pacific Northwest.

Especially adapted to dairying, diversified farming, stock and poultry raising. Free rural delivery daily, excellent schools, splendid roads, long distance telephones and near fine lakes and streams. Soil rich, with ample moisture.

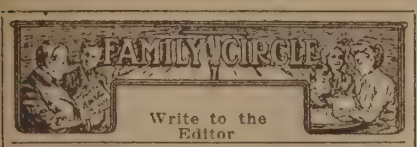
Every acre put on the market last year was sold, indicating attractiveness of our proposition. Additional acreage now ready at prices from $7.50 an acre up, on terms to suit purchaser.

SPECIAL OFFER TO JUNE 1

All purchases to June 1 secure service of man with team, stump puller and carpenter for one week free.

Write for attractive folder giving exact facts about these lands and the best opportunity for securing the most attractive farm home in the northwest.

MILAN FARMS DEVELOPMENT CO.
1322 Old Nat'l Bank Bldg., Spokane.



Raise High Priced Wheat on Fertile Canadian Soil

Canada extends to you a hearty invitation to settle on her **FREE Homestead lands of 160 acres each** or secure some of the low priced lands in **Manitoba, Saskatchewan and Alberta.** This year **wheat is higher** but **Canadian land just as cheap,** so the opportunity is more attractive than ever. Canada wants you to help **feed the world** by tilling some of her fertile soil **—land similar to that** which during many years **has averaged 20 to 45 bushels of wheat to the acre.** Think of the money you can make with wheat at over $2 a bushel and land so easy to get. Wonderful yields also of Oats, Barley and Flax. Mixed farming in Western Canada is as profitable an industry as grain growing.

The government this year is asking farmers to put increased acreage into grain. There is now a great demand for farm laborers to replace the many young men who have volunteered for service in the war. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or to **J. N. GRIEVE,**
Corner First and Post Sts., Spokane, Wash.
Canadian Government Agent.

Being, Not Seeming

What is the quotation or what are the words which have helped you in the journey of life? Send it to the editor of The Farmer and let it help another.

To the Editor: I want to send you a quotation that has helped me, and I think it fits old and young: "True worth is in being, not seeming; in doing each day that goes by some little good, not in dreaming of great things to do bye and bye."

MRS. DYSART.

College Place, Wash.

KeepChild'sConfidence

Dear Mothers and Others of the Family Circle: I have been having some little confidential talks with your girls. In my imagination I have had them gathered about me and have told them little stories out of my own experience.

I love girls and am interested in what interests them and next to them I love their mothers. I wonder if we study our girls enough. I wonder if we judge things from their viewpoint as much as we should. I wonder if we look back to our own girlhood days when we were passing through the period when we hated to mend our clothes, hated to wash dishes, hated to make beds, in short, when we found it easier to giggle than to do anything else. I can remember seeing the look of patient endurance on the face of my mother when I would be especially foolish or aggravating.

There is a period in the growth of girls, even good, obedient ones, when it requires a great deal of patience to put up with their antics and headstrong behavior, but we should remember that we also have been girls with foolish notions of one kind or another.

I heard a man talk to an audience of boys not long ago. It was a good talk, but I don't remember much what it was all about. There was one sentence, however, that held my attention and remained with me. It was this: "Boys, I want you to be good boys. Remember, I am putting the emphasis on 'boys,' not on 'good.' Too often we expect boys to be good like men rather than good like boys." After the speaker got this far I lost most of the rest of his talk, for I got to thinking how often we grownups expect the boys to be good like men rather than like boys. We expect our girls to be good like women instead of good like girls. If we would but try to think the thoughts of our girls and look at life from their standpoint I am convinced we would understand them better and when we understand them we can guide them more skilfully through the danger period of their early teens.

It is so important, dear mothers, to be companions to your children. It means much self-sacrifice to do it, especially when they are small, because their little plans and games must of necessity be tiresome to follow up and there is always so much for busy mothers to do, but the companionship must be started while the children are small. If mothers manifest no particular interest in the plans and friends of the children they need not hope to be included in their plans or their friendships as they grow older.

I remember a little incident that occurred when my son was about 12 years old. He and a boy friend were planning to build a "shack," as they called it. They had gone to town and gathered up quite a load of packing boxes, but needed something to make their framework of. I heard them talking it over when they did not know I heard. The friend was for cutting down some small trees which were growing along the lower part of the farm without asking permission because they had no 2x4s. But my boy said "No, we better ask mother"; the other boy said, "She don't care about our shack and maybe she won't let us build it if we talk to her about it first." My boy answered, "Yes, she does care; she always cares about my stuff. I bet she will let us cut the trees, and, anyway, if she won't she will think up something else for us to use. She is that kind of a mother."

If we will but realize that "the thoughts of youth are long, long thoughts." They seem foolish to us, but their thoughts, their plans are their own and belong to the particular period of their existence in which they happen to be living. We must not expect 15 to have the plans or think the thoughts of 50 years. We do not want our young people to be little old men and women. Occasionally we meet with such a child and we always feel he is missing his birthright. Let the children be children as long as it is possible to keep them so and maintain a normal development, but keep close to them. To quote from my small son, "care about their stuff."

Happy indeed is the mother who has the confidence of her children and retains it as they grow up. Next time we will think of mutual plans for mother and children.

A. W. B.

"Lifting" Flour in

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: Some of the most helpful things that I have learned are: In mixing bread sponge into a dough, lift it until you have in enough flour instead of kneading it. Lifting the flour makes muscle in the arms and does away with lots of backache. When enough flour is "lifted" in, knead for one minute and put to raise.

Add a teaspoonful of butter to rice or any cereal when put on to cook, and they will not stick or burn readily.

The most helpful thing is to do the hard things, the ones you dislike, first. The longer we put them off the harder they are to do.

MARY RINGHISEN.

Withrow, Wash.

Planting Garden Roses.

Before setting dormant rose plants they should be examined and all broken roots cut off. Budded roses should be examined for buds or incipient shoots from the stock, which should be cut out, says the New York State College of Agriculture. Large, deep holes should be dug for the plants, the roots spread out evenly and the holes filled with well pulverized soil. To prevent any unfilled crevices among the mass of roots the plant should be shaken lightly while filling in the soil. When the hole is almost full pack the soil firmly by treading on it. If the soil is not too wet to handle, firming it will do no harm and is an essential to success. Budded roses should be planted so that the bud union, generally indicated by a crook in the stem, is two inches below the surface of the bed. If thus planted the number of suckers is reduced to a minimum, if not entirely eliminated. Rose bushes on their own roots should be set the same depth as before transplanting. If the ground is dry a good watering should be given.

Growing plants are easier to set, but it is essential that the balls of soil and roots are thoroughly moist before planting. A thorough watering given a few hours before setting will leave the plants in better condition to handle than if given immediately beforehand. The depth to set is the same as that for dormant plants.

The uppermost bud left in each cane should point outward since these buds grow vigorously and would soon interlace if pointing inward. Cutting back after planting is necessary if a strong and vigorous growth is desired the first season.

There is a pleasure in the pathless woods;
There is a rapture on the lonely shore;
There is society, where none intrudes,
By the deep sea, and music in its roar:
I love not man the less, but Nature more.

—Byron.

Don't Coddle the Chicks.

Don't shut the chicks up when a raincloud appears above the horizon; give them their liberty. That means a dry warm shelter and the cool outdoors. A few drops of rain won't hurt them if they have the liberty of going into a clean warm coop when they want to. It is a serious mistake to keep them shut in a warm room all the time.

Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

Must Know Business

By Paul E. Triem.

Senator W. H. Paulhamus of the Puyallup-Sumner Fruit Growers' association reports the purchase during the last canning season of 1200 tons of windfall apples from Yakima county. These apples are steam cooked, and the juice is extracted, to be used in giving body to various jams which have not in themselves sufficient pectin to stiffen them. Twenty carloads of this apple-base jam were sold last season.

Mr. Paulhamus reports also that in the production of Damson plums, sour cherries and Italian prunes the producing districts tributary to the canneries are deficient. The market for Puyallup and Sumner canned goods is constantly extending. Recently an inquiry coming in from a St. Louis baker for plums, etc., in gallon cans. Last spring many berries were put up in barrels, without sugar, by the simple process of putting 380 pounds of berries into the barrel and freezing them. Discovery of this process was entirely accidental and was due to the fact that the high price of sugar last season caused a shortage in this necessary ingredient to the older method of barreling. Berries were coming in every hour of the day till the cannery was full and the platform was full and the street was full. It was the old story of the horse that climbed a tree. Horses don't climb trees, but this one had to—so he did. Berries aren't canned without sugar, but these had to be—so they were.

The man from Puyallup warns other communities from building a cannery without knowing something definite about the matter.

CHECK FOR THREE YEARS.

Please find check for one dollar and a half to pay in full for three years for The Washington Farmer. Think your paper is improving very fast.

FRANK STEPHENS.
Bickleton.

Make Themselves Self-Supporting.

It was the sense of an agricultural preparedness meeting held at Wenatchee that if the apple growers of the state could make themselves self-supporting in the way of garden stuff now imported, milk and other canned goods, and would grow sufficient garden stuff to can to carry them over the entire season; also put up eggs for storage and, in a word, make themselves independent of imports, the usual quantity of food stuff brought into this district can be used in sections where the stuff can not be produced and the surplus, if any, can be sent across the waters.

To Drop Other Work.

Pierce County Agriculturist Charles A. Cole has been instructed to drop other work for agricultural preparedness. Farmers will be advised to plant peas, beans and corn, products which have a high food value and can be dried or canned.

Agriculturist for Pend Oreille.

Milton J. Newhouse, who has been doing senior work in the department of agriculture and instructing in the department of elementary science at Washington State college, has accepted the position of county agriculturist for Pend Oreille county.

Patterns

1925—Girls' slip. Cut in five sizes: 2, 4, 6, 8 and 10 years. It requires for size 6, 2 yards of 36-inch material. Price, 10 cents.

2088—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. It requires 4 1-4 yards of 36-inch material for an 8-year size. Price, 10 cents.

1696—Boys' blouse suit with shield. Cut in four sizes: 3, 4, 5 and 6 years. It requires 3 yards of 44-inch material for a 4-year size. Price, 10 cents.

1960—Dress for misses and small women. Cut in four sizes: 14, 16, 18 and 20 years. It requires 4 1-2 yards of 44-inch material for an 18-year size. The skirt measures about 2 2-3 yards at the foot. Price, 10 cents.

2090-2079 — A smart sports dress. Waist 2090 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 36-inch material for a 38-inch size. Skirt 2079 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure, and requires 3 1-4 yards of 44-inch material for a 24-inch size. It measures 2 7-8 yards at the foot. Two separate patterns, 10c for each pattern.

2070—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6 1-2 yards of 36-inch material for a 36-inch size. The skirt measures about 3 yards at the lower edge. Price, 10 cents.

1672—Child's rompers. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 6 years requires 2 7-8 yards of 36-inch material. Price, 10 cents.

1796—Lady's dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 44-inch material for a 36-inch size. The skirt measures about 3 1-8 yards at the foot. Price, 10 cents.

2083—Lady's brassiere and drawers. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 1-2 yards of 36-inch material for a 36-inch size. Price, 10 cents.

1673—Girl's middy dress, with skirt attached to an underwaist. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 4 1-8 yards of 40-inch material for an 8-year size. Price, 10 cents.

2084—Girl's dress. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. Size 8 will require 3 1-4 yards of 44-inch material. Price, 10 cents.

1663—Lady's one-piece apron. Cut in 3 sizes: Small, medium and large. It requires 4 7-8 yards of 36-inch material for a medium size. Price, 10 cents.

Rode Down the Dragon's Mouth.

Dear Aunt Nellie: It has been quite a while since I wrote to the Corner, but I am going to write again. My subject will be "My Vacation Trip." One morning we got up very early to go on our trip. About 20 cars lined up at Pine City. It was about 8 o'clock when we started. We arrived in Spokane about 10 o'clock. We stayed in town until about 11. Then we went out to the Manito park. There we saw all the animals. One of the cougars was named Tige and he would put his paw out at the people who passed. There were some coyotes in a cage and a man was standing by the cage. He would whistle with his fingers and oh, how the coyotes would howl. Then at 12 o'clock we ate dinner. After dinner we all went down to Natatorium park. I rode down the dragon's mouth. It went like a flash. Then I rode through the old mill and on the merry-go-round. Then about 6 o'clock we started home. We came to Rosalia, where we took supper and had all the ice cream we could eat.—Myrtle Ledbetter, St. John, Wash.

Out for a Tramp on the Bluffs.

Dear Aunt Nellie: I have never written to the Children's Corner before, but I read all the letters that the cousins write and think they are very interesting. We live on a ranch. The schoolhouse is just across the road from our house. I come home for dinner. My teacher comes home with me for she boards at our place. Her name is Miss Newman. I like to go to school very much. We have so much fun there. Today we went out for a tramp on the bluffs. We discovered caves of great interest. I wish some of our little cousins could have gone with us. Some of the scholars of our school were leaving today and so we thought we would give them a good time before they left. They are going to the Colville reservation in Okanogan. Their name is Launtenschleager. Don't you think it is a long name? Well, Aunt Nellie, I must have been named for you because my name is Nellie. My nickname is Ned.—Nellie E. Dorman, St. John, Wash.

Spring With All Things Beautiful.

Dear Aunt Nellie: My subject is "My Favorite Book." My best book is a book mama gave me for Christmas. It has such nice stories in it. The name of the book is "The King's Daughter." It is spring now and everything is beautiful here. Our flowers are in bloom now. We have lots of different kinds of flowers. We have five horses and one colt, seven cows, three calves, 24 chickens and eight bantams. I am 10 years old and in the fifth grade at school. My birthday is November 15. Have I a twin? I would like some girl to write to me that is about my own age. My sister runs the gasoline engine when papa is not home. I milk two cows and my sister milks five cows. I have two pets. They are cats. One is a white one and the other is gray. I live on a farm of 95 acres, and I like to live on the farm better than in the city.—Evelyn Willey, Ferndale, Wash.

Only Log Schoolhouse in the County.

Dear Aunt Nellie: I am going to school and am in the fifth grade. My teacher's name is Miss Vera Sexsmith, and I like her very much. I am 11 years old, and will be 12 the 18th of December. We have one pig, three calves, five cows, three horses and about 25 chickens. We have one sheep, one dog and six cats. I have three sisters and one brother. The oldest of the sisters' name is Floy, then Esther, and the next is Ruth. My brother's name is John. We live on a farm of 156 acres. My best girl friends are Wilma Peterson and Edna Knox. We have lots of fun at school. Our schoolroom has nine seats in it, and there are six pupils, four girls and two boys. The girls' names are Esther, Wilma, Edna and Mabel, and the boys are Fred and James. Our schoolhouse is made of logs, and is the only log schoolhouse in Spokane county.—Mabel Margret, Crofoot, Wash.

Ray's Horse Is as White as Snow.

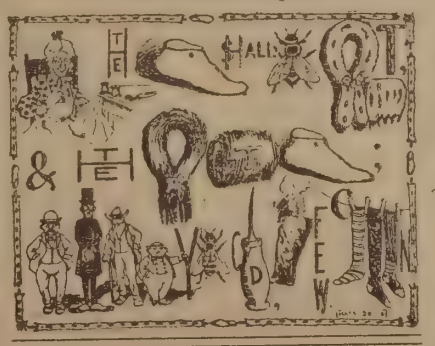
Dear Aunt Nellie: We live on a farm of 160 acres. We live one mile and a half from school. I like my teacher this year. His name is Mr. Heckman. He teaches us music twice every day. I have a saddle horse. His name is Roy. He is pretty and white as the snow. My birthday is the 10th of April. I was 11 years old. Have I a twin? If I have I would like to hear from him or her.—Louis T. Talbot, Wauconda, Wash.

Has Planted Her Flower Garden.

Dear Aunt Nellie: For my subject I have chosen "My Favorite Books." My favorite books are Kazan, White Fang, the Call of the Wild, and The Little Shepherd of Kingdom Come. If the nieces and nephews have not read these I hope they will get to read them some time. The books tell of many hardships and battles. They teach people to be kind to animals. My favorite studies in school are arithmetic and geography. Geography is interesting because we can learn many things about Mother Earth, the inhabitants, the scenery, etc. I suppose all the cousins of the Corner are planting flower gardens. I have just finished planting mine. In it I have planted lilac bushes, rose bushes, primroses and sweet peas. I am 12 years old and in the sixth grade at school. My birthday is the 25th of August. Have I a twin?—Esther Carslin, Olalla, Wash.

Brother Has Joined the Marines.

Dear Aunt Nellie: We have had some bad weather this month. My papa has been working at Cosmopolis and came home because he was sick. He is improving very slowly. Frank is going to Montesano today. My teacher's name is Miss Glamey. There are 30 children in our room. I am in the fifth grade. I have two brothers going to school. Their names are Frank and Walter. Frank is 15 years old and in the ninth grade. Walter is in the seventh grade and is 12 years old. I was 11 last December the 19th. My sister is too little to go to school. Almon has joined the United States marines. He went to Portland, Ore., to take the last examination and he passed O. K. Then he went to Vancouver, Washington. From there he went to Port McDowell in California. We can hear some coyotes barking at night. I don't like to hear them.—Ruby Warren, route 1, Box 2B, Elma, Wash.



Her Twin Got in Ahead of Her.

Dear Aunt Nellie: I just love to read the Children's Corner and have often thought I would like to write and find out whether I have a twin or not. Blanche Bell, Mold, Wash., is my twin. She got in ahead of me. She writes she is 9 years old. So am I. And she says she is in the fourth grade. I am too. My teacher's name is Miss Helmer. Our school is called the Lone Pine school. I love my teacher, and, of course, like to go to school. We have only been here since last October. We moved from Rathdrum, Idaho. I like farm life best of all. I have three brothers and three sisters. We have lots of fun when our work is done. Maybe Blanche will write to me some time. I am very anxious to join the Children's Corner and be a member.—Ella Liere, Tekoa, Wash.

Sold Her Puppy for $2.

Dear Aunt Nellie: I live about 50 miles from Seattle in King county. There are quite a few farms in this country. It is very pretty around here in some places. I like to live out here quite well. I was born in King county in Seattle. We have many flowers out here, including lilies, violets, buttercups, stars of Bethlehem or another name for them is star flowers. I will now write about my favorite book, which is Uncle Tom's Cabin. I like it because it has a good deal in it about colored slaves. I think it a rude thing that they should sell people like they did then and take their children away from them. I will always be thankful to Abraham Lincoln for setting them free. I think this story is a very interesting one. My next subject is how I earned my first money. I had a pup and was going to sell it. A girl bought it and paid $2 for it. I have gotten other money for pups that I raised.—Mary Symigton, Kangley, Wash.

The Bible Says:

This Cousin's Name Is Nellie, Too.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I want to know if I have a twin? I was 9 years old the 7th of March. My name is Nellie, also. I am in the 3A grade at school. My teacher's name is Miss Fylpa and I like her very much. I have four brothers. I have a puppy, three cats and eight cows and two horses.—Nellie Neil, Kennewick, Wash.

Billy Is the Name of Hazel's Pony.

Dear Aunt Nellie: I like to read the letters. I am 11 years old. I am in the fifth grade. We live on a 640-acre wheat ranch. We have 10 mules and two horses. I have a pony. His name is Billy. I ride him to school. I live two and a half miles from school. I have one brother. His name is Ora. I go to the Ochs school. My teacher's name is Mabel Snider.—Hazel M. Ethredge, Mohler, Wash.

Swimming Races in the Nearby Lake.

Dear Aunt Nellie: I am 12 years old and I am in the eighth grade. My teacher's name is Miss Mendham. She is very jolly and plays many jokes on us and then she joins in our laughter. My subject is "Farm Life." We did live in the city, but have now moved three miles out of Pasco on a farm. We have much fun especially in the winter. A big hill lies behind our farm and in the winter time we pour water on it at night, which is frozen in the morning. Then we take our sleds and have the time of our lives. Once I ran into a rabbit hole, which was covered with snow. I did not know it was there. My wound proved partly serious. When summer comes we have some fun going swimming in the nearby river, where we race and slap the water on each other. —Eugene Pollastrini, Pasco, Wash.

Toodles Is a Pretty White Spitz.

Dear Aunt Nellie: I have been reading the letters in the Children's Corner and like them very much. I was 12 years old the 10th of March. I am in the sixth grade. I like to go to school. My teachers' name is Miss McCabe. I like her very much. Her home is in Cheney. I walk to school. I have half a mile to go. We have a car. It is a King. I like to ride in a car. We can go to town in a few minutes. I live six miles from town. We have three dogs. Their names are Cimmie, Bulgar and Toodles. Toodles is a little white Spitz. She is very pretty. I have no sisters or no brothers. I have a friend I like very much. Her name is Mary Dixon.—Madelyn Hughes, Pomeroy, Wash.

Saving for the Starving Children.

Dear Aunt Nellie: I am 13 years old, in the seventh grade. My teacher's name is Miss Mary Wardrobe. She is very nice and I love her. I am going to write about the program at our church. We had a program at Easter time. The name of it was "Dorothy Indifference." She is one of my best friends, for the girl who takes her part is my friend. I played a piano solo. All the juniors of our church are saving for the starving children in Europe and a new tuberculosis hospital in India. I guess we're going to have spring some time for I have seen bluebirds and robins and many pussy willows. We live in town now, but this fall may move out on our ranch.—Letha Dwire, Garfield, Wash.

Just Moved From Eastern Washington.

Dear Aunt Nellie: I read all the letters and enjoy them very much. I always turn to the cousins' page as soon as we get the paper. We just moved to this city from eastern Washington a few weeks ago. My papa bought us a home here. I think it is a very pretty place. I haven't gone to school yet because my brother took the measles a few days after we arrived. My little sister and I haven't got them yet. My little sister and brothers' names are Louise and Wayne. Louise is 2 years old and Wayne is 5 years old. I am 9 and in the fourth grade.—Hattie Litchfield, 1126 Cedar street, Raymond, Wash.

The Sheep's Name Is Billie.

Dear Aunt Nellie: My birthday is December 6 and I am 12 years old. I am in the fourth grade. I have light hair and blue eyes. I go to school every day. My teacher's name is Mrs. Shold. There are 15 going to our school. I have just a half a mile to go. We are milking six cows now. Sometimes I milk one and two. We have four little calves that we feed from the bucket. We have 18 head of cattle altogether. We have 14 heads of horses. I have a pony, saddle and bridle. My pony's name is Star. I have a sheep. His name is Billie.—Georgia Buck, box 111, Coulee City, Wash.

Go a Mile and a Half to School.

Dear Aunt Nellie: My father takes The Washington Farmer and I enjoy reading the letters very much. I was 14 years old the 25th of February and I am in the sixth grade at school. We go to the Heart school district No. 47. We go about a mile and a half. Our teacher's name is J. E. Tomblin. I have six brothers and one sister. We live on a rented farm. We have five head of cattle, five horses, one dog and 38 chickens.—Jessie Moss, R. F. D. 1, Box 36A, Davenport, Wash.

Have Seven Cats Altogether.

Dear Aunt Nellie: I like to read the letters in the Corner very much. I was eight years old February 20. I go to school. I am in the second grade. My teacher's name is Miss M. Herren. I live on a 600-acre farm. We have about 170 cows, nine horses, two dogs, one named Mick and the other Scott, and seven cats, four that stay around the barn and three stay by the house.—Willie Righetti, Monroe, Wash.

The Worst Day in the Whole Year.

Dear Aunt Nellie: I like to read the Children's letters. I think that I will write about the worst day in the year. I like to skate and can skate as good as anybody in my class. Well the worst day is when the ice melts and I can not skate. I am in the fourth grade. I will be glad to hear from other children in the Corner. My age is 11. My birthday is the 1st of December.—Robert Carter, Jonathan, Wash.

Write Short Stories Every Day.

Dear Aunt Nellie: I have not written to the Corner for a long time. We have to write short stories every day for language. I had to write about A Dutch Windmill, A Tree Fell With an Awful Crash, What the School Clocks See, Seeing Things at Night, A Light in the House by the Side of the Road. Today we had to write a poem. Mine was "Grandma's Story."—Theresa Wilson, Grays River, Wash.

Ida Wishes We Had Two Pages.

Dear Aunt Nellie: I have been reading the children's letters and thought I would like to write also. I am 10 years old and in the fourth grade. I live on a 400-acre farm, but my father owns 1040 acres of land. We have 17 cattle; one of them is mine. Her name is Spot. We have 53 horses; two of them are mine. Their names are Mike and Belle. We have one dog. His name is Bob. We have five cats, but they have no names. I have four brothers. Their names are John, Jake, Thomas and Robert. I wish we had two pages of the children's corner instead of one.—Ida Eliabeth Shaw, Govan, Wash.

Likes the Baby Best of All.

Dear Aunt Nellie: I am 8 years old and in the second grade. I have two sisters and one brother. My sisters' names are Irene and Norma and my brother's name is Loren. Norma is a baby 6 weeks old. I like her the best of all. My father takes the Farmer. I read all the Children's letters and like them very much. I think that one of my cousins is going to write. Her name is Vera James. I live on a farm. We have a dog and two cats.—Louise James, Rochester, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Mae Lenderman, Henry Crabtree, Agnes Lund, Linda Haquist, Harriet Johnston, Stanley Stewart, Albert Needham, Beulah Weyrich.

NEW SUPPLY OF FLAGS

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Enclosed find $.... (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

Size of flag ...../.....

Benson Heads Program

(Continued from page five.)

that each county had been asked to organize for the work of greater food production and the reports received so far were most encouraging. These showed that 28 counties were fully organized, six were partly organized and five had not reported.

In regard to the employment of school children, Mrs. Josephine Corliss Preston, state superintendent of public instruction, declared it was the plan to close the high schools in June and not reopen them until November. Out of 25,000 high school pupils in the state 40 per cent are boys, she said. The elementary schools will not be affected as no children under 15 years of age should be employed in the fields. The younger children, she declared, are giving much assistance with their home garden work.

E. B. Marsh, president of the state federation of labor, said that it may become necessary to conscript labor for work in the fields as well as for military services. He predicted an acute labor shortage, which can be overcome by cooperation between employers and workmen. There will be no labor troubles, he declared, if both sides try to be fair and use arbitration for all disputes.

The above resolutions are passed for the purpose of the production of the crops during the season of 1917 and that recognizing the welfare of the state of Washington, and the necessity for continual increased production of all food products in the state, we respectfully recommend to E. F. Benson, commissioner of agriculture, Olympia, Wash., that plans be immediately outlined for a continual increase of the yearly output of all food products in the state of Washington, and we suggest that through the assistance of state and county officials, that an effort be made before the first of the year to locate available agricultural lands in the state not now under cultivation with a view to bring the same under cultivation in 1918.

Labor Situation.

H. M. White, representing the National Government Bureau of Immigration, Labor and Employment in this state, told of the 10 branch offices now established about the state and of three or four more to be established shortly. His office last year placed 50,000 men and women upon the farms of Washington. The shortage of farm labor in this country, said Mr. White, is due to two principal causes, men going into the fighting forces and the 100 a day which he says are going onto the farms in Canada. The public schools, he said, offer the only solution for a relief of labor shortage. He advocated the discontinuance of all unnecessary public work that the men and horses might be used on the farms. He also said he did not believe it practical to have office men spend a two weeks' vacation doing farm work, as he believed they would not be able to earn their board, being unused to the hard work and warm sunshine.

It was announced that the bill introduced in congress appropriating $25,000,00 for the department of agriculture to be expended in the cause for food preparedness would result in adding nearly $80,000 to the campaign in this state. Tentative plans have already been made by the state college authorities for the expenditure of this money in putting 10 or a dozen more county agents at work in the state, as well as a score of other specialists along different lines of food production, food preservation, and the prevention of food waste.

DEALS WITH INTERESTING SUBJECTS.

To the Editor of the Washington Farmer: I get more good out of The Washington Farmer than all the other ones put together. It may be, of course, because it deals direct with the subjects we are most interested in and what we farmers want to know. May you live long and prosper.—E. E. FERSEN, Sunnyside, Wash.

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, the Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

Grain and Produce Markets

Chicago Grain.

CHICAGO, May 19.—Sellers of wheat overreached themselves today trying to profit by a report that European entente nations had agreed to liquidate holdings of American grain futures. No evidence of such liquidation developed, and the market, after a moderate decline, went soaring when sellers who wished to even up trades attempted to switch to the buying side. The close was unsettled, 12c net higher, with July at $2.40 and September at $2.17. Other commodities, too, scored gains—corn, 3c to 4 1-4c, oats 1 1-4c to 1 1-2c, and provisions, 15c to 25c.

Mention of a proposed pooling system whereby exports from this country would be apportioned with due regard to domestic needs tended somewhat to act as a transient further handicap on the bulls, and so, too, did word that the federal government was directing the overland export movement from the Pacific coast.

Once the wheat market started upgrade the ascent of prices was rapid. In some cases the jumps were as much as 5 cents betwen trades.

Corn rose sharply, owing to the scarcity of offerings and owing to smallness of receipts. Oats were strong as a result of dry weather complaints from Illinois and Indiana and because of good export business.

Higher quotations on hogs and grain lifted provisions.

Pacific Northwest Grain.

TACOMA, May 19.—Wheat—Bluestem, $2.72; fortyfold, $2.67; club and fife, $2.66; red Russian, $2.63.

SEATTLE, May 19.—Wheat—Bluestem, $2.72; turkey red, $2.72; fortyfold, $2.66; club, $2.66; fife, $2.66; red Russian, $2.63.

PORTLAND, Ore., May 18.—Grain—Cash quotations: Wheat—Bluestem, $2.72; fortyfold, $2.67; club, $2.66; red Russian, $2.63.

Oats—No. 1 white feed, $50.75.

Barley—No. 1 feed, $49.50.

Car Receipts at Coast Points.

Receipts of grain and hay in car lots at coast points for the fiscal year beginning July 1 up to Saturday night for 1916-17 and 1915-16 were as follows:

	Wheat	Oats	Barley	Hay
Seattle—				
1916-17	5,876	1,556	319	4,819
1915-16	7,596	1,014	1,375	4,148
Portland—				
1916-17	5,830	2,218	254	2,481
1915-16	10,063	1,007	1,513	2,465
Tacoma—				
1916-17	5,837	297	123	1,822
1915-16	6,761	374	501	2,309
Totals—				
1916-17	17,543	4,071	696	9,122
1915-16	24,420	2,395	3,389	8,922

Portland Market.

PORTLAND, Ore., May 19.—Egg buying for northern account ceased at the end of the week when the California market dropped, and a readjustment of local prices is expected in the next day or two.

The butter market is firm and higher with a better outside demand. Another advance in cheese prices is looked for in the immediate future.

Trading in the poultry and dressed meat markets has fallen off and all prices, except on pork are weak.

There is practically no demand for potatoes for either local or shipping use. But for the very light stocks, a sharply lower market could be looked for.

Oregon strawberries have made their appearance in valley towns, but no large quantities will be available for some time, owing to the cool weather.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $50.75 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $41 per ton; shorts, $45.

Barley—No. 1 feed, $49.50; brewing, nominal; rolled, $53.

Hay—Buying prices: Timothy, eastern Oregon, $30; alfalfa, $23; grain, $18@20.

Eggs—Oregon ranch, case count, 32½@33c per dozen; candled, 34c.

Poultry—Hens, 17c; ducks, 18@20c; turkeys, alive, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 39@40c per pound; cubes, 36½@37c.

Cheese—Oregon triplets, 25c; young Americas, 25c.

Dressed meats—Veal, 14c; pork, 19@19½c.

Hops—1916 crop, 3@6c per pound.

Potatoes — Oregon jobbing price, $3.25@3.75.

Wool—Eastern Oregon, fine 45@48c; coarse, 50c; valley, 46@50c.

Beans — California small white, 16½c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 12c; dry hides, 24c; dry salt hides, 24c.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., May 19.—Hogs—Receipts, 5200; steady to 5c higher. Heavy, $15.80@16.15; mixed, $15.70@15.90; light, $15.60@16; pigs, $12.75@15; bulk, $15.70@16.

Cattle—Receipts, 100; steady. Native steers, $10@13.25; cows and heifers, $8.50@11.25; western steers, $8.25@11.50; Texas steers, $8@10; cows and heifers, $8.50@10.50; canners, $7@8.50; stockers and feeders, $7@11; calves, $9.25@13.25; bulls, $7@10.

Sheep—Receipts, 100; steady. Yearlings, $13@15; wethers, $12@14; ewes, $11.50@13.50; lambs, $19@20.

At Chicago.

CHICAGO, May 19.—Hogs—Receipts, 7000; strong, 5c to 10c above yesterday's average. Bulk, $15.90@16.35; light, $15.15@16.30; mixed, $15.70@16.45; heavy, $15.70@16.40; rough, $15.70@15.85; pigs, $10.50@14.50.

Cattle—Receipts, 600; steady. Native beef cattle, $9.60@13.70; stockers and feeders, $7.60@10.40; cows and heifers, $6.65@11.60; calves, $10@14.75.

Sheep—Receipts, 1000; steady. Wethers, $12.75@15.75; lambs, $15.75@20.40; springs, $15@21.

At Seattle.

SEATTLE, May 19.—Receipts, 631 cattle, 80 hogs; market steady on all lines.

Cattle—Prime steers, $10.25@11.75; common to medium, $6@9.75; best cows and heifers, $8.25@9.25; common to medium, $6.25@8.25; bulls, $3.50@8; calves, $6.50@11.10.

Hogs—Prime light, $16@16.25; medium to choice, $15.75@15.85; smooth heavies, $15.25@15.55; rough heavies, $14.75@15; pigs, $13.50@14.45.

Sheep—Prime lambs, $12.50@13.75, good lambs, $12.25@12.50; wethers, $10.25@10.50; ewes, $9.10.

At Portland.

PORTLAND, Ore., May 19.—Hogs—Receipts, 179; market steady. Bulk of packing grades, $15.65@15.85; heavy packing, $15.85@16; light packing, $15.50@15.75; rough heavy, $14.50@15; pigs and skips, $13@13.75; stock hogs, $12@13.

Cattle—Receipts, 65; market steady. Steers, prime light, $10.50@10.75; prime heavy, $10.25@10.50; good, $9.75@10; cows, choice, $9.25@9.75; medium to good, $8.50@9; ordinary to fair, $7.75@8.50; heifers, $9.50@10; bulls, $6@8.50; calves, $8@10.

Sheep—Receipts, 9; market steady. Lambs, east of mountains, $13.50@14; lambs, valley, $13.25@13.50; lambs, shorn, $11@11.50; prime yearlings, $12.50@13.50; choice ewes, $11@11.50; heavy ewes, $9@11.50; prime shorn wethers, $9.75@10.

Spokane Stockyards Saturday.

Hogs — Receipts, none; market steady; stockers lower. Prime heavy packing, $15.60@15.80; prime light packing, $15.45@15.50; rough heavy, $14.50@14.80; pigs, $12.50@13.50; stockers, $12@13.25.

Cattle—Receipts 268, mostly stockers; market steady. Prime heavy steers, $10.50@11; prime light steers, $10.25@10.50; good steers, $10@10.25; prime cows, $8.75@9.50; good cows, $8.25@8.75; common cows, $7.50@8; best heifers, $9@10.35; bulls, $6@8.50; calves, $8@10.50; stockers and feeders, $6@9.

Sheep — Receipts, none; market strong. Prime lambs, $13@13.50; common lambs, $12@12.50; choice yearlings, $11.25@12; good yearlings, $10.75@11.25; best mutton ewes, $10@11.

Portland Wheat.

PORTLAND, Ore., May 21.—The wheat market at the close of the week appeared to be well on the way of another advance, impelled by a sharp demand and a scarcity of offerings. The trade here believes that prices in all domestic markets will get back to the former high level in spite of the restriction of option trading. The cash demand is making itself more felt here now that shipping facilities for business with the east have improved. As indicating the trend of the market, a sale of Washington bluestem at St. Louis at $3.16 was reported. This price is equal to $2.96 here, which is about as high as wheat went during the recent boom.

At the Merchants' exchange closing bids for prompt delivery were as follows: Bluestem, $2.72; fortyfold, $2.67; club, $2.66; red Russian, $2.63. In the open market bluestem was held to be worth fully $2.80 and club $2.75.

But little business is passing in the oats market, and prices are no more than steady. Barley is wholly nominal.

Millfeed prices have been reduced. There is a good California inquiry, but little local demand.

Fleece Clip Is 12 Pounds.

An average of 12 pounds of wool to the fleece is the record made by Fred Smith, a prominent sheepman of Granddalles. Some of the fleeces ran to 18 pounds. This remarkable average in weight of fleeces may be the result of using a power shearing machine, which saves wool and time. Mr. Smith sheared 2600 sheep and with the price of wool hovering around the 40-cent mark the fleece will bring in a tidy sum.

Seattle Market.

SEATTLE, May 19.—Estimated holdings of old crop potatoes, including eastern and western Washington, are 75 carloads, 50 cars of which consist of locals and are held here. The market is cleaning up rapidly, due to a spurt in the demand from east of the Rockies, principally Chicago, and it is now expected that the cleanup will be made on existing quotations of $75 for locals and $90 for Yakimas. Very few gems are held in Seattle.

Eastern Washington holders are bullish and are quoting $80 f. o. b. shipping point, a level which buyers are not disposed to pay. During the week there have been sales at $75 f. o. b., and buyers feel that they can jar holders loose for what they have at that level. The weather all along has helped the potato bull, as new Californias do not sell even at a distinct loss to the dealer. Consumers evidently have no fancy for the stock.

Jobbers have advanced the bid and selling price of fresh ranch eggs to 33 and 34 cents and 37 and 38 cents, respectively. The season for a surplus is here, but wholesalers report almost without exception that the element that produces easy prices is missing, and it is doubtful whether there will be any lower quotations this year. Storage is completed for the season, but orders for Alaska and heavy shipping and consumption locally is absorbing all that is offered as fast as it comes in.

City creamery men are unable to get hold of any surplus of butter for necessary storage, although the increase in cream production during the last 30 days has been very heavy. The more butter that is produced the greater the current demand. A few cubes have been placed in the coolers, and every manufacturer on Western avenue is inquiring constantly for country offerings for the reserve supply, but it has not been available. Condensaries have begun to encroach upon the field of cream production, and with stronger bids that creameries can afford are getting the milk which formerly was sold for its butterfat, skim milk returned for young stock.

Information has been received by city creamery men to show that several large herds of milch cows have been shipped from the Yakima valley this spring to Skagit county and are producing milk for condensaries in place of cream for creameries as before.

Cheese is about steady at 25@25½ cents for Oregon and Washington triplets, and there is a slight undertone of strength for the week. Greater care in quality and pack has eliminated the former differential in favor of Oregon cheese over the staple turned out in the neighboring state, and the market is on an equality.

Seattle Wheat.

SEATTLE, May 19.—The support for North Coast flour, the local wheat market, was badly shaken early this week by sympathy with Chicago, and millers who had been working against inclines found themselves in the position of being compelled to fight declines. Wheat fell by gradual stages 33c to 35c per bushel on the Seattle market for the week, with only a slight recovery, that of Thursday, when quotations were raised 10c from the receding market. The market for the week-end stiffened and showed a total advance of 17c from the lowest point.

Bluestem, on which the principal bear attack seemed to be directed, declined 35c from the opening of the market on Monday. There was no excitement. A feeling of apprehension and uncertainty pervaded all transactions, but there was considerable confidence in ability of the market to right itself, inasmuch as May wheat was being bought and sold and traders had something more on which to base values with cash transactions behind them than did the dealers of the east.

One of the representative sales on 'change for the week-end was 5000 bushels of May club at $2.62.

Butter and Eggs.

SAN FRANCISCO, May 19.—Butter—Fresh extra, 36 1-2c; prime firsts, 36c. Eggs—Fresh extras, 33 1-2; extra firsts, 33c; fresh extra pullets, 30c; extra firsts pullets, 29 1-2c.

CHICAGO, May 19.—Butter, higher; creamery, 33@38c.

Eggs higher; receipts, 21,768 cases; firsts, 34@35c; ordinary firsts, 31 1-2@32 1-2c; at mark, cases included, 31@34 1-2c.

ELGIN, Ill., May 19.—Butter, 100 tubs at 38c.

PORTLAND, Ore., May 19.—Butter—Prints extras, 39@40c; cubes, extra, 36 1-2@37c; prime firsts, 35 1-2c; dairy, 27 1-2c.

Butter fat, Portland delivery; No. 1 sour cream, 40c; No. 2, 38c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3.25 cwt; new potatoes, 12½c lb.

Seed Potatoes—Early Rose, $4 cwt.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 39c lb; Medo-Maid, 39c lb; Cascade, 39c lb; Gold Leaf, 39c lb; Better Butter, 39c lb; Attalia, 39c lb; Diadem, 39c lb; Hazelwood, 39c lb; Solid Pack, 37c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $9.50 case.

Live Poultry—Hens, 20c lb; old roosters, 10c lb; ducks, 13@14c lb; turkeys, 20@25c lb; geese, 11c lb.

Dress Poultry—Hens, 23c lb; springers, 21c; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs., 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Urged to Grow Beans.

Lane county, Oregon, farmers are urged to grow beans.

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from page twenty.)

but surely contrive some means to take her life, and I hoped he would. I spoke to my wife, Jane, about the queen's conduct, and she finally admitted that she did not like it, so I, unable to remain silent any longer, determined to put Mary on her guard, and for that purpose spoke very freely to her on the subject.

"Oh! you goose!" she said laughingly. "He is almost as great a fool as Henry." Then the tears came to her eyes, and half angrily, half hysterically shaking me by the arm, she continued: "Do you not know? Can you not see that I would give this hand, or my eyes, almost my life, just to fall upon my face in front of Charles Brandon at this moment? Do you not know that a woman with a love in her heart such as I have for him is safe from every one and everything? Have you not wit enough to know that?"

"Yes, I have," I responded, for the time completely silenced. With her favorite tactics she had, as usual, put me in the wrong, though I soon came again to the attack.

"But he is so base that I grieve to see you with him."

"I suppose he is not very good," she responded, "but it seems to be the way of these people among whom I have fallen, and he can not harm me."

"Oh! but he can. One does not go near smallpox, and there is a moral contagion quite as dangerous, if not so perceptible, and equally to be avoided. It must be a wonderfully healthy moral nature, pure and chaste to the core, that will be entirely contagion proof and safe from it."

She hung her head in thought, and then lifted her eyes appealingly to me. "Am I not that, Edwin? Tell me! Tell me frankly; am I not? It is the one thing of good I have always striven for. I am so full of other faults that if I have not that there is no good in me." Her eyes and voice were full of tears, and I knew in my heart that I stood before as pure a soul as ever came from the hand of God.

"You are, your majesty; never doubt," I answered. "It is pre-eminently the one thing in womanhood to which all mankind kneels." And I fell upon my knee and kissed her hand with a sense of reverence, faith and trust that has never left me from that day to this. As to my estimate of how Francis would act when Louis should die, you will see that I was right.

Not long after this Lady Caskoden and I were given permission to return to England, and immediately prepared for our homeward journey.

Ah! It was pretty to see Jane bustling about, making ready for our departure—superintending the packing of our boxes and also superintending me. That was her great task. I never was so thankful for riches as when they enabled me to allow Jane full sway among the Paris shops. But at last, all the fine things being packed, and Mary having kissed us both—mind you, both—we got our little retinue together and out we went, through St. Denis, then ho! for dear old England.

As we left, Mary placed in my hands a letter for Brandon, whose bulk was so reassuring that I knew he had never been out of her thoughts. I looked at the letter a moment and said, in all seriousness: "Your majesty, had I not better provide an extra box for it?"

She gave a nervous little laugh, and the tears filled her eyes, as she whispered huskily: "I fancy there is one who will not think it too large. Good-bye! good-bye!" So we left Mary, fair, sweet girl-queen, all alone among those terrible strangers; alone with one little English maiden, 7 years of age—Anne Boleyn.

(To be continued in the next issue.)

Grange Against Road Bonds.

With over 100 delegates in attendance from 18 of the granges, the Pomona grange at its meeting at Oregon City, Ore., went on record practicaly unanimously against the $6,000,000 road bond issue in resolutions adopted.

The grange also voted to support Secretary of Agriculture Houston in his recommendation that the farmers plant increased acreage with a view to supply the needs o fthe nation during the war with Germany.

Buys Improved Ranch.

Wade Headrick of Burley, Idaho, has purchased the I. N. Sly place, consisting of 40 acres, on Driscoll ridge. There are about 35 acres in cultivation and the land is very productive. It is improved with a pretty five-room house, a fine large barn, besides other outbuildings.

A War Effect.

The isolation of tongue, characteristic of the British people—especially the lower classes—has been done away with by the war. The huge army sent over to France has out of necessity learned something of the French language.

Could Northwest Manufacture War "Tanks"?

In the recent patriotic parade at Tacoma, Wash., one of the features which attracted attention was a "war tank," an ingenious counterpart of the fighting machines of Flanders. The "tank" was no other than a common tractor attachment coupled with a chassis and "armored," the latest production of a Tacoma factory.

The picture here is an intimation that the northwest could manufacture armored cars if called upon.

WE WILL PAY SALARY
to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.
We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.
You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.
We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.
Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

Turn It Into Cash
If you have something you want to sell, offer it to our big family of over 50,000 subscribers. A want ad is the cheapest way we know of to get in touch with buyers.

NEWS FOR BREEDERS

Made Record as a Two-Year-Old

When Ernest Werner of Aurora, Ore., purchased his first pure-bred Holstein five years ago he bought two from the pioneer herd of P. A. Frakes and two from Albert Johnson—herds that have furnished some of the best foundation stock in the northwest. Mr. Werner went contrary to the best advice of breeders and colleges and bought untested cows, so he got busy and gave them official records himself. He paid long prices for the cattle, and the fact that he made good selections was proven by the official records the cows made. Lundy Gerben, almost 10 years old, produced 25.45 pounds of butter in seven days. Nor do these cows stop at making records. Their daughters were tested with first calves and Mr. Werner got very satisfactory records. Jantilna Colantha Johanna, one of the daughters, whose photo appears on this page, made a record of 22.75 pounds of butter in seven days as a junior 2-year-old. This was the highest record in the northwest and remained so for some time, and now has only been beaten a very little by one junior 2-year-old heifer. The week Jantilna's record was made 168 other 2-year-old Holsteins were tested and she stood at the head of the list. She freshened February 5 as a 4-year-old, and in March produced 2402.2 pounds of milk.

Jantilna Colantha Johanna.

Mr. Werner's senior herd bull is Toge De Kol 2d Johanna Duke. His dam has a record of 29.67 pounds of butter in seven days and milked over 100 pounds a day three days. His sire, Sir Korndyke Manor De Kol Jr. 2d, is the sire of Lady Tobe De Kol, whose 36.59 pounds of butter in seven days and 141.23 pounds in 30 days as a senior 3-year-old were world's records when made and remained so for two years. He is the sire of three more daughters with over 30 pounds.

Mr. Werner now has eight official records, three of them by daughters of his herd bull, and all but one made as 2-year-olds. Oregon Inka's record is 24.8 pounds of butter in seven days; Johanna Oregon has 17.93 pounds, and Toge De Kol Johanna Oregon 15.03. Mr. Werner has made these records with ordinary herd care. He feels that he can not give his cattle quite the chance they should have, but he will continue to test and expects more good records. H. A.

RANCH'S ROSIE.

Last winter J. M. Fruits of Enterprise, Ore., purchased Ranch's Rosie, the Hampshire sow shown above, from J. Crouch & Sons of Indiana, after she was grand champion at the Chicago International, the highest honor that can come to a hog. She was 5 years old when exhibited. She weighs 800 pounds in show condition and still has a great back and good, strong legs. When Mr. Fruits began breeding and exhibiting Hampshire swine they were but little known in the Pacific northwest and were considered a joke. He has made for them a place as reputable as any of the better known breeds and no exhibit of hogs at the leading fairs is looked at with more interest than the "hogs with the white belt across their shoulders." Mr. Fruits has always bought the best that money would buy for breeding stock. He paid $456 for Lead Me to It, at R. L. Bollman's auction in Illinois, generally considered the greatest Hampshire hog in America. Other great boars he has owned are Bollman's Wonder and Chief Joseph. Dan Patch, of his own breeding, is a great show boar and last winter a purebred barrow of Mr. Fruits' breeding was first prize aged Hampshire barrow at the Chicago International. His hogs are also making good in the herds where he has sold.

THREE-YEAR-OLD PERCHERON.

Jerico No. 110196, a 3-year-old Percheron stallion, owned by the firm of Follett & Schooler of Genesee, Idaho. It will be with regret that the farmers of eastern Washington and northern Idaho will learn that this firm is to retire from the horse business, on account of the death of Mr. Schooler. D. G. S.

SALE AT FOREST GROVE.

A. T. Buxton & Sons of Forest Grove are to hold a sale June 5. They are disposing not only of their purebred Jerseys, their Shropshire sheep and Berkshire swine, but of their farm implements and equipment. Mr. Buxton says, however, that the land will produce just the same, even though he is compelled to retire for the present. Mr. Buxton has one son in the navy.

Public Sale Announcement

On TUESDAY, JUNE 5, 1917
at their farm near FOREST GROVE, ORE.,

the undersigned will sell their entire farm equipment. The live stock will include the following: One registered BERKSHIRE boar, also eight registered sows; registered SHROPSHIRE ram, 40 registered SHROPSHIRE ewes with crop of lambs; one registered Jersey bull, FANCY'S RALEIGH, grand champion Panama-Pacific International exposition, Cascade International, Pacific International 1915; this bull is fit to head any herd on the Pacific coast; 15 registered Jersey females and two bull calves.

FISK Non-Skid TIRES

They have the stamina, the strength and the endurance of blooded stock. Our long experience in tire making enables us to build Fisk Tires with a pedigree and get those qualities which stand for real dollar-for-dollar value to the man who buys them. *Fisk Tires are pure-bred tires.*

Every user knows it and knows too that there is no greater tire value on the market.

Buy at least one—compare the value you get in Fisk with any other make of tire—thousands of Fisk buyers began to use Fisk by making that dollar-for-dollar comparison, and they are using Fisk today.

"When you pay more than Fisk prices you pay for something that does not exist"—that's something to remember when buying tires.

A special feature of Fisk Tire Value is the policy of Free Service through Fisk Branches in more than 125 principal cities throughout the country. There are Fisk Branches in your State, where your home dealer buys direct and is always sure of promptest attention to your wants. And when the Branch is convenient you can go there any time, *whether you use Fisk Tires or not,* and make use of the only uniform and complete Free Tire Service in the country. There is no charge at any time except for supplies and actual repairs. Take the first opportunity to get acquainted with *Fisk Service,* Fisk Organization, Fisk Methods and Fisk Products.

If you do not find a Fisk Branch in the partial list below that is convenient to where you live, write for complete list—there may be one nearer you.

Marketing Problem Alarms Fruit Growers

United, Courageous and Quick Action May Be Needed to Prevent Ruin of Industry

Fruit growers in all the orchard districts of the Pacific northwest are alarmed over the gravity of the marketing problem. Warnings have come from railroad managers that it may be found impossible to provide cars to move the tonnage. Fears are expressed that cars will be diverted by government orders to other commodities, and that the council of national defense may class fresh fruits as a luxury, not to be moved to market so long as cars are needed for movement of other products.

Against the above possibility orchard communities are urged to bestir themselves to provide ways for drying and otherwise preserving as much of the crop as possible.

This danger was the subject of earnest discussion at the recent Spokane conference of the Northwestern Fruit Growers' agency, and the following telegram was sent to the congressional delegations of the four northwestern states:

"Fruit growers' agency, representing the fruit interests of Washington, Oregon, Idaho and Montana, urge our congressional representatives to confer and make a united effort with representatives from other fruit sections to have the government classify fresh fruit as food so as to secure transportation preference and save our farm laborers from conscription. Without such action our fruit industry is doomed."

Contracting Endangered.

Professor J. C. Caldwell, by-product specialist of the Washington State college experiment station, thinks the situation is most critical. At a massmeeting in Walla Walla he declared that if he were a buyer he would not dare to contract with local growers for their apples to be delivered next fall at 25 cents per box, for the reason that there will be an unprecedented crop in the United States and that transportation facilities will be insufficient to move it owing to the munitions business.

Professor Caldwell urged growers to build drying plants to take care of their cull apples and possibly a part of the better grades. He also advocated sun-drying and individual kiln-drying in the orchards for the earlier fruits, and asserted that the allied government buyers would take all the dried fruit that could be marketed next fall.

The danger is so great, the threatened loss would be so vast and irreparable, that The Farmer feels justified in emphasizing its editorial suggestion of quick and courageous state action.

Must Have State Aid.

The problem is too stupendous for quick solution by individual or even community effort. It calls for state aid.

Professor Caldwell says: "To be commercially profitable, an evaporator must have a daily capacity of at least 400 bushels of apples, and must be equipped throughout with modern labor-saving machinery and equipment. The cost of such a plant, completely equipped, will be from $3700 to $4800, depending upon the cost of materials in the locality."

The Farmer believes that the governors of the four northwestern states should call extra sessions of their legislatures to consider the feasibility of state action on a great scale to save the orchard industry.

Should Rush Construction.

Suppose the state appropriated $1,000,000 to build evaporating plants of the type described by Professor Caldwell. That sum would construct 200 such. They could evaporate 80,000 bushels a day—2,400,000 bushels a month.

By rushing construction, the state-owned evaporators might be made ready for late summer or early autumn service. They could begin on berries, soft fruits and such vegetables as were in danger of loss from lack of cars to move them to market. They could run into the late autumn on these products and then take up the work of evaporating apples, or if necessary, also potatoes, and operate continuously during the winter.

Perhaps the state could not buy and carry the produce, but it could give service at actual cost computed on a business-like basis. The evaporated products could be stored at slight expense and could keep indefinitely until a ready market could be provided. They would be a valuable food reserve against a known world shortage of foodstuffs. By organizing local units, growers could pool their dried products and get financial aid from the banks to carry them over until a market opened, if a market was not immediately available.

Might Aid Cooperation.

After the war the state could sell its plants to cooperative associations of growers and withdraw from the business if it wanted to.

The problem is great, and the difficulties apparent, and The Farmer proposes this solution with cognizance that full discussion might show that it was not feasible.

But we face extraordinary conditions that call for extraordinary action. Governments are doing things now they would not have thought of doing three years ago. If the state governments of the Pacific northwest can save the great orchard industry from ruin or appalling losses, it is their duty to do it at almost any cost.

Continued on page two.

Let More People Become Farmers

Get more to take to the land as real farmers, is the best way to increase the production of foodstuff.

PROSSER, Benton County, Wash., May 21.—The weather is fine; some frost last week, but it did no damage. There never was a better prospect for fruit in this valley. The wheat looks good, but it will be late; the high price of seed wheat made the acreage short this spring and farmers did not have the money to get the seed. Almost every farmer is doing something for greater food production. I would suggest to aid in greater food production or general farm betterment to put each and every family on a farm, if it is not but 10 acres, and give him a chance to pay for it out of the crops. One-third of the land in the Yakima valley is not farmed. If that land was farmed, would not the production in this valley be one-third greater? Instead of building a small house for a year 'round hired man and his family, put him on a farm and give him a chance with the rest of us.

G. W. WILGUS.

Wants Prisoners of War.

FITZVILLE, Adams County, Wash., May 15.—The high price of food certainly makes the producers go some this part of the county. Every little tract of ground is being used for something and a large acreage is being seeded into the stubble which will make a fair crop if the weather permits. At the present time it is not practicable for the farmer to build homes for a year 'round hired man and his family for the simple reason that families do not apply for those positions. The working men today will not a good, steady job too easy when-ever an offer of attractive wages is offered some other place. The crops are coming on fine and with rain we have a right to expect a bumper crop. But who will help us harvest it? Wouldn't it be a good thing for all of us and for humanity if France and England would send us their prisoners of war. We could take good care of them and they in turn would help us to raise feed for this and other nations.

JACOB HARDER.

More Thought and Toil.

SHELTON, Mason County, Wash., May 10.—Every available square yard of cultivated land is subject to doing duty in the great preparedness campaign. It is not a question of high prices but one of 'beatum' with plenty to eat. It means a little more hay, peas, beans, a lot more potatoes, and preserved fruit. The ultimate results will be better than present achievements. The suggestions I would offer for greater production and farm betterment are more thought and more effective toil. There are a few cases in Mason county where a suitable house with attractive conveniences and environments all for the hired man and his family could serve a good purpose and pay big dividends. It would help solve the farm labor problem, both as to supply and reliability. The subject should have practical consideration. Cherry trees are in full bloom, and early apple trees are beginning to bloom. Lots of plowing remains to be done.

SCOTT HAYES.

No Greater Production.

COLFAX, Whitman County, Wash., May 17.—High prices of seed are curtailing production somewhat. It is hard to say just how much. Nothing is being done towards greater food production as the conditions of winter wheat will take all the extra time farmers have in reseeding. Farmers here will do well if they produce as much food as last year.

E. C. HUNTON.

Planting Each Inch.

DARRINGTON, Snohomish County, Wash., May 20.—As a result of the high prices paid for grain, farmers in this section are planting every inch of land to either oats or roots for the milch cows next winter, for it is not likely that dairymen will be able to buy much grain and make a profit. There will be about one-third more ground planted to potatoes than usual and the same as to other garden stuff. Spring has been very backward, but most of the planting is done. Strawberries and cherry trees are loaded down with blossoms, but loganberries and raspberry bushes suffered by the frost last fall, in particular the improved Cuthberts. Pasture is getting fairly good now and stock is doing reasonably well. Farm help is very scarce and wages high. The Darrington school district is going to build an up-to-date schoolhouse this summer costing $10,000.

C. B. NEIDERPRUM.

Strawberry Harvest Is On.

KENNEWICK, Benton County, Washington, May 19.—There is some scarcity of help, yet the labor problem has not, so far, become serious. Strawberry harvesting will begin next week and we hope, with the assistance of the federal employment agent which the department will locate here at least during the strawberry season, that we will be able to save all of the crop. There are a small percent of farmers in the country who could employ help the year round. Those who have sufficient work for a man the year round could assist themselves materially in getting satisfactory help by providing a small house where a man with his family could live, even to handle the short season work. Much better class of farm labor could be secured if the farmers would provide comfortable quarters.

LEE M. LAMPSON.

Government Must Do Its Best.

METHOW, Okanogan County, Washington, May 21.—The effect of high prices of grain is that more will be harvested for the grain than ever before and less cut for hay. There is twice the acreage of potatoes sown this year. The hay crops are going to be light, as it looks as though 25 per cent of the alfalfa was frozen out. In regard to any suggestions in aiding greater production, will say that the farmers here and elsewhere are heeding the government's call to raise more foodstuff and will do their part, but the farmers want the government to do its part in setting a price on all food products and not let the price of products drop down 500 per cent while in the hands of the farmer and as soon as the food speculators get hold of it, raise it 500 per cent. If the government allows this the next call for greater food production will be in vain and it will find out the wisdom of Lincoln's saying in regard to fooling the people. The way the farms are at present, it would not pay to build a small home for the hired man and his family. That eventually will come, but not yet.

CHARLES GRANT.

House for Hired Man.

COLVILLE, Stevens County, Wash., May 12.—It is estimated that the total acreage of crops in this county has been increased about 20 per cent. Many of the thin meadows are being plowed up and seeded to grain. Most of the grasses being seeded this spring are being seeded with a nurse crop. On some of the larger farms the farmers have provided a house for a hired man and his family. These cases, however, are few, as most of the farms are small and labor is only seasonal.

A. R. HAHNER.

Season Unusually Wet.

RAINIER, Thurston County, Washington, May 12.—About all the available land is being put into a crop, although there is lots of land too wet to crop yet. The season is very wet and backward. A good many potatoes are planted, and also hay crops and feeds for cattle. In this vicinity I know of very few farms where it would be practicable for a farmer to keep a hired man the year round and make a living profit for himself. While there are many farms that need the extra help, the cash returns would not pay the extra expense, because we are in a timber country and clearing the land of wood and stumps would be a leading job and this is a very slow job at the best with no cash returns until the land can be cropped.

L. F. DAVIS.

Change Farming System.

TWISP, Okanogan County, Wash., April 30.—Farm help is short here; desirable men that are looking for farm work are very scarce. The only solution that I can think of for the labor problem is to engage in farming that won't require so much help. Plowing and seeding each spring is a very important and essential item to be considered. That can be eliminated by seeding the place to alfalfa or some other perennial that requires but little attention except at harvest time. Stock raising and dairying on much of a scale is the only kind of farming that pays to keep a man the year round. The spring continues backward. More wheat than usual is being sown, but it is slow in getting started. Most of the live stock is in good condition and in demand at a good price.

GEORGE LA DUE.

Marketing Problem

Alarms Northwest Fruit Growers

(Continued from page one.)

Statements have come from Washington city designed to relieve the anxiety over the problem, and no doubt they indicate the hope and the desire of officials to be able to avert any such crisis as seems imminent. Herbert C. Hoover, who is being put at the head of the food control organization, has assured members of congress from the northwest that there is no intention on the part of the government to permit fruit to be discriminated against. Secretary Houston of the department of agriculture makes similar statement.

But it is a condition and not a theory that confronts the fruitgrowers. Physical problems of transportation difficult of solution face the railroads and the government. The fruit crop is going to be unusually large. The growers face also the threatened increase of 15 per cent in freight rtaes. Car shortage is not an impossibility, in the light of last season's experience. Hopes and promises are not sufficient. The growers must be ready to protect themselves and every effort should be made at once with this in view.

Purchase Farm for $16 000.

C. C. Pressely of Grants Pass (Ore.) has purchased the Parkey ranch of 148 acres at New Hope, the purchase price being $16,000.

More Grain for the Farmer; More Profits for the Thresherman

THE Red River Special saves the farmer's high priced grain—and saves the thresherman's time. *It beats out the grain.* Most threshers wait for the grain to drop out. The big cylinder, the "Man Behind the Gun" and the beating shakers do the work just as you would do it by hand. Write for literature on the

Red River Special

If you are a thresherman, learn how you can get the big money-making runs. Crowd more bushels into the day's work—more good jobs into the season's run.

If you want a thresher for your own use, learn about our Junior Red River Special, the small thresher built with the efficiency of big high power machines. Hook it to your tractor or gasoline engine. Saves the grain like the Red River Special. Makes home threshing pay. Built for long service—has large, strong shafts, wide belts, strong frame. It saves the farmer's thresh bill. Write

Vol. 40. No. 22 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF May 31, 1917

Farmers Should Own Liberty Bonds

Investment Is Safe; Bond Can Not Be Taxed; May Be Sold at Any Time

The Farmer would like to see a Liberty bond in every farm home in the Pacific northwest. Or two or three of them, for they are within the reach of thrifty boys and girls, and mother is deserving of one that will be entirely her own.

It is not often in the country's history that one can be both patriotic and thrifty in a single transaction like this. When you buy your share of the $2,000,000,000 bond issue the government is now selling to finance the war, you have the satisfaction of knowing that you are helping your country's cause in the greatest war for world freedom and popular government that history records.

At the same time you will possess something that is well worth white to acquire and hold. "As good as a government bond" is the highest mark that can be placed on the value of anything.

Semi-Annual Interest.

Suppose that mother has her $500 bond. The interest on it, coming in every six months, will buy her little comforts and luxuries all her life. When she gets her bond she will find attached to it 60 little coupons (the bonds run for 30 years, and there will be two coupons for each year.) Every six months she has only to clip off one of these coupons and draw $8.75 interest in gold.

A U. S. government bond has two point of superiority over almost any other kind of property.

It can not be taxed as other property ordinarily is taxed.

It can be readily sold.

If you want to sell a horse, or a house or a farm, you may find that when times are dull you must take a sacrifice price. Or you may not be able to sell at any price, or have to pay a large commission. But there is always a ready market for U. S. government bonds, and the cost of selling one of them is trifling.

The Instalment Plan.

You can buy your bond on instalments, paying only 2 per cent on application, 18 per cent on June 28, 20 per cent on July 30, 30 per cent on August 15, and the final 30 per cent on August 30. Coupon Liberty bonds will be issued in denominations of $50, $100, $500 and $1000. To draw the interest on these you clip your coupons and your banker will collect the interest for you. Or you can mail the coupon yourself and get your interest by mail from Washington.

Then there will be another kind of Liberty bond known as registered bonds. These will be issued in denominations of $100, $500, $1000, $5000, $10,000, $50,000 and $100,000. These bear no coupons. You simply hold the bond, which is registered in your name at Washington, and every six months the treasury department will send along your interest.

The bonds will be dated June 15, 1917, and will bear interest at the rate of 3 1-2 per cent per annum from that date, payable semi-annually on December 15 and June 15.

The bonds will mature June 15, 1947, but the issue may be redeemed on or after June 15, 1932, in whole or in part, at par and accrued interest, on three months' published notice, on any interest day; in case of partial redemption the bonds to be redeemed to be determined by lot by such method as may be prescribed by the secretary of the treasury.

The principal and interest of the bonds will be payable in United States gold coin of the present standard of value, and the bonds will be exempt, both as to principal and interest, from all taxation, except estate or inheritance taxes, imposed by authority of the United States or its possessions, or by any state or local taxing authorities.

If any subsequent series of bonds shall be issued by the United States at a higher rate of interest than 3 1-2 per cent per annum before the termination of the war between the United States of America and the imperial German government (the date of such termination to be fixed by proclamation of the president of the United States), the holders of any of the bonds of the present issue shall have the privilege of converting the same, within such period and upon such further terms and conditions covering matters of details as the secretary of the treasury may prescribe, into an equal par amount of bonds bearing such higher rate of interest and substantially identical with the bonds of such new series, except that the bonds issued upon such conversion are to be identical with the bonds of the present series as to maturity of principal and interest and terms of redemption.

This opportunity to buy liberty bonds is well worth inquiring into. Ask your banker to get a bond for you.

President Wilson Says:—

"The entrance of our beloved country into the grim and terrible war for democracy and human rights which has shaken the world creates so many problems of national life and action which call for immediate consideration and settlement that I hope you will permit me to address to you a few words of earnest counsel and appeal with regard to them.

"To do this great thing worthily and successfully we must devote ourselves to the service without regard to profit or material advantage, and with an energy and intelligence that will rise to the level of the enterprise itself. We must realize to the full how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice it involves.

"The simplest part of the stupendous undertaking is to place the navy on an effective war footing and to create and equip a great army. Those men and women engaged in industry, agriculture and commerce will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefields or in the trenches.

"These, then, are the things we must do, and do well, besides fighting—the things without which mere fighting would be fruitless.

"We must supply abundant food, not only for ourselves and for our armies and our seamen but also for a large part of the nations with whom we have now made common cause, in whose support and by whose sides we shall be fighting; to help clothe and equip the armies with which we are cooperating in Europe, and to keep the looms and manufactories in raw materials; coal to keep the fires going in the ships at sea and in the furnaces of hundreds of factories across the sea; steel out of which to make arms and ammunition, both here and there; rails for railways, locomotives and rolling stock; mules, horses and cattle for labor and military service—all must increase output. The supreme need of our own nation and of all the nations with which we are cooperating is an abundance of supplies, and especially of foodstuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without an abundance of food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail.

"Let me suggest that every one who creates or cultivates a garden helps, and that every housewife who practices strict economy puts herself in the ranks of those who serve the nation. This is the time for America to correct her unpardonable fault of wastefulness and extravagance."

To Control Food Supplies

Administration's Bill Will Ferret Out Speculators

If congress will quit fiddling and pass the administration's food bill, the speculators will run to cover like rats stirred out of an old barn.

It is true the bill is the most radical measure of the kind ever offered congress and the American people, but it deals with a great emergency and is carefully drawn and revised on the advice of eminent and patriotic authorities.

It is the product of a series of conferences between President Wilson, Herbert C. Hoover, the man who saved the Belgians from starvation by ably administering American relief supplies, Secretary of Agriculture Houston and members of the agricultural committees of both houses. Mr. Hoover, who will hold the post of food administrator if the measure is passed by congress, says it will meet the food problem.

It is called a food bill, but it is more than that. It gives the government control of all necesaries of life and manufactured products and articles.

It will have the approval of an overwhelming majority of the American farmers, for it makes war on long-standing evils which they have been fighting for decades. Briefly the measure would do these things:

Declare the production, manufacture, storage, distribution and sale of necessaries to be affected with a public interest.

Make it unlawful to commit or permit preventable waste or deterioration of necessaries; to restrict supply or distribution or to enhance prices to excessive levels.

Authorize the president to establish standards, and grades of foods to establish their quality and value.

Authorize licensing of manufacturing, storage and distribution of foods to prevent uneconomical manufacture or inequitable distribution; empower the president to order disposition of hoarded stocks.

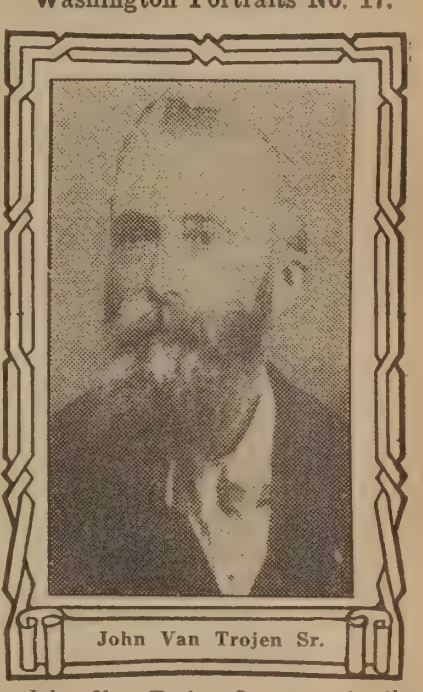
Would Prevent Hoarding.

Authorize the president to prevent hoarding, monopolizing or the exaction of excessive profits by having the government either manufacture or deal in necessaries; authorize the taking over of factories or plants for government operation if necessary to provide proper distribution at fair prices.

Authorize the president to prescribe rules for the conduct of exchanges and boards of trade or to prohibit entirely their operations if in the public interest.

Authorize the fixing of minimum prices to the producer to stimulate production; authorize import duties if importations threaten operation of guaranteed minimum prices; authorize purchase by the American government at the prescribed minimum prices supplies for the allies of the United States.

Restrictions on Grains.



Establishment by the president of maximum prices to break food corners or to prevent hoarding and speculation.

Authorize the changing of milling grades or the mixing of grains in making flour.

Authorize the president to prescribe restrictions on the use of foodstuffs in the manufacture of alcoholic liquors.

The measure is based on the war powers of congress and operates throughout the country irrespective of state lines.

Washington Portraits No. 17.

John Van Trojen Sr.

John Van Trojen Sr. came to the Chimacum valley in 1869, at which time there was but three or four settlers in the valley, and during that winter he worked for a Mr. Robinson on the same farm where William Bishop now has his famous herd of Holsteins. A few years later he took up a homestead about two miles west of Chimacum, cutting a trail through the woods and carrying his food on his back; he built a cabbin and commenced to hew his home out of the winderness. Mr. Van Trojen has gradually developed this farm into a stock ranch. At present he keeps over 600 laying hens and hatches over 2000 young chicks each year, and sends young chicks all over the state. He is also a breeder of Chester White hogs, having had this breed for over 25 years. Another branch of the farm is the cows. The butter he delivers to private families once a week in Port Townsend. Mr. Van Trojen has made the trip every Wednesday for over 28 years, and, although he is 68 years old, he still is on the job.

The next in the series of Washington portraits will be that of John C. Martin of Castlerock, and will be given in next week's issue of The Washington Farmer.

Buys a Dairy Herd.

Ben Porter has purchased a herd of dairy cows of Thomas Coon and returned to his homestead up the Twisp, where he has an active dairy business going, and shipping cream regularly to the local creamery, says the Twisp News.

Lights on Automobiles

New State Laws on Regulation of Speed

Chapter 155 of the session laws of Washington for 1917 relates to the licensing of motor vehicles and other regulations for automobiles, motorcycles, etc. A large part of the law relates to the obtaining of licenses, all of which regulations may be obtained from any county auditor. Other matters are taken up, beginning with section 15, which will be of much interest, especially as the act goes into effect June 6, 1917.

Sec. 15.—That section 21 of chapter 142 of the laws of 1915 be amended to read as follows:

Section 21. Every motor vehicle shall exhibit during the hours of darkness, at least two lamps, one on each side, showing white lights visible 200 feet or more in advance of said vehicle. Such motor vehicle shall have attached to the rear not less than one lamp showing a red light, visible at least 200 feet in the rear of such machine, and the same light or additional light casting white rays of sufficient strength on the rear of number plate thereof, so that such number plate may be easily read at a distance of at least 60 feet: Provided, That motor cycles shall be required to carry only one light in the front thereof, which shall show white rays visible at least 200 feet in advance of such motor vehicle: Provided, further, That it shall be unlawful to display any light showing red to the front of any motor vehicle. Every motor truck, the body of which exceeds six (6) feet in width shall exhibit during the hours of darkness, in addition to the above required lights, a white light on the left side of the machine defining the limit of the body of the machine or the overhanging load, if any there be, and beyond the outside thereof, so fixed or carried that the light therefrom may be seen both from the front and rear of said motor truck. Every motor truck, automobile or trailer carrying a load which projects over the rear end three feet or more shall be required to display a red flag by day and a red light by night, on the extreme end of such overhanging load. It shall be unlawful to use on a vehicle of any kind operated on the puolic highways of this state any lighting device of over four candle power equipped with a reflector, unless the same shall be so designed, deflected or arranged that no portion of the beam of reflected light, when measured 75 feet or more ahead of the lamps, shall rise above 42 inches from the level surface on which the vehicle stands under all conditions of road: Provided, That any vehicle coming under the provisions of this section not equipped as herein provided shall, when meeting another vehicle after dark, reduce speed to not more than four miles an hour until such approaching vehicle has passed. This shall not apply to spotlights, but a spotlight shall not be directed at an approaching vehicle. From and after the first day of July, 1918, it shall be unlawful to sell or offer for sale, or have in possesion with intent to sell, any vehicle of any kind for operation on the public highways of this state equipped with any lighting device of over four candle power with a reflector unless such lighting device shall conform to the provisions of the preceding paragraph of this section.

Sec. 16. That section 24 of chapter 142 of the laws of 1915 be amended to read as follows:

Section 24. In no case shall any motor vehicle be driven, operated or moved at a rate of speed faster than one (1) miles in five (5) minutes at any crossing within the main thickly settled or business portion of any city or town nor within 100 yards of any school house, on school days between 8 o'clock in the morning and 5 o'clock in the evening within this state, nor in any portion of any city or town faster than one (1) mile in three (3) minutes, nor outside the limits of any city or town on any road, street or public place at a rate of speed faster than one (1) miles in two (2) minutes. No motor vehicle of a carrying-capacity of two (2) tons and under three (3) tons shall be driven at a speed faster than at the rate of fifteen (15) miles per hour. Vehicles of a capacity of three(3) tons and under four (4) tons faster than fourteen (14) miles per hour. Vehicles of a capacity of four (4) tons and under five (5) tans faster than twelve (12) miles per hour. Vehicles of five (5) tons and over at a rate of speed not faster than ten (10) miles per hour. Auto stages of more than 10 passengers capacity shall not be permitted to exceed a speed of 20 miles an hour on other than paved roads.

Sec. 17. There shall be constructed and maintained within one hundred (100) yards of each approach to each school house in the state, a conspicuous wooden or suitable sign with the words, "school, slow down" printed thereon in letters of the following dimensions:

Description of School Sign.

The size of the board shall be 15 inches by 27 inches over all, with a black border on the outer edges, one-fourth inch in width. The following directions shall be painted on the board in plain block letters in black on white background:

SCHOOL!

Slow Down.

The word "School" shall be written above the words "Slow Down." The size of the letters shall be four (4) inches in height, about two and three-eighths (2⅜) inches in width, and spaced approximately four (4) inches from center to center. The lines forming the letters shall be one-half (½) inch in width.

The size of the letters in the word "Slow Down" shall be three (3) inches in height, about one and three-fourths (1¾) inch in width, and spaced approximately two and three-fourths (2¾) inches from center to center. The lines forming the letters shall be three-eighths (⅜) inch in width. The words "Slow Down" shall be underlined with a black line one-fourth (¼) inch in width.

A margin of approximately two and one-fourth (2¼) inches shall be left between the outer edge of the letters and the edge of the board. Said sign shall be constructed and maintained by the local authorities of the city or town in which any of said schoolhouses are situated and at the expense of said city or town. For all schoolhouses located outside the limits of any town or city said sign shall be constructed and maitained by the county in which any of said schoolhouses are situated and at the expense of said county.

Sec. 18. That section 30 of chapter 142 of the laws of 1915 be amended to read as follows:

Section 30. Any person who shall make falsely any statement herein required to be made or who shall obtain any license by any misrepresentation or deceit, or who shall display any number of license not authorized by law to be used, or who shall in violation of the provisions of this act, loan or permit to be used any license or number issued to him or who shall in any manner violate the provisions of this act, shall be builty of a misdemeanor, and upon conviction thereof shall be punished accordingly: Provided, That in no event shall the minimum fine be less than five dollars ($5).

Sec. 19.—That section 31 of chapter 142 of the laws of 1915 be amended to read as follows:

Section 31. All moneys received from fines assessed or forfeited bail for the violation of any of the provisions of this act shall be paid into the permanent highway fund, for the maintenance and repair of permanent highways in addition to the funds heretofore provided by law, to be distributed in accordance with the amounts of money paid into the permanent highway fund by the various counties of the state.

Sec. 20. That section 34 of chapter 142 of the laws of 1915 be amended to read as follows:

(Continued on page seven.)

Ready for Grange Meeting

Wenatchee Will Welcome Large Delegation

The city of Wenatchee is ready to welcome 800 delegates to the annual convention of the Washington state grange which meets here Tuesday, June 5, for a three-day session. One of the greatest sessions in the history of the organization in this state is anticipated in the preparations being made for the gathering.

In attendance will be some of the leading persons of the state, including aside from active members of the grange, Governor Ernest Lister, State Superintendent Josephine Preston, Dr. E. O. Holland, president of the state college at Pullman, and George Severance, head of the state college department of agriculture. President Holland will attend as the representative of the city of Pullman and will present its strong appeal to the grange to hold its 1918 convention in the college town.

The committee of the Chelan county Pomona grange who will have charge of the Wenatchee arrangements is composed of C. A. Ferrin, H. I. Shotwell, C. F. Kaiser, Mrs. Pyle and J. T. Compton. This committee has announced an auto excursion throughout the orchard districts surrounding Wenatchee, and a banquet and reception for Tuesday evening.

The grange will handle a large number of important problems, some of them made specially important because of the conditions growing out of the war situation.

The election of a successor to C. B. Kegley, for many years master of the state grange, will be one of the important matters of business in addition to the selection of other officers. Master Kegley is not a candidate to succeed himself, owing to having accepted appointment as one of the farm property appraisers for this state under the federal farm loan banking act.

SUCCEED WITH SHEEP.

Thirty-one Thousand Sheared.

Ephrata is gradually becoming a center for the wool industry. Approximately 217,000 pounds of wool was sheared at the shearing pens in Ephrata from 31,500 sheep. This year's clip is worth about $75,000. The sheep from which this wool was clipped are worth at least $472,500. Besides the wool there is about 21,000 increase of lambs valued at $160,800. This would give a grand total value of the sheep that were sheared and their lambs of $635,000. It takes 10 cars to ship the wool that was sheared at Ephrata. This gives a large income for the sheep-grower not only in wool, but also in the increase of the lambs. The sheep are wintered in Grant county owing to the dry, open winters and the available forage which can be purchased.

H. W. REAUGH.

Will Not Lose Credits.

The faculty of the State College of Washington has made arrangements for all students who are up in their work to receive credit if they leave school now to enlist in the army, navy, reserve officers' training corps, as farm laborers or as leaders of boys' and girls' club work.

Ten Million Men Must Register

June 5 Is Nation's Great Day to Prove Its Patriotism

Next Tuesday, June 5, is America's great opportunity to show her patriotism. On that day, which is the day set aside by President Wilson for registration under the recently enacted selective conscription army bill, 10,000,000 young men will be required to register. In many states the day has been declared a legal holiday, and citizens generally are urged to join heartily in a serious, patriotic observance of the occasion. Registering officers are tendering their services free. Thousands of automobiles are being offered to carry the young men eligible to registration to the registration places. Women are being asked to supply meals to the registration officers, and every one is urged to "do his bit" to make the day successful as the greatest demonstration of patriotism in the recent history of the United States.

The war department has issued a special notice setting forth the principal features of the registration requirements, emphasizing the fact that persons eligible must register on June 5 or face severe penalty. The points to be remembered are given as follows:

1—There is only one day for registration—June 5, 1917.

Registration booths will be open from 7 a. m. to 9 p. m. on registration day, June 5, 1917,

2—Every male resident of the United States who has reached his 21st and has not reached his 31st birthday must register on the day set, June 5, 1917.

The only exceptions are persons in the military or naval service of the United States, which includes all officers and enlisted men of the regular army, the regular army reserve, the officers' reserve corps, the enlisted reserve corps, the national guard and national guard reserve, recognized by the militia bureau of the war department; the navy, the marine corps, the coast guard and the naval militia, the naval reserve force, the marine corps reserve and the national volunteers, recognized by the navy department.

3—Registration is distinct from draft. No matter what just claim you have for exemption, you must register.

4—Registration is a public duty. For those not responsive to the sense of this duty, the penalty of imprisonment, not fine, is provided in the draft act.

5—Those who through sickness shall be unable to register should cause a representative to apply to the county or city clerk for a copy of the registration card. The clerk will give instructions as to how this card should be filled out. The card should then be mailed by the sick person, or delivered by his agent, to the registrar of his home district. The sick person will enclose a self-addressed stamped envelope for the return to him of his registration certificate.

6—Any person who expects to be absent from his voting precinct on registration day should apply as soon as practicable for a registration card to the county clerk of the county where he may be stopping, or, if he is in a city of over 30,000, to the city clerk. The clerk will record the answers on the card and turn it over to the absentee. The absentee should mail this card to the registrar of his home district so that it will reach that official by registration day. A self-addressed, stamped envelope should be enclosed with the card to insure the return of a certificate.

A Skamokawa Dairy Barn

The dairy barn of Howard L. Wiester of Skamokawa. Mr. Wiester is a prominent and successful farmer who has developed rapidly in the past few years. He has 40 head of Jerseys, some of them registered. He is past master of the grange and present master of his Pomona grange.

To The Washington Farmer: I think so much of the paper that every one is filed away. There are topics that I refer to occasionally. You can always count on me as a subscriber to The Washington Farmer.

LOU SANDERS.

Richland, Wash.

Wool Sells at Half Dollar a Pound

Demand at Fever Heat, With Prices at 100 Per Cent Over Last Year

By J. M. LOWNSDALE

Wool trading in the northwest is now on in full swing, with prices 100 per cent higher than a year ago, and last year's prices were the record.

The Washington clip is now well sold up. Considerable progress was made in disposing of the Idaho clip before shearing, but in Oregon only a small part of the wool has passed out of the growers' hands.

The shearing season is later than usual and this has held back trading operations in Oregon. The Oregon clip this year is estimated at about 11,000,000 pounds, against over 12,000,000 pounds in 1916, the decrease being due to the selling off of flocks last summer. The Washington and Idaho clips are figured about the same as last year.

Of the million pounds or so of Oregon wool that had been disposed of up to March 20 about 500,000 pounds were moved immediately prior to that date. Most of these sales were in the Echo section, where the first shearing was done. Prices there ranged from 48 to 50 cents for medium grades, and in Baker county one large clip was taken at 50 1-2 cents, the best price paid so far in eastern Oregon. Fine wools have been bid for at prices ranging all the way from 43 to 48 cents.

At Pendleton recently a buyer offered 50 cents to Manuel Pedro for 30,000 pounds and the bid was accepted, the deal topping the Umatilla county market.

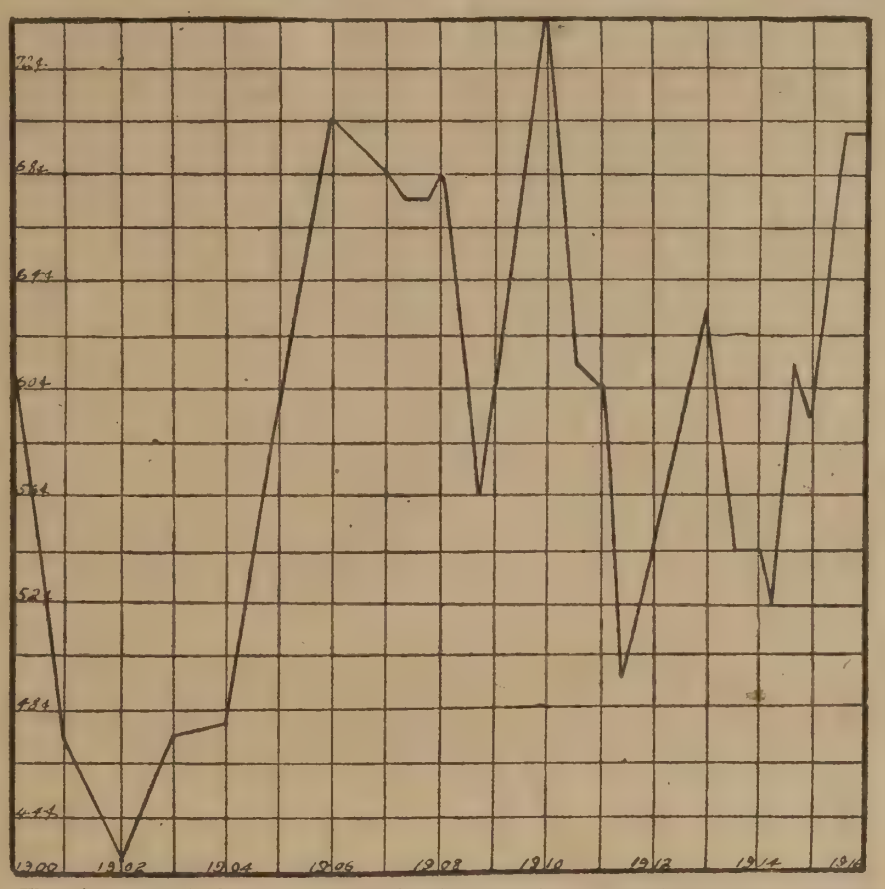
The majority of Oregon growers are holding back their clips for the regular sealed bid sales. The Oregon Woolgrowers' association has announced the following wool sale dates: Heppner, June 15; Echo, June 18; Pilot Rock, June 19; Condon, June 21; Shaniko, June 23; Bend and Redmond, June 25; Madras and Maupin, June 26; Enterprise and Joseph, June 27; Baker, June 28.

The Yakima market, which is covered by Portland buyers, has seen considerable activity in the past weeks. Isidore Koshland and Harry Armitage have just bought 112,000 pounds there at prices running from 45 to 50 cents, according to grade. The clips purchased were: L. Warden, Ephrata, 18,000 pounds; Forrest Wenner, Ellensburg, 20,000 pounds; Buckholz, Prosser, 24,000 pounds; Desert Sheep company, 30,000 pounds; Shockley Sheep company, Kennewick, 20,000.

Only early sales of fine wools in that section brought less than 35 cents. As indicating the condition of the market for Yakima wools, the buyer of a leading Boston house purchased a 100,000-pound clip at 43 cents. Last year he bought the same clip at 23 cents.

Yakima sheep men estimate that their wool clip this year will return them at least $1,000,000. They figure the output at 2,500,000 pounds. The 1916 production was 2,052,000 pounds and it returned growers $471,000.

They are also fortunate in having an extremely high sheep market and expect to realize an average of at least $9 per head for lambs, against $7.50 last year. Sales of Yakima sheep and wool this year are likely to aggregate $3,400,000 as compared with $2,500,000 in 1916.



According to reports received by the trade in Portland there is a keen demand in Montana for all sorts of wool, with medium clips most in favor and half bloods and fine wools following close after. A Boston firm bought a large clip of 300,000 pounds in the Great Falls district at 52 cents. This was fine, medium wool. Later, it is said, 55 cents was paid for a very good staple clip running half blood to fine medium in grade.

Buyers as well as sellers are satisfied that the market will continue to advance. They have no fear of the government regulating prices, as a great actual shortage exists in the United States. Only a short time ago dollar scoured wool was considered a marvel. Now predictions are freely made that $2 scoured wool will soon be in evidence. Purchases made one day look cheap the next and therefore the demand is at fever heat. Growers have adopted the same line of reasoning, and, in Oregon at least, the purpose is to speculate by holding as long as it is safe.

Special correspondence to The Farmer from Boise says:

"Idaho wool has gone beyond even the most optimistic expectations of the sheepmen of this state. It has passed

(Continued on page twenty)

The above chart shows the fluctation in the price of "territory fine medium scoured" wool on the Boston market from 1900 to 1916. At the left are the prices in cents, while at the bottom are the years. To illustrate the reading of the chart, the dark line touches the lowest quotation of the six years in 1902, when it goes down to approximately 42 cents. It reaches the highest point of the period in 1910, when it goes to 74 cents.

The Boston market is accepted throughout the United States as the basis for wool quotations, though there is no fixed differential by which the exact market value at any other given point may be calculated from the Boston quotations. At the present time, however, the price of wool is practically the same in the northwest as at Boston.

One important feature to be considered, however, is the fact of shrinkage in the scouring process. The Boston quotation is on scoured wool, and in the scouring process western wools shrink from 25 to 80 per cent, depending upon the amount of natural grease primarily, though the coarseness or firmness and the sand, dirt, weed seed and the like also influence the shrinkage greatly. Graders must become expert in estimating the shrinkage and determining the fineness and length at the shearing pens. With the latter determined so that the clip may be placed in a certain class as quoted on the Boston market, the scoured value may be calculated on the basis of the estimated shrinkage.

Thus, a wool quoted at 50 cents per scoured pound would be worth 20 cents "in the grease" if the shrinkage were 60 per cent, which is approximately the average shrinkage. In like manner a 60-cent scoured wool would be worth 24 cents in the grease on a 60 per cent shrinkage basis, or a 70-cent scoured wool worth 28 cents in the grease on the same shrinkage basis.

This Map Shows Where the World Gets Its Wool

Notice the great number of sheep grown in England, Italy, Greece, part of Australia, southern Africa and southern South America, as indicated by the dark places on the map.

Must Carry Lights

On All Vehicles Drawn by Horses

An act of the last session of the Washington state legislature provides:

Section 1. Every vehicle drawn or propelled by horses, mules or other animal power shall, when driven on any public road, highway, park, parkway, street or avenue within this state during the hours of darkness, have fixed or carried thereon in some conspicuous place on the left side of said vehicle at least one lighted lamp, so fixed or carried that the light therefrom may be seen both from the front and rear of said vehicle.

Section 2. Every person violating this act shall be guilty of a misdemeanor.

This law goes into effect June 6, 1917.

Inoculation Methods

To the Editor of The Washington Farmer: Will you please send me all the information possible on the inoculation of soil for different crops? Where can I get the preparation, and about what would the cost be? We raise wheat, oats, clover, alfalfa and other small truck.—J. E. N., Orin, Wash.

Leonard Hegnauer, extension specialist in soils and crops at the state college of Washington, says in reply to the above question:

For inoculating alfalfa, clovers, peas or vetch, use soil taken from fields where the particular crop is grown and on which the plants are known to be inoculated. A soil of this kind will carry sufficient bacteria to inoculate a new seeding. From 300 to 500 pounds of the soil scattered on each acre of the new field sod and harrowed in at the time of seeding should give satisfactory inoculation.

Another method of inoculation, which is frequently used and is quite successful, consists of taking a small amount of infected soil and fastening it by means of glue to the seed. A description of this method is found in Extension Circular 21. Another method of inoculation is by the pure culture method. This material is sent out by the Washington experiment station, Pullman, Wash., and costs about 25 cents per acre. When properly used this material gives splendid results.

Clarke Bean Crop Gains.

A larger acreage of shell beans than ever before will be grown at Ridgefield, Pioneer, La Center, Sara and Feldia, Clarke county, this season. The growing of beans is expected to be a real factor in the food production of the county. The small navy bean will be most extensively planted.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Are You Doing Your Part?

Governor Lister told an audience of 4000 that came out to hear his address in Spokane that President Wilson informed him that the food problem of the allies is very grave; that Great Britain has food stocks for "considerably less than six months."

The Farmer has reliable advices that England's reserves are nearer 60 days than six months. Some students say that her wheat and flour reserves, if not reenforced by new supplies, would hardly last for 30 days.

England has 200,000,000 bushels of wheat in Australia—enough to feed her people for a year. But that wheat is 13,000 miles away and she lacks the ships to transport it so far. A grain vessel can make four voyages from the United States or Canada to Liverpool in the time required for a single voyage on the long Australian run. That is why Great Britain wants the wheat of the United States.

With shipping scarce and growing scarcer all the time from submarine sinkings, it looks as though that 200,000,000 bushels in Australia is pocketed for the war.

That lays a grave duty on the American farmer. England and America are fighting a common foe. It is imperative that America feed not only her own people the coming year, but grow a surplus for France, England and Italy as well.

Are you doing your part? Are you working early and late to produce the last pound of food that can be taken from your soil?

Building a Cooperative Association

In building a working association of American farmers the fact must always be kept in mind that the raw material comes from many parts of the world—that we Americans are a cosmopolitan nation. Perhaps this is one reason for the diversity of thought and effort among us. At any rate, this fact of diversity of origin and of methods of thinking suggests the necessity of utilizing every means to promote loyalty to a single ideal, in every cooperative organization.

The first of these means is a definite and possible aim, or ideal; and the second is such a system of distributing exact knowledge of the facts bearing upon production and marketing as shall enable every member to see the wisdom of every proposed action. The members of potato associations who broke away from their organizations and sold on the field market, last fall, for instance, would not have done so had they been fully informed as to market conditions.

It is not enough to tell an American farmer that he must do a thing. He is not a child, to be commanded, but a man, to be convinced. Tell him why.

Fruit Growers Should Be Ready for Any Emergency That May Arise

The Farmer is not pessimistic, but believes in preparedness against bad luck.

There is danger that bad luck may fall upon the orchard districts this year. The fruit industry is menaced with a 15 per cent advance in freight rates on July 1. But that is not all. There is danger that cars may not be had when the fruit is ready to ship. There is talk that the railroads may decide that fresh fruit is a luxury and cars must be used exclusively for transporting the essentials of life—like grain, hay, meat products, canned salmon and milk, or for lumber needed in the great shipbuilding plants of the east.

That situation would spell disaster for the orchard industry unless ways were found to evaporate and preserve the fruits of the Pacific northwest.

We live in extraordinary times and must do extraordinary things. Rather than let our fruit go to waste, the governors of Washington, Idaho, Montana and Oregon would better convene their legislatures and urge appropriations to put in state-owned and state-operated evaporating plants. We could better spend millions in that way than to suffer the loss of greater millions at this time, when the nation can not afford any wastage of food.

The time may be too limited to establish canneries this year, but dehydrating plants can be built, and there will be ample markets for the product, which, thus preserved, could be moved to eastern centers and Europe later on.

Think this over and be prepared to act quickly if the necessity should arise.

A Problem That Staggers the Experts

Consumers complain that meat prices are almost prohibitory. But the grower protests that he is not to blame; that conditions bear as hard on him as on the consumers, as prices of feed, labor and supplies have run ahead of the prices he is getting for his produce, and he is actually losing money instead of piling up profits, as many city dwellers think.

The facts bear him out. He is quitting the business here and there, and that is the real test, for the farmer is not going to relinquish a profitable line of industry to engage in something new.

At a recent conference at Lincoln, Neb., of men interested in the live stock industry and professors from western agricultural colleges the alarming statement was made that there are 6,000,000 less breeding cattle in the United States than there were 15 years ago.

Yet population has grown and Europe is making extraordinary demands. Is it surprising that meat prices are up and going higher every month?

The further information was given at the Lincoln conference that the first four months of the present year showed 951,000 fewer hogs on the market than the same four months of last year. That is a decrease of 10 per cent. With feeders all over the country virtually gone, brood animals sold, hay and grain at prohibitive figures and slight prospects of relief, the conference decided drastic action was necessary.

To supply the country with meat under present conditions, to say nothing of sending provisions abroad, presents a serious condition, and the Lincoln conference threw little light on its solution.

The problem staggers the experts and alarms the nation.

The First Essential to Live Stock

The unusual demand for live stock at the present time, with prospects for a like demand for the future, produces another demand that the farmers and stockmen must not overlook. Feed!

There is danger that there will be shortage of hay and pasture on many farms this season because of the unprecedented demand for grains at high prices. But the man who has live stock or who is planning to add to his herd or flock must not allow himself to be drawn into winter with insufficient feed. Systematic plans must be laid and systematic calculations made to determine the amount of stock to carry under the particular possibilities of feed production on a given farm. So much pasture of such and such kind will carry so many cattle or hogs or sheep or horses so many weeks during the ordinary season. So much hay or silage will be required to carry them so much farther, and then so much grain will be required to keep them in proper flesh or finish them for market.

These things must be calculated by every man who would succeed. Hit-or-miss methods will not pay, especially at this time, when every loss of a pound of feed or the possibilities of producing a pound of feed means a loss of actual cash value.

Washington Gleanings

The Arcadia Orchard company will put in 1200 acres of peas this year, especially on the open sections. The apple trees never looked better, it is reported.

The Vancouver cannery will open about June 1 on spinach. This will be followed by gooseberries, then strawberries will come and other fruit as the season advances.

The boys and girls' club movement in Pierce county is well under way and 41 clubs have reported their enrolment to T. J. Newbill, state leader of boys and girls' clubs.

The Okanogan County Grange fair is to be held in Okanogan October 11, 12 and 13 and is expected to be the greatest exhibit of live stock in the history of Okanogan county.

P. K. Lewis has sold his ranch between Sultan and Startup to Mrs. Shaddinger of Oregon at an approximate consideration of $9000. The ranch comprises an area of 60 acres.

A peppermin farm of nearly 100 acres is to be located near Sifton in Clarke county at once. A shipment of 75,000 pounds of roots for use in starting the new enterprise have arrived.

Walla Walla high school students have enlisted in the cause of American agricultural preparedness. They will be used this summer in getting the crops of the valley properly harvested.

Under the direction of T. J. Newbill, state leader of the boys and girls' clubs, a gardening and canning club and a boys' stock-raising club have been formed by the high school students of Pullman.

The farmers and stock raisers of the Beaver Creek district, north of Deer Park, have formed an association to be known as the Stock Breeders' Protective association. Their object is to promote the breeding of better live stock.

A modern warehouse is being erected at Leavenworth by the Peshastin Fruit Growers' association. The stock of the Peshastin Fruit Growers' association is owned entirely by the growers and financed through the Leavenworth State bank.

A contract for 30,000 pounds of butter has been awarded the Lynden Creamery company by the United States government for the use of the Alaska Engineering commission. The award was made on a basis of 45 cents a pound and amounts to $13,500.

Business conditions this season in the fruit-growing districts of the state of Washington will depend largely upon transportation facilities and the market situation at harvest time, according to Conrad Rose, well-known operator in apples and produce.

What Others Say

Kent Journal—A good brood sow and a few good ewes would soon pay for themselves and bring a good return besides.

Port Angeles Tribune—The boys from the farms and the colleges have been the first to offer themselves for enlistment in the army and navy.

The Washington Call—Congress can well afford to forget all about the war for a day and enact legislation prohibiting the buying and selling of grain unless the parties actually have the goods.

Snohomish County Tribune—It looks as though high or war prices are to be accompanied by unusual prosperity.

Centralia Daily Hub—Time spent in the cultivation of the fields passes very pleasantly.

Air Ships Make Raids

Women Killed by Germany's Bombs

After a lapse of several months, the German airmen have resumed their raids on coast towns of England. Last week some 16 airships dropped bombs into the streets of two small cities, killing 76 persons. Of those killed, considerably more than half were women or children. No apparent object in the raid is known save to spread terror among the people of England and other enemy countries subject to such possible attacks.

Freight Under Sea.

Simon Lake, the man who invented the submarine, is reported to have developed the undersea idea now so that submarine freight boats capable of carrying 8000 tons of freight are not only a possibility but a probability. It is declared that such ships can be turned out rapidly, and that the first few of them can be ready for service within a few months. If successful, as officials are said to anticipate, such vessels would be able to evade the torpedoes of the German submarines.

World Purchasing Agent.

Plans are said to be under way for the centralizing of all the purchasing business of all the allied countries now at war with Germany in the hands of one man or a small commission of men. Such agent would expend about $10,000,000,000 a year, it is estimated. The purchases would include foods, clothing and munitions. The United States would place its purchasing under the same control, it is contemplated.

Spies Are Operating.

That German spies are operating successfully in this country seems evident from the official statement that the German government knew beforehand of the sailing of the American flotilla of ships for England to take part in the war on the submarines. The destination of the flotilla was also known to the enemy, notwithstanding that the admiral in charge of the expedition did not himself know his destination until he opened his sealed orders after reaching the sea.

Submarines Conquered?

Officials report from England that the losses of vessels at sea from the submarine menace were much less during the last several days than for other recent weeks. British statesmen declare openly that such progress has been made as to insure England and her allies against the threatened starvation which Germany has been trying to bring about. The United States navy is now actively engaged in the war on the submarines, though reports of its operations are strictly censored so that no definite reports of such operations are available.

Lights on Automobiles

(Continued from page four.)

Section 34. The local authorities shall have no power to pass or enforce any ordinance, rule or regulations governing the speed of any motor vehicle, or requiring of the owner or operator of any motor vehicle, any license other than an occuaption license or a tax which may be levied in only one city or town when such motor vehicle is engaged in intercity service, or permitted to use the public highways except as herein provided or to exclude or to prohibit any motor vehicle whose owner has complied with the provisions of this act from the free use of the public highways, and all such rules, ordinances and regulations now in force are hereby declared to be of no validity or effect: Provided, however, That nothing herein shall be construed as limiting the power of the county commissioners or local authorities to make, enforce, and maintain ordinances, rules and regulations governing traffic in addition to the provisions of this act affecting motor vehicles, but not in conflict therewith.

Sec. 21. At the time any application is made to the county auditor for a license, as provided elsewhere in this act, the applicant shall pay to the county auditor the sum of twenty-five cents for each application, in addition to the license fee provided for in section 15 of this act, which shall be paid to the county treasurer in the same manner as other fees, collected by the county auditor and credited to the county current expense fund.

Sec. 22. Every owner or operator of any motor truck or auto stage using the public highways in this state shall equip such truck or auto stage with a mirror or other device to enable the driver thereof to have such a clear and unobstructed view of the rear as will enable him to obey the "rule of the road" when overtaken by any other vehicle.

Sec. 23. Drivers of all motor vehicles carrying passengers for hire on any of the public highways of this state outside the incorporated limits of any city or town, shall bring said vehicles to a full stop within fifty feet of any unguarded grade crossing of any railroad or interurban track before crossing the same.

The Motor Car
On the Farm

What has the motor car done for the farming business? A whole lot, say those who have studied the matter. But, by the same token, what have the farm folks of the country done for the automobile business? Well, there were pretty nearly 3,000,000 motor vehicles registered in the United States of America in 1916; and if the farm folks of other parts of the country are as good buyers as we are here in the Pacific northwest (which, generally speaking, they are not) about three-fourths of the billion and so odd million dollars contributed toward the upbuilding of the automobile business came from off the farms.

The motor car has made life on the farm more attractive and more enjoyable; it has made work on the farm more efficient and more profitable. And in recognition of these benefits no class of American citizens today are causing motor car manufacturers so much anxiety and worry—so much of "jumping sideways" to keep the supply up to the demand—as are farmers.

The other day a boy just within the age limit for drivers walked into the office of a motor car company of Spokane and said he wanted to buy a car.

He had come to Spokane from Elmira, Wash. He wasted no time in getting right down to business. He knew what car he wanted, saying he had examined the car he wished to buy in Elmira and that it suited him.

The price of the car was $1725—and extra equipment purchased brought the amount of the transaction up to around $1800—which was promptly paid, out of this young man's own funds.

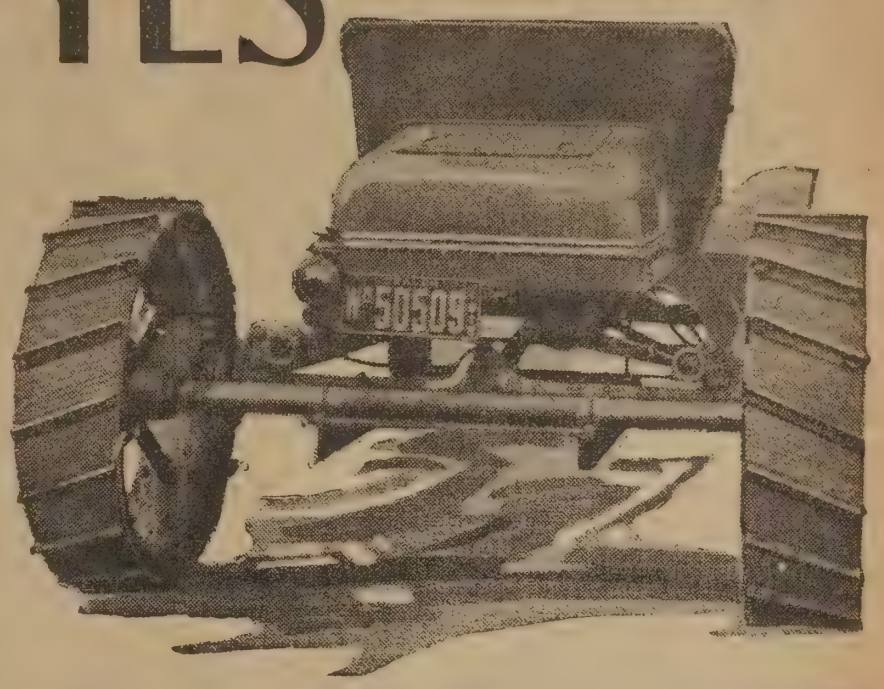
Not only does this show that motor car buying begins at an early age in the Pacific northwest, but it shows the kind of stuff that is in the young folks of this section of the country.

For, be it remembered, this boy had a bank account which permitted an investment of $1800 in a car, which speaks well both for himself and his parents. Of course he was a farmer boy—one of the oncoming generation of business farmers who are to carry on the efficient work that today makes the Pacific northwest one of the greatest zones of specialized and successful farming in the country.

He drove his car away—handling it with the easy assurance of a "professional." He said, however, that he had been driving his father's car since he was 9 years old and assured solicitous bystanders that he never "speeded" nor took unnecessary risks of any kind in his driving and that he had never had an accident.

Not a bad example—this boy—to many older motorists.

ONE FLAG AFLOAT.



Lewis County Boy Wins Emblem.

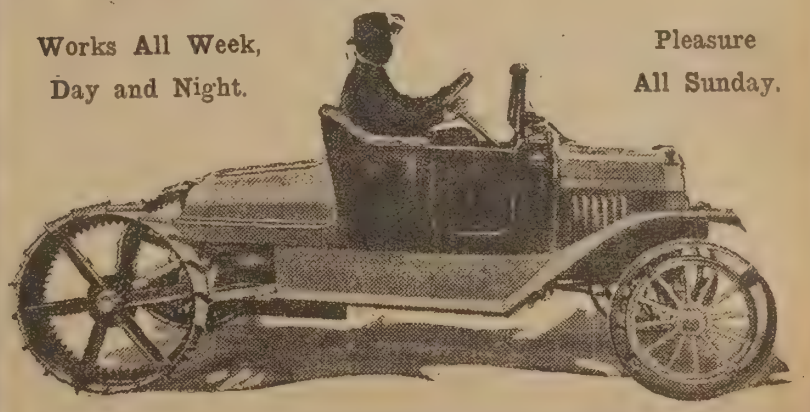
Reuben A. Gilleland, a farmer boy living on the Cowlitz river in Lewis county, a few days ago set afloat a United States flag that he says in a letter to the Farmer is the first to fly in his community. He earned it working for the Farmer securing subscriptions, and says in a letter just received:

"The flag has arrived safely. When I saw what a nice flag it was it nearly tickled me out of my shoes. I received your letter stating that I was credited 120 points, but the flag required 125 points, which left me owing you five points. I thank you a thousand times for sending it. I will send in some more subscriptions soon to pay the points I owe. I am trying very hard to get some more premiums which are in the catalogue. The flag that you sent me is the only flag that is flying in this part of the country."

The flag offer to boys and girls throughout the state is still open, and may be found in an advertisement in this issue.

YES We Have Solved It!

HERE IT IS, the TRACTOR EVERY MAN CAN BUY—MADE TO MEET THE SPECIAL DEMAND for LOWEST POSSIBLE COST with POSITIVE, ABSOLUTE EFFICIENCY—THE BEST LOW COST LIGHT TRACTOR EVER BUILT—The



UNIVERSAL Junior

$150.00 TRACTOR ATTACHMENT

F. O. B. Tacoma

A FORD CONVERTED IN 30 MINUTES TO A TRACTOR—and BACK AGAIN TO AUTO IN SAME TIME—NO MECHANICAL CHANGES WHATEVER.

Works All Week, Day and Night.

Pleasure All Sunday.

It's now up to you. But it won't win the war in our factory. Get it on your farm, hitch your plow to it. No use telling you a lot of technical things in this advertisement. The pictures here prove it—looks as if it would do work of four horses, doesn't it? And it does—no more, no less—and made in the west. No delays. Meets the soil conditions of the west—made by men of the west—then why not keep your money in the west? No big freight costs, but your money is all in the tractor. Investigate. Write us for details. Prompt action. Our tractors and not our cannon will win this war! Write today!

FREE

Write for "A Tractor — a Matter of Course." Gives details of the Universal Junior. Don't hesitate. Investigate it. Get ready for the crops.

The FIRST TRACTOR ATTACHMENT on the market was put on by our company. We are the Absolute Pioneers. Others may copy, but they will go through the experimental stage we passed through long ago. We are taking orders every day for our "UNIVERSAL" ($275.00) and have doubled the size of our plant in the last sixty days to meet our orders.

GERLINGER Motor Car Co.

Manufacturers of "Universal Junior" Tractor Attachment "Gersix" Motor Trucks.

TACOMA, WASH.

Agents Wanted

Certain territory still open. Responsible firms or individuals wanted as agents and distributors. Write or wire. Our field manager may be near you.

Dairy Questions

Are Answered by A. B. Nystrom

I want to build a silo this spring and would like to have you give me information on the following questions: How big a silo would I need for four or five cows? What kind of a foundation would I need? When is the proper time for filling the silo with corn?—C. J., Marysville, Wash.

Ordinarily we do not consider it wise to build a silo for as small a herd as four cows, but presumably you have other stock to which you can feed this silage, so that you will probably have the equivalent of 10 cows. A silo 10x20 will hold 30 tons of silage and it will keep eight cows, feeding them six months in the year and 40 pounds per day. A silo 10x24 will hold 36 tons and will keep 10 cows, feeding them the same amount for the same length of time.

Build a good, substantial foundation, preferably of concrete.

The proper time to put corn into the silo is when the kernels have begun to dent. In this connection allow me to suggest that you get home-grown seed if possible, so that you will be sure it will mature sufficiently for good silage before the frost comes. Some of the dairymen in the Puget sound region have experienced a little difficulty at times in getting the corn to mature properly. Hence they have taken to using other crops, such as clover, peas and oats, vets and oats, and the like, for silage purposes. No doubt corn is the best silage crop; that is, it makes the best silage; but sometimes heavier yields can be obtained from other crops.

Smallest Economical Silo.

What is the least number of cows and the smallest silo possible to have for success in feeding and keeping silage fresh?—O. A. V., Port Orchards, Wash.

We usually consider that it is not wise to have a silo for less than 10 cows. However, if you are so located that you can feed silage to other animals, such as sheep, and perhaps horses and hogs, you will be able to put up a silo for fewer cows. The important point here is to keep enough feed off every day to keep it from spoiling. From one and a half to two inches per day must be fed off. If the silage is to be used in the summer time you must have a larger herd than when it is used in the winter time. In other words the silage spoils faster in summer than in winter. For example, for a silo 10 feet in diameter it is necessary to have 13 cows to keep it from spoiling, in the summer time. However, in the winter time only about seven or eight cows would keep it from spoiling.

Preserving Butter.

Kindly let me know whether butter will keep and how long by preserving it in the following way? Salt as for table use and wrap and lay in a crock over a layer of salt and cover with salt. I have been told that this method was very satisfactory, but would like your advice or any other suggestions about it.—Mrs. F. C. H., Wenatchee, Wash.

I believe that you will be able to keep good butter by the method that you have mentioned, especially if you put the butter away in a very cool place. However, I have found that using a saturated solution of salt brine instead of pure salt gives just as good results, and in fact leaves your butter in such a condition that you can take some out at any time without disturbing the brine. Fill your crock to within four inches of the top and then fill in the four inches with a saturated solution of salt brine made from pure water and a good clean butter salt.

The most important point regarding packing butter in either of these ways is to have good butter to start with. It is impossible to make butter that will keep out of a poor quality of cream.

Do You Know That

Perseverence often outruns genius?

C. A. Swenson Holds High Herd Average

According to the report of Ira J. Wolfe, tester, there were 28 herds, comprising 582 cows, on test in the Tillamook Cow Testing association during the month of April.

Of this number 141 produced over 40 pounds of butter fat, 74 made the honor list of 45-pound cows, 31 producing over 50 pounds of fat. The high herd average production is held by C. A. Swenson's herd, with an average milk yield of 1050 pounds, and butterfat yield of 44.61 for 27 cows. 44.40 pounds of butterfat is the best 2-year-old record for the month, and the honors go to a pure bred Holstein belonging to John Ebinger.

Below are listed the cows producing 50 pounds of fat during the 30-day period of test ending April 30. The list is not as full as might be expected for this season, but the backward spring is chiefly responsible. Many farmers did not turn out on grass till the latter part of the month, and because hay and grain were scarce or unobtainable cows were in many cases underfed. The cows are rapidly coming to their own since grass conditions have become normal and a considerable increase over April is expected for May.

Purebred Registered HOLSTEIN CATTLE

All records for butterfat production in 365 days, not only Holstein-Friesian, but those of all other breeds, were broken in 1915 by the registered purebred Holstein cow, Duchess Skylark Ormsby 124,514, when she produced 27,761 pounds of milk containing 1,205.09 pounds of butterfat. The test was made under the supervision of the Minnesota Agricultural college, thirteen different supervisors being employed. This wonderful cow freshened at the age of 3 years and 3 days. Holstein cows as a rule milk longer and produce much larger quantities of milk than any other breed, a fact that has made them the choice of progressive dairymen everywhere.

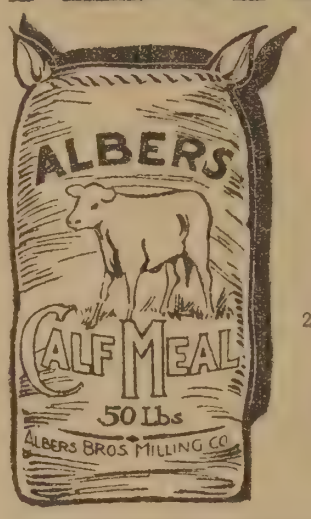
$97.05 Profit Per Cow Per Year.

Pure bred sires, careful testing and careful feeding are the means which Ernst Dengler of Davenport, Iowa, has used to make his herd one of the most profitable in the state. At the close of last year's work in the Iowa cow testing association his herd stood among the highest of the 500 herds in the 23 associations. The highest five cows in the Davenport association were from his herd, as were eight out of the first nine.

The average production of his 24 cows for the year was 7094 pounds of milk and 380.1 pounds of butter fat. A feed cost of $56.81 per cow deducted from the gross income of $153.86 per cow left him a profit of $97.05 per cow for the year.

The herd was made up of two pure bred and 22 grade Guernsey cows.

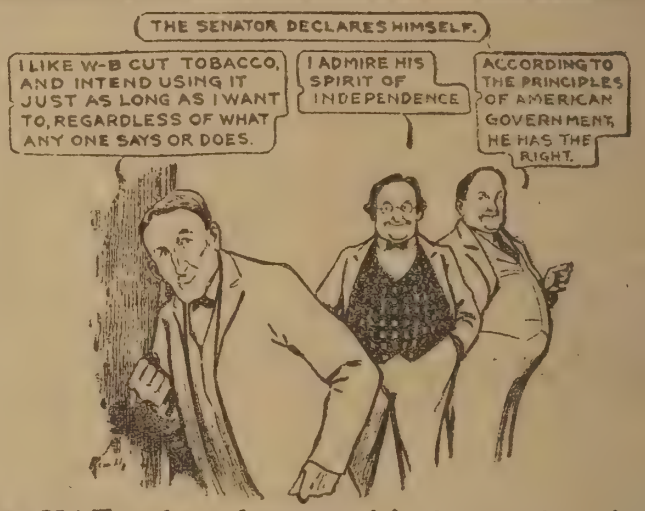


Calves thrive on Albers Meal

Why continue to feed them whole milk with butter-fat at 40c pound? Albers Meal contains all the nourishing elements needed for quick, sturdy growth.

Albers' has for a basis, ground oatmeal. The superiority of oatmeal over shorts for raising young stock is recognized by all feeders.

Albers Calf Meal



is used and endorsed by the most successful stockmen and dairy farmers in the Northwest. Read this letter.

"A Guernsey heifer was given to us at 14 days old. We had no cow milk at that time, so fed her on Albers Calf Meal and water straight until 6 weeks old. She then refused to drink fresh milk, so we continued Calf Meal. She never had a sick day and developed into a fine, large cow. We have tried three other calf meals—none give results like Albers."—*Edwin Dow, Malott, Wash.*

Ask for Albers Calf Meal—your dealer sells it in 25, 50 and 100-lb. bags—or address our nearest branch.

WHAT makes tobacco good is the sap there is in the leaf to start with and the way it's cured—some tobacco is sappier than others. If you take a big chew of W-B CUT, you may find it too rich for you. Take a *little* chew—it's made of fine, sappy, leaf; there's a lot of *tobacco satisfaction* stored away in it. The touch of salt brings it out, without so much chewing; and a *little* chew *lasts* and *satisfies*.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month, or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

When you write to advertisers be sure to say that you saw their advertisement in this paper.

Hog Shortage.

County Agent Birch and E. J. Fjlstead were in Buhl and stated to a Herald reporter that after having made a canvass of the territory comprising Twin Falls county and on the north side of the river they learned that few hogs remained on the farm. They said that the Twin Falls tract has only about 20 per cent of the number of hogs kept here under normal conditions and that the north side has but 35 per cent of normal quantity. The alfalfa crop will be shorter this year, said Mr. Birch, because of the fields which have been plowed up and the lateness of the first crop.

Veterinary

Dr. S. B. Nelson

Loses Flesh.—I have a mare that foaled a colt about five months ago. She kept falling off in flesh. I weaned the colt, but she does not pick up. Have been giving her three gallons of grain and what hay she would eat, but lately she will only eat the grain at times. She has plenty of exercise. Have also given her stock tonic.—W. E. I., Elma, Wash.

Answer.—The fact that the mare will not eat is very indefinite symptom upon which to base a diagnosis. She must have some indigestion or possibly she may have some teeth trouble. I can not make a diagnosis. You have, I believe, a very competent veterinarian at Elma and I would advise you to consult him. I regret that I can not be of definite service to you.

Lumpy Jaw—I have a 2-year-old steer that has had a large lump on his jaw for five or six weeks. About two months ago there was a little poke or sack underneath his jaw which I opened and a good deal of pus came out; a week later I opened it again, with the same result; the third time I opened it it would not run any more. I also stuck a knife in the big lump on the side of his jaw, but it just bled. The poke underneath has almost disappeared, but the hard lump has never diminished. It does not seem sore to the touch, in fact he seems to enjoy having it rubbed. His appetite is good, but it bothers him somewhat in chewing.—S. C. L., Clinton, Wash.

Answer—Your animal is affected with lumpy jaw or actinomycosis and the fact that you state that he is bothered in chewing would indicate that the disease has gone so far into the bone that the roots of the teeth are affected. I do not believe that he would yield to medicinal treatment at all and perhaps the only thing that he would yield to would be the radical operation by a competent operator. This operation would require the removal of the teeth infected, and a portion of the jaw. I doubt whether it would pay that he should be operated upon. I think it would be much better if he was destroyed. This type of animal is very dangerous to have about the place because everywhere where the pus drops the germ is left and that means that every animal from one to four or five, according to the number on the place, will become affected every year and it will be a constant source of loss, which in a large number of years will run into a large sum of money.

An All 'Round Barn

Is Built on a Side Hill for Good Drainage

By ROBERT S. DOUBLEDAY

Barns have to be adapted to so many conditions and requirements and fit so many pocket books that there is no "best barn"—for everybody. But I recently built a barn, 30x60 feet, outside dimensions, which is satisfactory enough to me. I believe it has enough good points to be worth describing and that it will meet the needs of a very large number of farmers. In the description to follow I can not refrain from some slight modifications, for you know we build nothing in this world that we would not alter just a trifle, at least.

End Elevation of Barn 30 by 60 Feet.

This barn is built on a slope, or a side hill. I like a side hill barn. There is always good drainage—there is an extra story or half story at very little expense, the basement is always warm in winter and cool in summer, and you can drive in or mow away hay in what is nominally the ground floor but is in reality the second story, and do it handily.

The main part of the barn is 30x30, and there is a 15-foot extension on both the uphill side and the low side.

The basement proper, on the lower side, should be concreted and should have 8-foot walls. It should occupy only the space under the 15-foot extension, and 5 or 6 feet under the main part of the barn for passageway in front of the cattle mangers. The 30x15 foot space in the extension to be in cattle stalls. Entrance for stock at either end, or in the side, according to desired location for the manure pit. The upper part of the 15-foot extension on that side is cut up into five 6-foot sections, four for horse stalls and one used as a passageway and harness room.

Entrance for Horses.

A way into the barn for the horses, and without taking up any barn space and without the undesirable steep incline, is provided for in a wide, substantial platform running along the end of the barn, on the outside, very nearly level with the main floor. This platform passageway is made of six-inch saplings, or roughed timbers, to provide against a slippery passage, and is given a slight slant so as to readily carry off rain and slush. There is a wide door opening onto this platform from the passageway in the rear of the horse stalls, of course, and also a door opening onto it at the end of the wide passageway in front of the horse mangers. There is also a door in the opposite side of the barn at the other end of this passageway, and alongside this door is a stairway going up to the top floor of the barn. This main floor of the barn is subject to a variety of arrangements, but a feed room should be built in somewhere, with a door opening into the passage in front of the mangers.

The posts and studding should be 16 feet, allowing 12 feet for the main floor, and 4-foot side walls to the top story. This top floor may, of course, be omitted altogether and the whole interior of the main part of the barn, except for the grain room and the passageway in front of the mangers, be made one big hay mow.

Slope of One to One.

The roof should have a slope of one to one, which would make the center posts 19 feet high from the top story floor, if a top story is used and if center posts are used. The roofs of the two extensions begin four feet below the eaves of the main roof, allowing upper side walls in which windows may be placed. There are windows, of course, in the ends of the barn and in the wall back of the horse stalls, and in the wall of the basement, back of the cattle stalls.

The 15-foot extension on the high ground side is simply a wide driveway, a place to keep wagons and many tools and from which unloading of hay or grain may be done in the dry. Or this may be made into a place for young stock. There is a wide, sliding door in the middle of the side of the main portion of the barn from this extension.

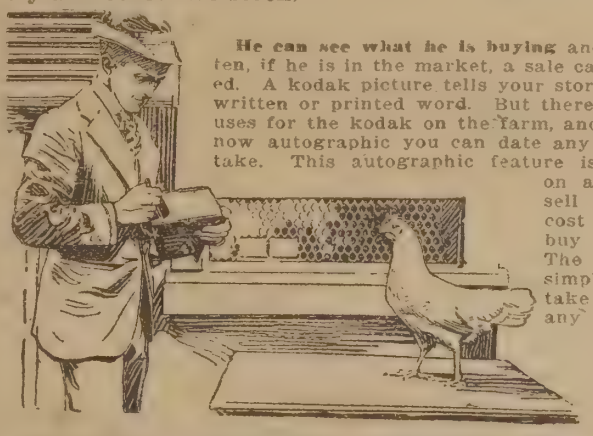
Underneath the main part of the barn, in front of the cow basement and passageway, there is some space which may be used for storing lumber, or it makes a fine room for hogs—if one wants to keep hogs at the barn—which I do not.

Schutes are provided through the main floor, for hay and feed for the basement. Put railings around these schutes.

Everything is compact and convenient. Stock may be fed, or fastened in, or let out without going around in the stalls at all. There is no wasted room. Large hay doors are provided at either end for horse hay fork or for pitching in.

It is the most satisfactory all 'round barn, to me, that I have seen—but that may be because I planned it—to suit my own ideas and needs.

For convenience in feeding, the floor of the extension part, containing the horse stalls, may be dropped about a foot below the floor level of the main part of the barn. I did that and I like it.

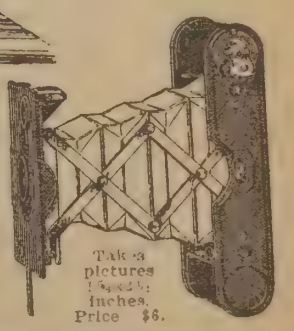


The top story floor may be made to cover only the main floor passageway, in front of the horse mangers, or a little more, if desired, the interior arrangement of this main part of the barn being, as previously stated, adaptable to the individual notions and requirements.

More Stock on Forest Range.

Approved grazing allowances for the national forests during the coming season provide for the pasturing of 8,400,155 sheep, 2,120,145 cattle and horses, and 54,680 swine. These figures, compared with those of last year, represent an approximate increase of 111,000 cattle and horses and a decrease of about 200,000 sheep. Grazing experts of the forest service figure that for purposes of range allotment one cow is equal to five sheep. Consequently the increase of 111,000 cattle and horses is held to be equivalent to a net increase of 355,000 sheep, or of 71,000 cattle, over the total number of stock grazed last year.

Kodak Pictures Will Sell Your Poultry and Live Stock



Send your prospective customer a kodak picture of your poultry and other live stock.

He can see what he is buying and nine times out of ten, if he is in the market, a sale can be readily effected. A kodak picture tells your story better than the written or printed word. But there are many other uses for the kodak on the farm, and as every kodak is now autographic you can date any picture that you take. This autographic feature is now obtainable on any kodak that we sell without additional cost to you; so do not buy an old style camera. The new kodaks are simple to operate and take perfect pictures any day in the year.

This Simple Vest Pocket Autographic Kodak

with Meniscus Achromatic Lens and Kodak Ball Bearing Shutter is very handy and the most popular for small pictures. A roll of films, capacity eight exposures, for this Vest P. A. Kodak costs only **20c.** Developing only **10c** per roll. We give a book of instructions with any kodak or Brownie camera that you buy here. It tells how to take the best kind of pictures in the home and on the farm.

Takes pictures 2½x4½ inches. Price $6.

This store is the Complete Kodak Agency of the Northwest—all the latest models carried in stock—Kodaks $6.00 to $106. Brownie Cameras, $1.25, $2.00 and more.

The finest and most complete **Developing, Finishing** and **Enlarging Plant** is here in Spokane and all **mail orders** are promptly filled. Spokane is the kodak center.

Send for the illustrated booklet, "Kodak on the Farm," mailed Free, before June 11.

Mites on Chickens

The warm weather brings out great armies of chicken mites. They come from eggs laid by other mites, and it requires a warm temperature to hatch them. Millions of them are now being hatched every day. Poultry-keepers who wish to do their "bit" for the food campaign, can do nothing better than make war on the mites. It will mean more eggs and more food for the consumers and more profit for them.

Look for mites first on the roost perches. They do not bother the fowls during the day but attack them at night on the roost. They gorge themselves with blood from the hen, and crawl back to their hiding places, mostly on the underside of the perches. Rough, unplaned perches offer better hiding places and breeding ground than planed perches. They will also be found on the walls at the ends of the perches, and if not destroyed they will soon be found all over the interior of the house, especially in the cracks or where the dust accumulates. They will also be found on the droppings boards. The nests must also be carefully watched.

There are many ways of killing the mites. Crude carbolic acid with kerosene, one part of the former to three of the latter is an effective spray or paint. Creosote is also effective. Crude petroleum mixed with kerosene one part to four of the crude oil is also good. Among the commercial articles, carbolineum, kreso dip and zenoleum are satisfactory.

Farmers' bulletin 801, United States department of agriculture recommends the following: "Of the several materials that have proved effective, one of the so-called wood preservers, consisting of certain coal-tar products, known as acthracene oil with zinc chlorid added, has given particularly good results. Its repelling power lasts for months. The cost is about $1 a gallon, but twice the quantity may be obtained by reducing with equal parts of kerosene."

Thorough spraying or painting with one of these remedies will rid the poultry house of the mites. After that it will usually be sufficient to make the application to the roosts and nests only. This should be done whenever there is a sign of mites. The spray or paint should be applied early in the day so that it will be dry before the fowls go to roost.

Swat the mites and add to the food supply.

J. D.

Chicks Dying in the Shell.

To the Editor: "To prevent little chicks dying in the shell dip the eggs in warm water three or four days before and again the day that they are to hatch."—Maud Merriam, St. Joe, Idaho.

This will help some in incubators that have considerable ventilation, but it will be better to keep moisture in such machines throughout the hatch. A pan of water or moist sand under the egg tray is the best way to furnish the moisture. As to the amount of moisture required the amount of ventilation the particular machine has should determine.

Saves the Waste.

Some milk is wasted in most families. Skim milk, buttermilk and sour milk is thrown away. Whether sour or sweet, milk is one of the best feeds for chickens. Why not save every pint of it? Those who have no chickens should save it for those who have. Give it to the chicks or hens to drink or mix it in a bran mash. Milk is rich in lime and phosphorus, and puts strength and vigor into the chick.

Against Late Turkeys

C. M. Wilson, a turkey raiser, located a few miles north of Caldwell, is pronounced against late turkeys. He says that late birds are not a success, and he, based upon his own experience, would never hatch anything later than June 10, and that May 1st turkeys will add five pounds more than June 1. The poor stuff in his flocks last season were all late birds.

He has not found the artificial brooder a success with turkeys. They easily smother, and do not seem as thrifty. He would not give over 19 eggs to the hen for hatching, and especially cautions against overfeeding the young the first month; also against letting the youngsters range by the irrigation ditches. Too many of them are liable to drown.

A. E. G.

Preserving Eggs.

The Lime Method.—Some experiments have shown that the lime method gives as good results as waterglass for preserving eggs, and it is much cheaper. Dissolve a pound of lime in five gallons of water. Some authorities say two pounds of lime. What is wanted is a saturated solution of lime, or as much lime as the water will hold in suspension. Stir thoroughly and let settle. Then pour off the clear liquid into a wooden or earthen jar or tub. Then put the eggs in each day as they are gathered, the fresher the better. The eggs must be kept covered with the liquid. When filled with eggs to within an inch of the top of liquid, cover with coarse muslin, and spread over it a paste of lime to exclude the air. Keep the eggs in the coolest place in the basement.

Feeding Lawn Clippings.

"How much green food in the form of lawn clippings do you advise to feed chickens? I have access to more than they would eat if given nothing else." D. H. Erickson, Mount Vernon, Wash.

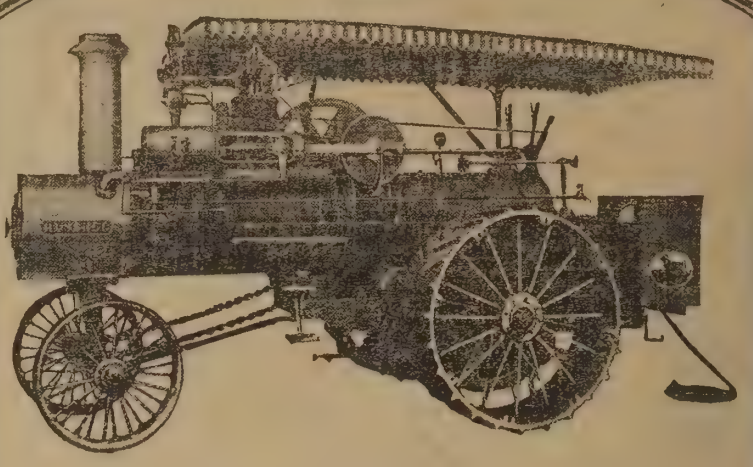
The answer to that is easy. Give them all they will eat every day. It will not do to starve them for several days then give them all they will eat. Give it to them regularly and they will eat just what they want every day. No other green food will be necessary. Feed it when fresh cut. They will not eat as much when it is dry or wilted.

J. D.

Kale for Chickens.

If you have not yet planted some kale for use of the chickens in the summer and early fall it is not too late yet. Nothing will pay a better investment than the planting of kale for poultry. It should have been planted in March or April for summer use, but if it hasn't been done it may be planted now for late summer use. Then plant some seed to make plants for transplanting in July for the winter supply of kale. More kale will mean thousands of dozens of eggs from the hens of western Washington and western Oregon.

J. D.



Railroads Will Help.

In a circular letter to all employes of the Oregon Short Line, Union Pacific system M. V. Platt, vice president and general manager, called their attention to the important matter of food preparedness, saying: "I would offer the following suggestion as indicating practical ways in which you may assist in this matter: First, by planting a garden on your own ground, if you have any, otherwise on railroad right of way where suitable, or on vacant lots you might lease for the purpose; second, by urging your neighbors to plant gardens; and, third, by taking up with your commercial clubs or other organizations and urging upon them the desirability of organizing within the limits of their community a concerted plan for carrying on this work. If the railroad company can be of assistance in providing help or giving advice it will be pleased to do so to the fullest possible extent through its various representatives."

Reports Splendid Results.

Mrs. H. J. Cortner and Mrs. Lowery of Payette, Idaho, who advertised mammoth bronze turkeys in The Farmer the past winter, report splendid results. They advertised in seven papers, including one other farm journal, yet fully 90 per cent of their inquiries and practically all their sales were made through The Farmer. They sold over $670 worth of turkeys in Idaho, Oregon, Washington and Montana. The Cortner ranch has been sold, and the ladies have sold their turkeys to C. L. Haworth of Boise. Mrs. Cortner's turkeys have a reputation all over the northwest for size and quality, and Mr. Haworth is fortunate in securing them.—H. A.

Why Should I Spray?

The following unique way of presenting excuses given by growers for not spraying is from the pen of V. I. Safro, who was formerly entomologist at the Oregon Agricultural College and also connected with the California Experiment Station before taking up his work with the Tobacco Products people:

Excuse: My neighbors don't spray, why should I?

Answer: A very frequent excuse. It has as much logic as though the grower were to say, "My neighbors all have the measles, why shouldn't I?" It is the progressive grower in every community who points the way and if your neighbors are not progressive, bring them up to your heights rather than go down to their level. Competition is a factor in agricultural production as well as in other lines of endeavor and the grower who calls to his assistance all possible factors that will help him to put out a larger or better product than his neighbor, will reap the benefit of his progressiveness.

Excuse: I have been growing crops for quite a few years and have never sprayed and yet have made money each year.

Answer: The fact that a grower has made money, notwithstanding his neglect in spraying, is no indication whatever that he might not have made more had he adopted modern methods. To cease activity merely because one is making money or making a profit on his product is as illogical as accepting just any price offered for his product, so long as that price is above the cost of production rather than attempting to obtain the highest price the market affords.

Excuse: I have lost money on my crops. Had I sprayed it would have involved a still greater expense.

Answer: Spraying as an essential part of farm or orchard management passed out of the experimental stage into the practical a long time ago. The slight expe
following up-to-date spraying recommendations brings its returns in many ways and in many times
cost of the item itself. The grade of product is improved, the yield is increased, the plants become hardier. In the case of fruit trees, the health, and therefore the value of the trees in later years, is not impaired as it may be if permitted to be infested with insects or diseases.
the difference between profit and loss may be attributed to proper use of sprays.

Excuse: My trees are not in bearing, therefore it is not necessary to spray.

Answer: In the spraying of trees in orchard and grove, it is not alone the immediate crop that receives the benefit of the spray, but the whole tree. A fruit tree is supposed to become more valuable each year and any care taken of it in its younger period of development, will u.
edly have its effect when the tree becomes self-supporting. Very often the injury done by insects does not stop in one year, but may run through a series of years. The potential value of young trees not yet bearing and the expense involved in bringing them to the point where they become self-supporting, and, profitable, makes it all the more important that they be sprayed properly taken care of in their younger period of development.

Growers who are inclined to neglect spraying because their trees are too young to bear should keep this point in mind: In spraying a young tree in 1917, they are spraying the tree they expect to

of five, 10 and 20 years hence, and the slight expense involved in additional care is certainly worth while.

Excuse: I have noticed the insects, but they don't cause much damage to my crops.

Answer: The grower here fails to take into consideration that the greatest damage done to crops by insects, particularly in orchards, is the decreased yield and the checking tree growth; in other words, the grower does not notice the fruit that is not there; or he doesn't notice the growth and vitality and ability to bear fruit is lower than they would have been had the trees been protected; or, and this is most often the true explanation, the grower has no means whatever of comparing his crops, unsprayed, with a similar crop grown under similar conditions, but sprayed.

Too many growers consider that a certain percentage of culls is "natural" and that an "extra fancy" grade of fruit must necessarily occur to a very slight per cent. In this connection we are reminded of the story of the city boy who was brought up on storage eggs. When he visited a farm in the country and was served with fresh eggs, he complained that he couldn't eat them because they had no flavor.

Excuse: The total crop this year will be a big one and prices probably low; therefore why should I try to increase my yields or grade of fruit by spraying?

Answer: Whether the size of the total crop is large or small, whether the prices are good or bad, it is certainly to the interest of the individual grower to put out as large a yield and as high a grade as possible. The fact that the crop over the country is very large and the prices low, will not be altered by the individual grower cutting down his own output. Some growers take the following attitude and it is a good one: Win or lose, it is best to spray; if for no other reason than to build up the tree, thereby assuring its continuous normal, healthy growth and insuring against insect and disease epidemics.

THE FARM GARDEN

ARTICLE 14.

Growing Beets

Beets make one of the valuable garden crops for both summer and winter use. In many localities of the northwest they can be grown as a succession crop, but require comparatively long growing season to mature two crops.

Beets should be planted in rows some 15 to 18 inches apart for hand cultivation, or 30 to 36 inches apart for horse cultivation. They should stand from three to six inches apart in the row after thinning. They should be planted about one inch deep in a soil not too heavy, and one in which the moisture can be reasonably well conserved.

The young beets make an excellent kind of greens, and the thinnings may be made use of in this way. Many cooks prepare them by using the root as well as the top in preparing the greens.

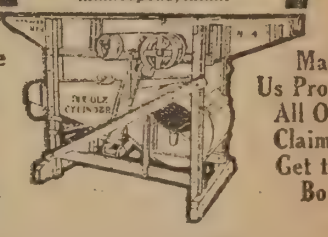
The round turnip type of beet is best for early and summer use, while the long varieties are best for winter keeping. They must not be allowed to stand in the ground during the winter like parsnips, but must be harvested and stored away in a dry, cool, but not frosty place. Some persons prefer the sugar beet to the ordinary red kind. One may be grown as readily as the other and stored with equal success.

Will Move to Palouse Farm.

E. L. Meeks, who has been a resident of the Harvard district for a number of years, has leased the Robinson farm south of Palouse, Wash., and will move his family to that place at once, and make preparations to put in a spring crop.

I Will Make $500.00 Easy This Fall With—

"—our 20 x 32 Owens Bean and Pea Thresher. Threshed 60 bushels an hour" — T. A. Cox, R. R. No. 1, Midland, Mich. Takes vines just as they come off the field. Separates peas—beans without splitting. Cuts up vines into splendid fodder. Adds 50% to bean or pea grower's profits.



OWENS Double Cylinder
Bean and Pea Thresher

In 4 sizes—a size for every size farm. Pays for itself over and over again in one season. Guaranteed not to split the seed—and to take all from the vines. Saves all waste. Sold on easy payments if you desire.

A Little Town With a Big Chautauqua

Washington Village With Three Hundred Inhabitants Successfully Holds Six-Day Affair

Three years ago the village of La Crosse, Whitman county, Wash., won for itself the distinction of being the smallest town in the United States to hold a six-day Chautauqua. It continues to hold the Chautauqua, but it can no longer claim the record it won that first year, for it has doubled in population since them.

This story is told not to exploit La Crosse nor to entertain the reader, but rather to indicate to a hundred or so other small towns in the northwest how they can do likewise—provide a great, entertaining and educational attraction for their people and the country folk around them, stimulate the community spirit and bind town and country together in a way that modern progression requires.

How to Go About It.

Somebody must grasp the idea before a community can have a Chautauqua. At La Crosse that man was E. S. Knowlton, one of the leading business men of the little town, which then had a population of about 300 souls. Mr. Knowlton had heard that Chautauquas were a good thing, and it sounded reasonable to him. So he confided the idea to his friends.

Most of them were willing. Quite a few really liked the suggestion. Eighteen believed in it and joined with him in the formation of an association, making him secretary-treasurer. They also signed with him a contract with a Chautauqua company for a six-day program to be furnished on a guarantee of $1000, which meant a personal guarantee of $52.65 for each of the 19 signers.

The dates were fixed for a week just before the Fourth of July, the celebration of which was dispensed with in view of the greater event.

Twelve Hundred Attend.

The company came and conquered. Notwithstanding that the population of the town was only 300, one of the programs drew an attendance of 1200 persons, four times the population of the town itself. The people for 25 miles around came in and were treated to a series of 12 high-class entertainments, some humorous, some musical, some heavy, but all both entertaining and educational. There were comic lectures, musical programs (including one 24-piece band) and addresses by men of national reputation.

The 19 signers of the guarantee paid a deficit of $2 each, the net receipts totaling $962.

But La Crosse and the community about it were aroused. The Chautauqua was contracted for a second season. Whereas there were 19 persons willing to sign the guarantee the first year 40 willingly signed up the second, and whereas there was a deficit of a few dollars the first year, there was a small profit the second.

This year the third series of entertainments is contracted for, and there are 100 men guaranteeing the $1000, of which number 60 are farmers living within a radius of 25 miles of La Crosse.

The first year the committee worked hard to sell the allotted number of season tickets. Last year they did not have to work much. This year the people are hunting up the members of the committee and purchasing their tickets weeks in advance of the dates—June 28 to July 3.

An Annual Affair.

"La Crosse would not do without its Chautauqua now under any consideration," said Mr. Knowlton to a representative of The Farmer recently. "It is our great annual educational and entertainment feature. It has brought the country and the town together as nothing else could have done.

"I should say that three-fourths of the patronage is by country people who come in for miles around. Many of them come in their automobiles 10 or 20 miles, attend the afternoon performance, return to their chores and are back for the evening entertainment.

"We begin with a rousing number—something strictly entertaining and not too heavy. Gradually we work up till the last couple of days include big educational features, like lectures by such men as Senator Vardaman of Mississippi or Victor Murdock of Kansas This year Senator Burkett of Nebraska is to deliver a lecture. And it is a fact that the people enjoy these larger things even more than the lighter features."

A Lyceum Course Also.

It is hardly fair to say that the Chautauqua is "the" big annual attraction, for each winter a lyceum course is given by one of the big national companies. Its programs are given in the evenings, there being five such entertainments during the winter evenings some two weeks apart. Though less pretentious, the lyceum has proved itself as successful in its field as the Chautauqua, and the people in and about La Crosse would be almost as loath to let a winter pass without it as to have a summer season go by without the Chautauqua. The lyceum course is given for a guarantee of $400, and the patronage assures those who sign the contract that no deficit need be feared.

Mr. Knowlton, who took the leading part in securing the Chautauqua and the lyceum for LaCrosse, told the Farmer that he would be glad to give any community interested the result of his experience in order that such community might undertake to hold like entertainments and make a success of them. Scores of little towns in the northwest could do it, and it is one very practical way to build up the spirit of unity, which is a vital need of so many towns and their surrounding communities.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XIII.

The "old bachelor's" place in society of Eastern Washington of 25 to 35 years ago.

One of the important social "facts" in pioneer eastern Washington of 25 to 30 years ago was the "old bachelor." An old bachelor was not always old—he might by anywhere from 35 to 40 and rarely were they above 45 or 50. Most of these men had come into the new country, took up their claims, and settled down in a small, one-room cabin with a cellar outside. Men greatly outnumbered the women, hence, mating off in pairs was difficult. Occasionally an old bachelor would "go east" and marry a sweetheart of his youth who, in her youth maybe, had married some one else, and had since become a widow. One or two old bachelors of my acquaintance "advertised" for a mate, and got one, and the others profited by their example, and kept clear of this route to connubial bliss.. Among all but the "soft ones" among the bachelors, advertising for a wife was regarded as an indication of idiocy.

A few of the old bachelors married young girls of the neighborhood; but this was regarded as hazardous.

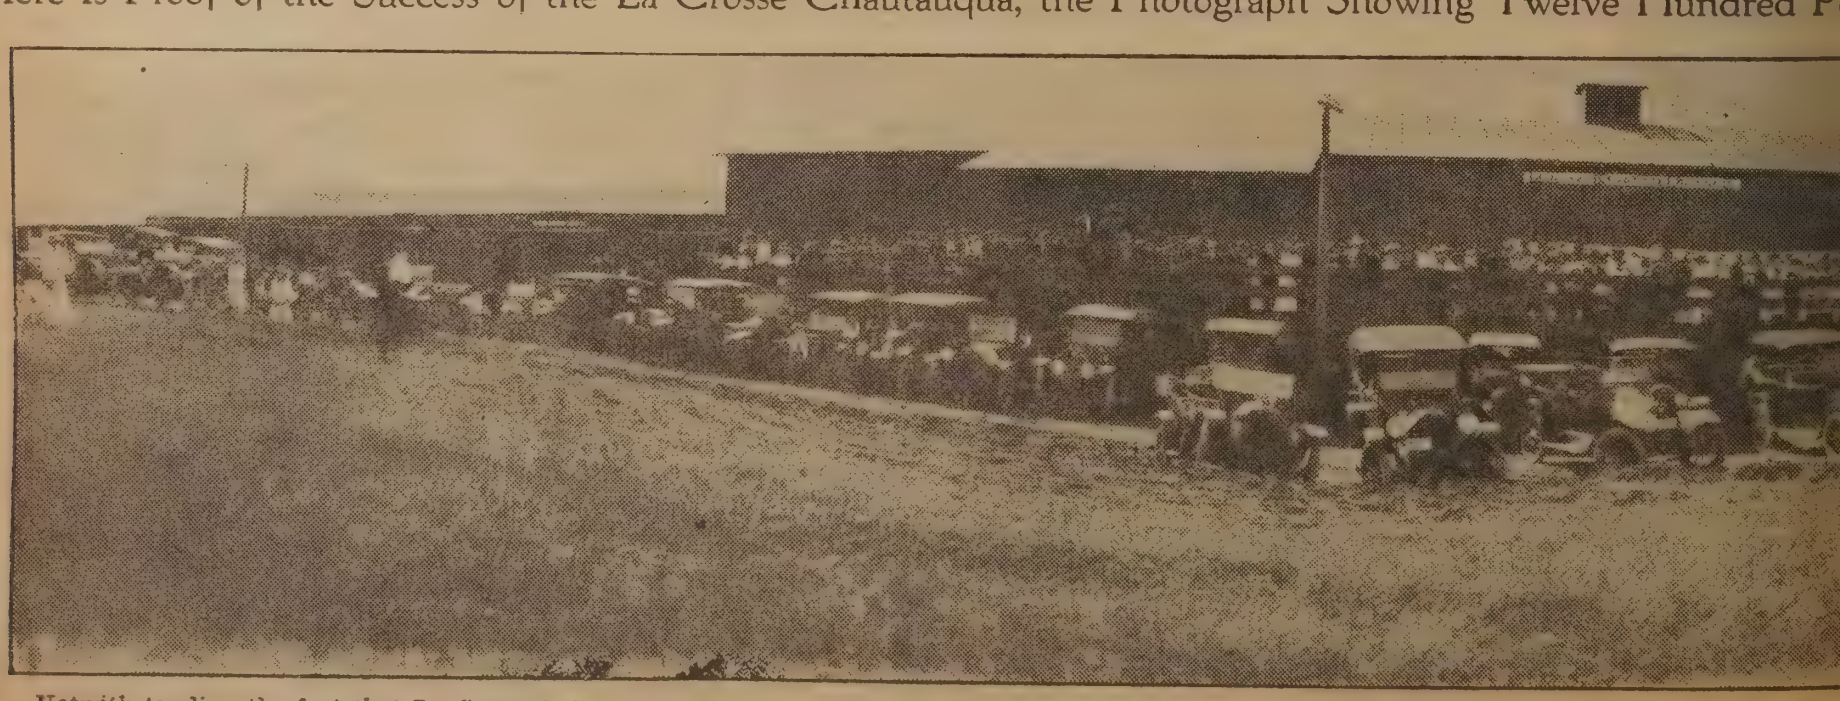
"There's old Dave Binak, going to marry Hettie Williams, and she's just a kid," remarked one of our neighbor women. "Why, he'll soon have one foot in the grave, and she'll still be as spry as a colt, wanting to go to all the dances and things! A fine time she'll have pulling him loose from the fire in cold weather! Mark my words—they won't agree!"

They didnt.

One of our neighbor girls who had been assiduously courted by a bevy of old bachelors and had turned them all down, gave her reason for this wholesale rejection of suitors:

"An old bachelor is a good deal like an outlaw horse that has been lose on the range for 10 years without being corraled," she explained. "Put him in a corral and he'll either smash through or jump over. Put 'blinkers' on him and he'll either balk or kick up. You can't break 'em gentle when they've been loose on the range too long."

One of our bachelor neighbors who was confirmed in the ways of bachelorhood and vowed that he never would marry under any conditions was he whom we called "Missouri Pete." In the space of a few years his nickname by a process of evolution became "Misroury" minus the Pete; and later, simply "Misery." I knew him and greeted him as Misery..



Missouri Pete, that is, Misery, was nicknamed as indicated because he was always complaining about his bad stomach. He was a great reader of patent medicine literature, and in the consumption of patent medicine was simply omniverous. He was always finding a new medicine which was just what his ailing stomach needed. His yard was littered with bottles which he had emptied. Misery must have had a constitution of iron, else he could not have consumed with impnuity, such vast quantities of patent medicine.

Rather late in the period during which I knew him, he had found a medicine which he preferred to all others, and was known as "bull bitters." Bull bitters was not greatly different from that atrocious liquor, "Injun whisky." It may have contained less alcohol, and perhaps was flavored with medicinal bark, herbs, or the like.

Misery scorned whisky. In pioneer Coulee City, the office of the Star Livery barn and Hutton's saloon rivaled each other as social centers of the town, and on many winter days Misery could be found in one place or the other. If any one passed a "bottle" at the stable, or treated the crowd at the saloon, Misery declined, saying his stomach had just been troubling him

Here Is Proof of the Success of the La Crosse Chautauqua, the Photograph Showing Twelve Hundred P

Notwithstanding the fact that La Crosse is in the center of a strictly farming country, the photograph herewith shows no horse vehicle, but auto

All the World's a Stage, and All the Men and Women Merely Players

Chieftains of French Armies

Here are three active war chieftains of the armies of France. General Petain has been named gneralissimo of the armies, with supreme command of all the armies in the field. General Foch, who commanded the French center at the battle of the Marne, has been named to succeed Petain as chief of staff. General Nivelle will have command of certain great army groups. General Joffre remains military adviser to the French war council.

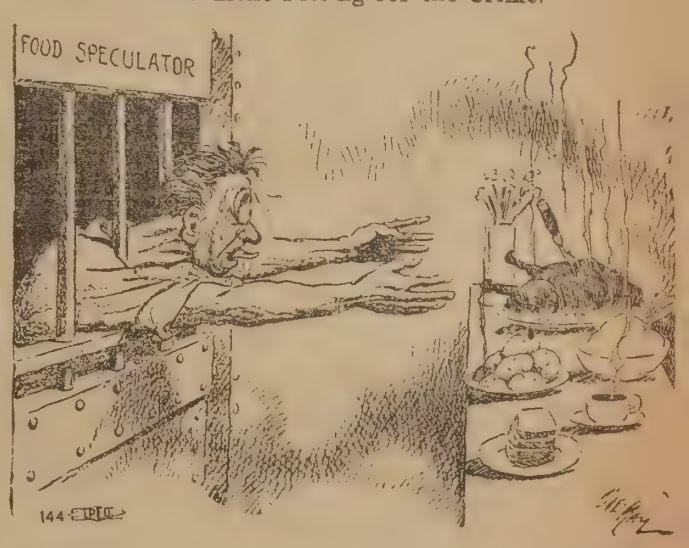
Youngest Licensed Operator

Copyrighted by International.

In the above picture is shown Walter Siddell, Washington's wireless prodigy. He is said to be the youngest licensed wireless operator in the United States. Walter is but 14 years of age, yet he holds a first-class wireless operator's license granted him by the federal government. Since the declaration of war with Germany he has offered his services in this capacity to the war department of the United States.

On Italian Mission.

Copyrighted by International.



Signor Enrico Arlotta, the minister of marine and transportation of the Italian cabinet, is here shown. He is a member of Italy's war mission, which is now in Washington, D. C., for discussions with American officials along the general lines of war cooperation. The scope of the work outlined for the envoys will take into account many peculiar problems which confront the government of Rome.

When They Met as Good Friends

The above photograph was taken in the year of 1910, when Roosevelt was in Germany. On this occasion the ex-president of the United States and the ruler of Germany met as good friends. The picture shows the kaiser and Colonel Theodore Roosevelt reviewing a large body of German troops after a sham battle which was staged for the special benefit of the ex-president of the United States.

Our "Want" Ads Can Help You Get What You Want

Testimony of Others Who Have Used Our "WANT" Ads:

Results From Poultry Ad.

"As to my ad in The Farm Trio, I had splendid results; in fact, more than I could supply."—A. O. Laabs, Coeur d'Alene, Idaho.

17 Poland Chinas Sold in Week.

"It pays to advertise. Sold seventeen last week, all registered stock, for breeding purposes. Nothing cheap about my stuff except the price."—F. P. Farrington.

Sells His Seed Corn.

"I have a great deal of confidence in the Trio as an advertising medium, as I have just had some success in selling some seed corn through the three papers. Enclosed you will find my check for $7.42, covering the ad for January. Please run this ad as per my letter of January 25, through February."—L. F. Courtales, Oroville, Wash.

Ad Sells $1000 Worth of Live Stock.

"We feel more than pleased with the results secured so far through our advertising in your papers. We have sold to buyers in these states to the amount of $1000 in the last four months, every one having mentioned one or another of your papers."—Pomeroy & Son, Scappoose, Ore.

Best for Selling Turkeys.

"Results from my turkey ad in The Farm Trio: Aside from one local order all shipments have been one, two or three birds in a shipment, going to all parts of Washington, Oregon and Idaho, and some to Montana. We have been carrying ads in six or seven weeklies, and can safely say that 85 per cent of our inquiries come from The Farm Trio."—Mrs. H. J. Cortner, Payette, Idaho.

Sells Farm and Raw Lands.

"No doubt it will please you to know that the classified 'want' ad service of your three state papers has been productive of very good results for us. Your papers are bringing us a constant stream of good, live inquiries from all three states, which shows plainly that a good proportion of your subscribers in all sections of Washington, Oregon and Idaho are always on the lookout for promising real estate investments and that they must watch your 'want' ad pages pretty closely for legitimate snaps in farms, raw lands and city property."—J. Melvin Thomas & Co., Spokane, Wash.

Do You Want to Buy or Sell a Farm?

Do You Want to Buy or Sell Live Stock, Machinery, Seed, Poultry?

If you are in the market for any of these, or if you want to find buyers for some of your stock or products, try a "want" ad with us.

Every time your ad is printed in this paper it will also appear on the "want" ad page of the two other big state papers of the Pacific northwest, thus bringing you into communication with thousands of prospective buyers or sellers in every section of Washington, Oregon and Idaho.

Examples showing cost of different sized "WANT" ads inserted in The Washington Farmer, The Oregon Farmer and The Idaho Farmer.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XXI.

Upon our return to England I left Jane down in Suffolk with her uncle, Lord Bolingbroke, having determined never to permit her to come within sight of King Henry again, if I could prevent it. I then went up to London with the two-fold purpose of seeing Brandon and resigning my place as master of the dance.

When I presented myself to the king and told him of my marriage, he flew into a great passion because we had not asked his consent. One of his whims was that every one must ask his permission to do anything; to eat, or sleep, or say one's prayers; especially to marry, if the lady was of a degree entitled to be a king's ward. Jane, fortunately, had no estate, the king's father having stolen it from her when she was an infant; so all the king could do about our marriage was to grumble, which I let him do to his heart's content.

"I wish also to thank your majesty for the thousand kindnesses you have shown me," I said, "and, although it grieves me to the heart to separate from you, circumstances compel me to tender my resignation as your master of dance." Upon this he was kind enough to express regret, and ask me to reconsider; but I stood my ground firmly, and then and there ended my official relations with Henry Tudor forever.

Upon taking my leave of the king I sought for Brandon, whom I found comfortably ensconced in our old quarters, he preferring them to much more pretentious apartments offered him in another part of the palace. The king had given him some new furnishings for them, and as I was to remain a few days to attend to some matters of business, he invited me to share his comfort with him, and I gladly did so.

Those few days with Brandon were my farewell to individuality. Thereafter I was to be so mysteriously intermingled with Jane that I was only a part—and a small part at that I fear—of two. I did not, of course, regret the change, since it was the one thing in life I most longed for, yet the period was tinged with a faint sentiment of pathos at parting from the old life that had been so kind to me, and which I was leaving forever. I say I did not regret it, and though I was leaving my old haunts and companions and friends so dear to me, I was finding them all again in Jane, who was friend as well as wife.

Mary's letter was in one of my boxes which had been delayed, and Jane was to forward it to me when it should come. When I told Brandon of it, I dwelt with emphasis upon its bulk, and he, of course, was delighted, and impatient to have it. I had put the letter in the box, but there was something else which Mary had sent to him that I had carried with me. It was a sum of money sufficient to pay the debt against his father's estate, and in addition, to buy some large tracts of land adjoining. Brandon did not hesitate to accept the money, and seemed glad that it had come from Mary, she, doubtless, being the only person from whom he would have taken it.

One of Brandon's sisters had married a rich merchant at Ipswich, and another was soon to marry a Scotch gentleman. The brother would probably never marry, so Brandon would eventually have to take charge of the estates. In fact, he afterward lived there many years, and as Jane and I had purchased a little estate near by, which had been generously added to by Jane's uncle, we saw a great deal of him. But I am getting ahead of my story again.

The d'Angouleme complication troubled me greatly, notwithstanding my faith in Mary, and although I had resolved to say nothing to Brandon about it, I soon told him plainly what I though and feared.

He replied with a low, contented little laugh.

"Do not fear for Mary; I do not. That young fellow is of different stuff, I know, than the old king, but I have all faith in her purity and ability to take care of herself. Before she left she promised to be true to me, whatever befell, and I trust her entirely. I am not so unhappy by any means as one would expect. Am I?" And I was compelled to admit that he certainly was not.

So it seems they had met, as Jane and I suspected, but how Mary managed it I am sure I can not tell; she beat the very deuce for having her own way, by hook or by crook. Then came the bulky letter, which Brandon pounced upon and eagerly devoured. I leave out most of the sentimental passages, which, like effervescent wine, lose flavor quickly. She said, in part:

"To Master Brandon:

"Sir and Dear Friend, Greeting: After leaving thee, long time had I that mighty grief and dole within my heart that it was like to break; for my separation from thee was so much harder to bear even than I had taken thought of, and I also doubted me that I could live in Paris, as I did wish. Sleep rested not upon my weary eyes, and of a very deed could I neither eat nor drink, since food distasted me like a nausea, and wine did strangle in my throat. This lasted through my journey hither, which I did prolong upon many pretexts, nearly two months, but when I did at last rest mine eyes for the first time upon this King Louis' face, I well knew that I could rule him, and when I did arrive, and had adjusted myself in this Paris, I found it so easy that my heart leaped for very joy. Beauty goeth so far with this inflammable people that easily do I rule them all, and truly doth a servile subject make a sharp, capricious tyrant. Thereby the misfortune which hath come upon us is of so much less evil, and is so like to be of such short duration, that I am almost happy—but for lack of thee—and sometimes think that after all it may verily be a blessing unseen.

"This new, unexpected face upon our trouble hath driven the old gnawing ache out of my heart that I love to be alone, and dream, open-eyed, of the time, of a surety not far off, when I shall be with thee. * * * It is oft-times sore hard for me, who have never waited, to have to wait, like a patient Griselda, which of a truth I am not, for this which I do so want; but I try to make myself content with the thought that full sure it will not be for long, and that when this tedious time hath spent itself, we shall look back upon it as a very soul-school, and shall rather joy that we did not purchase our heaven too cheaply.

"I said I find it easy to live here as I wish, and did begin to tell thee how it was, when I ran off into telling of how I long for thee: so I will try again. This Louis, to begin with, is but the veriest shadow of a man, of whom thou needst have not one jealous thought. He is abed of sickness most of the time, of his own accord, and if, perchance, he be but fairly well a day or so, I do straightway make him ill again in one way or another, and, please God, hope to wear him out entirely ere long time. Of a deed, brother Henry was right; better had it been for Louis to have married a human devil than me, for it maketh a very one out of me if mine eyes but rest upon him, and thou knowest full well what kind of a devil I make—brother Henry knoweth, at any rate. For all this do I grieve, but have no remedy, nor want one. I sometimes do almost compassionate the old king, but I can not forbear, for he turneth my very blood to biting gall, and must e'en take the consequences of his own folly. Truly he is wild for love of me, this poor old man, and the more I hold him at a distance the more he fondly dotes. I do verily believe he would try to stand upon his foolish old head, did I but insist. I sometimes have a thought to make him try it. He doeth enough that is senseless and absurd, in all conscience, as it is. At all of this do the courtiers smile, and laugh, and put me forward to other pranks; that is, all but a few of the elders, who shake their heads, but dare do nothing else for fear of the dauphin, who will soon be king, and who stands first in urging and abetting me. So it is easy for me to do what I wish, and above all to leave undone that which I wish not, for I do easily rule them all, as good Sir Edwin and dear Jane will verify. I have a ball every night, wherein I do make a deal of amusement for every one by dancing La Volta with his majesty until his heels, and his poor old head, too, are like to fall off. Others importune me for those dances, especially the dauphin, but I laugh and shake my head and say that I will dance with no one but the king, because he dances so well. This pleases his majesty mightily, and maketh an opening for me to avoid the touch of other man, for I am jealous of myself for thy sake, and save and garner every little touch for the. * * * Sir Edwin will tell you I dance with no one else and surely never will. You remember well, I doubt not, when thou first did teach me this new dance. Ah! how delightful it was! and yet how at first it did frighten and anger me. Thou canst not know how my heart beat during all the time of that first dance. I thought, of a surety, it would burst; and then the wild thrill of frightened ecstacy that made my blood run like fire! I knew it must be wrong, for it was, in truth, too sweet a thing to be right. And then I grew angry at thee as the cause of my wrong-doing, and scolded thee, and repented it, as usual. Truly didst thou conquer, not win me. Then afterward, withal it so frightened me, how I longed to dance again, and in no way stay myself from asking. At times could I hardly wait till evening fell, and when upon occasion thou didst not come, I was so angry I said I hated thee. What must thou have thought of me, so forward and bold! And that afternoon! Ah! I think of it every hour, and see and hear it all, and live it o'er and o'er, as it sweeter grows with memory's ripening touch. Some moments there are that send their glad ripple down through life's stream

(Continued on the following page.)

Don't Let Pests Destroy Crops

Diligent Warfare Against Insects and Fungi Is Needed

By T. O. MORRISON.

At this time, when so many of us are urging the planting of increased acreage of the various staple food crops in order to secure a plentiful supply of food for another year, I believe that many of us may probably overlook some of the very important factors that enter into the essentials for growing a maximum crop on the ordinary acreage that has been heretofore planted.

In this connection I am thinking of the great loss due annually to the ravages of insects and fungi, and that much of this loss could be averted if greater care were exercised on the part of the planter. Think what it would mean to wheat ranchers in crop production and wealth if the loss from smut could be averted or the total loss reduced by one-half!

Imagine, if you can, what would be the result if every one planting a crop of any kind, would adopt and use every possible precaution in the selection of the seed and in treating it, to be assured that the disease would not be transmitted to the crop through this means. How many potato growers in this great potato growing state observe, and how many ignore the principles of disease control by examining their seed for disease. If there is any one crop wherein disease control can be marked up against the cleanliness or the diseased condition of the seed planted, it is our common old standby, the potato crop.

The fusarium wilt disease of potatoes can be detected by clipping off the stem end of every potato to be planted, and if potatoes infected with this disease are planted it is almost an absolute certainty that the new crop will be diseased. Great loss is sure to follow in storage as a result of this disease, and will mean that thousands of tons will spoil and be unfit for human food. Therefore in order to be assured of a good supply of potatoes next fall, that will stand up in storage, every planter should most diligently inspect his seed and discard any potatoes infected with fusiarum wilt.

The harmless looking rhizoctonia disease (dirt that won't rub off) does not interfere with the keeping quality of the stored potatoes. Its serious effects, in seasons such as the coming one, will be on account of its peculiar characteristics of attacking the buds of the root stems where it prevents the development into potatoes of a certain per cent of buds that would ordinarily develop into potatoes.

In reducing the crop tonnage rhizoctonia becomes one of our most effective enemies in times like this when it is the total amount of food that every one is clamoring for.

Horses for the First Million Men

By E. L. POTTER.

Wayne Dinsmore of the Percheron Society of America has compiled some interesting figures on the equine requirements of an army of 1,000,000 men. A regiment of cavalry requires 1728 horses and mules, a regiment of infantry 212 horses and mules and a regiment of artillery 1189. It is generally understood that there will be about 500 regiments of infantry, 125 of artillery and 100 of cavalry. In view of the great use of artillery in modern warfare the proportion of artillery may be increased over that estimated. It might be assumed that cavalry is less used in Europe and that less than the usual proportion might be used in the present emergency. We can not forget, however, the Mexican situation and the necessity for preparedness in that direction. Every one will understand that cavalry is the big need on the Mexican border and that infantry and 16-inch artillery would hardly get much chance to fight a Mexican bandit. Mr. Dinsmore therefore figures that it will require about 350,000 horses and mules in addition to what the army already has to equip the first million men.

Something of what this means is shown by the fact that we have exported since the beginning of the war and up to March 1, 1917, a total of 1,142,118 horses and mules, in other words it will take to equip this million men of our own one-third as many horses as we have sent to Europe. As compared with the total number of horses in the United States the army will require one out of every 60.

The present method of buying by contract is especially expensive and unsatisfactory, more so for the United States than for the allies. Contractors can never be certain just what horse will be accepted, and every one rejected means a heavy loss. There is always a sentiment against buying rejected horses, and they must be sacrificed. Furthermore, the expenses of buying and shipping has been entirely wasted. The proper way would be to buy these horses direct from the producers. In this way the moment the horse left the producer's hands he would be directly on the road to the remount stations and no unnecessary expense need be incurred. Of course, contractors' profits would be saved, but that does not amount to much. Some have made big profits and others have had heavy losses. On the average, dealers and contractors have only made wages and expenses, so there would be no saving on that score.

The big saving would be the waste of buying and handling rejects. It has been a common practice for contractors to ship all horses rejected at one inspection point to another inspection and try to pass them there. A considerable number of rejects will pass under the eye of another officer. This may be repeated several times.

Another waste is the uncertainty of the number the United States inspectors will take. Buyers often come in with a lot of good horses well bought, only to find inspections temporarily closed down. He must either sell elsewhere and at a loss or must wait on heavy expense until inspection. In either case his loss is no one else's gain.

Another thing to be considered is that the government has never paid a profitable price for horses. Even in war times when horses are needed most the prices seldom justify raising horses for that especial purpose. Today horses are the cheapest animals on the farm. Good draft horses would have to be worth $700 a head to be in line with sheep or hogs. A common grade sow is now worth the price of a cavalry horse.

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from the preceding page.)

to the verge of the grave, and truly blest is one who can smile upon and kiss these memory waves, and draw from thence a bliss that never fails. But thou knowest full well my heart, and I need not tease thee with its outpourings.

"There is yet another matter of which I wish to write in very earnestness. Sir Edwin spoke to me thereof, and what he said hath given me serious thought. I thank him for his words, of which he will tell thee in full if thou but importune him thereto. It is this: The Dauphin, Francis d'Angouleme, hath fallen desperately fond of me, and is quite as importunate, and almost as foolish as the elder lover. This people, in this strange land of France, have, in sooth, some curious notions. For an example thereto: No one thinks to find anything unseeming in the dauphin's conduct, by reason of his having already a wife, and more, that wife the Princess Claude, daughter to the king. I laugh at him and let him say what he will, for in truth I am powerless to prevent it. Words can not scar even a rose leaf, and will not harm me. Then, by his help and example I am justified in the eyes of the court in that I so treat the king, which otherwise it were impossible for me to do and live here. So, however much I may loathe them, yet am I driven to tolerate his words, which I turn off with a laugh, making sure, thou mayest know, that it come to nothing more than words. And thus it is, however much

The widdowed queen was a prisoner in her own apartment.

I wish it not, that I do use him to help me treat the king as I like, and do then use the poor old king as my buckler against this duke's too great familiarity. But my friend, when the king comes to die then will I have my fears of this young Francis d'Angouleme. He is desperate for me, and I know not to what length he might go. The king can not live long, as the thread of his life is like rotten flax, and when he dies thou must come without delay, since I will be in deadly peril. I have a messenger waiting at all hours ready to send to thee upon a moment's notice, and when he comes waste not a precious instant; it may mean all to thee and me. I could write on and on forever, but it would be only to tell three o'er and o'er that my heart is full of thee to overflowing. I thank thee that thou hast never doubted me, and will see that thou hast hereafter only good cause for better faith. MARY, Regina."

"Regina!" That was all. Only a queen! Surely no one could charge Brandon with possessing too modest tastes.

It was, I think, during the second week in December that I gave this letter to Brandon, and about a fortnight later there came to him a messenger from Paris, bringing another from Mary, as follows:

"Master Charles Brandon:

"Sir and dear friend, greeting—I have but time to write that the king is so ill he can not but die ere morning. Thou knowest that which I last wrote to thee, and in addition thereto I would say that although I have, as thou likewise knowest, my brother's permission to marry whom I wish, yet as I have his one consent it is safer that we act upon that rather than be so scrupulous as to ask for another. So it were better that thou take me to wife upon the old one rather than risk the necessity of having to do it without any. I say no more, but come with all the speed thou knowest. MARY."

It is needless to say that Brandon started in haste for Paris. He left court for the ostensible purpose of paying me a visit and came to Ipswich, whence we sailed.

The French king was dead before Mary's message reached London, and when we arrived at Paris, Francis I. reigned on the throne of his father-in-law. I had gussed only too accurately. As soon as the restraint of the old king's presence, light as it had been, was removed, the young king opened his attack upon Mary in dreadful earnest. He begged and pleaded and swore his love, which was surely manifest enough, and within three days after the old king's death offered to divorce Claude and make Mary his queen. When she refused this flattering offer his surprise was genuine.

"Do you know what you refuse?" he asked in a temper. "I offer to make you my wife—queen of fifteen millions of the greatest subjects on earth—and are you such a fool as to refuse a gift like that, and a man like me for a husband?"

"That I am, your majesty, and with a good grace. I am queen of France without your help, and care not so much as one penny for the honor. It is greater to be a princess of England. As for this love you avow, I would make so bold as to suggest that you have a good, true wife to whom you would do well to give it all. To me it is nothing, even were you a thousand times the king you are. My heart is another's, and I have my brother's permission to marry him."

"Another's? God's soul! Tell me who this fellow is that I may spit him on my sword."

"No! no! you would not: even were you as valiant and grand as you think yourself, you would be but a child in his hands."

Francis was furious, and had Mary's apartments guarded to prevent her escape, swearing he would have his way.

(To be continued in the next issue.)

Necessary to Disk

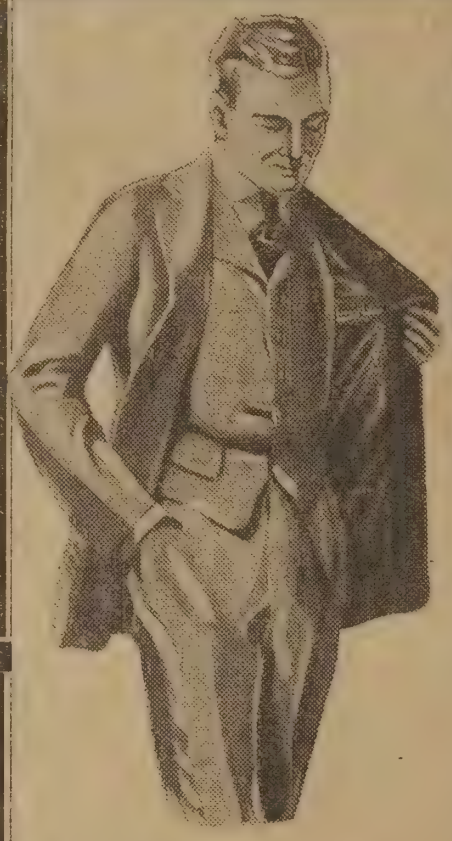
To the Editor: Should alfalfa which has been infested with bluegrass or other grasses be disked now, or is there a better treatment?

MRS. C. H. P.

Leonard Hegnauer, extension specialist in soils and crops at the state college of Washington, answers the above question as follows:

Where bluegrass and other grasses are getting into alfalfa, it is necessary to disk or spring tooth the alfalfa in order to free it from these grasses. This disking might well be done early this spring as soon as the ground is in condition to work. It must not be done, of course, as long as the ground is wet, since if disking is done at this time the ground will bake and the alfalfa will be injured rather than benefitted by the treatment. Thoroughly working the ground in this way will greatly lessen the danger from weeds and grasses and the cultivation will help to strengthen the alfalfa plants and improve the land. If danger from weeds continues, disk the alfalfa again after the first cutting.

To Preserve Harness.



Harness leather can not be neglected without injury that lessens its durability. It should be washed and oiled frequently. The washing should be done in tepid water, with a neutral soap and a sponge or stiff brush. After rinsing in clean tepid water the harness is hung up to drain a little while before oiling.

For driving harness neatsfoot or castor oil is best, but for heavy harness there may be some tallow in the oil. The applications should be light for driving and liberal for heavy harness. The oil, warm to the hand, is rubbed thoroughly into the deather while it is still wet from the washing. Excess oil which the leather is unable to take up should be removed with a clean, dry cloth.

Sheep Sheds Finished.

William Hoggard has just finished building five large sheep sheds on the Stanfield ranch in the sand west of Standfield, Ore. These sheds are for use in the shearing time. They are 144 feet long by 16 feet wide.

$25 Value Suit or Overcoat For $15

ORDER YOUR CLOTHES BY MAIL

Our new mail order department brings our immense stock of ten thousand suits and overcoats direct to your home. It is now possible to purchase from us at the same low price and with the same guarantee of fit and service as the thousands of our customers in the city.

Save $10

We Pay Delivery Charges Anywhere

Buy your clothes the modern upstairs way, the money-saving way. Ten thousand suits to select from—blue serges, pencil stripes, clay worsteds, tweeds, cassimeres, velours—any fabric you may fancy, all hand tailored, at a saving of $10.00 to you.

Selling clothes upstairs on the second floor is a radical change from the old way—the low rent, the inexpensive fixtures, the cash selling plan and the fact that we are willing to accept a small profit—these are the reasons why we are able to save $10 to every purchaser.

Thousands of men in the northwest have taken advantage of our selling plan and proven to themselves that they save money—you can do the same.

Understand Others

What is the quotation or what are the words which have helpld you in the journey of life? Send it to the editor of The Farmer and let it help another.

To the Editor: I am glad to see your request for quotations or words which have helped in the journey of life. Mottoes, I believe, have helped to mold many a life. They have been very influential in my own. Some one has said: "A high ideal crystallized into a motto and constantly held up before a young man has often determined a whole destiny." "Our motto should not be 'Forgive one another,' but 'Understand one another.'" This motto has given me the key to solve many misunderstandings, by tracing effects back to their causes, looking more deeply into human nature. I find there is seldom any cause or need of forgiveness if we "understand our brother."

Another quotation which has worked well with the one just mentioned is: "More love is the great need of mankind. A pure affection concentric, forgetting self, forgiving wrongs and forestalling them, should swell the lyre of human love,"—M. B. Eddy.

MRS. IDA M. HART.

Eagle Creek, Ore.

Cottage Cheese Salad.

The first days of spring bring a proper craving for salads and green stuffs. This salad is nourishing and appetizing: To a pint of cheese add two teaspoonfuls of minced onion and a bit of minced pimento, if there is any left from some previous meal; mix well, adding cream or milk and a little butter till of the right consistency. Season with salt and a sprinkling of paprika, and serve on crisp lettuce. This needs no dressing.

Some Simple Recipes.

To make rhubarb pie, skin and cut into half-inch pieces enough rhubarb to make a cupful and a half. Mix three-fourths cupfuls sugar with two heaping tablespoonfuls flour, adding to the mixture one beaten egg. Add to the rhubarb and bake between two crusts. The flour and egg add to the nourishment as well as give body to the watery "pie plant."

To Save Shoes

Shoes should be oiled or greased whenever the leather begins to get hard or dry, according to experts of the U. S. department of agriculture. They should be thoroughly brushed and then all the dirt and mud that remains washed off with warm water, the excess water being taken off with a dry cloth. While the shoes are still wet and warm apply the oil or grease with a swab of wool or flannel. It is best to have the oil or grease about as warm as the hand can bear, and it should be rubbed well into the leather, preferably with the palm. If necessary, the oil can be applied to dry leather, but it penetrates better when the latter is wet. After treatment the shoes should be left to dry in a place that is warm, not hot.

Castor oil is satisfactory for shoes that are to be polished; for plainer footgear neatsfoot, fish oil or oleine may be substituted. If it is desired to make the shoes and boots more waterproof beef tallow may be added to any of these substances at the rate of half a pound of tallow to a pint of oil. The edge of the sole and the welt should be greased thoroughly. Too much grease can not be applied to these parts.

A simple method of making the soles more durable, pliable and water resistant is to swab them occasionally with linseed oil, setting them aside to dry overnight.

Many of the common shoe polishes are harmful to leather. All those which contain sulphuric, hydrochloric or oxalic acids, turpentine, benzine or other volatile solvents, have a tendency to harden the leather and make it more liable to crack.

It is poor economy, too, to wear a shoe with the heel badly worn on one side. This throws the shoe out of shape, and may soon result in its ruin. It is also likely to cause temporary injury to the foot.

Chicken Fat Valuable

Do you throw away the body fat of poultry—big layers of clean, sweet, yellow fat around the gizzard and found elsewhere around the intestines of the chicken? If you do, say specialists of the United States department of agriculture, you are throwing away fat which French housewives consider the finest of fats for making cakes and especially puff paste. In certain seasons in New York and other big cities, this fat is so highly esteemed that it brings as much as $1.10 per pound. So great is the demand for this fat that many people make a business of collecting it from butchers and others who dress poultry before delivering it to customers. Housewives would do well to insist on having it delivered if they buy their poultry dressed. By using chicken fat in cooking they can cut down the amount of fat they must buy for that purpose. To prepare it, try it out in a double boiler, or other vessel set in hot water, until the fat just melts away from the tissues and can be poured off. This fat becomes rancid easily and should be kept cool and covered like butter and used in a very few days. Chicken fat, like goose fat, may be used for shortening in cakes such as spice cake where the seasoning used will mask any flavor which the fat might have. It can also be used for frying the chicken itself or other meats and for warming vegetables.

Happy the man, and happy he alone,
He who can call today his own;
He, who, secure within, can say,
Tomorrow, do thy worst, for I have liv'd today.

—Dryden.

Food Restrictions In Great Britain.

By order of the food controller of Great Britain no cake shall contain more thean 15 per cent of sugar or more than 30 per cent of wheaten flour and no biscuits more than 15 per cent of sugar. Another order prohibits any individual from being served with any meal which begins between the hours of 3 p. m. and 6 p. m. with more than two ounces in the whole of bread, cake, bun, scone or buscuit, except in those places where no customer is charged more than six pence for meal and beverages included and which does not include meat, fish or eggs.

The food controller also has been empowered to take over all flour mills of the United Kingdom which use wheat in the making of flour except those where the output capacity is less than five sacks of flour per hour. By this order these mills pass into the possession of the food controller and are to be carried on according to his directions.

It requires five and seven-eighth yards of 44-inch material for a 36-inch size. The skirt measures about three and one-eighth yards at the foot. Two separate patterns, 10 cents for each pattern.

Ye Have Heard That It Was Said by Them of Old Time

THE SIXTH COMMANDMENT.

"Thou Shalt Not Kill"—Exodus 20:13.

There are no modifying clauses to this commandment. It is plain and short. And yet the Jewish law did not abolish capital punishment, and it allowed for the defense of one's life. The crime of murder has to be punished. A life for a life was the Mosaic law.

If it is wrong—so wrong that a life must be paid for a life—to kill, what can be said of any man or group of men who deliberately plan operations which result in the death of thousands and tens of thousands and more—whole hecatombs of slain? What can be said of the guilt of the men or group of men who regard it as legitimate that wholesale murder be committed on battlefields that some political tenet be established or some selfish policy advanced?

How many lives will some of these gentlemen have to supply to satisfy the stern law of justice?

A world war sweeps bloody pennons over most of the globe today. Men and nations seek to place the blame, and to a certain extent they are probably right; but nobody can nicely weigh and balance degrees of guilt for breaking this commandment in this last war. God alone can do that, and, we may rest assured, he will. Let us be sure he finds our skirts clear. This does not prevent our entrance into the war; as the agency of justice and right we may act as executioners, and protect the peace of others. Our position today is one of uprightness. Let us maintain our attitude of high purpose, and let our share in this war be for ultimate good and blessing to ourselves and our neighbors.

H. H. B.

195 Hogs; Paid $5807.

Herman Rayer of Arco, Idaho, disposed of two carloads of hogs, 195 head, at Salt Lake City, and as payment for same he pulled down a check for $5807.

The hogs were sold to Cudahy Packing company, the new packing plant in Salt Lake City. During his visit there Mr. Rayer attended the international live stock show.

Dear Old Summer's Coming Back.

Dear Aunt Nellie: It made me feel happy today to see papa, my brother and the man that works here go to the field with the horses and plows and the potatoes to plant. It made me think of the dear old summer coming back to us. Buttercups are growing on the hills and the dear little summer birds are singing. I think the meadow lark sings the most beautifully of all the birds. I have read your letters, Aunt Nellie, and to my fancy and I should think every one else's, you write the kindest and nicest letters I have ever read. You never slight one niece or nephew. You are the same to all the children and that is what I certainly like. My favorite book, after the Bible, used to be The Merry Children, but since I am acquainted with the Children's Corner it seems to be the most interesting and pleasant to me, because it tells of so many nice and pleasant things, but sometimes I see some things very sad. We wish those cousins all the best joy and happiness.—Florence Cox, Leahy, Wash.

The Story of a Clever Dog.

Dear Aunt Nellie: For my subject I have chosen, "A Very Clever Dog." One bright morning two little children, Lee and Alice, were sent to the nearby store by their mother to buy some groceries. When they were on their way home they saw some children playing hop scotch. They stopped and watched, set their basket down behind them. A dog sneaked very quietly up and took the basket. When the children found that it was gone they began to cry. It was growing dark so off they started for home. When they got home their mother asked, "How is it that the basket came home before you?" "Do tell us," the eager children cried. "Well it is like this," the mother began, "Mrs. Smith came over with the basket and said her dog had brought it to her place. She has trained her dog to carry her basket. Every time he carries it she gives him a piece of cake." "Did she give him a piece when he carried ours?" "Yes, she did," replied the mother. "Mother, mother," cried Alice, "Please buy that dog from Mrs. Smith so he can pack our basket." 'No, she needs him herself. She has no children to pack her basket and I have." I am 11 years old and in the sixth grade. I am four feet eight inches tall. I have a light complexion and wheigh somewhere in the ninety's. My father is dead. He has been dead for five years last Christmas eve.—John Carslin, Olalla, Wash.

They Earned Their Money Easy.

Dear Aunt Nellie: I like to read the Children's Corner. Lately I have read two letters from our school in The Washington Farmer, but I will write about something else. Only I will say that the Norman school is the best schoolhouse around here.. I will tell you how easy we made money and how we lost it. Ole is 12 years old and I am just three years younger. We started to count the figures in The Washington Farmer but we soon got mixed up.. Then my father started to count them. He got 6959. After awhile my mother thought she too, would get some of that easy money and so she counted the figures and got the same answer as my father did. Of course my father would get first prize and my mother second prize. So we all figured what to do with all that money. I wanted a piano, Ole a flying machine and my father a Ford car. My mother, she too liked to have the piano and the automobile but did not care very much for the flying machine. But we all laughed when we read about the fellow who counted four times and got a different answer every time and then wanted to hang the contest editor.—Carrie Fjerlie, box 621 East Stanwood, Wash.

Bible Is the Book of All Books.

Dear Aunt Nellie: Of the three subjects, I believe "My Favorite Book" is the best. I have looked in the Children's Corner every time to see if I could find a cousin of my own age and the same birthday. Ruth Marie Eaton is in the same grade as I am. She is the same age and we were born on the same day, so you see we are twins. My favorite book is the Bible. It teaches us to love and serve God and to do that which is right. Christ, through the Bible, teaches us in parables, for instance, the prodigal son, the good Samaritan, Lazarus and the rich man and the parable of the sower and the seed. The Bible is the book of all books. It contains God's word and his teaching. It leads us to do right and to love God. Other of my favorite books are Robinson Crusoe, Pilgrim's Progress, A Dozen Bees for Boys and Black Beauty, but the Bible reigns over all other books. It is the book of all books.—Harvey Norris, Goldendale, Wash.

Martha Got a Piano for Christmas.

Dear Aunt Nellie: I go to school and I am in the sixth grade. I am 12 years old. My birthday is October 27. I would like to hear from a girl of my own age. I have two sisters and one brother. They are all older than I am. I am the baby of the family. We have three dogs. Their names are Cora, Rover and Daisy. Rover is a big shepherd dog. He gets the cows for me when I tell him to. I got a piano for Christmas and I can play many marches and many other songs on it. I can make cake, pie, cookies and biscuits and a few other things. Our school will be out the 25th of May. Then I can stay home from school and help mama with the little chickens and help her milk cows. We have some ducks, turkeys, guineas and chickens. We live four miles west of town. I enjoy country life better than city life.—Martha Entel, Colton, Wash.

Pony Goes Home All By Herself.

Dear Aunt Nellie: I wrote about my dog, "Matt," the other time, but will have to change my subject as Matt ran away and never came back. I will tell you about my pony this time. Her name is "Minnie." She isn't very large. She is a brown roan. Sometimes I ride her to school and as we have no barn at school to keep her in, I tie the reins up over her head, and she goes home by herself. I ride her after the cows, horses and nearly every place I go. She is afraid of automobiles sometimes, but she never threw me off yet. She runs away sometimes when she is with another horse and I can not hold her. I am going to an Easter Egg hunt at our schoolhouse. The teachers and all the pupils colored 15 dozen eggs to hide. The one that got the most eggs gets a prize.—Byron Robertson, Pomeroy, Wash.

Thelma Has Three Teachers.

Dear Aunt Nellie: I hope this letter will be a success for it is my first letter. My grandfather takes The Washington Farmer and I am very much interested in the Children's Corner. I am in the sixth grade at school. I have three teachers. Mr. Craig is one. He teaches History. Miss Baker teaches arithmetic and another. Miss Baker teaches writing, hygiene, geography, spelling and reading. I am 12 years old and I have a little brother 5 years old. His name is Noble. I have been writing to one of the cousins, Grace Wills. I used to live where she does now.—Thelma Hinkle, Prosser, Wash.

Her Side Won the Spelling Match.

Dear Aunt Nellie: I am 11 years old and am in the fifth grade at school. My birthday is the seventh of February. My teacher's name is Miss Knapp. I like her very much. We have one cow and two calves. I have four brothers and one sister. My brothers' names are Henry, Milton, Rodney and Earl.

The Bible Says:

My sister's name is Harriet. We had a spelling test including from the fourth to the 12th grades. My friend and I chose up sides. My side won. I have two miles to walk to the school wagon and ride three miles in the school wagon. There are 32 children in my room.—Evelyn Hanson, Menlo, Wash.

Dicky, the Canary, Will Fight.

Dear Aunt Nellie: I have been reading The Washington Farmer. I got quite interested in the letters and thought I would write one, too. I am 10 years old and in the sixth grade and partly in the seventh. We have a canary bird and it will fight if you poke your finger at him. His name is Dickie. My Aunt Edna has a bird and its leg is cut off above the foot, but he will fight. His name is Sam. I have many pets. I have two canaries, one dog, two cats and a pony. My pony's name is Dot. She is a very pretty pony, white and black. She is a Shetland pony. She will eat cake, pie, candy, apples and ice cream.—Edna Light, Pomeroy, Wash.

Tries to Get the Paper First.

Dear Aunt Nellie: This is the third time I have written. Every time we get The Washington Farmer I always try to get the paper first. I would like to correspond with Gertrude Nelson, Box 141, Puyallup, Wash. We have four cows and four calves. We have four old sheep and six little lambs. The snow is all off here now. I have a sister. She said she was going to write to the Corner. Her name is Effie. I wish my sister and I could join this club. We would like to join it.—Nellie Salvage, Addy, Wash.

Good Time Visiting Her Aunt.

Dear Aunt Nellie: Papa takes The Farmer and I enjoy reading the letters in the Corner. I am 13 years old. My birthday is June 16. I am in the seventh grade at school. My teacher's name is Miss Emma McCabe. I like her very much. I have one brother but no sisters. My brother's name is Ronald. He is 6 years old. For pets I have an old dog and two little pups. The old dog's name is Brownie. We had to muzzle her, as there were mad coyotes not far from here. Last summer I visited my aunt in Idaho. I stayed a month with her. I had a very good time while I was there.—Brenda Ward, Pomeroy, Wash.

Harry Will Stay All Summer.

Dear Aunt Nellie: I am a girl 12 years old the first of June. I have four sisters. Their names are Cora, Nellie, Ethel and Gertie. I have one brother. His name is Victor. My sister, Gertie, is the baby. She is very cute and is only 1 year old. Her birthday is the 21st of July. I had three cousins out here. Their names are Dee, Elmer and Harry. Dee and Elmer went away about two weeks ago, but Harry did not. He is not going away. He is going to stay here all summer.—Effie Salvage, Addy, Wash.

The School Where Father Went.

Dear Aunt Nellie: I am a farmer boy. I am 9 years old and in the third grade. I go to the Bell school, the same school where my father went about 35 years ago. I live on the farm two and a half miles east of Latah. I have about 100 chickens to take care of mornings and evenings, also pigs and lambs to look after. I enjoy reading the Children's Corner every week.—Leonard Clark, Tekoa, Wash.

Violet Lives on a Dairy Farm.

Dear Aunt Nellie: I live on a dairy farm 14 miles from Chehalis. I am in the fifth grade at school. My teacher's name is Mr. Elder. I go to the Glen Alder school. I have one little sister. Her name is Dorothy. My father has taken the Farmer for two years, but this is the first time I have ever written to you. I have always read the children's letters.—Violet Howell, R. F. D. 2, Box 171, Chehalis, Wash.

Two Puppies, Tip and Robin Hood.

Dear Aunt Nellie: Papa takes The Washington Farmer and I like to read the letters in the Corner. I go to school and am in the first grade. I am 6 years old. I will be 7 years old in May. I have two little puppies. Their names are Tip and Robin Hood. We have a little black and white calf. We call her Spot. I have a pony. She is 11 years old. Her name is Nellie. I have a sister. Her name is Brenda. She is 13 years old.—Ronald Ward, Pomeroy, Wash.

Arthur Is Making Garden.

Dear Aunt Nellie: I am 8 years old and am in the third grade. I go to school every day and like it fine. My teacher's name is Miss Gray. My papa takes The Washington Farmer and I like to read the letters in the Children's Corner very much. I live on a farm in the Satsop valley. We have a lot of pet rabbits, a dog, a cat, three horses, five cows and some chickens. I am making a garden this spring. I like it very much. I have four sisters and no brothers. My birthday is on the 18th of April. I wonder if I have a twin.—Arthur Elphick, Elma, Wash.

Beatrice's First Corner Letter.

Dear Aunt Nellie: I am writing to you for the first time. I am 11 years old and am in the sixth grade at school. We go to the Freeport school. I have one brother and one sister. My brother will be four in March. My sister is 7 years old. My sister goes to school too. We only have one acre of land, but we have a cow and a calf, a rabit and 59 chickens. We get about 24 eggs a day from the chickens. We do not take the Farmer, but Grandpa lives right by us and I get his. I have read the leters and so I thought I would write. I will write again.—Beatrice Hett, Kelso, Wash.

Little Tom, Big Tom and White Mose.

Dear Aunt Nellie: I have never written to the Children's Corner before. I live on a farm six miles from town. I have to go to school one and a fourth miles. I have a pony named Bolley. I ride a mile and put my horse in the barn. I have one dog and three cats. My dog's name is Brownie. My cats' names are Little Tom, Big Tom and White Mose. I am 11 years old and my birthday is the 11th of July. I am in the sixth, seventh and eighth grades. There are 16 in our school. In the summertime my brother and I go to town every day to take eggs and butter and vegetables.—Richard F. Lefors, Tekoa, Wash.

Merna Has a Pony Named Babe.

Dear Aunt Nellie: I am 12 years old the 7th of April. I have two brothers and no sisters. My brothers' names are William and Frank. We have a pony named Babe. I go to school. My teacher's name is Miss Mary O'Laughlin. She is a good teacher. I live on a farm. I have a rabbit and three chickens.—Merna Elliott, Alpha, Wash.

Willie Has Never Written Before.

Dear Aunt Nellie: I like to read the letters in the Corner and thought I would write a letter too, for I have never written before. I am 10 years old and in the fifth grade. There are 25 in our room. My teacher's name is Miss Moultrop. I live about one mile from school. We live on Blalock ranch. We have 37 little chickens, two dozen large chickens and 19 cows and a cat named Tabby. I have three sisters and two brothers. My sisters' names are Lulu, Dot and Mildred. My brothers' names are Carl and Dea.—Willie Bell Dysart, College Place, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Ovey Van Horn, Nettie Johnson, Hazel Covert, Helen Davis, Gertrude Sande, Myrtle Sodorff, Vena Henning.

To Get a Flag Write Soon

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Enclosed find $.... (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

In answering advertisements don't fail to mention this paper.

Wool Brings 50 Cents

(Continued from page five.)

the 50-cent mark, clips having sold for 50 1-4 cents per pound. Even 60-cent wool is predicted by some of the sheepmen. The more conservative, however, believe that the high-tide price has been reached and that it will not go higher. Neither do they expect to see any material decline while the present war is in progress. While they do not look for a raise, they are inclined to the belief that prices are more likely to rise than they are to decline.

"Last year wool went up to 36 cents, but only in exceptional cases. The average paid was 25 cents per pound. Not many years ago wool was bringing a big price at 20 cents. The present year, however, is starting out with 50-cent wool and a heavy demand."

Some idea of the extent of the sheep industry in Idaho can be obtained by the statement issued by Hugh Sprout, president of the Idaho Woolgrowers' association, covering 1916. Mr. Sprout showed that the number of sheep going into the winter was approximately 2,250,000. He estimated the wool clip at 18,000,000 pounds, with a value of $4,700,000, averaging the price paid at 25 cents a pound. The number of lambs sold in 1916 he estimated at 1,500,000, netting to the grower about $6 per head or a total of $9,000,000. The older sheep sold he valued as worth $1,000,000, so that the total income from sheep in 1916 was, according to his figures, $15,000,000. The total investment in sheep he estimated at $22,500,000 in ranches, and necessary equipment $12,000,000, or a total investment of practically $35,000,000.

Correspondence from Butte indicates the same strength of wool market as noted in other states. The writer says:

"Opening at around 40 cents a pound the price of wool in Montana has skyrocketed to a height of 52 cents, a figure little dreamed of by the flockmasters of this state. Sales are frequent at the present time at 50 cents.

"Union Woolen company of Boston started the ball to rolling in earnest in the Montana wool by bidding up eastern Montana clips to the amount of nearly 250,000 pounds from 48 to 50 and 52 cents a pound, approximately 280,000 pounds being taken at the high figure. With this quotation established southern Montana flockmasters rapidly boosted their asked prices to 50 cents, followed by the growers in Fergus county. In the latter a number of small clips were held over from last year, when wool brought around 40 cents, and these were disposed of at 50 cents, the last reported sale being a clip ranging from 35,000 to 40,000 pounds going at that figure.

"Two million pounds of wool were purchased by the American Woolen company in Beaverhead county the past month at 50 cents a pound. The wool production from this part of Montana, one of the largest wool sections in the staet, will approximate 3,700,000 pounds.

"The total wool clip of the state is expected to be around 18,000,000 pounds, with the prospects good of this estimate being considerably exceeded, some prominent flockmasters predicting 20,000,000 pounds. This estimated production is somewhat smaller than in years past, due to heavy shipment of sheep eastward to the live stock markets, lambs commanding a particularly high price. The limitation of the large ranges of Montana, too, is curtailing the size of the bands of sheep and materially affecting the wool output. However, farmers are beginning to raise small flocks of sheep and many of these bands are serving to offset the loss suffered in the diminution of the one time famous large bands."

Field Peas for Seed

To the Editor of The Washington Farmer: Will you kindly tell me what you can about field peas? What is the Blue Bell variety? Is it a field pea for stock, or for the market green or dry? Would you raise Canada peas for hogs instead of corn? How can insect injury be prevented?—H. S. S., Vancouver, Wash.

Leonard Hegnauer, extension specialist in soils and crops at the state college of Washington, says in answer to this question:

Field peas are most commonly grown for feed. The Blue Bell variety is one of the best varieties for your section. These field peas are not commonly grown for market, as they do not contain enough sugar. However, many of the field peas are grown as split peas, and are thus used for soups. Canada field peas make a splendid hog feed, and while they would not necessarily take the place of corn, yet they would make a splendid combination when fed with corn. There is no treatment that you could give pea seed in order to free it from possible insect injury.

RALPH C. M'ALLASTER.
719 CENTRAL BLDG., SEATTLE.

FOR SALE OR EXCHANGE 702

FOR SALE, OR EXCHANGE FOR SMALLer place—My 552-a stock and grain ranch, 3 miles to town. Address owner, R. E. Warner, Crawfordsville, Oregon.

Grain and Produce Markets

Chicago Grain.

CHICAGO, May 26.—Announcement that foreigners were getting rid of some of their future delivery holdings had a bearish influence on the wheat market today. The outcome was a heavy close at 4c to 6 1-2c net decline. Corn finished 3 3-4c to 6c down, oats off 5-8c to 1 7-8c and provisions off 25c to 57c.

Notwithstanding that week-end evening up of trades gave the wheat market at one stage an appearance of strength, breaks in prices became pronounced during the last half of the session. Messages from the seaboard said European interests were fairly active in letting go of future contracts and taking instead wheat for immediate delivery. In this connection it was said that premiums for cash wheat had dwindled 20c a bushel from the recent high point and that much more wheat was being offered than was the case when premiums were extreme. Other bearish influences included an authoritative estimate that the total yield in the United States this season would be as much as 750,000,000 bushels. Assertions also were current that the domestic consumption this season would be 4 3-4 bushels, as against a normal average of 5 1-4 bushels. Such a reduction would mean a saving of about 50,000,000 bushels.

Corn prices fell sharply owing to arrival of Argentine corn in New York, and as a result of the improved car supply, which was said to be taking much corn east for which there was not immediate domestic or export demand. Besides, crop reports were bearish.

Oats went lower with corn. Field advices were favorable and nothing was heard of any revival of export call.

Provisions dropped because of the break in grain value. Smallness of prospective hog supplies next week acted as only a temporary support for the market.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3.50@3.75 cwt; new potatoes, 8c lb.

Seed Potatoes—Early Rose, $4@4.50 cwt.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwood, 40c lb; Solid Pack, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 40c lb; brick cheese, 30c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $10.50 case.

Live Poultry—Hens, 20c lb; old roosters, 10c lb; ducks, 13@14c lb; turkeys, 20@25c lb; geese, 11c lb.

Dress Poultry—Hens, 23c lb; springers, 21c; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs., 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Wool in Oregon.

PORTLAND, Ore., May 23.—The wool market in eastern Oregon was greatly excited at the close of the week with buyers freely offering 50 cents for fine wool and in some sections even more. A dozen clips at Echo, Heppner, Pendleton and Pilot Rock were sold at that price. The sales, however, were only about 200,000 pounds as the majority of growers wanted more money. Wool dealers said the entire clip of the state could be cleaned up in 24 hours, so strong is the demand, if growers would accept the prices bid. The call just now is for fine wool with coarse grades more or less neglected. Growers are asking 55@60 cents for coarse and some are asking that much for fine wools.

Shearing is still delayed by cold weather and probably not 10 per cent of the normal amount has been taken off to date. The quality of the staple is pronounced the best in years.

HAY WANTED.

This paper is constantly receiving inquiries wanting the names of farmers who have hay to sell. If you have any to dispose of you can sell it through a small classified ad at but very little cost and save the middleman's profit. Try it.—Adv.

Portland Market.

PORTLAND, Ore., May 26.—In the egg market the supply and demand are even, and prices are holding steady.

Butter is also steady, although the make is gradually increasing. Shipments of cheese to eastern cities have been resumed, three cars going out in the last week. San Francisco is drawing heavily on the Tillamook factories.

Receipts of poultry and dressed meats have been light, and the market is fairly steady.

Potatoes are cleaning up slowly at unchanged prices. There is still a good eastern demand, but the local inquiry is unimportant.

A few crates of Oregon strawberries have arrived. Oregon gooseberries are also on the market.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $47 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $37 per ton; shorts, $40.

Barley—No. 1 feed, $45; brewing, nominal; rolled, $58.

Hay—Buying prices: Timothy, eastern Oregon, $30; alfalfa, $23; grain, $18@20.

Eggs—Oregon ranch, case counts, 32 1-2@33c per dozen; candled, 34c.

Poultry—Hens, 17@18c; ducks, 18@20c; turkeys, alive, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 39@40c per pound; cubes, 36c.

Cheese—Oregon triplets, 24c; young Americas, 25c.

Dressed meats—Veal, 13 1-2@14c; pork, 19 1-2c.

Hops—Nominal.

Potatoes—Oregon jobbing price, $3.50@4.

Wool—Eastern Oregon, fine, 50c; coarse, 55c; valley, 50c.

Beans—California small white, 16 1-2c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Seattle Market.

SEATTLE, May 26.—Advices from Kennewick today indicate that express lots of berries will be available about Wednesday and that by the end of next week receipts will be ample for the needs of this market and in recognition of the high prices at which the fruit is selling.

Kennewick-Richland growers are quoting $5.50 f. o. b. shipping pount for the initial lots next week, or approximately $6.50 here.

Some select old crop local spuds, with cutouts removed and well sized as to uniformity, were shipped to Alaska today at $90 f. o. b. Seattle. General quotations are $75 to $85, with Yakimas firm at $90. Only a few carloads, probably 30, are held here, locals almost exclusively, and jobbers and brokers alike now concede that today's quotations will go through to a cleanup.

The market for turnips, cauliflower and other new vegetables is slowly declining.

The week-end shows a general softening of the sharp outlines of the market in butter, eggs and cheese. While there is not much of a surplus of butter, city creamerymen in place of quoting lower markets are storing the surplus of daily churnings, together with such country creamery stock as they can put together. Only a few cubes have been spared to date for the coolers, but manufacturers take comfort in the thought that summer will come some day and the production of cream will increase in this territory to the point where they can extract daily allowances for reserve stocks in low temperatures.

The receipts of fresh ranch eggs have increased to the point where the market must be weakened. The eggs are not moving in keeping with the arrivals. Short holding for storage is not regarded as longer advisable, and a few days of sunshine would compel a decline in a part of the season where downward movements have practically been unknown.

Cheese is barely steady. There has been considerable storage, and jobbers are applying still more pressure in order to force prices to safe levels for a summer and fall movement.

Poultry quotations will be steady for Monday with the exception of broilers, which will bring producers 2c less.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 33@34c per dozen.

Poultry—Live hens, fat, over 4 lbs., 19c per lb.; 3 lbs. and under, 17c; old roosters, 12c per lb.; springs, 22c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 18@23c per lb.

Butter fat—42c per lb.; dairy butter, 28c per lb.

Beef—Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 10@12c per lb.

Veal—Fancy light, 13@14 1-2c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 32c per lb; salted calf, 32c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 36c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 30@33c per lb.

SELLING PRICES.

City Prices—Team Lots.

Apples—Winesaps, $2.25@2.75 a box; cooking, $1.50 a box; Newtowns, $1.25@2.25 a box.

Asparagus—Local, 12 1-2@15c per lb.

Feed—Scratch feed, $79 per ton; all grain crop, $69 per ton; oats, $57 per ton; rolled oats, $58 per ton; rolled or ground barley, $57 per ton; clipped barley, $60 per ton; wheat, $95 per ton; bran, $40 per ton; shorts, $43 per ton; oil meal, $55 per ton; whole corn, $75 per ton; cracked corn, $77 per ton.

Hay—Eastern Washington timothy, $35 per ton; alfalfa, $26 per ton; double compressed, $38 per ton; wheat hay, $26 per ton; Puget sound, $26 per ton; straw, $15.

Potatoes—Local, $75@85 per ton; Yakima Gems, $90 per ton.

Cauliflower—Local, $1@1.25 dozen.

Rutabagas—$3 sack.

Butter—Washington creamery extras, cubes, 38c per lb.; do bricks, 39c per lb.; creamery firsts, cubes, 37c lb.; do bricks, 38c per lb.

Eggs—Fresh ranch, 36@37c.

Portland Wheat.

PORTLAND, Ore., May 28.—Wheat prices have declined steadily with an absence of demand in any quarter of the local market, though it is said exporters have taken small amounts in the country for shipment east. Eastern buyers do not want wheat, in fact have tried to resell wheat here bought earlier in the season. Closing bids for cash wheat at the exchange were: Bluestem, $2.47; fortyfold and club, $2.45; red Russian, $2.43.

Oats and barley are weak and nominal in the absence of buying.

The flour market had another 40-cent decline at the close of the week, which put the price of patents at $12.10. The total flour decline to date has been $1.60 a barrel.

Mill feed prices have also dropped sharply $4 to $6 a ton. Hay continues firm, but trade is quiet.

Early Irish Potatoes.

A forecast of the production of early Irish potatoes in 1917 is made by the bureau of crop estimates in the department of agriculture and shows the total of 33,516,000 bushels as against 26,481,700 bushels in 1916. The acreage harvested in 1916 amounted to 242,900, while the acreage planted this year is given at 281,700. Virginia is by far the largest producer of early potatoes, having produced 14,000,000 bushels last year, with an estimate of 16,000,000 bushels this year. New Jersey comes next with over 3,000,000 bushels. California produced over 800,000 bushels last year and is estimated to produce over 2,000,000 this year.

Butter and Eggs.

SAN FRANCISCO, May 26.—Eggs—Fresh extras, 34 1-2c; fresh extra pullets.

CHICAGO, May 26.—Butter higher; receipts, 10,332 tubs; creamery extra, 41@41 1-2c; extra firsts, 40 1-2c; firsts, 38 1-2@40c; seconds, 37@38c.

Eggs lower; receipts, 27,733 cases; firsts, 33 1-4@34 1-4c; ordinary firsts, 31 1-4@32c; at mark, cases included, 31 1-2@34c.

ELGIN, Ill., May 26.—Butter higher; 125 tubs at 43c; 40 tubs unsold.

Mirror Pie.

Line a deep pie plate with rich crust and turn it into a clear lemon jelly (after baking the crust) and let it set until the jelly is hard. Serve with whipped cream.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., May 26.—Hogs—Receipts, 7600; steady. Heavy, $15.60@15.80; mixed, $15.50@15.70; light, $15.40@15.70; pigs, $12.50@14.50; bulk, $15.50@15.70.

Cattle—Receipts, 100; steady. Native steers, $10.25@13.25; cows and heifers, $8.50@11.50; western steers, $9@11.50; Texas steers, $8.75@10.75; cows and heifers, $8.50@10.25; canners, $7@8.50; stockers and feeders, $7@11; calves, $9.50@13.50; bulls, $6.75@10.25.

Sheep—Receipts, 100; steady. Yearlings, $13.50@15.50; wethers, $12.50@14.25; ewes, $11.75@14; lambs, $19.25@20.35.

At Chicago.

CHICAGO, May 26.—Hogs—Receipts, 8000; easy, 5c lower than yesterday's average. Bulk, $15.45@15.95; light, $14.65@15.85; mixed, $15.35@16.05; heavy, $15.25@16.10; rough, $15.25@15.40; pigs, $10.50@14.50.

Cattle—Receipts, 700; steady. Native beef cattle, $9.40@13; stockers and feeders, $7.40@10.30; cows and heifers, $6.50@11.40; calves, $10.50@15.50.

Sheep—Receipts, 1000; steady. Wethers, $12.25@14.75; lambs, $13@17.25; springs, $14.50@21.

At Seattle.

SEATTLE, May 26.—No receipts today; market steady.

Cattle—Prime steers, $10.25@11.75; common to medium, $6@9.75; best cows and heifers, $8.25@9.25; common to medium, $6.25@8.25; bulls, $3.50@8; calves, $6.50@11.10.

Hogs—Prime light, $16@16.25; medium to choice, $15.75@15.85; smooth heavies, $15.25@15.85; rough heavies, $14.75@15; pigs, $13.50@14.45.

Sheep—Prime lambs, $12.50@13.75; good lambs, $12.25@13.50; wethers, $10.25@10.50; ewes, $9.10.

At Portland.

PORTLAND, Ore., May 26.—Hogs—Steady; receipts, 739. Heavy packing, $15.85@16; light packing, $15.50@15.85; bulk of packing grades, $15.50@15.75; rough heavy, $14.25@15.25; pigs and skips, $13@13.50; stock hogs, $12@13.

Cattle—Easier; receipts, 553. Steers, prime light, $10.25@10.50; prime heavy, $10@10.25; good, $9.75@10; cows, choice, $9@9.50; medium to good, $8.25@8.75; ordinary to fair, $7.25@8; heifers, $7@10; bulls, $6@8.50; calves, $8@10.

Sheep—Firm; receipts, 1099. Lambs, east of mountains, $13.50@14; lambs, valley, $13.25@13.50; lambs, shorn, $11@11.50; prime yearlings, $12.50@13.50; choice ewes, $11@11.50; heavy ewes, $9@11.50; prime shorn wethers, $10.25@11.

Spokane Stock Yards, Saturday.

Hogs—Receipts, none; market steady. Prime heavy packing, $15.75@16; prime light packing, $15.60@15.75; rough heavy, $14.60@15; stockers, $12.60@3.75.

Cattle—Receipts, 154; market steady—Prime heavy steers, $10.25@10.75; prime light steers, $10@10.25; good steers, $9.75@10; prime cows, $8.75@9.25; good cows, $8@8.75; common cows, $7.25@7.75; best heifers, $9@10; bulls, $6@8.50; calves, $8@10.50; stockers and feeders, $8@9.

Sheep—Receipts, none; market strong. Prime lambs, $13@13.50; common lambs, $12@12.50; choice yearlings, $11.25@12; good yearlings, $10.75@11.25; choice ewes, $10@11; prime shorn wethers, $10.25@11.

Care of Sheep in the Winter

Proper Housing and Feeding Essential to Best Success

For several weeks The Farmer has been publishing the articles of this series on sheep management by Dean Iddings of the agricultural college of the University of Idaho. This week the article deals with winter management. Next article will treat of the management of the flock during the lambing season. These instalments will not be directly applicable for several months, but it is necessary to publish them in regular order in the series. Every person who has sheep or is at all interested in sheep should file away the paper containing each of Dean Iddings' articles, or at least clip the article itself and keep it carefully with the others of the series for use at the particular time when most applicable. The entire series comprises an unusually simple and comprehensive text book on the management of sheep on the farms of the northwest.

ARTICLE 5, By E. J. IDDINGS.

The first problem in winter feeding is to start the ewes into the winter period in good flesh and vigorous condition. If this is done hay and various other fodders are sufficient for the greater part of the time. In some sections where corn is one of the leading crops corn fodder with the ears removed has given quite good results, without grain in addition. Clover, alfalfa or other legume hays are very palatable for sheep and are a sufficient feed for the greater portion of the period of pregnancy. Root crops, silage free from mold, both in moderate amounts, give splendid results along with clover or alfalfa hay. Heavy feeding of root crops previous to lambing, it is claimed by some sheep men, results in flabby lambs of low vitality.

One of the problems of the flockmaster is to have his ewes give sufficient milk for the new lambs. Ewes fed the entire winter on dry feed, particularly true of young ewes, frequently have no milk after lambing and refuse to own their lambs. Old ewes take care of their lambs, but have an insufficient milk flow. This difficulty can be almost entirely overcome by light grain feeding beginning four to six weeks previous to lambing. Root crops, silage or other succulent feed in addition are very desirable. Oats or bran and oats are to be preferred among the grains and the daily allowance per head need not exceed one-half pound. The proportion used in handling bure-bred ewes at the University of Idaho is two parts of oats to one of bran. Range sheep men have success in feeding to their range ewes previous to lambing time a small daily allowance per head of cottonseed meal.

Open Shelter Preferable.

Tightly enclosed shelters for sheep in winter are neither necessary nor advisable. The sheds or barns need first of all to be kept dry underfoot and there should be sufficient room under shelter or in outside yards for exercise. If weather permits a good plan is to compel the ewes to walk a reasonable distance to a field or another yard for their hay. For shed room some authorities recommend 15 square feet per sheep. The fleece keeps the body warm and the overhead protection needed is such as will keep off storms and prevent drafts. In quite cold weather, if the nights are dry, sheep are found to prefer the open air to enclosed sheds.

Where the flock varies as to size, and some are much more timid than others, good results follow dividing them into uniform bunches. The rams must be kept separate and kept in no more than good condition. Legume hay and from one-quarter to one-half pound of bran and oats daily per ram is ordinarily sufficient.

Ups and Downs of a Bunch Grass Boy

(Continued from page twelve.)

and he had merely come to town for some medicine—that is, bull bitters.

At his home, Misery took his bull bitters morning, noon and night; and, of course, since it was "medicine," not real Injun, that he was taking, he could not be expected to share his bottle with a guest, which occasionally he had. Misery's little dissipation carried with it no social obligations, such as treating or sharing up with a neighbor—hence was less costly. I am sure now that he took this into account, for he was notoriously a tightwad.

He made money, too; in fact, there were years in the neighborhood when Misery was about the only one of the farmers who farmed at a profit. He raised rye hay — never tried to raise anything else. All the others raised wheat, the yields being light and the price low. Misery merely cut and stacked his rye hay, which yielded at least two tons per acre, and then waited for the stockmen on Wilson creek, 10 miles south, to come out and buy it in midwinter, when their feed ran low. This they almost invariably did, hauling it away themselves and paying $5 a ton for the privilege. Yet, most of the neighboring farmers thought Misery was a "damfool" for sticking to rye.

His hay crop sold and the money in his pocket, Misery's stomach began to trouble him, and he sought surcease from pain by turning to his beloved bull bitters. It is clear to me now that between Misery's stomach trouble and the price of rye hay there was a sympathetic relationship. If the winter was mild and the stockmen failed to buy Misery's rye hay at a good price, he said very little about his bad stomach, and treated it with only meager doses of bull bitters. But if the winter was long and cold, and all his hay went at top-notch prices, then he talked to all the neighbors about his paining stomach and made many trips to Coulee City to renew his stock of bull bitters. He was the shrewdest, the most conservative, actually the wisest drunkard I have ever known.

There is a saying that "Misery likes company." It was not exactly true in Missouri Pete's case, for he was not far removed from pessimism so far as the gentler sex was concerned. No, he would never marry—didn't want any women folks about. They were fussy and always talking about their neighbors. Also, he disliked dogs; but he liked cats—had an old maid's affinity for them, especially for the one he called Crook. This cat Misery had reared from a small, half starved kitten. When he wished it to leave the room and it did not respond at once to his bidding he picked it up by the tail and flung it from the door. This act repeated many times while the kitten was attaining the dimensions and dignity of a tolerably large, passably fat cat, gave the creature's tail a permanent crook to the left; hence, the name Crooked Tail, which Misery eventually shortened to Crook.

Crook was a great hunter, said Misery. The floor of his shanty had been made of rough, pine boards with a few small knots in the boards. As the boards dried, the knots worked loose and fell out, leaving several small, round roles in the floor of Misery's house. Squirrels playing under the house, not infrequently poked their heads through the holes. Right here, Crook did some fine work. The cat seemed to know just which knot hole to watch. Just as surely as a squirrel poked up through a knot hole, Crook would shoot out his paw, claw the squirrel up through the knot hole, and devour it then and there. Missouri Pete never tired of boasting of Crook's achievements as a watcher of knot holes. He said that one Sunday afternoon while he dozed or watched the cat in mute admiration, Crook hooked five squirrels through the knot holes, and ate them all.

But there was one squirrel which Crook failed to get. I dropped in on Missouri Pete one day at dinner time. He had bacon, potatoes boiled with their skins on, dried prunes, coffee and cabbage, but no bread, notwithstanding the fact that he was a famous maker of "sour dough" biscuits. He explained.

He guessed he had shut Crook out of the house when he went to work, or something. A squirrel had come through a knothole and the darned thing had tumbled into his sour dough can, which was sitting on the floor near the wood box, so as to keep warm. Unable to get out of the can, the squirrel eventually had perished and sunk to the bottom.

Several days later, he didn't know how many, Misery chanced to pour his sour dough from one can to another—and discovered the dead squirrel. The sight of it had made him sick. His stomach was bad anyway, and he was out of bull bitters. He was sure, though, that it was merely the looks of the squirrel that had made him sick. If he hadn't seen the darned thing he could have gone right on making bread out of the can without knowing the difference. As it was, he didn't think he would ever care to see, smell or bite sour dough bread again.

The next instalment of "The Bunch Grass Boy" tells of a recitation by "Joey Ashlock," who already had acquired considerable fame as an "elocutionist" in the Hartline Literary society. Neither should you lose the debates and debaters of the Hartline Literary, as they are recounted also in the next instalment.

Clackamas Crops Gain.

There has been an increase of about 10 per cent in the area of cultivated land in Clackamas county during the last year, if the first 150 reports of Clackamas county farmers in the agricultural defense movement may be taken as a guide. These reports, filed with T. D. Case and E. B. Fitts, district representatives in the movement to centralize agricultural resources, are coming in much more rapidly than had been expected.

NEWS FOR BREEDERS

Own Registered Stock

There are in the Grand Ronde valley in eastern Oregon, rather a surprising number of stockmen owning registered Shorthorn females. Speaking about the fact with W. J. Townley of Union, one of the pioneer Shorthorn breeders of that valley, I learned several interesting facts. Most of these men, said Mr. Townley, are not new comers to Oregon. Among them are the oldest cattlemen of the state and their sons and grandsons. I asked him the reason why there is now such a movement toward pure bred cattle, and especially Shorthorns, and his answer was: The reduction of the range, making it harder to run large bands of cattle; thus a necessity for fewer and better cattle, and this, with the high cost of keeping cattle, both in feed and labor, makes the wise stockman turn naturally to the best beef breed on earth, especially for the farm—the Shorthorn.

Among the breeders to have one or more registered females are the following:

At Union—W. J. Townley, W. W. Green & Sons, newcomers, but cattlemen back in Oklahoma; Hutchinson & Sherman, the former's father a cattleman away back in 1864; W. E. Fickle, E. C. Keckritz, Davis Bros., Donald Gale and A. D. Bideler.

At Hot Lake—G. W. DeLay, whose father was an oldtime cattleman.

At Alicel—G. G. Gray, who bought his first registered bull from Mr. Townley on October 23, 1902; G. M. Gray, J. T. Gray and N. T. Gray.

At La Grande—G. G. Taal, quite an oldtime cattleman himself.

Besides these there are Cleris Olsen, Haines; R. E. Boyce, W. A. Payton and others at Baker, just over in the Powder River valley, and every one of these named except two are expected to exhibit at the Union Stock show June 13-6, or some 15 exhibitors. The Shorthorn breeders are feeling pretty good over the situation. H. A.

IN THE WRONG CORRAL.

In a recent issue The Farmer identified a fine looking Holstein cow as a "Fine Shorthorn Heifer." Somebody in the office—it hasn't yet been decided who—left the gate open, as it were, and she got into the wrong corral. The animal shown herewith is the Shorthorn heifer, the photographs having become interchanged. This animal belonged to W. O. Minor of Heppner, Oregon, and sold at a Portland sale in April for $570.

Poland China Futurity.

At a meeting of the Idaho State Poland China association, presided over by President W. F. Howard of Parma, held at Caldwell May 17, it was voted to hold the 1917 Poland China futurity at the state fair in Boise this year, providing the fair management would meet the necessary conditions. A. L. Wilson of Greenleaf was one of the prominent speakers at the meeting. This was the unanimous agreement and, as Canyon county is the center of a large number of Poland China breeders, probably the largest number in the entire state, the action reflects the desire of the breeders to help out the fair by a large exhibit. The matter of running special live stock cars from Canyon county to some of the fall shows was also brought up and received favorable consideration. This was particularly urged in view of the fact that Canyon county is becoming noted for its high class live stock, and it believed that this would be good publicity, as well as in the line of a proper public spirit.

On the Ratcliff Farm.

The above picture is of a registered Shire stallion, owned by Grant Ratcliff of Lancaster, Wash. Mr. Ratcliff recently purchased this horse and two fine registered Shire mares from Metz & Sons of Pendleton, Ore.—D. G. S.

Buys Entire Herd.

To the Editor: I have just returned from a six weeks' trip through the east for the purpose of securing additional Aberdeen Angus cattle. We succeeded in purchasing the entire herd of John D. Evans, Aurora, Ill. This herd comprises 70 head of excellent breeding cows and heifers and five extra good bulls. In addition to this herd we purchased five very choice cows at public auction in Iowa, from the herds of F. J. Roberts of Atlantic and B. J. Donohue of Holbrook. These cattle will arrive at the ranch the fore part of June. Our herd will then number about 250 head of breeding cattle.

Our sales have been exceptionally good of late. Some of the recent sales are as follows:

George Dixon, Prineville, Ore., bull calf and yearling bull; Edward H. Minden, Clarkston, Wash., two bull calves; University of Idaho, two bull calves; H. Lundberg, Cle Elum, Wash., bull calf; L. C. Bunnell & Son, Enterprise, Ore., yearling bull; P. F. Fassler, Akron, Col., yearling bull; J. A. Scollard, Chehalis, Wash., two-year old show bull and six outstanding heifers; John Smithson, Ellensburg, Wash., five yearling bulls; Pope Bros., Notus, Idaho, yearling bull; W. A. McLeod, Grass Valley, Ore., two bulls.

OTTO V. BATTLES.

Live Stock Sales.

Auctioneer J. W. Hughes of Forest Grove announces the following sales:

W. A. Forrest will hold a Jersey sale at McMinnville, Ore., June 12. The farm is close to Whiteson station. C. W. Jensen joins in the sale with six purebred Duroc Jersey sows and a boar. The cows are all Record of Merit animals.

McArthur & Stauff will hold a sale of purebred Jerseys at the farm near Rickreall, Ore., June 27. Twenty head are Register of Merit cows.

On June 27 the entire dairy herd of J. C. Graham, including both grade and purebred stock, in all nearly 80 head, will be sold at auction at the Graham place, two and a half miles southwest of Palouse, Wash. Auctioneers Gue and Cranke will conduct the sale.

Refuse 66½ Cents for Mohair.

The mohair pool at Eddyville, Ore., refused an offer of 66½ cents a pound. This indicates the high range of prices being paid for both mohair and wool. Last year much of the hair was sold at 40 cents.

Jersey Cattle Club.

The Marion County Jersey Cattle club will meet at the commercial club at Salem, June 6 at 10 a. m.

THE WASHINGTON FARMER

THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 23. JUNE 7, 1917. ** WEEKLY.

Apples Are Important as Food Necessity

As a Dried Product They Surpass Evaporated Potatoes in Nutritive Value

If an American Robinson Crusoe of this year 1917 knew that he was to be cast upon an island with a limited supply of food, he would be pretty careful to pick out what he thought would contain the most nourishment. He would very likely center on bread and meat and potatoes as representive food products. As much as he might like apples and other fruits he would probably classify them as luxuries, which should not be permitted to take the place of food necessities.

This is evidently the view taken by the Northern Pacific railroad when the company served notice on the apple growers of the Pacific northwest that cars would not be furnished for the movement of apples next fall and winter, as apples are regarded by the railroad as luxuries and not necessities.

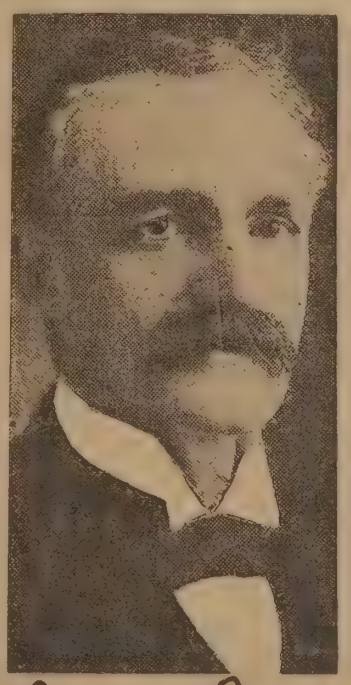
This matter was taken up at Washington with Senator Poindexter by Frank Reeves and W. T. Clark of Wenatchee, Wash., representing the apple growers of the northwest. A Washington dispatch says that Senator Poindexter, accompanied by the two apple men, called on Herbert N. Hoover, government food administrator, and Secretary Houston, laid before them the situation which had arisen and received positive assurance that the position taken by the railroads would not stand. Mr. Hoover added that apples constitute a highly important article of diet, more important than potatoes and especially in time of war. He explained that much of the suffering among the people of Belgium, with whom he worked so long, was due not so much to the fact that they had insufficient food as to the fact that they could get no fruit.

It is possible that Mr. Hoover and even Secretary Houston may not have had the opportunity of looking into the energy value of apples as measured by the calories of the food scientists, or their distinctive nutritive value as distinguished from the health giving qualities usually attributed to the eating of fruit. A caloric is the unit of measurement by which food scientists calculate the energy, or nourishment value, of foods.

While at Pullman the other day I met Professor O. L. Waller, who gave me a compilation just prepared by several of the experts of the state college on this very matter of the food value of apples and other fruits as compared with other foods. Professor Waller himself said that he preferred apples to potatoes. He ate apples at every meal, eating baked apples without the usual accessories of sugar and cream.

The facts brought into the light by the state college experts are not only of great importance, but of especial timeliness. For instance they dig up Bulletin 28 of the bureau of chemistry of the national department of agriculture, which gives the fuel or nutritive value of dried products in calories per pound as follows:

Dried apples	1386
Dried prunes	1170
Dried potatoes	1168



These figures are astounding in connection with the all-important agitation for the saving and preserving of fruit products by home drying devices as well as by community and commercial hydrating plants.

The following tables are from Graham Lusk's "The Science of Nutrition."

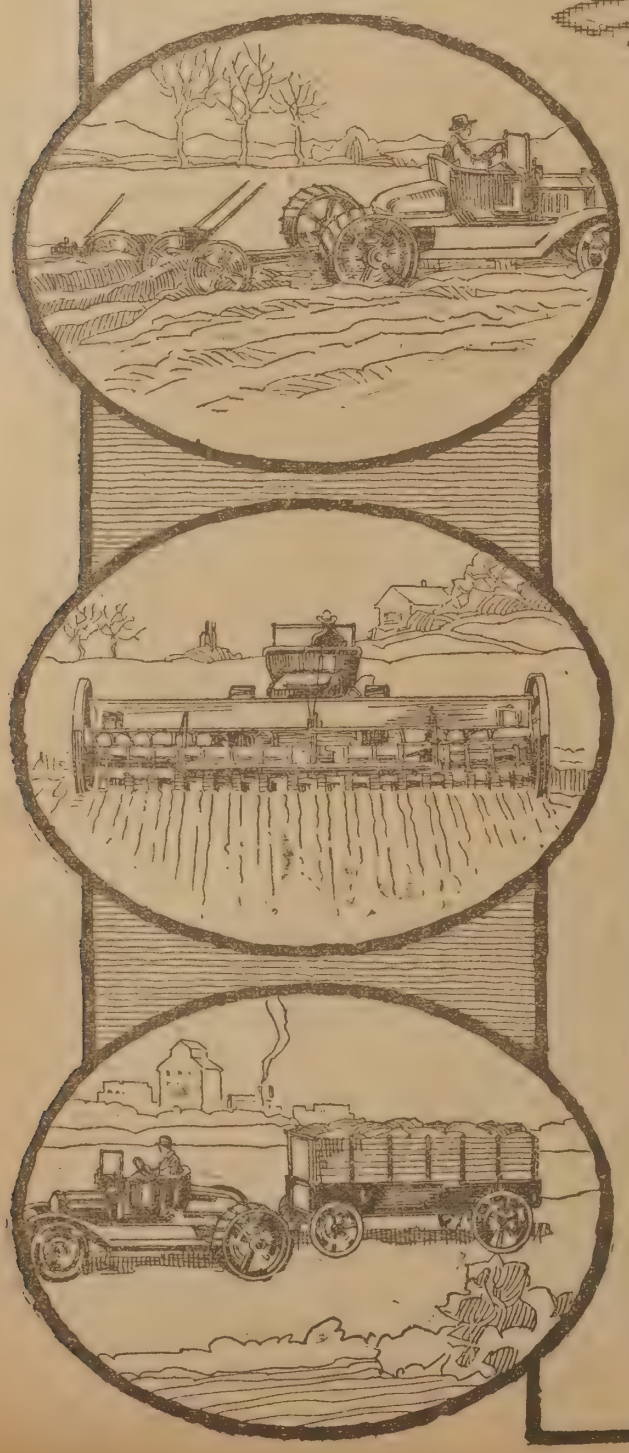
(Continued on page five.)

U. S. Safety In Hands of Farmers

The Farmer has already printed the clear and powerful appeal of Gifford Pinchot to the farmers of America. As president of the National Conservation association and former United States forester, Mr. Pinchot has made the plea of the farmers heard in high places, fighting the special interests with telling force. Two or three sentences from Mr. Pinchot's appeal can not be published too often or sink too deeply into the hearts of the readers of the Farmer:

Gifford Pinchot

"The two great weapons in this war are arms and starvation. The war against German arms will be won or lost in France; the war against starvation will be won or lost in America.



"The safety of our country just now is in the hands of our farmers. What I mean is not merely the safety of our lives in the matter of food, I mean that the safety of the United States against foreign invasion hangs on the decision of the farmers of the 48 states.

"The great duty of the nation is to guarantee the farmers a fair price for their crops when grown, and a reasonable supply of labor at harvest. The great duty of the farmer is to raise food enough to win this war for democracy against kaizerism.

"No such responsibility has ever rested on any class of men since the war began as rests today on the farmers of America."

WE FINANCE THE FARMER

YES!
He Is Happy—He Paid
$50.00 Down and Balance $10.00 Per Month

Universal Junior Tractor Attachment, $150

On Installments

WE REMOVE THE LAST OBSTACLE. EVERY FARMER CAN NOW HAVE A TRACTOR.

How You Can Buy The Universal Junior

The Gerlinger Motor Car Company announces the most business-like and most liberal Tractor proposition ever offered the Farmer! You need the Tractor, but you can't afford the money right now. Well, here's our proposition: It's very simple. You make us a small payment and the balance on time—**$50.00 down, $10.00 per month.**

WHAT MADE US DO THIS? WELL, READ THIS LETTER! IT SET US TO THINKING.

Keating, Oregon, April 5, 1917.

Gerlinger Motor Car Co.,
Tacoma, Washington.

Gentlemen:

I have seen your Universal Tractor Attachment at the Ford Garage, Baker City, Oregon, and I would have the attachment had I the money to spare just now. I am putting in 50 acres of grain this spring and would put in more had I this attachment. Since I have a 1916 Ford car, I wish you would meet me part way in this matter. This is what I will do: I will pay the freight from Tacoma, Wash., to Baker City, Ore., on the attachment, complete. I will give you a mortgage on my car and all of the crop from 50 acres, and at the end of 8 months' time I will promise to pay you in full for the tractor attachment. If you can do anything for me, please write me right away, for spring is here now. Address me, Keating, Baker County, Oregon.

I am, Yours truly, ANDREW DAHL.

My references: Basche Sage Hardware Co., First National Bank, Hansen-Weis Gen. Merc. Co., all of Baker City, Ore.

THE UNIVERSAL JUNIOR

(for Ford car only); attaches without mechanical change whatever in 30 minutes; reconverted to pleasure car in same time.

And there you have it! — every ounce a real tractor. All wrought steel. Made right in the West. No freight delays. No obstacles of distance. Made to suit the soils and conditions of the West. Works on a gallon an acre. Lowest cost per working hour. Any day, any hour, any task. And, remember—the Gerlinger Motor Car Company are the pioneers in tractor attachments. We put the first attachment on the market. The Universal Junior is a PRACTICAL FARMER'S tractor, every ounce and inch of it. We long ago got out of the experiment stage. Simple as a wagon; just as workmanlike. All the power you'll need for average work. Gear reduction 40 to 1. Plows, hauls, is all-around, all-purpose, and practically indestructible. The Sturdiest, Simplest, Most Satisfying, Honest Tractor at the Price Ever Built.

OUR COUNTRY IS CALLING FOR MEN, horses and more land to be tilled. Every horse set free for the army is another trench won for America. A tractor will set free four horses, and every tractor on the farm is more than cannon—it is food, more food, more grain, more hogs, more cattle. Do your part, buy a Universal, **TEN MONTHS TO PAY FOR IT.**

Orders filled in order received.

NOW IS YOUR CHANCE—DON'T EVADE IT!

GERLINGER MOTOR CAR CO.

Manufacturers of

UNIVERSAL JUNIOR AND UNIVERSAL TRACTOR ATTACHMENTS.

(We are also manufacturing the "Universal," $275 f. o. b. Tacoma, adapted to most all cars, such as Dodge, Buick, Overland, Maxwell, Studebaker and Ford. Orders will be filled in order received.)

Tacoma, Wash.

Agents Wanted Responsible firms or individuals wanted. Some territory still open. A golden opportunity for the right parties. Wire or phone.

THIS COUPON ALSO BRINGS YOU OUR UNIVERSAL JUNIOR FOLDER—"A Tractor A Matter of Course."

Gerlinger Motor Car Co., Tacoma, Wash. Gentlemen: I am interested in your installment plan offer on the Universal Junior Tractor Attachment.

Name .....

Town .....County and state .....

Kind of farm.....Acres in cult. .....

Enclose with this coupon check or money order for $50.00 and order will be booked and shipment made in turn. Contract blank for purchase of Universal Junior being meanwhile sent to you in regular way. If no money accompanies coupon, said contract blank will be sent with any particulars asked for. Our installment offer is to be understood as meant for farmers of character and references will be appreciated.

Producers File Protests

Enormous Freight Rate Increases Draw Fire

Whether or not the railroads of the country shall be permitted to increase their freight rates 15 per cent, thereby increasing the freight to be paid by the producers and consumers approximately $375,000,000 a year, is the question that is now being fought out in Washington, D. C., at this writing.

From all over the nation protests have poured into the interstate commerce commission against the proposed increase, and the states of the northwest have just had a hearing before the commission.

Some months ago, when the Adamson law was enacted providing for increased pay to the railroad operatives as the price of their continuance in service without the threatened strike, the Farmer warned the producers and consumers of the northwest that the railroads would sooner or later come back with a petition for increased freight rates to counteract the wage increase. They did as predicted, except that they asked for increased revenues of something like eight times the wage increase that the Adamson law required them to pay, and the interstate commerce commission granted the request, subject to final conclusion after opportunity to hear protests from those who must pay the costs. These protests are now being heard.

Last week Washington, Oregon and Idaho joined in a presentation in part of the case of the farmers, fruit growers, live stock producers and general consuming public of the northwest.

Prominent Men Take Part.

Among those taking part in the presentation of the case for the three states were the following: E. F. Blaine, chairman, and O. O. Calderhead, traffic expert of the Washington state public service commission; Commissioner H. H. Corey and Secretary Edward Ostrander of the Oregon state public service commission; J. Curtis Robinson of the Northwestern Fruit exchange; Assistant Attorney General Hance Cleland of Washington, and W. L. Clarke of Wenatchee, Wash.

Representing all the western states, H. B. Warren of Minnesota presented statistical data showing the mileage, capitalization and present earnings of the railroad companies.

Industries from all over the nation were represented in the week's grist of protests, practically all the states joining in the united move to prevent the enormous increase of freight rates.

Fundamental Principle.

Speaking specifically for the fruit-growing industry of the northwest, but sounding a fundamental principle, W. T. Clarke of Wenatchee, who was called as a witness before the interstate commerce commission, said:

"We are not unfriendly to the railroads. In fact, they are our partners in interest. If our industry fail they lose the tonnage. If we are prosperous they share equally."

He testified that at the present time when the railroads ship northwestern apples to points east of the Missouri river, where the greater portion of them are consumed, they receive approximately 50 cents a box for the service.

"The biggest part of all we earn goes to the carriers," he testified. He said that if the government places a 3 per cent war tax on freight shipments, as proposed, it will mean an 18 per cent increase instead of only 15 per cent, and would amount to 9 cents a box.

When the commerce commission will render its final decision on the case is not announced, but producers should continue their protest relentlessly until decision is made beyond all appeal. The farmer pays the freight both ways, on produces en route to markets and on manufactured goods coming back. His profits from wheat, fruit, beef or what not will be reduced by a certain portion of that $375,000,000 if the increase is allowed, and the cost of his machinery, clothing, manufactured foodstuffs and whatever else he uses will be increased by an additional portion of it.

Meeting of State Grange

By the time this issue of The Washington Farmer reaches our readers the 29th annual session of the Washington State grange will have assembled at Wenatchee. A full report of the sessions of the grange will be given in the next issue of The Farmer. In the meantime the following extracts are taken from an advance copy of the address of State Master C. B. Kegley:

This is a war, as President Wilson has said, for democracy, but our army and navy are not built on democratic lines. The resolutions asking for the reorganizing of the army and navy on democratic lines adopted at our last session should again be indorsed and plans made to see that support is aroused throughout the country to carry them into effect. An army organized on the lines of the old monarchial ideas of common soldiers and aristocrat officers, a class apart, is most inefficient for fighting for world democracy and would be a constant menace to democracy at home.

How shall the cost of the war be met? To me it seems very clear that we should insist with all our might that the war be paid for as we go and that not a single dollar shall be left for our children, or our children's children to pay, until the last dollar of the accumulated wealth has been exhausted. We have assisted in organizing a farmers' national committee on war finance and have affiliated with the American committee on war finance, both of which organizations have done and are doing splendid work to place the burden of financing the war where it belongs. I urge you to consider their program and take a strong, positive stand on this vitally important matter of how the cost of the war shall be met.

Feeding the Nations.

The American farmer is called upon to feed the nations, and I do not need to say at such a meeting as this that the farmers of this state, practically without exception, have responded and will respond to the best of their ability. But there is a responsibility upon the part of the government fully as great as that upon the farmer in order that the work of feeding the nations shall be as thorough and ample as the potential producing capacity of this great country warrants the nations to expect, and in order that our farmers in responding to the demand shall not suffer from a glutted market if the war should come to an end. This would mean disaster if not ruin to the great majority of our farmers, and it is only common sense in preparedness in this great world-wide emergency, for congress to remove the fear of this disaster by insuring them against this possibility by guaranteeing a minimum price.

The miller can be protected by guaranteeing that his price shall not exceed the farmers' price plus a reasonable handling profit, and the consumer can be protected by regulating the price of flour in the same way. By the nations buying through a single agency they will be able to get their fair quota of the surplus for export at the farmers' price plus the cost of shipment, which, through the council of defense and its subsidiary councils, it will be able to control.

By simply guaranteeing to farmers a minimum price and leaving supply and demand to regulate the price above this minimum the two most vitally important things are insured, namely: First, that distribution shall be where the need is most urgent; and, second, that the increased price will go to the producer, where it belongs. This will stimulate as nothing else could extra effort upon the part of every producer to greater production of the next crop.

If this plan is supplemented by a well-organized plan upon the part of the government to insure an adequate supply of skilled farm labor—and to do this the government may need to establish farm labor training camps—the maximum yield, so far as present farmers are concerned, will be insured.

Industrial Alcohol Distilleries.

Any system of national preparedness that does not include provision for encouraging the most rapid possible development of agricultural industrial distilleries is defective, whether viewed from the point of increasing food production, the liquid fuel supply, or munitions of war. I consider this a matter of such importance that I want to see a national association of farmers, liquid fuel users, and alcohol using manufacturers to take charge of this important part of national preparedness, and I hope you will appoint at this session a committee specially charged with the duty of helping to form such an association.

Condition of the Order.

The condition of the order is not always shown by the report of the secretary, but that can safely be taken as an index.

During the period that has elapsed since we made our last annual report we have organized 37 new granges, and reorganized four. Our growth has not not been abnormal, but we are anxious that we shall show from year to year an ever-increasing strength such as is manifest in subordinate and Pomona granges throughout the state. This is where we get the true test of the condition of the order, and we here make the statement that our granges are in better condition than in any previous year of the existence of the grange in Washington.

The state lecturer has about the best barometer for gaging the condition of the order in his weekly reports from subordinate and Pomona lecturers. Based on these reports, his opinion is that never before was the condition of the order so good. All this gives us courage to press onward and upward until we have reached the goal which is the ideal of all patrons.

Field Days and Fairs.

Last year, more often than ever before, we were called to attend these midsummer picnics and were forcibly reminded of the necessity of having some kind of a program, or a committee on program, to arrange these affairs so that they will not conflict in dates, thus enabling the state officers to make their itinerary so that one will follow another as nearly as possible. With this in view I would recommend that a committee be appointed at this session whose duty it shall be to bring about this arrangement.

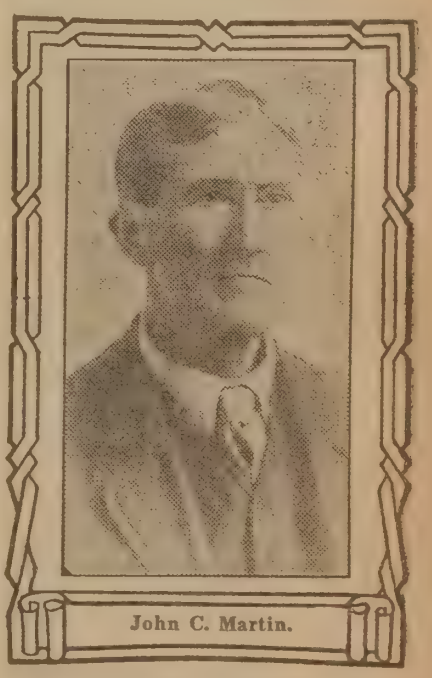
Year by year this work grows, and we are glad that it does. It means real education. Last year, in this state, we had more boys' and girls' clubs in contest work at fairs than in any year before. It was a source of the greatest satisfaction to see the boys and girls winning over grown-up men in the show ring at the Interstate fair.

Cooperation.

This subject is a live one in every subordinate grange, and the Pomona should make this work one of its chief functions. For years we have been urging this and lately we have been able to see decided results. This work is perhaps more developed in King county than in all the other counties together. One of these cooperative stores, located at Kent, under the management of Brother L. Y. Williams, did a business last year of over $113,000, on less than $6000 capital; another, located at Issaquah, with Brother R. I. Case as manager, will do as large a business as the one at Kent; and another, at Bothell, is doing almost as big a business. These patrons believe in cooperation and that the way to cooperate is to cooperate.

State College.

The patrons of Washington have just cause to rejoice with all the people of Washington over the victory won in the unusual fight waged against this, our state institution. This was an attempt to create an aristocracy in education—in other words, to reduce the farmers' school to a second class college and elevate the university to a school for the rich, thus drawing an ever-widening line of distinction in society. We have always demanded the same educational opportunities for our boys and girls as are offered to the city bred youths. This is nothing but plain democracy.



Adams County Fair.

The Adams county fair association at Ritzville, Wash., has elected five trustees, who are to serve a term of one year. They are B. B. Gillespie, J. A. Willis, W. R. Peters, F. H. Haupt and J. H. Perkins. A force of men is now busy cleaning the fair grounds. The track has been marked out and postholes for the fences are being dug.

Palouse Farm $75 an Acre.

Arthur A. Henry of Pullman, Wash., has bought for $12,000 the 160-acre farm of W. J. Cunningham, four miles west of Pullman.

Washington Portraits No. 18.

John C. Martin.

John C. Martin of Castle Rock, with the exception of five years has lived in Cowlitz county all his life. He has wrestled with those conditions that make men use their brains as well as their hands, first working in logging camps, helping clear the timber land, and finally owning a sawmill. He now has one of the coziest homes in the county. For two years he has been county treasurer, and deputy assessor for seven years of the county.

The next in the series of Washington portraits will be that of Charles E. Kline of Burke, and will be given in next week's issue of The Washington Farmer.

Liberty Bonds on Instalment Plan

Government Makes Liberal Terms and Banks Are Lending Their Aid

Your credit is good with Uncle Sam. He will sell you one of his liberty gold bonds on the instalment plan and give you the summer to meet the payments.

Suppose you decide that duty and good business judgment require you to invest in a $1000 bond. You can secure it on these government terms:

$20 when you make your application.
$180 on June 28.
$200 on July 30.
$300 on August 15.
$500 on August 30.
And the bond is yours.

There are, of course, bonds in smaller demominations for those who can not invest $1000 or more. Thrifty boys and girls can aspire to the ownership of a $50 bond. They would pay—

$1 down when they make their application.
$9 on June 28.
$10 on July 30.
$15 on August 15.
$15 on August 30.

These are the government's terms, but most of the banks are working out plans to offer still easier conditions. Some banks will give you a whole year to complete your payments.

The first thing to do is to take up the matter with your nearest bank, either by calling in person or by writing for instructions. The transaction is a simple one, and there is an organization in every county formed to help the government place these bonds.

The government is striving to popularize these bonds and the fault will be yours if you do not get one. An official statement from the treasury department at Washington says:

"Large numbers of national banks, state banks and trust companies, private bankers, express companies, newspapers, department stores, and other private corporations, firms and organizations, have patriotically offered to receive and transmit applications for the liberty loan without expense to the United States or to the applicants.

"The secretary of the treasury, appreciating the value of these offers, will have application blanks widely distributed throughout the country to these private institutions and also to the postoffices and sub-treasuries. Individual subscribers may use these conveniences or may send their applications directly to the treasury department at Washington."

With all these facilities, the purchase of a liberty bond will be as easy as the buying of a money order at the postoffice.

Mr. Roosevelt has well stated the reasons why every patriotic American should take a bond. "It is the duty," he says, "of every man and of every woman in this country, who can possibly afford to do so, to buy liberty bonds in order that guns, ammunition, food and clothes may be promptly and freely furnished to our soldiers who go to the front. There is every reason for buying them. The patriotic reason is enough, but here in addition there is offered the best security in the world, an investment backed by all the credit of the government and people of the United States."

Think it over. Talk it over with your family, asking them all to do their part.

Must Farmers Have Oriental Labor

The Washington Farmer of May 10 printed an article discussing a plan to supply needed farm labor which has been brought forward in the west. It is the French method of temporarily bringing in oriental labor with the requirement that the imported Chinese and Japanese farm workers be sent back at the end of the year. This article was sent out to quite a list of farmers scattered throughout the state of Washington and the replies received will be read with much interest:

J. C. BUSH, Chehalis, Wash.—Replying to your inquiry of May 2 regarding the temporary employment of oriental labor:

Personally I am opposed to the temporary or permanent employment of oriental labor in this country. The employment of such labor means in the end that the laborers become renters and land owners if the laws allow. The blood doesn't mix well, like that of the Scandiavians, the Germans, the English and other races, and in time we have colonies of orientals living on our best lands, mingling with the whites only in a limited business way, a source of trouble between the governments of the United States and those of the orient. I believe it better to avoid such trouble and possible future wars by discouraging in every possible way the coming to this country of the orientals even under the alluring plea of temporarily because we need them.

Our own hundred million people should furnish all of the labor we need to till the land and the taking away of one man out of every hundred of the population for the army should not work a great hardship. Let the home guard organizations, the commercial clubs and all patriotic bodies lend their individual and organized efforts toward helping the farmers at the rush times by supplying temporary labor and we will have no shortage. Let the army of hoboes be corralled and forced to work or starve. Let the national laws and machinery require every able-bodied man (and woman, too, for that matter), whether he is a pauper or a millionaire, to perform a certain amount of labor each year in helping produce food, unless he can show that he is regularly and steadily employed, and there will be no shortage of labor for the farms. We are too independent and want to take life too easy. We want the other fellow to volunteer for the army and we want "George" to go help our farmer friend while we ride about the country in automobiles and speculate on the prospects of crops for the coming season. If we are deeply and seriously in earnest about producing crops to help feed the allies let us conscript a few million men not needed for the army and navy and not following regular useful occupations and have them work on the farms.

A. A. KELLEY, East Spokane, Wash.—I am unalterably opposed to the indiscriminate importation of Oriental or Asiatic labor for agriculture or any industry when such labor is planned on a par with mules or other beasts of burden. If it is the purpose of importing and deporting the unfortunate, ignorant coolie, to be herded from place to place, not chained together, perhaps, but owned and controlled by contractors and drivers, I am of the opinion that we would be advocating a near-return to antebellum days. The Asiatic is a human being, endowed with mind and soul. There is no sound argument prohibiting the immigration of the Asiatics and the standing invitation and open door to every other part of the world. The standard of qualifications for entry to our land or country are fixed, may be changed, and in my humble opinion there should be no discrimination because of color, race, creed or country. Because my skin is white I am not so far removed from the birth of man that I can see no good in my fellow being. Therefore, it is incumbent upon me to regard my brother from the standpoint of citizenship rather than from the color of his skin, whether it be red, black or yellow.

BEN GROTE, Walla Walla, Wash.—I am not in favor of the temporary employment of Oriental labor, and I do not think it should be considered at all until it is determined how the raising of an army and the building up of our navy will affect the number of men usually available for farm labor. I employ from 20 to 75 men all during the year, and up to the present time I have had no difficulty in getting help: Conditions may be different in other sections, but personally I can see nothing to be alarmed at, for this season at least.

ALEX. MORRISON, Valley, Wash.: Relative to farm labor as regards oriental labor, I am not altogether in a position to say, only that wages are extra high, hence it means high cost of living or higher prices. Now Uncle Sam knows more about these things than I do, so I am willing to back him up, also abiding by his decisions. Of course we need more farm labor to cultivate the land from which our crops come. The idea of taking six or seven weeks to try one man like the I. W. W. case at Everett when all those jurors and witnesses should have been cultivating land! The case should have been fixed so it could have been tried with two judges, according to my view, but as the constitution says otherwise, so be it. Should Uncle Sam decide to allow the Chinese and Japanese to come to this country, then I am with Uncle Sam, first, last and always.

ROBERT PRIOR, North Yakima, Wash: There is absolutely no reason why oriental labor should not be supplied to the farms of the United States at this time, and in my opinion, any person or organization who opposes it is very unpatriotic if not anti-American.

W. FRENCH, Conconully, Wash.: The country is in great need of farm labor, therefore it is my belief that it would be to the advantage of the whole nation if farm labor of any kind could be secured, oriental or any other.

PETER CONBOY, Glenwood, Wash.: You ask me what I think of the proposition advanced regarding the temporary employment of oriental labor on the farms during the war; I am opposed to it.

More Egg Education

J. H. Guffey, manager of the Washington Cooperative Egg and Poultry association, confirms the report that many Washington poultrymen are going out of the chicken business.

"This is the report I get at our conferences, attended by the managers of the local associations," Mr. Guffey comments. "The selling movement is logical and almost inevitable at this time of the year, when the poultry farmers are faced with the necessity of carrying young stock through the summer on high priced feed. Either the egg market must improve, or many of our farmers will quit the business."

It is needless to say that such a condition would be a calamity for the entire northwest. Much of the stump land of eastern and western Washington is ideally suited to poultry culture. The hen is a specialist in turning the grasshopper and the wood ant into eggs and meat. Her ability as a rustler, and the wide range of diet to which she can adapt herself, make her one of the basic economic resources of the state. It is not reasonable to ask the farmer to shoulder this burden without help—he has been selling on a narrow margin of profit from the dawn of history, and a time has come when that margin is about to be wiped out. If the city man wants to continue to eat eggs, he must readjust his sense of food values; we need fewer egg boycotts, and more education.

P. E. T.

Something Good Added to Our Family Circle Page

Beginning with next week's issue THE FARMER will publish a series of

HEALTH AND HAPPINESS ARTICLES

By DR. LEONARD KEENE HIRSHBERG A. B., M. A., M. D.

Dr. Hirshberg is a graduate of Johns Hopkins university, and during his extensive medical studies in Europe was made assistant to a world authority on nervous diseases. He writes the kind of interesting and helpful health articles that you get both real benefit and keen enjoyment from reading. He blends the most timely and sensible medical advice with a buoyant optimism and good humor. We predict that our women folks will like Dr. Hirshberg, whose introductory article will appear in

NEXT WEEK'S FARMER.

Bull Association

Fifty Members Already Sign Up

N. C. Jamison, dairy specialist of the extension department of the State College of Washington tells The Farmer of the bull association now being organized on the Tieton project in the Yakima valley. In company with Joel G. Winkger of the United States department of agriculture, who has had much to do with the organization of these bull associations, R. P. Bean, the agriculturist on the Tieton project and J. N. Price, live stock specialist of the extension department of the state college, Mr. Jamison made a tour of the farmers. Over 50 members already have signed up and others are joining. The association will buy six or eight bulls and these will be located in blocks. At the end of two years the bull in block one will be transferred to block two, the bull in block two to block three and so on, and the bull in block six or eight will be transferred back to block one. This is the only bull association in the state of Washington. There are some 30 bull associations in the United States, the largest of these associations having 22 bulls and the smallest having three bulls. When several farmers unite in buying one bull, the organization is called a bull club. There are at least half a dozen of these bull clubs in Benton county, County Agriculturist Lee M. Lampson, having been largely instrumental in organizing them.

Milk Situation Critical.

Mr. Jamison, in common with others who are posted, regards the milk situation as extremely critical.. A number of dairies are being dispersed, the producers being convinced that they can not continue the business on present prices. There are somewhere about 250,000 milch cows in the state of Washington, and as the average life of a milch cow is eight years, it requires 30,000 cows each year to keep up the supply.

"People today are getting more food value for their money in milk than in almost any other essential article of food," says Mr. Jamison. "The producers should have an increase in price, and the consumers should be educated in the matter of the comparatively low cost of milk even at an increased price."

Mr. Jamison believes that the dairy cow yet remains one of the most profitable of animals, that she can use up roughage on a farm to better purpose than the hog, and that in the long run it will pay farmers not to sacrifice more of their dairy stock.

Mr. Jamison is continuing the work of aiding to organize the Spokane County Cow Testing association and will soon aid in similar work in the Yakima valley.

Skagit County Fair Prizes.

The board of directors of the Skagit County Fair association offer the following prices for the best grade dairy and beef cattle:

Grades.

Guerneseys.
Guerneseys, class M.
1. Cows, 3 years old or over; first, $4; second, $2.
2. Heifers, 2 years and under 3, first, $4; second, $2.
3. Heifer under 1 year old, first, $4; second, $2.
4. Herd, first, $10, $5.
Holstein, class N.
Same as above.
Shorthorn, class O.
Same as above.

Any Breed.

Class K.
1. Best grade cow, 3 years old or over, first, $4; second, $2.
2. Best grade cow, 2 years old and under 3, first, $4; second, $2.
3. Best grade heifer, 1 year old and under 2, first, $3 second, $2.
4. Best grade heifer, 6 months old or under, first, $2.50; second, $1.50.
Special premium for cow or steer in best condition for beef, $7.50.

New Elevator at Almira.

Almira, Wash., is to have a new elevator of 50,000 bushels' capacity.

Apples Important Food Necessity

As a Dried Product They Surpass Dried Potatoes in Nutritive Value

(Continued from page one.)

Energy Value.

	Calories per Lb.
Apples, fresh	260
Apricots, fresh	240
Grapes, fresh	390
Oranges, fresh	210
Prunes, fresh	325
Pears, fresh	255
Apples, dried	1190
Prunes, dried	1230
Apricots, dried	1139
Dates, dried	1415
Raisins, dried	1410
Baked beans, canned	555
Sweet corn, canned	430
Green peas, canned	235
Asparagus, canned	80
Tomatoes, canned	100
Apricots, canned	295
Cherries, canned	365
Peaches, canned	190
Corn meal	1625
Rice	1610
Wheat flour	1615
Corn bread	1170
White wheat bread	1195
Dried white beans	1530
Dried white peas	1508
Beef, fresh, rump	1380
Beef, corned, rump	1250
Veal cutlets	710
Pork shoulder	1660
Bologna sausage	1085

It will be noticed from the above that of the six kinds of fresh fruit, apples are credited with a greater number of calories per pound than apricots, pears or oranges. Canned baked beans contain only about half as much food value per pound as do dried apples. Canned sweet corn has only about a third as much value as dried apples.

White wheat bread has only about the same amount of food value as dried apples.

The above table will bear much study and will be a revelation to those who have deemed apples as a luxury rather than in the light of an important food product.

Outside of food values the necessity of fruit in the diet is well recognized by authorities as well as by the experience of people in general.

Analysis of 173 samples of 34 leading commercial varieties of American apples compiled from authorities are as follows:

	P. C.
Water	85.31
Solids, total	14.69
Sugar, total	11.30
Cane	3.40
Reducing	7.90
Protein	.639
Acid as malic	.589
Ash (salts)	.31
Crude fiber	1.29

Here is a table giving analysis of potatoes:

	P. C.
Average water content	76.67
Total solids	23.33
Starch	17.89
Sugars and dextrin	1.21
Protein	2.07
Crude fiber	.78
Ash	1.19
Undetermined	.19

Bulletin 28 of the bureau of chemistry gives the inedible portion of potatoes as 20 per cent; the available nutrients in the edible portion as follows:

	P. C.
Carbohydrates	17.7
Protein	1.7
Fat	.1
Minerals	.8
Unavailable nutrients	1.4

The same authority gives a fuel value per pound of potatoes as purchased of 292 calories.

The following table of food values of commodities as shipped are taken from "Elaboratory Handbook of Dietetics," by Mary Swarts Rose of Columbia university:

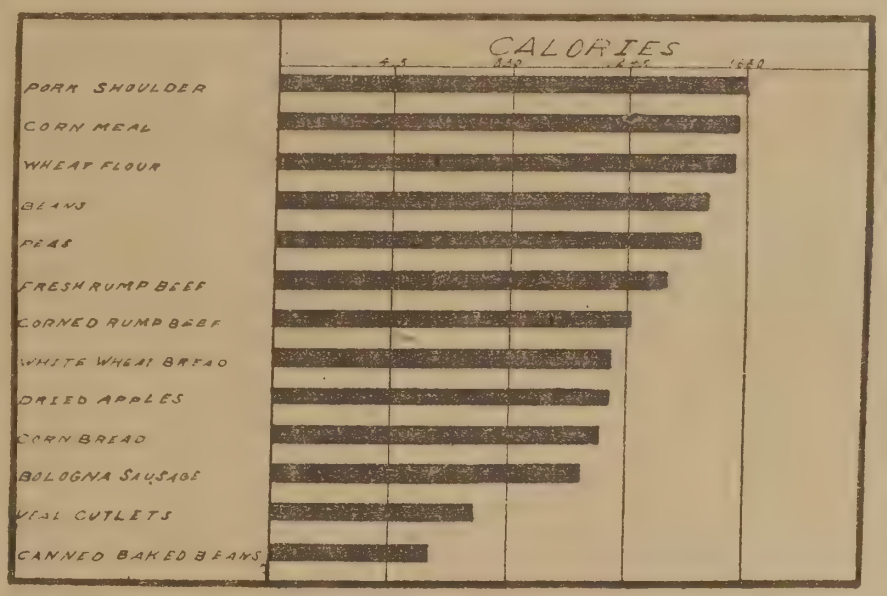
	Calories per Lb.
Tomatoes	103
Spinach	108
Cabbage	120
Cauliflower	138
Carrots	159
Potatoes	304
Cereals, etc.—	
Canned corn	445
White bread	1174
Beans, dried	1564
Rice	1591
Corn meal	1615
Fruits, fresh—	
Watermelons	57
Muskmelons	88.9
Oranges	169
Peaches	153
Apples	214
Pears	256
Dried fruits -	
Prunes	1161
Apricots	1260
Apples	1318

The apples are consumed in greater quantities than any other fruit in the United States. It constitutes one of the cheap forms of the desirable fruit portion of the diet, says B. F. Barnett, professor of pomology, state college of Washington.

Apple production:

1909 .....58,827,000 barrels
1916 .....67,695,000 barrels

The above is for the whole United States.



Here are some extracts from authorities on the subject of apple food value:

"The natural combination of acid, sugar, pectin, mineral salts and water that is found in fruits stimulates the appetite and helps in the movement of foods through the energy machine that we call the alimentary canal."—Bailey.

"The wholesomeness of apples is well recognized by all authors on physiology and hygiene, and the necessity of at least a partial fruit diet is acknowledged by all. Inasmuch as the apples are one of the most abundant of fruits * * * its value as a food product is probably not as fully acknowledged by our own people as it should be. Through a greater part of the year apples can be made a staple article of diet. They are, of course, to be most highly recommended uncooked."—Wiley.

The above compilation by the state college authorities is only one feature of the work that is being done by the institution in the line of aiding food preparedness. An exhaustive bulletin of over a hundred pages has been issued by the state college on the "Evaporation of Apples," by J. S. Caldwell, fruit by-products specialist, and other bulletins are in preparation, especially upon devices for use by families in drying fruits, some of which can be easily made at home.

Chart of Calories or Food Units

Dried apples (1190 calories) have in food units:

71.7 per cent as much as pork shoulder	1660	calories
73.2 per cent as much as corn meal	1625	calories
73.6 per cent as much as wheat flour	1615	calories
77.7 per cent as much as beans	1530	calories
78.8 per cent as much as peas	1508	calories
86.2 per cent as much as fresh rump beef	1380	calories
95.2 per cent as much as corned rump beef	1250	calories
99.5 per cent as much as white wheat bread	1195	calories
101.7 per cent as much as corn bread	1170	calories
109.6 per cent as much as bologna sausage	1085	calories
167.6 per cent as much as veal cutlets	710	calories
214.4 per cent as much as canned baked beans	555	calories

Land Bank Bonds Must Be Sound

Appraisals of Land Must Be Accurate and Reasonable

NORTH YAKIMA, Wash., May 31.—Several farm loan associations in the valley will go out of business, it is said, as a result of the announcement by Appraiser C. B. Kegley of the federal farm loan bank at Spokane, that fruit trees add nothing to the value of land and that loans must be based entirely on the land value.

Mr. Kegley has left this field with the suggestion that the associations disband, except one or two that with enlarged boundaries may accommodate any who want loans on the reduced valuations.

Desiring authoritative information on the matter of appraising orchard lands under the federal rural credits act the Farmer called upon D. G. O'Shea, president of the federal land bank at Spokane, handling the loan business for the four states of the Pacific northwest.

"Safety first; then service," is the motto adopted by the federal farm loan organization, said President O'Shea.

It was this idea, he says, that caused the central board at Washington, D. C., to make the ruling that fruit trees could not be appraised as a real asset of farm lands.

While this ruling has caused some uneasiness and some reported dissatisfaction in some orchard districts, it is believed that it will not work out to the injury of even the fruit growers themselves. Charters are being issued to loan associations in orchard districts, notwithstanding the ruling, says President O'Shea.

Announcement is made at the Spokane office that there are now nearly 30 associations in the four northwestern states, with many others in the process of application for charters. Of those granted, Washington leads with nine, Montana has eight, Oregon six and Idaho five.

The following is an extract from President O'Shea's instructions to land appraisers under date of June 1, touching upon the matter of orchard land appraisals:

"The appraisal of orchard lands has given rise to some comment and difficulty. In a measure we are between two fires and have to endeavor to steer fairly between both.

"In the first place I will say we are here primarily to serve the farming people of our district and bring to them the benefits that come from the farm loan law. Secondarily we are in duty bound to see that the security that is behind the bonds that will be issued will at all times be sufficient and beyond question. The continued operation of the law will altogether depend on the sale of the bonds that will be issued, and no question of reasonable doubt can ever be allowed to be raised as to the sufficiency of the security behind the bonds. It must also be borne in mind that the purchasers of such securities (many of whom will doubtless be representatives of estates for widows and orphans) must at all times feel that the investment is safe.

"The state of Oregon, under its rural credit law, has placed a limit on the amount of money that the state will loan per acre on any land within the state as a maximum of $50 per acre. It is doubtless true that the limitation was placed by the state of Oregon by reason of the difficulty that may arise from appraising lands in orchard districts. We would not like to have any misinterpretation of our purposes in the matter, and would also wish it understood that we are in duty bound to carry out the policies of the federal farm loan board. It would be useless for us to take mortgages that would not be acceptable for bond issues, as our activities would cease.

"We appreciate that land that is intensely cultivated is valuable, and we do not expect to ask to have land that is especially adapted for gardening and intensified cultivation appraised on the basis of grain lands in a remote section, as some have feared. In many sections of the western country, much land for orchard use was marketed in the past at high figures, and orchards have been planted thereon and loses incurred. In many cases the orchards have been pulled out and the land reverted to ordinary agricultural uses, and necesarily for all purposes will have to take the usual agricultural valuations.

"An orchard is a beautiful and a valuable asset, so is a beautiful home. If fruit trees were insurable they could be considered, doubtless, as insurable improvements. They can not possibly be fairly considered in the value of the land for the reason that they are destructable, that if care is not taken of them they may die or become diseased, and hence there is reason and justice in the policy of not considering the trees as having value for mortgage loans that will run up to 40 years. If orchard land should change ownership, what assurance would there be that future owners would have the knowledge or inclination to maintain orchards?

"In all these matters I trust that you will endeavor to make our position clear wherever you go and have it understood that it is our firm policy and purpose to treat all people and all sections of our district with equal consideration and care, and render to all equal service. Confident of the full and complete success of the land bank, and of its unquestioned and manifold benefits to farmers, we want only fair and conservative appraisements, and, believing that we are building for the future, we shall urge compliance with the motto we first adopted of "Safety first; then service."

Lambing Time

ARTICLE 6, by E. J. IDDINGS.

Management at lambing time generally determines the measure of success with the flock of the year. The percentage saved is all-important and runs from 40 per cent to 150 per cent, depending on feeding and management of the flock previous to lambing, equipment for taking care of the ewes and lambs and faithfulness of the work of the shepherd. In winter or early spring some shelter for night and conveniences form warming chilled and weakened lambs are required.

Some ewes, especially young ones, need to be placed by themselves for from two to four days until ewe and lamb learn to know and be able to find each other. Some lambs are born very weak and need to be rubbed to start the circulation and given warm milk and stimulants to give them a start in life. Saving of such lambs often does much to help the percentage. Orphans are common and must be placed on another ewe or raised by hand Often by placing the skin of a dead lamb on an orphan the mother of the former can be induced to take the latter. Other simple devices are made to serve the same end.

How to Feed Orphans.

Many fail in raising orphans by hand. The principal reason is overfeeding. The best method of feeding is with a bottle and rubber nipple. The first two or three days the cow's milk should be given every two hours, at first only two or three tablespoonfuls at a feed. Milk from a high-testing cow is best. The average for a 78-day butterfat test on 10 ewes representing five breeds in the University of Idaho flock was 8.62 per cent. One ewe, a Cotswold, averaged 9.46 per cent over a period of 76 days. The butterfat percentage for the average cow is approximately 3.75 per cent. The bottle and nipple must be kept clean and sanitary and the milk warmed for each feeding to about 92 degrees Fahrenheit.

After lambing the wes should have feed ample for making a strong milk flow. Some grain or grain and root crops for a few days and then grass is the common and entirely satisfactory method.

If the lambs are expected to make rapid growth they should be taught to eat grain early. After grazing is good the ewes need no grain. Feeding the lambs grain is solved by making them a creep. In a separate enclosure are placed low troughs for the lambs and

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Crisis May Justify Asiatic Labor

Recently The Farmer suggested the advisability of the United States government temporarily permitting the immigration of Asiatic labor as a wartime measure to fill the urgent need of farm industries. The plan has been successfully tried out in France, with a provision of law that the Asiatic workers are to be returned to their native land when the war is over.

Other Pacific coast newspapers are supporting the movement, and the Chinese Six Companies of San Francisco have offered to import Chinese laborers up to the number of 500,000 for farm work in this country and to return them promptly to China on the termination of the war.

Offer Is Being Considered.

Their offer is now under consideration at Washington, and Walter S. Gifford, director of the council of national defense, has acknowledged it in the following telegram:

"Your telegram of May 19 was considered by the council of national defense at its meeting yesterday. I am directed by the council to convey to you its appreciation of your offer and to advise you that the whole subject is being studied and that the government will be glad to avail itself of your cooperation later should occasion arise. Permit me in behalf of the council of national defense to thank you for your tender of service."

Prejudice Should Not Rule.

Action on this matter should turn on existing conditions and not on prejudices of former years. If Chinese labor is needed—if its temporary importation will help to increase food production and make easier the winning of the war—there should not be a moment's hesitation about accepting this offer. The Chinese Six Companies are in close touch with the labor supplies of China, and have the organization and the financial resources to fulfill their pledges. The fact is also to be considered that all authorities agree that Chinese business men are scrupulous in keeping their obligations. The Six Companies have promised to return these offered workers whenever the United States government shall so direct.

The American wage-earner has as much to gain by their coming as any other citizen. Probably more. It will mean increased food production and reduced cost of living. It will check or stop the withdrawal to the farms of labor needed in other industries, a movement that threatens to paralyze many industries and throw their remaining workers out of employment.

The Conditions Are Abnormal.

In normal times the Farmer would be against the bringing in of additional Asiatic labor. But these are abnormal times. The nation is at war with a powerful and resourceful enemy. The war may be won or lost on the farms of the United States. Our allies are crying for food, and it would be a crime against civilization and free government for us to allow anything to go to waste next harvest time for want of labor in the fields.

In all probability the labor problem will be particularly stringent on the Pacific coast. We have grain to harvest, fruits and vegetables to pick, pack, preserve and dry; salmon and other food fish to can and dry. If the labor supply should fall short, millions of dollars' worth of precious food will be lost.

These huge problems are up to the council of national defense, and if its judgment approves the offer of the Six Companies it will be the patriotic duty of the public to accept the decision and make the most of this added labor resource.

A Mistaken Idea of Cowardice

There is a great deal being said these days about so-called slackers, men and boys who for various reasons and by various means wish to avoid service in the army or the navy.

The coward or the man without sufficient patriotism to shoulder arms for his country should be frowned upon, but in prosecuting the campaign against slackerism many persons are casting a slur on thousands of honestly patriotic boys and men who are joining the army of food producers on the farm. No doubt there are persons who wish to go to the farms to avoid army service, just as there were those who wished to rush into matrimony for like purpose. And just as many patriotic and sincere young men refused to carry out their plans of marriage for fear of being thought slackers, so will many patriotic and sincere men refuse to join the army of soldiers of the soil this season because there is about to be a stigma placed upon them.

The armies fighting Germany are in sore need of food. Their governments are pleading with America to produce it, and the government of the United States is urging the farmers to do their utmost and thousands of men and boys in the city to join them to help plant and harvest the greatly needed crops. There should be thousands of workers from cities working on the farms this summer, and they should be honored for it. It would be as patriotic service as that performed by the men who will go with Pershing to the French front. The charge of slacker that is being promiscuously made is unfair and withal foolish; unfair because where one slacker goes to the farm to escape duty, hundreds of loyal men and boys will go to perform duty; foolish because under the selective draft law recently passed, employment on the farm will exempt no man unless it be determined that his serviec there is of such nature as to render it more valuable to the country than it would be on the battlefield.

Bond Dealer Talks Foolishly

A Spokane bond dealer advances the nonsensical suggestion that the government fix a minimum wartime wheat price for the farmers of 80 cents a bushel. That was about the average price before the war, he says, and if farmers made money at that figure three or four years ago, they should make a profit on that basis now.

The man who made that suggestion needs to wake up. Vast changes have come to this old world since the fateful summer of 1914. The cost of growing wheat has skyrocketed everywhere and an 80-cent guaranteed minimum would be no guarantee at all. It would be a monumental blunder, for the inevitable effect would be to discourage production, cut down acreage and intensify the existing world shortage in breadstuffs.

The farmer must pay more for everything that goes to the production of a wheat crop. Machinery, labor, seed, grain sacks, binding twine, horse feed, gasoline, cost of boarding his helpers, harvest expenses—all are on a higher plane.

Eighty-cent wheat in 1917 would be about as unprofitable as 30-cent wheat in the '90s. It is simply out of the question.

The world is short of foodstuffs and liberal profits to the farmer will be found the only corrective for that international misfortune.

Save the Bottles

Look about most houses and a large number of unused bottles will be found. The large-necked ones may be used for putting up small fruits and preserves. The others may be utilized for the bottling of fruit juices. Corks and sealing wax or paraffin will make them airtight.

Washington Gleanings

The farmers of Thurston county have made applications to the farm loan bank of Spokane for $24,300.

The Colville Indian reservation is to be opened to settlement to aid the increased production of farm products.

J. C. Fluherty, federal government farm expert, has been appointed county agriculturist of Yakima county and will assume his new duties at once.

For the third consecutive month E. L. Brewer of Satsop and Murphy brothers of Montesano have captured the Aberdeen Chamber of Commerce prizes in the cow testing competition.

According to a report submitted to the state department of agriculture by F. E. DeSellem, horticultural inspector at North Yakima, 1600 acres will be planted in beans in Yakima county this spring.

Four hundred organized farm loan associations in the Spokane district have applied for loans aggregating over $19,000,000. Unorganized applications in sight will double this sum in loans soon to be made.

M. V. Picken has been appointed by the county commissioners to fill the vacancy caused by the resignation recently of M. K. Bowen as a member of the board of directors of the West Okanogan valley irrigation district.

T. O. Morrison, assistant commissioner of agriculture, announces that the department will send F. N. Rhodes of Seattle to Los Angeles for the purpose of inspecting all shipments of California potatoes which are sent to northern markets.

H. B. Miller, chairman of the beet sugar committee of the commercial club of Toppenish, announced that sufficient pledges are secured or in sight to guarantee the 50,000 tons' output of beets required to secure a sugar factory for Toppenish next year.

Glenn Chandler, aged 17, a member of the Broadway Pig club of North Yakima, has received a $20 cash prize from the secretary of the National Duroc-Jersey Record association, for the best record in any state in 1916 in raising Duroc pigs in school club work.

Up to date a total of nine war leases have been signed by State Land Commissioner Savidge in accordance with his plan to permit farmers to rent free of charge, vacant state lands. The land is being leased by small farmers who want to raise vegetables for their own families and not for commercial purposes.

What Others Say

Herald, Concrete: We talk too much anyway.

Megaphone, Quilcene: When conscription begins the fact that war actually exists will for the first time really be accepted by the general public.

Press, Uniontown: It begins to look as if we were going to have to work our own roads, and it is now up to some one to ask the county officials to please lend us the drags and other implements to do the work with.

News, Index: For every soldier at the front we will have to have several at home. That means that every man, woman and child who stays behind must be kept busy at some profitable labor until the world strife is done.

Tribune, Lynden: So successful was the Housekeepers' Institute at the high school under the direction of Miss Mary Rausch, a member of the faculty of the University of Washington, that an effort will be made to make it an annual affair.

May Insure Soldiers

Government Takes Up Big Problems

The council of national defense is now working on the details of a proposed plan whereby the government would insure all its soldiers who go into the service of the country. Under the proposal as it now stands a flat insurance of $4000 on the life of each soldier of whatever rank. Higher insurance could be had, but the soldier would have to pay a premium for all above $4000, which amount the government would carry without cost to him. The proposal is made as one step toward the solution of the pension problem, which looms large with the approach of what may be a long and bloody war.

Hoarding a Felony.

Congress has enacted a law providing for a nation-wide survey of food resources and making hoarding or otherwise interfering with the free distribution of foodstuffs with a view to influencing the price a felony. The measure also makes provision for stimulating agriculture to produce the greatest amount of foodstuffs possible. Great powers over grain exchanges are placed in the hands of the president, who may prohibit practices of dealing, especially with respect to futures, when deemed by him injurious to the people of the United States. The measure carries over $11,000,000 appropriation.

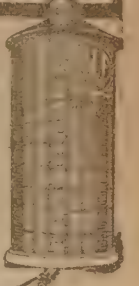
Wheat Production Inadequate.

Herbert C. Hoover, who will have charge of the food conservation program in this country during the war, has announced that it will require 971,000,000 bushels of wheat to supply the needs of this country's allies and neutral European nations. This is far more than the United States will be able to provide, he says, estimating that this country and Canada will be able to export 600,000,000 bushels of wheat during the coming year.

In order that the maximum staple foodstuffs may be available for supplying the needs of the warring nations including the soldiers of this country, Controller Hoover urges the saving of everything possible. Especially does he urge the people to use perishable goods as much as possible during this season, in order that the staples may be conserved not only for foreign use next winter, but for home use as well.

American U-Boat Base?

Persistent rumors have been heard during the last few days that the German government was making successful overtures to Venezuela to secure the island of Margarita, in the Caribbean sea, for use as a submarine base. Such base would be a great menace to this country, especially as it would enable the Germans to place the Panama canal in jeopardy. The rumors have been denied by Venezuela, buit it is still believed that negotiations are being made for a base somewhere in American waters.



Apple at the Top.

The apple is the most important fruit grown in the United States, considering the quantity produced, value of product and wide distribution of cultivation.

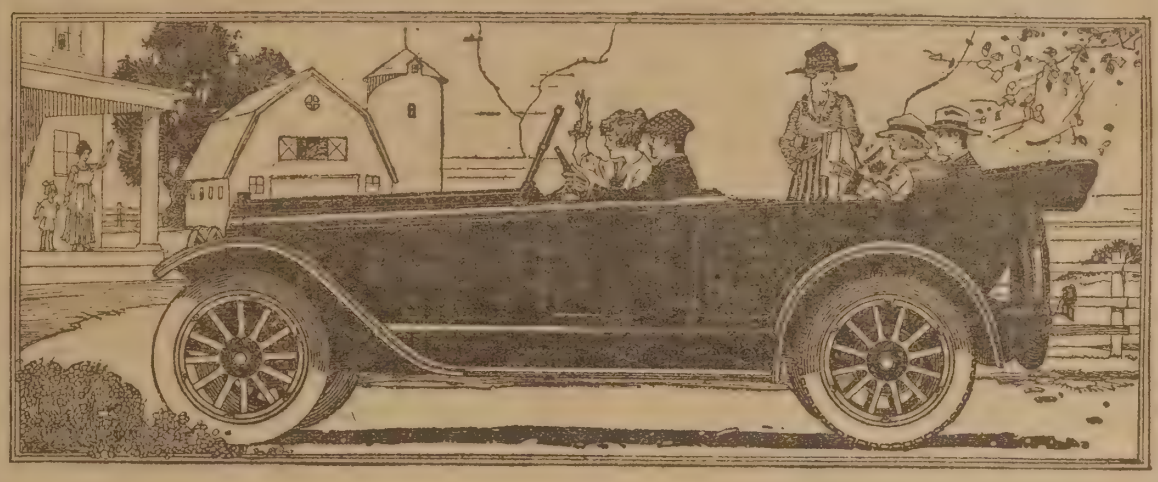
Ewes Sell at $18 Each.

Fred Beeman, the Pine Creek cattle and sheep man of Okanogan county, Wash., has sold 1000 ewes for $18 a head to Vincent McKenna, representing a Portland company. The sheep are extra good, course wool Shropshire grades, and were sold with the understanding that there would be a lamb with every ewe.

RUSH SILO ORDERS!

Your silo will pay for itself this year. Feed prices will be so high next fall that every stalk of corn should go into the silo. Rush your order for a genuine H-L-F Double Walled Silo.

No Carpenter Needed



This silo can be put up by one man. No scaffolding necessary. Double wall absolutely prevents freezing. Costs less than any stave silo. Over 1,000 in service. Write today for prices.

This Rugged Car

Has Twice the Needed Strength

John W. Bate, in the past three years, has doubled our margins of safety. Now every important part in Mitchells has 100 per cent over-strength.

This means better steel. It means larger parts. In these times it means much added cost. But it also means a lifetime car. It means a safe, economical car. A car which has proved that it can run 200,000 miles. That means 40 years of ordinary service.

Millions in Extras

There are also 31 features in Mitchells which nearly all cars omit. Things like a power tire pump, for instance.

There is 24 per cent greater luxury than in any other car in its class.

These extras will cost us on this year's output about $4,000,000. That is, for this over-strength, these extra features and this added beauty.

All Free to You

But all this added value costs you no extra price. Note that Mitchell prices, for either size, are below most fine-car prices.

We save in our factory cost. This mammoth plant has been built and equipped to produce this one type economically. John W. Bate, the efficiency expert, has cut our factory cost in two. Even the Mitchell bodies are built here, under these up-to-date methods.

That saving pays for these extras. We save all waste, and spend that saving on a superlative car.

Please see that car. See how it differs from other cars you know. Note its many unique attractions. You should know these things before you buy a car.

If you do not know the nearest Mitchell dealer, ask us for his name.

Lambing Time

(Continued from page five.)

entrance to this place is gained by openings that admit the lambs but not the ewes. Crushed oats and bran or crushed oats and corn meal are grain combinations suited for offering lambs in a creep.

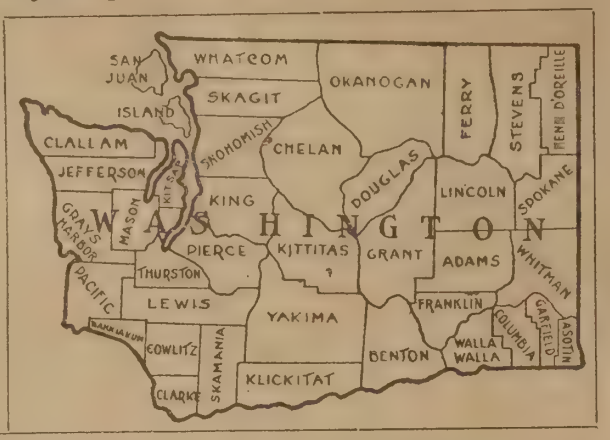
The average weaning time is four months of age. Good pasture for the lambs at this time enables them to grow fast and miss their mothers' milk but little. If the market offers inducements in order to secure spring lambs and the lambs are growthy, they may be sent directly from the ewes to the butcher.

Docking and Castrating.

Docked lambs keep cleaner and as fat lambs bring a higher price on the market. Docking should be done at 7 to 14 days of age. The tail should be severed with a knife or docking pincers at a point about one and one-half inches from the body. The pincers are used hot to prevent bleeding and are favored by many shepherds of the central states.

No ram lambs except pure-breds intended for breeding should be permitted to escape castration. Ram lambs gain slowly and in addition annoy other lambs in the feed lot. A good time for this work is on a bright day when the lambs are 10 to 14 days of age. The lower third of the scrotum is cut off and the testicles pulled out. At the age mentioned the cords break easily and but little blood is lost. The use of one of the many common disinfectants in connection with this operation makes it safer.

Forbids Sale of Wool.



The army council forbids the sale of raw wool grown or to be grown in the united kingdom during the season of 1917, including fleece wool and skin wool, but not including daggings, locks, brokes, and fallen wool, otherwise than on behalf of the director of army contracts. All persons having in custody stocks of such wools are required to sell same to persons authorized by the director of army contracts.

Berry Picking On.

Strawberry picking is on at Richland, Benton county, Wash. Although the berries are late, they are reported to be of fine quality, with a large crop in prospect.

Should Employ Man and Wife

A House for Hired Family Would Solve Many of the Problems Due to Shortage of Labor and Inefficiency

FAIRFIELD, Spokane County, Wash., May 19.—It is not only possible, but very practicable, for farmers to build small tenant houses for a man and family and keep them the year around. This would lighten the work both for the farmer's wife and the farmer and go a long way to solve the hired man problem. The extra cost would be so slight in keeping the man the entire year that no farm where a hired man is kept could afford to be without the family. It is very difficult to get the right kind of kitchen help and by having an arrangement with the tenant's wife much of the work could be done in that way. In rush seasons the extra hired help could be boarded and thus relieve the farmer's wife of this extra work. The tenant man and wife would be on the place to take charge whenever the family desired a few days' outing or, in fact, at any time they should want to stay away after chore time. Without some such dependable help, farm life becomes a drudgery with no Sundays or holidays, but a continuous job every day in the year. If the right kind of a man and wife could be found and once tried, they would never be dispensed with. Farm work is progressing very favorably and by June 1 should see the finish of pea and oat seeding. Vegetation is backward and pastures are short.

ROY G. ADAMS.

Must Conserve Stock.

MONTESANO, Grays Harbor County, Wash., May 25.—There is a slight tendency to increase the live stock in this county. This is especially true of pigs and a great many are regretting having sold off so closely when grain began to soar. Dairy cattle are somewhat on the increase and a number in outlying districts are turning their attention toward the production of beef. sheep breeders is becoming larger. No tention of a few and the number of theep breeders is becoming larger. No one is in the sheep business extensively, but the tendency is to grow a few sheep on the smaller farms, where the cost of production is low. The only way to increase the meat supply is to stop the sale for meat of breeding stock that would be profitable and productive breeders. It is obvious that such a scheme could be carried out best by the federal government. Until such time an appeal to the patriotism of the meat producers would be futile unless the idea made a strong appeal to their pocketbooks as well.

C. F. MONROE.

Live Stock Decrease.

PORT ANGELES, Clallam County, Wash., May 25.—The number of live stock, as compared with last year has decreased in this county, probably about 20 per cent and the reasons for this decrease are, high feed prices, a hard winter and the opening up of several logging camps. As a consequence the stockmen are slow in disposing of additional stock and a natural increase is expected. The high prices will be instrumental in herding cattle on the government plateaus in the Olympic mountains and stock raisers are figuring on making the most of the ranging privileges when weather conditions permit.

J. P. CHRISTENSEN.

Dairy Stock Increase.

OLYMPIA, Thurston County, Wash., May 28.—Dairy stock is on the increase; beef stock only a few herds. A number of low producing dairy cows have been sold with the idea on the part of the seller to restock with better stock. This has decreased and will decrease the number of dairy cows, but will keep the total production about the same. Increase in this line, as also in hogs, can be secured through campaigns for better feeding and better breeding. C. H. BERGSTROM.

Crop Prospects Fine.

BRUCE, Adams County, Wash., May 27.—There has been .85 of an inch of rainfall at Bruce during the month of May and the spring grain drop looks par excellence. The rye is beginning to head and farmers are not nearly through plowing. Some have started weeders on the summer fallow, but very few have harrowed their wheat, preferring to leave it, while some are harrowing now. Fruit will be good. Potatoes are looking fine and the prospect is good for a fine crop of everything. Not many enlistments from this part of the country. O. A. LEE.

Should Test Cows.

CHIMACUM, Jefferson County, Wash., May 25.—The number of live stock in this community is about the same as one year ago. The stock disposed of are the milk cows who do not pay for their feed because of the high cost of feeds and a poor cow can not be kept at any price. This is not a meat raising community, the only beef being raised is culls, etc., from the dairy farms. If farmers would keep account and test each cow, they would readily see their mistake which would be one way to increase the beef supply. JOHN VAN TROJEN JR.

Milk Too Rich for Calves.

CHEHALIS, Lewis County, Wash., May 28.—It is my judgment that there is as much live stock in Lewis county as there was a year ago, although the country has been combed for young cattle and a great many have been taken away. The farmers are apparently well stocked with dairy cows, this being a dairy community, but owing to the high prices paid by the condenser for whole milk it is my impression that in the field covered by the condenser there will be only a limited number of calves raised this year. In the sections where cream instead of whole milk is sold it is probable the usual number of calves will be raised. Young calves have been sent from here this spring by express to eastern Oregon, where they are to be kept on nurse cows and used to replenish the beef herds. A steady market for beef at high prices will replenish the beef supply faster than anything else I know of. The condenser is paying $2.25 per hundred pounds for 3.7 to 4 per cent milk (an unheard of price at this season of the year) and is drawing milk from many sources where it was not previously furnished. Hundreds of farmers not in the habit of raising beef steers will find it convenient to raise a few at prevailing prices. J. C. BUSH.

Advocates Federal Control.

NEPPEL, Grant County, Wash., May 17.—The effect of high price of grain and produce has caused every available piece of ground to be planted. Most of the farmers are putting their shoulders to the wheels in earnest in expectation of an urgent need. As to bettering production and general farm conditions the machine corporations are advancing their prices and that has a tendency to lessen further purchases of improved machinery, notwithstanding the fact that cheaper money can soon be had from the federal farm loan banks. And the fact still remains that federal control is the only remedy for the unwarranted advances. Next year will see an average yield in crops in general. The production should be increased to 25 per cent over normal planting and yield of 1917. Several here are making preparations to keep a hired man and family the year 'round, although it is a hard problem at present. Hired men for short periods is expensive and one of the drawbacks the farmer has to contend with.

MARTIN PENHALLICK.

Crops Show Increase.

WILSON CREEK, Grant county, Wash., May 20.—The high prices are having a tendency to increase the acreage of wheat about 15 per cent above last year's acreage; potatoes and garden vegetables about 100 per cent. Farmers are also paying more attention to hogs and cattle. It is not practicable to build a house on a wheat ranch for a year round hired man and his family. J. P. SCHROEDER.

HAY WANTED.

This paper is constantly receiving inquiries wanting the names of farmers who have hay to sell. If you have any to dispose of you can sell it through a small classified ad at but very little cost and save the middleman's profit. Try it.—Adv.

88 Bu. Oats Per Acre

Mr. A. Taylor writes: "I had 315 acres in oats that averaged 88 bushels an acre, 30 acres in wheat that averaged 50 bushels an acre, 20 acres in barley that averaged 50 bushels an acre." This is only one of thousands of good reports from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected, centrally located lands close to the railway, that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the best grainland, land also adapted to dairy and mixed farming. Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.

Free Homesteads

If you have not the capital to buy land you can still get one of the recently surveyed 160 acre fertile Homesteads along the Canadian Northern Railway, the newest transcontinental railroad, 'The Road to Opportunity."

Free Book Be sure to write today for a free copy of the "Home-Seekers' and Settlers' Guide," full of complete and authentic information. A fortune is waiting for you.

Cheering Message to Farmer

This fact stands out beyond question: There never has been a year in the lifetime of this generation when the American farmer could go forward with such promise of ample reward for his intelligence, labor and enterprise.

Secretary Houston of the United States department of agriculture conveys a cheering message to the American farmer. In substance he says: "Go confidently forward with your plans for increasing the food production of the nation. We will see that you are supplied with the workers to help harvest your crops."

Speaking before the house committee on agriculture, Secretary Houston said:

"In the section west of the Mississippi and south of the Ohio the farm labor supply is not very far below the normal. There are, of course, in these sections of the country some areas where labor is scarce, and we have received reports of migrations. But reports of serious labor shortage come chiefly from the New England states, parts of Pennsylvania, New York, Delaware and New Jersey. It is of the utmost importance to be able to assure the farmers in these sections that there will be abundant labor for the harvest.

"By finding out just what the situation is in each state we can be of real assistance in extending aid through state commissioners of agriculture. We can, perhaps, induce laborers to move from one section to another as the time for the harvest comes around.

"It has been estimated," continued Mr. Houston, "that there are more than 2,000,000 boys in the cities and rural districts who could be utilized in the harvest. It might be well even to postpone the opening of high schools in the fall in order to impress the boys into the work of gathering in the crops."

Unless all signs fail, there will be a ready market at good prices for every pound of non-perishable food that can be produced this year on the soil of this country. Farmers will make no mistake in producing any of the staple grains, peas, beans, meats and poultry products. Potatoes are not so certain, but the indications point to a demand, either at home or abroad, for all that can be grown. Green vegetables will be a doubtful crop except in districts with canning and drying facilities, but where these exist there will probably be a ready market at fairly good prices.

Builds Up Farm

J. C. Graham Proves the Possibility

The announcement of the dairy sale of J. C. Graham near Palouse, Wash., late in June, brings forward an interesting story of the manner in which Mr. Graham took a run-down farm and developed it into one of the most fertile, productive farms in the Inland Empire.

When he purchased the place in 1910 the soil was badly depleted. Instead of continuing the process of robbing the soil by raising grain, Mr. Graham began the development of a forage farm and installed a few dairy cattle. At first he made use of every bit of manure or decaying vegetable matter obtainable. He even hauled straw and old stack bottoms from neighboring places. This material he scattered in the corrals and about the barnyard during the winter, allowing the stock to tramp it down. It absorbed much fertilizing elements, and when piled up in the spring soon rotted and was ready for distribution about the farm.

All the forage and hay product of the place he fed on the ground. As time and cash permitted, he increased his dairy herd. Presently the place began to assume the appearance of fertility, and began to prove it by producing large crops.

Recently the place was sold, the deciding point in the transaction being the superior fertility of the place over another under consideration by the purchaser. The sale of the place necessitates the sale of the cattle by Mr. Graham, the herd now numbering approximately 80 head.

New Tractor Attachment.

Above illustrates a new "track-laying" tractor attachment. This new attachment is fitted to the axle only and in no way connects with the frame or chassis of the car, thus leaving the rear end of the springs mounted. It is claimed by the manufacturers the attachment can be put on any car in one hour's time. The track is 12 inches wide by 28 inches long, making less than 3 pounds of weight to each square inch of ground surface. At ordinary plowing speed it is described as having a draw bar pull of 1470 pounds, equivalent to 10 horsepower, doing the work of 6 horses.

GOODRICH

BLACK SAFETY TREAD TIRES

THE Goodrich trade mark on Goodrich Black Safety Tread Tires is CERTIFICATION that they are the *best fabric* tires made, *tested* and found the *best* on the roads of our nation.

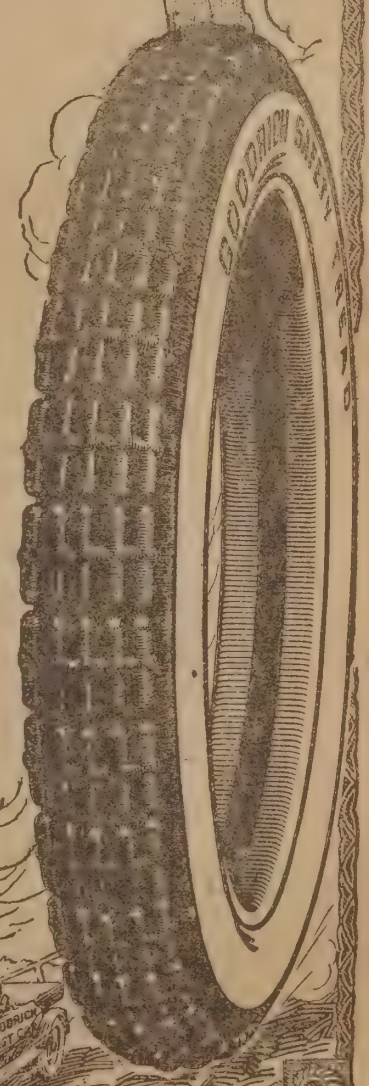
It *certifies millions* of *miles* of wear and tear tests vouch for those matchless fabric tires---millions of miles of hard roughing it to try the souls of tires.

It *certifies* that the UNIT MOLD, unbroken cure fabric construction, Goodrich always championed, has vindicated itself in the hardest test put to tires---the Goodrich Test Car Fleet.

Before Goodrich sells a tire to you, tires like them are belabored week after week through the Test Car System.

With heavy car and light car, two sets of drivers batter them sixteen hours a day over sand, rock and gravel.

Amidst the mountains of Yellowstone and Glacier Parks, in Dixieland, on the Pacific Coast, in the lake region of Minnesota, around Kansas City, over New England hills, SIX fleets of Goodrich Test Cars grind out the *best* and *worst* in Goodrich Tires.



The BEST, backed up by Goodrich Fair Treatment guarantee, you get in Goodrich Black Safety Treads you buy.

"Best in the Long Run"

A. B. NYSTROM, Editorial Contributor

Questions
Are Answered by A. B. Nystrom

Please tell me how to feed calf meal to a calf three months old. What is th feeding value of blood meal as calf feed, and likewise as a cow feed?

MRS. W. F. L., Mohler, Wash.

It is not an easy matter to raise calves without some milk. We do not find it necessary to feed whole milk for more than 10 days to two weeks, but a calf should get some skim milk even up to the age of three to five months. A good grain mixture for calves that are three months old is as follows: Eight pounds of blood meal, 100 pounds of corn meal, 100 pounds of wheat bran, 100 pounds of ground oats, and 50 pounds of linseed meal. This meal should be fed dry immediately following their allowance of milk. Blood meal is a good feed for calves, especially if there is danger of scours. Some feeders keep a box containing blood meal and a small amount of salt mixed within reach of the calves at all times. It is neither economical nor advisable to feed blood meal to cows.

Grain Before Calving.

How long before calving should a heifer be fed grain? How much should be fed? Is bran alone best? Or should it be mixed with some other grain?

M. I. H., Stanwood, Wash.

A heifer should be fed some grain to within four days of freshening. Up to within 10 days the grain may be the same that the rest of the herd is getting and should be composed of three or four grains. Within 10 days of the time of calving, feed bran alone or a mixture of bran, ground oats, and oil meal. It is important that the bowels be kept moving freely at time of calving. However, a purgative should not be given. Make use of laxative feeds.

Rennet From Calves' Stomach.

Can you advise me as to how to make rennet from calves' stomach properly?

E. R., Yacolt, Wash.

In preparing the home-made extract a number of the rennets are cut into pieces and just covered with salt brine in a suitable vessel, about three or four pounds of salt being added to 100 pounds of water. The mixture is vigorously stirred and pounded. Once a week the rennets are removed from the brine and passed through a press or clothes wringer to complete the extraction. The solution thus obtained is filtered through clean straw, sand and charcoal, and then treated with enough salt to prevent decomposition. A brine containing six or seven pounds of salt to 100 pounds of solution is about the proper strength. Rennet extract properly prepared is dark in color, but clear.

I do not recommend the use of home-made rennet extract. One can get the rennet extract at a dairy supply house at such a reasonable rate that it does not pay to go to the bother of preparing home-made extract, and again one is likely to get bacterial contamination. Also, the variation in strength of different lots usually requires the use of quite a variable amount of the preparation one time as compared with another.

To Prevent Bloating.

Is there any way that I can pasture cows on clover without their bloating? I have four cows and am depending on my clover for pasture until my rye is large enough to cut, but am having trouble with the cows bloating. Please let me know what to do.

W. M. B., Vashon, Wash.

Bloating is a form of acute indigestion, and can be largely prevented by making all changes in feed very gradual, especially if the ration is heavy, or if the new ration consists largely of green succulent feed. Cattle pasturing on clover should be kept under close observation and should not be let out if the clover is wet with dew or rain. It is sometimes well to feed some dry hay or similar feed before the change to pasture is made; or you may turn the cows to the pasture for a few minutes at a time, gradually increasing the time until they become accustomed to the new feed. Dry hay or similar material in a pasture is excellent to prevent bloating, as the cattle seem to like it. If the bloating is very acute and the animal is down, it will probably be necessary to insert a torcar through the body wall into the paunch on the left side about half way between the point of the hip and the last rib. A knife is sometimes used in place of a torcar, but there is danger of infection and also of making a wound that will not heal up readily when a knife is used.

If the case is not serious medicinal remedies will usually give relief. A large wooden bit about the size of a fork handle, on which some pine tar has been daubed, is placed in the mouth and held in place by a rope fastened to the horns. After the bit has been secured a small handful of salt thrown well back into the mouth causes the animal to work its tongue, and the flow of saliva promotes the belching of the gas. A large piece of rope that is hard will serve the same purpose. Tow ounces of turpentine diluted with milk is also a good remedy. This may be used as a drench if the bloating is not severe. Cold water may be dashed over the body or cold wet blankets may be put on and then covered with dry blankets.

Durham-Jersey Cross.

Does Durham and Jersey crossed make as good a cow as any, both the beef and milk qualities considered?

H. A. S. Appleton, Wash.

Sometimes if you get the milking strain of the Shorthorn and cross with a good Jersey cow you get an animal that is a fairly good milk producer and beef producer as well, but usually the cross does not result in such an individual. Very often we get cows that will produce only a small amount of milk with a low test. If you consider the beef type of Shorthorns you would by no means get as good a beef animal in the cross as you would by keeping the breed pure. I would not recommend such a cross. It is much better to stick to one line of breeding and try to breed up to the best possible production within that breed.

Preserving Butter.

There are several questions that I would like to ask about the brine method of preserving butter which you have given me. We have only a young cow and make but three to four pounds of butter a week, so that we have about one and one-half to two pounds more than we need. It is this surplus that I want to preserve. Can I make the brine as you suggest and just put the butter in from week to week? Would it be necessary to salt the butter? I should think the brine would salt it and make it very salty. I presume that when used it has first to be washed. We make our butter from sweet cream. Will that keep as well? MRS. F. C. B.

Wenatchee, Wash.

I believe you can get fairly good results by putting in a small amount of butter at each churning, but the best results can be obtained by making a special selection of cream to make sure that you are going to make the highest quality of butter, and then pack all of this butter into the jar that you expect to set away. If you do not do this you will find that some of the butter you will make will be of good quality and some perhaps a little inferior, and the color may be different in the different batches.

In preserving butter in this way you will not notice any great amount of salt in the butter except in the layer that is next to the top or next to the brine. In fact you will not need to wash the butter as you take it out, because there will be very little chance for any of the salt brine to get into the body of the butter, especially if it is properly packed. You should by all means salt the butter in the usual way, putting in just as much salt as your market demands, or rather as your taste demands. Get salt of good quality, free from odor, and see that it is worked in well, leaving no grittiness.

The larger the churning the better it will be and if you can fill your jar with one churning so much the better.

Many Dairies Quit.

Fifty-one dairies have gone out of business in Minneapolis in the last year, according to a report of the milk inspector. Most of these were small, having two to 10 cows. The high cost of cows and cow feed, in the face of the unchanging price of milk, and the increasing rent, are given as the causes.

Honor List of Walla Walla Association

The 4-year-old pure bred Holstein at the Walla Walla college heads the honor list in the Walla Walla Valley Cow Testing association during the month of April, she having produced 2201 lbs. of milk and 72.6 lbs. or butterfat. Cow No. 88, a Holstein at the penitentiary, has now been on the honor list for nine consecutive months, producing 594.7 lbs. of butter fat in that time.

The cow testing has been gradually increasing the number of cows on test until last month 400 were tested.

Below is a list of the cows producing over 50 lbs. of butter fat during the month of April, 1917, as reported by the tester, Will S. Horn:

Owner.	Breed.	Lbs. Milk.	Lbs. B. F.
Walla Walla College	H	2201	72.6
State Penitentiary	H	1098	69.2
State Penitentiary	J	1036	60.8

State Penitentiary	H	1444	50.5

Spring Soiling Crops

By CHESTER C. FARR, Snohomish County, Wash.

With feed prices soaring and prospects for cheap hay promising very little; dairymen should consider the use of fall sown soiling crops for the coming spring.

Why not work that potato field for a crop of succulent feed next spring, or make the corn land help? It may be that you are expecting to have a root crop this year which can be stored in time to seed a fall green crop.

Two bushels of winter rye, oats or wheat and 100 pounds of vetch seeds on the potato, corn or root crop land with the first fall rains or any time from then on until the middle of November will produce a valuable soiling crop for spring feeding, just when the ensilage gives out. The aftermath will make a good pasture or green manure crop to plow under.

Moisture conditions should be good for best results. You will have to judge from your type of soil as to which crop—oats, rye or wheat, with vetch or peas, will be best adapted to your conditions.

This green feed will keep your cows up in milk and condition just at the time they most need it and will save you many dollars which would otherwise go to buy high-priced hay.

Give this some thought in planning your crops for the year. Talk with your county agent for further information.

Blue Cheese Factory.

William McBride, who is opening up a 2000-acre ranch near Oakesdale, Washington, is arranging with the ranchers of the district to build a cheese factory there. Land for such a factory has been donated. McBride formerly operated a cheese plant in Los Molinos, Cal.

Feeding Work Horses

By E. K. SPURR, Ferndale, Wash.

At a time when conservation is the national motto and feed prices are soaring sky-high, it may interest the readers of The Farmer to learn of my method of feeding workhorses.

I cut my hay as fine as I can cut it. I have a board tank 10x24x36 inches, thoroughly painted with white lead; this is done to keep the boards from absorbing the liquid, and to make the tank watertight.

I put in this tank three pails of cut hay and one pail of cut alfalfa, measuring with 12-quart pail. Mix the hay and alfalfa while dry, then pour over them one pail of water containing one pint of molasses. This molasses should be put in two quarts of hot water before mixing it with the cold. If you are feeding a poor quality of hay use one quart of molasses instead of one pint.

Pour the pail of molasses liquid over the four pails of mixed hay and alfalfa, then mix until the hay absorbs the liquid. If you can not procure alfalfa use the molasses on the cut hay, but I prefer the mixture containing alfalfa.

The tank now contains three feeds for two horses used to eating it. With horses unaccustomed to this method of feeding begin with a light feed of, say, one-half of the regular amount indicated. When I put a pail of this feed into the feed box I mix in one-third of the ground oats that I use when feeding dry grain.

To one who has never used this method of feeding, the amount of hay and grain saved will come as a surprise. In cool weather the above ration will keep sweet until fed. In hot weather I keep only one or two feeds in the tank. Never mix enough to have it at all sour when fed.

This ration can also be fed to cows when the aim is to build them up and get them into a thrifty condition, but it is not a ration for producing milk.

Where many farmers make a mistake in using molasses is in buying too cheap a grade. I am using a cooking molasses that casts about 32c a gallon in barrel lots. The same molasses sold last fall for 25c a gallon.

Better Cattle Urged.

Professor Gordon H. True of the California state university farm at Davis declares that western ranches generally have about reached their maximum number of cattle; that "we have got to take steers off the range and replace them with breeding cows." He adds: "We must keep 2 and 3 year olds on the range, but the people in the valleys must raise feed to fatten them." It was Professor True who took two steers from the university farm back to Chicago last fall and won the grand championship and the reserve grand championship at the Chicago international.

Veterinary

Dr. S. B. Nelson

Bloody Milk—I have a cow that gives bloody milk. This condition has appeared for a couple of summers, and lasts each time about two or three weeks. She is in good condition otherwise and has a good appetite.

J. W., Sultan, Wash.

Answer—The red condition of the milk and cream may be due to either of two conditions. First it may be a slight bloody condition, or it may be an infection by one of the color-forming bacteria.

I am going to recommend to you that for the present you give a teaspoonful of hypo-sulphate of soda in a pint of water once daily for a week or 10 days. Wash the teats carefully with a 2 per cent solution of lysol before and after milking.

Calf Gets Stiff—What can I do for a calf that at first began to have indigestion fits and then got stiff in its body and limbs? When we lift it up on its feet it would try to walk, and its joints would crack and snap. It has a fairly good appetite. Seems to have some fever the last few days. It is about 6 months old now and has been in this condition for about three months.

L. H. S., Deep Creek, Wash.

Answer—It would appear that your calf had some trouble with the brain or spinal cord, as well as indigestion. I would suggest that you give two or three ounces of castor oil, then give in its milk or feed five grains of potassium iodide, morning and evening, for two or three days, then once a day for two or three days. With a chronic trouble like this treatment may not be very satisfactory.

Needs Exercise—I have a cow that was in heat three weeks after freshening, but not since. She is in good condition. J. P., Ferndale, Wash.

Answer—Try giving your cow a day's good exercise two or three days before you expect her to show signs of heat. Two days before this time, or the next day after giving her the good day's exercise, give her a pound and a half of Epsom salts. This may have the desired effect.

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

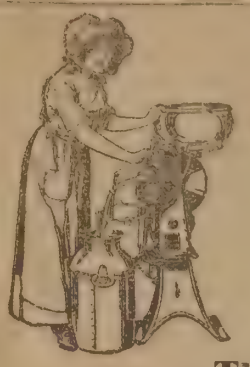
Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:



10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

MORE CREAM LESS LABOR

Through Using a

NEW DE LAVAL
CREAM SEPARATOR

PATRIOTIC DUTY as well as dollars-and-cents self-interest now demands of every cow owner the saving of every ounce of cream and butterfat.

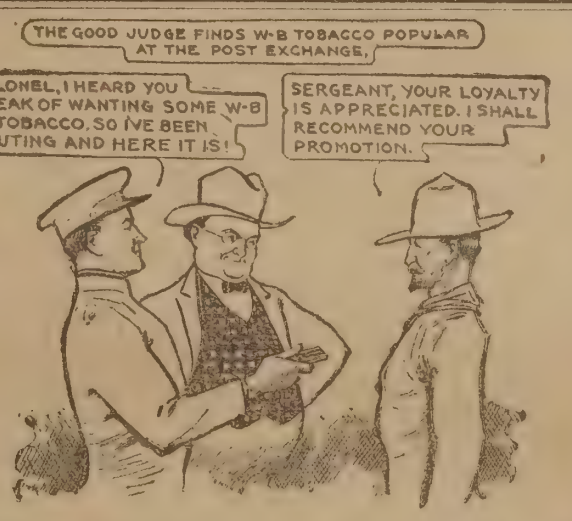
Likewise the saving of time that is possible through a cream separator of ample capacity, that is easily turned and always in order.

There was never a summer in the history of the country when both these considerations were of as great importance to the nation as well as to the individual producer of cream and butter.

Under present circumstances, a modern De Laval Cream Separator will save its cost every few weeks. Every cow owner owes it to himself and his fellow countrymen to effect this saving.

This is true whether you have no separator or have an inferior or half-worn-out machine, even if it be an old De Laval model.

It is important to remember, too, that if you can not pay cash for a new De Laval machine, you can buy one on such liberal terms that it will actually pay for itself while you are using it.



Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for new catalog or any desired information.

Every New De Laval is equipped with a Bell Speed-Indicator

POULTRY

Write to the Editor

JAMES ERYDEN
Editorial Contributor

What can the poultry raiser best do to aid the food campaign? Probably the best answer is that he should "stay on the job" and give his chickens better care than they ever had before.

The problem for the poultry keeper is not so much to hatch and raise more chickens as to take better care of what he has.

Keep the young pullets growing, so that they will come to laying maturity without a setback and furnish eggs when they are in greatest demand.

Never before has the poultryman had such an opportunity to make his work count for something. The country needs the eggs, and a little extra care given to the poultry will bring more profit than ever before.

Unless all signs fail the price of eggs for the next 12 months will be so high that the poultryman with a flock of good layers will make a very satisfactory profit. J. D.

"Volunteer" Plan Slow

To the Editor: Incubator chicks have many advantages over the others. Early chicks not only thrive better, but are worth more. I have my incubator set for the third time and only three hens set yet. The "volunteer" plan is too slow.

I never saw chicks grow like these. Not one has died, and they are really little bother after the first week.

Chicks, like all other babies, require warmth, food, cleanliness, exercise, fresh air and water, that's all. The first two days just warmth, the third grit and water. No food for three days. This is essential to health, life almost. No food till they have a mill to grind it. Grit and water first thing in the morning; grit all day, all they will eat, and they certainly do take a lot.

Give all dry feed; they know how much water they need. Give as free range as possible. Grass and insects are what they need. I made feeding pens by nailing four 12-inch boards together and tacking poultry wire on top. I can move these every day and keep food in them constantly.

I will set all hens that set before June 1 and put their eggs in the incubator just before they hatch. I can keep vermin from any incubator chicks and that, I think, is the secret of success.

MARILLA KIDWELL.
Garfield, Wash.

Note—This correspondent is right when she says that incubator chicks have advantages over others, but that does not mean that the "others" have not advantages over incubator chicks. Both have their advantages. It is true that early chicks are best, but hatching in June is late hatching. June and July I believe to be the worst months in the year for hatching and rearing chicks. Chicks are often fed too early, but there is also a danger of starving them too much. When they develop a good appetite, and that is usually in the second day after hatching, it is time to give them some feed. J. D.

Simplified Rations

Elaborate feeding formulas are not necessary. This point has been emphasized at the Storrs laying competitions. In the first four competitions the following rations were fed:

Scratch Grain.	Lbs.	Dry Mash.	Lbs.
Cracked corn	60	Coarse wheat bran	100
Wheat	60	Corn meal	100
Heavy white oats	40	Gluten feed	100
Barley	20	Ground oats	100
Kafir corn	10	Standard middlings	75
Buckwheat	10	Beef scrap	30
Coarse beef scrap	10	Fish scrap	30
		Low grade flour	25

In the fifth contest, which was held last year, the following simpler formulas were used:

Scratch Grain.	Lbs.	Dry Mash.	Lbs.
Wheat	100	Wheat bran	100
Cracked corn	100	Corn meal	100
		Ground oats	100
		Flour middlings	100
		Fish scrap	50
		Beef scrap	50

In the last contest the egg yield was some 10 eggs per hen higher than in the first four contests. It was not a feeding experiment and the result could not consistently be attributed to the change in ration, but it would indicate that elaborate feeding rations are not essential. The yield in the fifth contest was 162 eggs a hen. J. D.

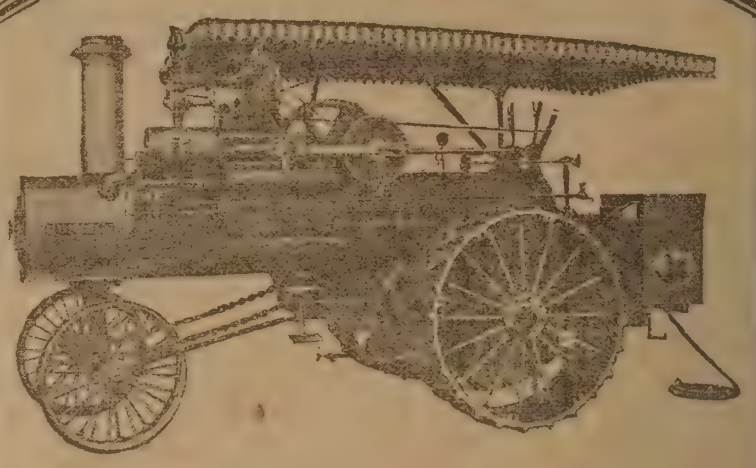
Pea Growing Hints.

If the land is reasonably clean of weeds harrowing may not be necessary where few peas are planted.

If, however, it is infested with wild oats and other weeds, a great deal of harm may result to the crop if the weeds are not destroyed, as peas have very little ability to choke down weeds.

According to the experience of various growers, the harrow may be used both before and after the peas are up, if they have been seeded deep (three to four inches). If the weeds start before the crop is up, harrowing should be done immediately. If the crop is up the teeth of the harrow should be slanted so as not to tear out the young pea plant.

Some
Popular Uses



Formaldehyde kills flies, purifies stables, stalls and milk cans, kills disease germs in kennels and chicken houses and clothing. It is a deodorant for refrigerators, sinks, drains, cesspools.

FORMALDEHYDE
The Farmer's Friend

officially endorsed by the U. S. Dept. of Agriculture as the greatest and most scientific seed grain cleanser the world has yet known. Destroys smut and fungus growth in seed grain, prevents diseases of potatoes and other vegetables. Write for big instructive Hand Book to-day—it is FREE.

Irrigation in Orchards

Every year since I have been a contributor to farm papers I have written one or more articles on irrigation. I had thought I would not write on that subject this year, but have changed my mind. The reason for change is that I have been out through the orchards, in several directions, and I see so many persons working at a disadvantage. Some are giving parts of the orchard too much water and other parts not enough. Some are distributing the water unevenly, in the same rows of trees and only a few comparatively doing the work in a way that it seems to me will yield the best results. So I have concluded to write again, giving those directions which I believe should be followed, and giving the reasons for following them.

Irrigate the Center.

I find a large numter of persons who irrigate splendidly up to within three to six feet of the trees, but who do not irrigate sufficiently near the trees. I saw one man wasting water because he said his orchard did not need all to which he was entitled, yet there was not a lateral carrying water nearer than six feet of the tree rows. We will suppose that the water percolates through the soil for a distance of two feet from the laterals there would still be left four feet on either side of the tree row without water or a strip of eight feet for every row of trees.

Now what is the result of that method? In the first place it is evident that the tree roots are not extending equally in all directions from the trunk of the tree and not getting all the food necessary to their best development. Tree roots tend to grow in the direction of the food supply. There is a scientific reason for this, but I am not teaching science, I am stating facts with which any observant farmer is familiar. It is a law similar to that which causes house plants to lean in the direction of the sunlight, if they are heliotropic, and away from it if they are anti-heliotropic. If, for instance, the tree rows run north and south there is a space eight feet wide along every row of trees in the orchard from which the trees get no moisture and therefore no food, because trees take their food in solution. Now we will suppose the trees are 24 feet apart, there is one-third of the orchard from which the trees get no food, or only such food as the slight moisture from the winter and an occasional summer rain will give them. The other two-thirds is generally given too much water and the damage done by overirrigating this part, is fully equal to the good results from rains. I, therefore, think it fair to say that by that method of irrigation one-third of the nutritive value of the soil is lost.

Again, in that arid strip, where the orchardist is trying the "dry farming method," the sage rats, gophers and field mice make their nests and grow their young, while they feed upon the tender roots of the trees. An orchard properly irigated, will drown hundreds of these young orchard pests, and the tendency will be for the old ones to remove to places not well irrigated. The man who irrigates all of his orchard thoroughly, will drive many of his gophers to the orchards of his neighbors who have dry strips of land where they can grow their young without being disturbed. These dry strips are also good places for ants, that are the worst carriers of blight and aphis, known to orchardists.

Now when I say I would irrigate the center, this does not mean necessarily that there should be made an irrigating lateral exactly in the center, although this is often better. But it does mean that the land all about the trees and between them should be wet.

The circumstances under which I would make a lateral immediately along the tree row, and so that the water will flow around the tree on either side, are when there is a little too much alkali in the soil. In the process of irrigation, the water percolates through soil, carrying with it a certain proportion of alkali and deposits it at a point where it percolates no further. It is common therefore to see strips of alkali about midway between the laterals, and a white crust on the surface, if the form of alkali is sodium sulphate, and a dark strip, if it is in the form of sodium carbonate. This is often strong enough to injure the bark of the tree and is a condition where certain diseases are propogated. Root rot would be much more frequent in an orchard of this character and treated in this way, than where the center is irrigated and the alkali carried away from the tree or more evenly distributed.

There are other questions of importance, but I will not mention them now, because I want the readers to remember the one thing in this article.

THE FARM GARDEN

ARTICLE 15.

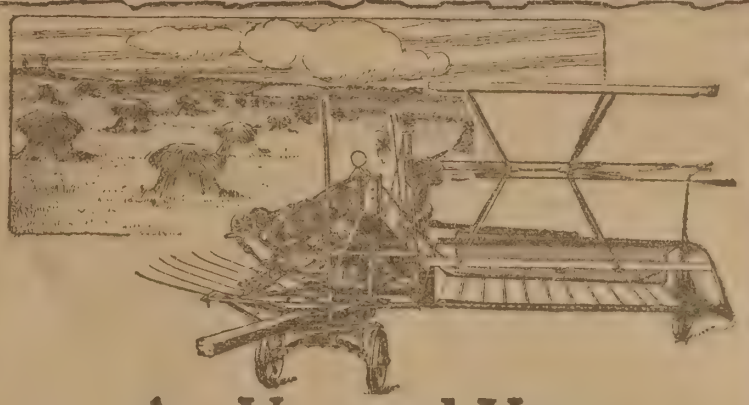
Oyster Plant

There are a few vegetables which large numbers of gardeners feel a timidity about trying merely because they are not as familiar as cabbage and onions and beans. Salsify, or oyster plant, as it is more commonly called, is one of these.

Salsify gets its name from the oyster flavor which it has, and many persons find it an excellent substitute in the making of soup, and use it also as an edible root. One common manner of preparing it is to boil until practically cooked, then cut into the size pieces desired, roll in cracker dust or crumbs and fry brown in butter. When thus prepared the dish is referred to as "fried oysters" because of the oyster flavor.

This plant should be sown and cultivated and treated generally in much the same manner as parsnips. It should be sown in rows for cultivation, and should stand three to six inches apart in the rows. Cultivation should be such as to provide a good root bed, as the plant is nearly useless if allowed to develop into a sprangly mass of small roots.

If allowed to stand in the ground over winter, which is a good plan as in the cash of parsnips, care should be taken not to let the seed scatter. The plant goes to seed the second year, like radishes, and grows much like a weed if allowed to run wild.



One ounce of seed is sufficient to plant about 100 feet of row.

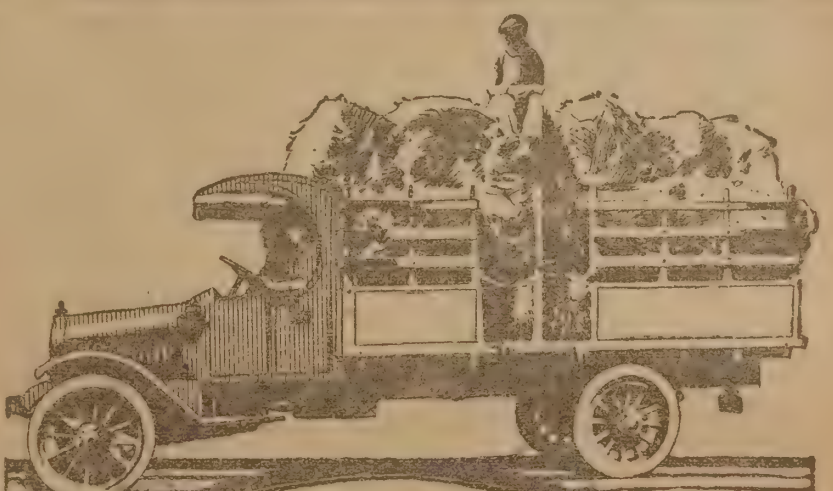
First Douglas Strawberries.

The first crate of ripe Douglas county strawberries were marketed at Roseburg, Ore., May 19 by William Pemberton of Green. The berries were sold for $4. Although the season is more than three weeks late, the usual amount of strawberries will be marketed.

Not For Her.

A fresh young farmer tried to kiss a summer girl who was spending her vacation in his home town last summer. He declared he had never kissed a girl in his life. She indignantly told him that she was no agricultural experiment station.

An Unusual Year



THIS may be the last year you will have a chance to market your small grain at such high prices. Naturally, you will do everything you can to secure a good crop and to harvest every last grain of it. The size and quality of the crop may not be entirely under your control, but the harvest is yours to make or break. It depends almost entirely upon the binder you use.

If your binder is not in first-class condition, get genuine I H C repairs for it at once and put it in shape. If it is too far gone for that, buy a new **Champion, Deering, McCormick, Milwaukee, Osborne,** or **Plano** binder now, while deliveries can be made and the machines gotten ready for work before harvest time. See your local dealer early in the season and arrange with him to have your binder delivered in plenty of time to assure the complete harvesting of your crop.

The twine situation this year is complicated by a number of unusual features, but we are furnishing our customers with twine of as good quality as ever. Quality in twine is more important than price. At the same time, just as a matter of insurance, it will be wise to make your twine purchases as early as possible. The dealer will appreciate any aid you can give him by placing your orders for I H C repairs, twine, and harvesting machines at the earliest possible moment.

Fourteen-Year-Old Remodels House

Raises and Cans Vegetables for Carpenter in Exchange for His Work

Ruth Anderson of Etowah county, Alabama, in her second year of club work, had an excellent plat of one-tenth of an acre of beans and tomatoes. She is the second girl in a family of 11, and takes a great interest in her club work. The family home was small, dark and crowded, and somewhat unattractive. One day a carpenter friend of her father saw her one-tenth acre and said he wished he had time to plant a garden. She told him she would furnish vegetables in exchange for some of his time. Thinking she was joking, he began to figure how many beans it would take to build a house, but Ruth told him about her canner, and he saw then that she was in earnest. After a while a bargain was made by which the carpenter agreed to begin work on the remodeling of the house if Ruth would furnish him with fresh and canned vegetables for the season. The other members of the family were soon interested in this undertaking and worked willingly to contribute their share to its success. When the house was partly finished Ruth won a canning-club prize given by a hardware merchant in Gadsden, the county seat. Silverware was offered her, but, intent upon completing the new house she asked the merchant how much a front door of glass would cost, and learned that she could get the door, side lights and windows for the price of the silverware. In this way Ruth brought light and joy to her family with her windows and door. Today they live in a pretty bungalow that she helped to build with her gardening and canning work. At the age of 14, in the second year of her work, Ruth put up 700 cans of tomatoes and 750 cans of beans.

Ruth's Home Before Improvement.

Ruth's Home After Improvement.

The upper picture herewith shows the old house in which Ruth lived before she undertook the remodeling plan. Below at the left is the result of her work, the old house converted into an attractive and conveniently arranged bungalow.

The success of this girl's undertaking should stimulate hundreds of boys and girls and even older persons throughout the country to can and preserve vegetables and fruits. Especially is it desirable that such work should be done this season. There probably has never been a time when fruit and vegetables available for winter use were so much to be desired.

Ye Have Heard That It Was Said by Them of Old Time

THE SEVENTH COMMANDMENT
"Thou shalt not commit adultery."—Exodus 20:14.

It is significant that "adultery" and "adulterate" are so near alike. To pollute good things with a mixture of bad ones, to mingle fine things with those things which are coarse and to lower the standard of purity, is a breaking of the seventh commandment.

And this being the case, would it not be well to prevent the likelihood of legalized and socially recognized adultery? The marriage at which true love is not present may be signalized by pomp and circumstance and attested by dignitaries of church and state, but it is adultery.

We approach marriage with too frivolous and light a thought. We have planned much to cure the evils of divorce. Why not begin before the marriage? Most of the evils of our present social life have come from a disregard of the sacred and holy things which relate to the relationship of the sexes. A recognition of the sacredness of our bodies and our responsibility for their preservation for the functions of parenthood would do away with the crying evil of our generation.

H. H. B.

FAITH WITHOUT WORKS.

To will and not to do when there is opportunity, is in reality not to will, and to love what is good, and not to do it when possible, is not to love it.

Ground Squirrels.

More than 50 species and races of ground squirrels inhabit the United States and Canada.

World Crop Outlook Is Gloomy

The International Institute of Agriculture, with headquarters at Rome, says "it is useless to ignore the fact that the world's wheat crop of 1916 and 1916-17 is unquestionably bad as compared with that of 1915 and 1915-16."

Copies of the April survey of the Institute have reached the United States. It discloses a gloomy outlook, not only for wheat but for foodstuffs in general.

It shows, in fact, a deficiency of more than one-fourth by comparison. It is also to be reckoned as a poor crop in contrast with the five years' average 1911 to 1915 and 1911-12 to 1915-16, since it shows a deficiency of one-eighth as compared with this average.

Statement for the commercial season—Fortunately, there is a considerable remainder from the previous crop. Will this suffice to meet the deficiency? The question would be answered affirmatively were it not that the trade of Rumania and Russia is interfered with. When the figures from these countries are set aside the situation becomes more aggravated, and reduced to its own resources the northern hemisphere shows a deficiency of 37,000,000 quintals, to which must be added the 26,000,000 quintals which usually form the net exports to tropical countries in the main.

To meet this deficiency of 63,000,000 quintals in the northern hemisphere we can find no more than 50,000,000 in the southern hemisphere.

Foodstuffs (Wheat and Rye).

Crop.—The crop of foodstuffs taken as a whole presents the same characteristics as that of wheat.

The rye crop of 1916 was also below that of 1915; rye is the only product showing a crop above the average in 1916; but this favorable situation can not do more than very slightly alleviate, in aggregating the foodstuffs, the deficiency in the wheat crop.

Disregarding the Rumanian and Russian crops not at present available for the world's requirements, the deficiency becomes even more pronounced than by including the yield of those countries in the totals. The deficiency is more than one-fourth in comparison with the past year, and about one-sixth of the average.

Fodder (Barley, Oats and Maize).

Crop.—Although relatively less unfavorable in the aggregate than the crops of foodstuffs the fodder crops must nevertheless be considered as bad when compared with the crop of 1915, and very moderate in contrast to the average yield.

Disregarding the Rumanian and Russian crops the situation is scarcely affected since the deficiency in these products is proportionately about as large in those countries as in the others taken as a whole.

Statement for the commercial season—Barley shows a deficiency of about 8,000,000 quintals (a quintal is about 220 pounds), which may, however, be counteracted to some extent by possible exports from subtropical countries.

Oats are the only cereal in the general statement that shows an appreciable surplus; this reaches about 30,000,000 quintals. The normal requirements of tropical countries are of no importance. It may be remarked that in order to constitute the credit balance it has been necessary to make considerable drafts on the reserves of the past year, amounting to 54,000,000 quintals.

Maize, on the contrary, presents the most unfavorable statement among the five cereals since the year finishes with a deficiency of 52,000,000 quintals, in spite of the fact that the reserves from the previous great crop amounted to 55,000,000 quintals.

In normal times tropical countries appear to require imports of maize, but the present high prices should have the effect of drawing this product to the large consuming centers in the temperate zone.

ONE HOUR'S WORK
Would It Feed One Soldier?

H. E. Murdock of the Montana Agricultural college experiment station, says he believes one hour's properly directed work on the farm this season will produce the equivalent of bread for one soldier for a year.

This may be questionable, but there is no doubt that there is need for effective work this season as seldom before, and if it requires five hours or 10 to feed a soldier it is all the more argument for no loss of time and no loss of effectiveness.

24 hours a Day

Is your working day measured by the endurance of your horses or mules? Is it limited to daylight hours? If it is, you are handicapped in doing your work on time, efficiently—in doing it *when* it should be done, in the *way* you want it done.

CATERPILLAR
Reg. U.S. Pat. Off.

With the Caterpillar, you can work day and night when necessary. You have plenty of power—steady, dependable power, always at your command. Read what one owner of two Caterpillars says:

"There have been no repairs, consequently no delays. During September we ran both engines 24 hours a day. The question with us today is—how did we ever farm without a Caterpillar?"

Think what it means to own a tractor you know is able to stand the gaff of long spells of day and night duty when necessary.

Only Holt design, Holt construction, Holt materials, Holt inspection, Holt service could make such results possible. For 35 years the name "Holt" has stood for the things that mean satisfaction and success for the buyers of Holt products.

Send for catalog T.R.524 It tells you all about the advantages of the Caterpillar—features not found on any other tractor—features you will want to know about before buying a tractor. It shows you the features that won for this tractor the highest awards at both California expositions—that have earned for it the name of "the world's greatest tractor."

Wants Fish Protected

To the Editor of The Washington Farmer: Just a word for which I beg to be excused and which I hope will escape the waste basket. I see in the last issue of The Washington Farmer, a very nice and truly interesting piece on the destruction of the coyote and all other predatory animals except the coon, which, with the help of the kingfisher and fish duck, evidently destroy more fish than all the nimrods in Washington or any other state.

Another party and I were fishing two or three years ago in Asotin county, Washington, and we stopped to eat our lunch beside Asotin creek well up in the mountains. We were there possibly 30 minutes and during this time there was a kingfisher perched on a snag by the creek. He caught to our certain knowledge six small trout, two to four inches long, leaving the tails and about half the fish lying where he sat when he caught them. And again you go along a small stream in the winter where there are plenty of small fry wintering and you will always see fish ducks (which are valueless) and coon tracks where they are catching those little fry. Now why fine fishermen who catch a few and eat every ounce of them and let predatory animals and birds catch and waste all the please? Why not put a bounty on kingfishers, fishducks, coons and fishhawks?

Again your item in The Washington Farmer says nothing about the coyote dostroying game birds. The coyote is an expert at finding grouse and other game birds' nests and you, Mr. Reader, know what it means for a coyote to find a nest of eggs.

Above all thing destroy predatory birds and protect the fish and destroy the coyote and protect the game birds.

S. B. CONNER.

Jerry, Wash.

To Poison Squirrels

To the Editor of The Washington Farmer: Will you kindly tell me in what solution can I soak seed corn to prevent the ground squirrels from taking it. It seems that we can not poison them when the corn is planted; nor can we prevent them from coming in from a great distance and devouring the corn. Would coal oil or corrosive sublimate be any good.—C. M. F., Colfax, Wash.

In answer to the above question, Leonard Hegnauer, extension specialist in soils and crops, State College of Washington, says:

The treating of seed grains for the purpose of keeping ground squirrels from destroying them would probably not be satisfactory. A good method by which to control the ground squirrels will be to use barley and treat that with the following preparation:

Barley (clean grain free from other seeds) 20 quarts.
Strychnine sulphate (ground or powdered) 1 ounce.
Saccharine, 1 teaspoonful.
Gloss starch (ordinary laundry starch) one-half teacup.
Water, one and one-half pints.

Dissolve the starch in a little cold water and add 11-2 pints of boiling water, making a rather thick solution. While hot, stir in strychnine and mix until free from lumps, then add the saccharine and beat thoroughly. Now pour the poisoned starch over the barley and stir rapidly until the starch is evenly distributed, then allow the grain to dry. When dry it will keep indefintely without deterioration.

Here is another method:

Take four gallons of cheap sugar and enough water to make five gallons of syrup. Heat to a boiling point and add one and one-third ounces of strychnine and boil for five minutes. The syrup can be bottled and kept indefintely. When ready to use, saturate the rolled barley with the hot syrup. As much should soak into the barley as is possible. Place a large tablespoonful of the mixture at one side of the holes. The squirrels are very fond of the sweet barley and it is sure death.

There is an objection to material of this kind, of course, which is that birds are killed by it.

Mountain Goats and Sheep.

The last flock of mountain goats and sheep of any considerable size in this state is to be found on what is known as Bauerman's ridge in Okanogan county. The last legislature set this aside as a game preserve, prohibiting the killing of sheep and goats therein. The United States has promised actve cooperation through its forest rangers to try to prevent the destruction of this flock.

Good Prospects for Fruit Crop.

Fruit Inspector Anderson of Garfield county reports good prospects for a big crop of fruit on Snake river farms, as there are no winter killed or frost bitten buds.

Canada's Liberal Offer of Wheat Land to Settlers

is open to you — to every farmer or farmer's son who is anxious to establish for himself a happy home and prosperity. Canada's hearty invitation this year is more attractive than ever. Wheat is much higher, but her fertile farm land just as cheap, and in the provinces of Manitoba, Saskatchewan and Alberta.

160-Acre Homesteads Are Actually Free to Settlers and Other Land Sold at From $15 to $20 per Acre.

The great demand for Canadian wheat will keep up the price. Where a farmer can get over $2 for wheat and raise 20 to 45 bushels to the acre he **is bound to make money**—that's what you can expect in Western Canada. Wonderful yields also of **Oats, Barley and Flax. Mixed Farming** in Western Canada is fully as profitable an industry as grain raising.

The excellent grasses, full of nutrition, are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent. There is now an unusual demand for farm laborers to replace the many young men who have volunteered for service in the war. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XIII.

In which are described the "literary" society and the country dance of 25 or 30 years ago in the Big Bend country of eastern Washington.

In the Big Bend country of eastern Washington 25 to 30 years ago when farms were scattered with miles betwen bunch grass intervening between the homes of settlers there were two main sources of amusement in the winter. One was the "literary societies" the other was the country dances.

Coulee City got especially gay one winter and put on a home talent play —"Among the Breakers," it was called. Chris Hartshorne, one of our bachelor neighbors, did the part of the gallant ship captain. Frank Robinson was the comedian. In one part of the play the comedian got stuck in a cracker barrel, which was part of the stage setting, and the gallant ship captain had to quit making love to the heroine long enough to pull Robinson out of the barrel.

The town artist painted the scenery, not omitting a distant view of the ocean. Just before the play began a dog went up on the stage. Will Gifford, the wag and wit of the countryside, said that the pup went up to the ocean and tried to jump in to take a swim.

At the age of 12 or 13 I acquired considerable fame as an "elocutionist" in the Hartline Literary society. I learned one long, rambling recitation after another, produced them at about the rate of one a week, I think, during the winter. I would sit in the back end of the Hartline school house where the "literaries" were held, and wait with trembling and bated breath till my turn came. Mrs. Hill usually was secretary. She would say: "Recitation by Joey Ashlock," and Joey would come forth with tottery knees. But somehow I would always get through my "piece," and never "forgot" once

I remember part of the favorite recitation. On several occasions when I was not on the program some one would ask for this declamation as an extra. It began this way:

St. Peter stood guard at the golden gate.
With solemn mien and air sedate.
When up to the top of the golden stair
A man and a woman ascending there
Applied for admission.

They came and stood
Before St. Peter, so great and good,
In hopes the city of peace to win,
And asked St. Peter to let them in.

The man was short and thick and stout.
And his stomach was built so it rounded it out.
The woman was tall and lank and thin,
With a scraggy beardlet on her chin;
The choir in the distance the echoes woke,
And the man kept still while the woman spoke.

"O, thou that guardest the gate," said she,
We come up hither beseeching thee
To let us enter the heavenly land
And play our harps with the heavenly band.

"Of me, St. Peter, there is no doubt,
There's nothing in heaven to bar me out,
I've been to meeting three times a week,
And almost always I'd rise and speak.

"I've told my neighbors, told them all,
About Adam and Eve and their primal fall,
I've told them what they'd have to do
To pass in with the chosen few.

"I've talked and talked to them, loud and long,
For my voice is good and my lungs are strong;
I've made their path of duty clear,
Marked out the plan of their whole career.

"And so, St. Peter, you'll clearly see
That the gates of heaven are open to me,
But my old man here, I regret to say,
Hasn't walked exactly the narrow way;
He smokes and chews and grave faults he's got,
And I don't know whether he'll pass or not."

The poem went on at some length, relating how St. Peter, observing that the top of the man's head was bare, questioned him as to the reason, and the evidence thus gained was damaging to the woman. Calling an imp he said, "Escort this lady around to hell!" At that my audience would laugh, the men loudly and the women in a rather scornful way.

Concerning the man, St. Peter said:

"Thirty years with that woman there,
No wonder he hasn't any hair;
Chewing is nasty and smoke's no good;
He smokes and chews? I should think he would;
Thirty years with a tongue so sharp,
Ho! Angel Gabriel, give him a harp,
A jeweled harp with golden strings,
A glittering robe and a pair of wings;
See that on the finest ambrosia he feeds;
I think he's had all the hell he needs;
It isn't hardly the just thing to do,
To roast him on earth and in future too."

That was the close. By then the men would be in high merriment and the women would be smiling grudgingly. Sanford Harmon and Belle, his wife, had a heated argument over this recitation, I heard. Sanford said that "it was just like a woman." Belle fired up and said that it wasn't; that it was just like a man, always trying to say something mean about a woman

Another literary gem in high favor in the pioneer Hartline Literary Society was Charley Ames' song entitled "Gooseberry Pie." Charley appeared by request on many programs. If he were given an encore he would sing the last verse over again. The refrain of the song was:

"A gooseberry pie, says I, says I,
O, gimme some gooseberry pie."

The last verse which Charley sang on encore served notice on all the girls present that he wouldn't wed a one of them who couldn't make good gooseberry pie. To give the proper expression to the last verse, Charley would cast a meaningful glance at the prettiest girl there, if she were near him; and she would look the other way with color coming up in her cheeks.

A favorite that broke even with Charley's "Gooseberry Pie" was George Roberts' "O'Flannigan's Pup." It began thus:

"Ould Mickey O'Flannigan had a bull pup,
He'd foight and he'd niver give up,
His legs they was crooked, his nose it was hooked,
There niver on earth was such a pup"

The chorus was:
"Ooo—woo, woo, woo, such a pup,
He'd foight and he'd niver give up.
There niver on earth was seen sich a wan,
As Mickey O'Flannigan's pup."

The debate was always an important part of the literary program. A hotly debated question that I remember was this:

"Resolved That farming by irrigation is less desirable than farming with rain.

The case went against irrigated farming. The farmer who led the attack on irrigation said, in tones of thunder, that "Goddle mighty" never intended that water should be taken out of "cricks and rivers" and put on dry land. If land was too dry to grow crops, folks had no business trying to farm it. Let them get out of the darned country and go where there was rain.

Another debated question dealt with the exclusion of certain European immigrants—specifically, "dagoes," which class represented the debaters' idea of undesirable European immigrants.

Charley Roberts defended the right of Europe to send "dagoes" to America. He was the keenest and most entertaining debater I have ever heard. He had come into the Hartline country from somewhere in Pennsylvania, and now I realize that he must have had a university education with legal training. Keen wit, biting sarcasm, fluency I have never heard surpassed, and a masterful knowledge of parliamentary law were his deadly weapons. He did not have access to libraries or other reliable fountains of information in preparing his arguments; but he relied on his super-eloquent tongue and stinging thrusts of speech either to ridicule his opponents to the ground or make them so "mad" that speech failed them, leaving him winner of the debate by default.

On the occasion of the debate on European immigration the opposition to "dago" immigrants was led by a woman debater of the literary society.

"A whole family of them, were in the car (evidently a tourist) when we came west," she said. "They cooked onions on the stove and ate chunks of bread dipped in oil of some kind, and smelled up the whole car with their onions and dirt till the conductor made them get out and go into the day coach. They had about a dozen children, and the whole lot of them slept in an upper and lower, and the children yelled in their sleep and fell out of bed all night; and one of the women, the black-eyed thing, flirted with the brakeman something awful; and——"

"Mr. Chairman," interrupted Charley Roberts, "with your permission, please, and the consent of the house, may I ask the speaker a question?"

He stated his request so solemnly and so respectfully that everybody gaped forward, listening intently.

"Is the speaker willing to be interrupted by the gentleman on the floor?" asked the chairman.

The speaker was willing.

"I should like to ask the speaker," said Charley in low, solemn tones which every one sought to hear, —— "I should like to ask the speaker if the black-eyed flirt also ate onions."

The "house" exploded. When the uproar had subsided the "speaker" was in her seat, red with wrath; and the right of Europe to ship whole cargoes of "dagoes" to America, onions, noisy children, black-eyed flirts, all, was vindicated by the unanimous vote of the three judges of the debate.

In the next instalment the Bunchgrass boy tells of sitting on the shady side of the smokehouse and cutting fruit for drying, day after day. "Boards were laid out in form of wide, long tables, and over the bare boards were spread the cut halves of peaches, prunes, plums, apricots and the quarters or eighth of apples." Not the least interesting incident is that of the first fresh strawberries he ever saw, which were raised by a squaw man.

Holland Regulating Crops.

In 1915, 126,000 acres, or 2 per cent of Holland's superficial area, was devoted to gardening and 20,900 acres, or 0.3 per cent, to flowers and bulbs, out of a total of 2,325,000 acres (38 per cent) of arable land. On August 16, 1916, a law was passed empowering the government to restrict or prohibit the planting of crops that were not so useful for feeding human beings and animals as certain other crops; and therefore the government has made several regulations calculated to increase the food-producing capacity of the land and at the same time to discourage the cultivation of crops whose acreage has been increasing under the stimulation of high export prices. The cultivation of several kinds of crops will be restricted to the average acreage employed for those crops during 1913, 1914 and 1915. Other crops which are principally used for export, will be reduced to 70 or 80 per cent of the 1913-15 figures.

Sells 1000 Ewes.

A. P. Jones, Prineville, Ore., recently sold 1000 head of ewes, to be delivered in September, to William Wilson of Powell Butte at $12 per head.

Make the Most of Your Time

SAVING TIME is like saving money when you are threshing. You cannot afford to have all hands sitting idle waiting for your repairs. Insist upon having a thresher that will save your grain and keep steadily at work until the job is done. Hire or buy a

Red River Special

It Saves the Farmer's Thresh Bill

It is guaranteed to be capable of doing more and better work than any other machine made of like size and proportions, working under the same conditions and on the same job. It can be crowded to the limit and still keeps saving the grain. Unlike other threshers, it *beats out the grain.*

Tractor owners find an ideal threshing outfit in our Junior, the small thresher with high efficiency. Same famous features as Red River Special. Makes home threshing pay. Write

Nurses Killed on Mongolia.

ABOVE:—MISS HELEN B WOODS
BOTTOM:—MRS EDITH AYRES

The above photograph shows Mrs. Edith Ayres and Miss Helen Burnett Woods, Red Cross nurses of Chicago, who lost their lives aboard the American steamship Mongolia when a brass attachment of a shell used in target practice by the ship's gun crew struck the water and boomeranged back nearly 200 feet to the deck of the vessel. The navy department has announced that no such accident ever occurred before.

Hinted in Reichstag at Revolt

George Ledebour, leader of the socialistic movement in Germany in a speech in the reichstag recently declared that "revolution must come and the country may as well prepare for it."

When Knighthood Was in Flower

By EDWIN CASKODEN (Charles Major).

Copyright 1898 by the Bobbs-Merrill Co.

CHAPTER XXI.—(Continued.)

As soon as Brandon arrived in Paris we took private lodgings, and well it was that we did. I at once went out to reconnoiter, and found the widowed queen a prisoner in the old palace des Tournelles. With the help of Queen Claude I secretly obtained an interview, learned the true state of affairs.

Had Brandon been recognized and his mission known in Paris, he would certainly have been assassinated by order of Francis.

When I saw the whole situation, with Mary nothing less than a prisoner in the palace, I was ready to give up without a struggle, but not so Mary. Her brain was worth having, so fertile was it in expedients, and while I was ready to despair, she was only getting herself in good fighting order.

After Mary's refusal of Francis, and after he had learned that the sacrifice of Claude would not help him, he grew desperate, and determined to keep the English girl in his court at any price and by any means. So he hit upon the scheme of marrying her to his weak-minded cousin, the count of Savoy. To that end he sent a hurried embassy to Henry VIII., offering, in case of the Savoy marriage, to pay back Mary's dower of 400,000 crowns. He offered to help Henry in the matter of the imperial crown in case of Maximilian's death—a help much greater than any King Louis could have given. He also offered to confirm Henry in all his French possessions, and to relinquish all claims of his own thereto—all as the price of one 18-year-old girl. Do you wonder she had an exalted estimate of her own value?

As to Henry, it, of course, need not be said, that half the price offered would have bought him to break an oath made upon the true cross itself. The promise he had made to Mary, broken in intent before it was given, stood not for one instant in the way of the French king's wishes; and Henry, with a promptitude begotten of greed, was as hasty in sending an embassy to accept the offer as Francis had been to make it. It mattered not to him what new torture he put upon his sister; the prince, I believe, was sufficient to have induced him to cut off her head with his own hands.

If Francis and Henry were quick in their movements, Mary was quicker. Her plan was made in the twinkling of an eye. Immediately upon seeing me at the palace she sent for Queen Claude, with whom she had become fast friends, and told her all she knew. She did not know of the scheme for the Savoy marriage, though Queen Claude did, and fully explained it to Mary. Natrally enough, Claude would be glad to get Mary as far away from France and her husband as possible, and was only too willing to lend a helping hand to our purpose, or Mary's, rather, for she was the leader.

We quickly agreed among ourselves that Mary and Queen Claude should within an hour go out in Claude's new coach for the ostensible purpose of hearing mass. Brandon and I were to go to the same little chapel in which Jane and I had been married, where Mary said the little priest could administer the sacrament of marriage and perform the ceremony as well as if he were thrice as large.

I hurriedly found Brandon and repaired to the little chapel where we waited a very long time, we thought. At last the two queens entered as if to make their devotions. As soon as Brandon and Mary caught sight of each other, Queen Claude and I began to examine the shrines and decipher the Latin inscriptions. If these two had not married soon they would have been the death of me. I was compelled at length to remind them that time was very precious just at that juncture, whereupon Mary, who was half laughing, half crying, lifted her hands to her hair and let it fall in all its lustrous wealth down over her shoulders. When Brandon saw this, he fell upon his knee and kissed the hem of her gown, and she, stooping over him, raised him to his feet and placed her hand in his.

Thus Mary was married to the man to save whose life she had four months before married the French king.

She and Queen Claude had forgotten nothing, and all arrangements were completed for the flight. A messenger had been dispatched two hours before with an order from Queen Claude that a ship should be waiting at Dieppe, ready to sail immediately upon our arrival.

After the ceremony Claude quickly bound up Mary's hair, and the queens departed from the chapel in their coach. We soon followed, meeting them again at St. Denis gate, where we found the best of horses and four sturdy men awaiting us. The messenger to Dieppe who had preceded us would arrange for relays, and as Mary, according to her wont when she had another to rely upon, had taken the opportunity to become thoroughly frightened, no time was lost. We made these 40 leagues in less than 24 hours from the time of starting; having paused only for a short rest at a little town near Rouen, which city we carefully passed around.

We had little fear of being overtaken at the rate we were riding, but Mary said she supposed the wind would die down for a month immediately upon our arrival at Dieppe. Fortunately no one pursued us, thanks to Queen Claude, who had spread the report that Mary was ill, and forrtunately, also, much to Mary's surprise and delight, when we arrived at Dieppe, as fair a wind as a sailor's heart could wish was blowing right up the channel. It was a part of the system of relays—horses, ship and wind.

"When the very wind blows for our especial use, we may surely dismiss fear," said Mary, laughing and clapping her hands, but nearly ready for tears, notwithstanding.

The ship was a fine new one, well fitted to breast any sea, and learning this we at once agreed that upon landing in England, Mary and I should go to London and win over the king if possible. We felt some confidence in being able to do this, as we counted upon Wolsey's help, but in case of failure we still had our plans. Brandon was to take the ship to certain island off the Suffolk coast and there await us the period of a year if need be, as Mary might, in case of Henry's obstinacy, be detained; then revictual and reman the ship and out through the North sea for their former haven, New Spain.

In case of Henry's consent, how they were to live in a style fit for a princess. Brandon did not know, unless Henry should open his heart and provide for them—a doubtful contingency upon which they did not base much hope. At a pinch, they might go down into Suffolk and live next to Jane and me on Brandon's estate. To this Mary readily agreed, and said it was what she wanted above all else.

There was one thing now in favor of the king's acquiescence: During the last three months Brandon had become very necessary to his amusement, and amusement was his greatest need and aim in life.

Mary and I went down to London to see the king, having landed at Southampton for the purpose of throwing off the scent any one who might seek the ship. The king was delighted to see his sister, and kissed her over and over again.

Mary had as hard a game to play as ever fell to the lot of woman, but she was equal to the emergency if any woman every was. She did not give Henry the slightest hint that she knew anything of the count of Savoy episode, but calmly assumed that of course her brother had meant literally what he said when he made the promise as to the second marriage.

The king soon asked: "But what are you doing here? They have hardly buried Louis as yet, have they?"

"I am sure I do not know," answered Mary, "and I certainly care less. I married him only during his life, and not for one moment afterwards, so I came away and left them to bury him or keep him, as they choose; I care not which."

"But—" began Henry, when Mary interrupted him, saying: "I will tell you—"

I had taken good care that Wolsey should not be present at this interview; so we four, the king, Wolsey, Mary and myself, quietly stepped into

The Thing to Do.

The youngster had just been told the story of Daniel in the lions' den, and the question had been put to him:

"What do you think Daniel did the very first thing when he found he was saved from the lions?"

The child reflected a moment, and then replied: "I suppose he telephoned home to his wife to tell her he was all right."

a little alcove away from the others, and prepared to listen to Mary's tale, which was told with all her dramatic eloquence and feminine persuasiveness. She told of the ignoble insults of Francis, of his vile proposals—insisted upon, almost to the point of force—carefully concealing, however, the offer to divorce Claude and make her queen, which proposition might have had its attractions for Henry. She told of her imprisonment in the palace des Tournelles, and of her deadly peril and many indignities, and the tale lost nothing in the telling. Then she finished by throwing her arms around Henry's neck in a passionate flood of tears and begging him to protect her—to save her! save her! save her! his little sister.

It was all such perfect acting that for the time I forgot it was acting, and a great lump swelled up in my throat. It was, however, only for the instant, and when Mary, whose face was hidden from all the others, on Henry's breast, smiled shyly at me from the midst of her tears and sobs, I burst into a laugh that was like to have spoiled everything. Henry turned quickly upon me, and I tried to cover it by pretending that I was sobbing. Wolsey helped me out by putting a corner of his gown to his eyes, when Henry, seeing us all so affected began to catch the fever and swell with indignation. He put Mary away from him, and, striding up and down the room, exclaimed, in a voice that all could hear, "The dog! the dog! to treat my sister so.' My sister! My father's daughter. My sister! The first princess of England and queen of France for his mistress! By every god that ever breathed, I'll chastise this scurvy cur until he howls again. I swear it by my crown, if it cost me my kingdom," and so on until words failed him. But see how he kept his oath, and see how he and Francis hobnobbed not long afterward at the Field of the Cloth of Gold.

Henry came back to Mary and began to question her, when she repeated the story for him. Then it was she told of my timely arrival, and how, in order to escape and protect herself from Francis, she had been compelled to marry Brandon and flee with us.

She said, "I so wanted to come home to England and be married where my dear brother could give me away, but I was in such mortal dread of Francis, and there was no other means of escape, so——"

"God's death! If I had but one other sister like you, I swear before heaven I'd have myself hanged. Married to Brandon? Fool! idiot! what do you mean? Married to Brandon! Jesu! You'll drive me mad! Just one other like you in England, and the whole damned kingdom might sink; I'd have none of it. Married to Brandon without my consent"

"No! no! brother," answered Mary softly, leaning affectionately against his bulky form; "do you suppose I would do that? Now, don't be unkind to me when I have been away from you so long! You gave your consent four months ago. Do you not remember? You know I would never have done it otherwise."

"Yes, I know! You would not do anything—you did not want; and it seems equally certain that in the end you always manage to do everything you do want. Hell and furies!"

"Why! brother, I will leave it to my lord bishop of York if you did not promise me that day, in this very room, and almost on this very spot, that if I would marry Louis of France I might marry whomsoever I wished when he should die. Of course you knew, after what I had said, whom I should choose, so I went to a little church in company with Queen Claude, and took my hair down and married him, and I am his wife, and no power on earth can make it otherwise," and she looked up into his face with a defiant little pout, as much as to say, "Now, what are you going to do about it?"

Henry looked at her in surprise, and then burst out laughing. "Married to Brandon with your hair down?" And he roared again, holding his sides. "Well, you do beat the devil; there's no denying that. Poor old Louis! That was a good joke on him. I'll stake my crown he was glad to die! You kept it warm enough for him, I make no doubt.'

"Well," said Mary, with a little shrug of her shoulders, "he would marry me."

"Yes, and now poor Brandon doesn't know the trouble ahead of him, either. He has my pity, by Jove!"

"Oh! that is different," returned Mary, and her eyes burned softly, and her whole person fairly radiated, so expressive was she of the fact that "it was different."

Different? Yes; as light from darkness; as love from loathing; as heaven from the other place; as Brandon from Louis; and that tells it all.

Henry turned to Wolsey: "Have you ever heard anything to equal it, my Lord Bishop?"

My Lord Bishop, of course, never had; nothing that even approached it.

"What are we to do about it?" continued Henry, still addressing Wolsey.

The bishop assumed a thoughtful expression, as if to appear deliberate in so great a matter, and said: "I see but one thing that can be done," and then he threw in a few soft, oily words upon the troubled waters that made Mary wish she had never called him "thou butcher's cur," and Henry, after a pause, asked: "Where is Brandon? He is a good fellow, after all, and what we can't help we must endure. He'll find punishment enough in you. Tell him to come home—I suppose you have him hid around some place—and we'll try to do something for him."

Mary before the king.

"What will you do for him, brother?" said Mary, not wanting to give the king's friendly impulse time to weaken.

"Oh! don't bother about that now," but she held him fast by the hand and would not let go.

"Well, what do you want? Out with it. I suppose I might as well give it up easily, you will have it sooner or later. Out with it and be done."

"Could you make him duke of Suffolk?"

"Eh? I suppose so. What say you, my Lord of York?"

York was willing—thought it would be just the thing.

"So be it then," said Henry. "Now I am going out to hunt and will not listen to another word. You will coax me out of my kingdom for that fellow yet." He was about to leave the room when he turned to Mary, saying: "By the way, sister, can you have Brandon here by Sunday next? I am to have a joust."

Mary thought she could—and the great event was accomplished.

One false word, one false syllable, one false tone would have spoiled it all, had not Mary—but I fear you are weary with hearing so much of Mary.

So after all, Mary, though a queen, came portionless to Brandon. He got the title, but never received the estates of Suffolk; all he received with her was the money I carried to him from France. Nevertheless, Brandon thought himself the richest man in all the earth, and surely he was one of the happiest. Such a woman as Mary is dangerous, except in a state of complete subjection—but she was bound hand and foot in the silken meshes of her own weaving, and her power for bliss-making was almost infinite.

And now it was, as all who read may know, that this fair, sweet, wilful Mary dropped out of history; her soul his empire; her every wish his subject, and her will, so masterful with others, the meek and lowly servant of her strong but gentle lord and master, Charles Brandon, Duke of Suffolk.

(The End.)

6 Victrola Records

Included with this wonder new Lyric Phonograph only $24.85

Every feature found in most expensive makes is embodied in this wonderful new instrument. The invention of the Lyric phonograph is an achievement of the greatest importance and interest to all lovers of good music. Many other wonderful features not obtainable in other makes also embodied.

It is constructed in accordance with true acoustic principles, and delivers a pure modulation of voice and musical tone that has proven it a marvel to the musical world. Every one who hears it is both astonished and delighted.

In other words, the LYRIC is the last word in artistic perfection.

We will send you this wonderful new phonograph and 12 selections or six double latest Victor records for the low price of **$24.85**

EASY TERMS can also be arranged for $1.00 down and $1.00 a week, but the price will be **$26.65.**

Guarantee and Exchange Agreement

Every one of these instruments is fully guaranteed by ourselves and the manufacturers, and if you are not perfectly satisfied in every way, your money will be refunded. Furthermore we make you an exceptional offer by accepting this instrument at full value toward the purchase price of any other make that you may wish, which we control the agency, within one year from the date of purchase. This protects you fully in every way, and we are sure that no fairer proposition has ever been made to the public.

FREE TRIAL

If for any reason you still may have a doubt whether this instrument is all that we claim it to be, let us send one to you for five days' free trial. All charges will be prepaid, and if it is satisfactory, send us the full amount, $24.85, or if you wish, buy it on the instalment plan.

Remember, the whole cost is only $24.85, which includes 12 selections of records of your own choice.

FAMILY CIRCLE

Write to the Editor

ALICE W. BARLAND
Editorial Contributor

Break Monotony

Have Something to Do Out of Doors

Dear Women of the Family Circle: I have been planting seeds during the last two or three weeks as I have no doubt you have, and aren't seeds the very most wonderful things?

I planted many varieties of flower seeds, some were so tiny like a pin point. As I held the little specks of things in my hand and looked at them the great miracle of life came to me with the same force as always when I am planting seeds.

Down in the heart of that tiny little brown speck is hidden a mystery which all the knowledge of all the ages has been unable to fathom—the mystery of life.

One could roll a few grains of earth into a little speck like the seed of a pansy for instance, which might look so much like the pansy seed that no one could distinguish them, but all the accumulated wisdom of all the centuries can not put the life germ into the speck which in outward form is identical with the pansy seed.

I had a package of carnation seeds which lay unopened for 15 years in my sewing machine drawer. From time to time as I put the drawer in order I left them there as they took up no room lying flat on the bottom of the drawer. Tossed about so long I forgot when or where or why I got them for I never raised carnations from seed. Last year I remembered them at the right time to plant them and though I had no idea the seeds would be good after all those years, I thought I would give them a chance.

They were placed in a little corner by themselves and in due time up came the sturdy little carnation plants.

Down in the heart of those little seeds was sleeping the life germ imbedded therein by God himself when he made the first carnation and decreed that every plant of the field should grow and produce seed each of its kind.

The little seeds, and they were very small, were lying forgotten for 15 years sealed into that paper package, but as soon as they were given moist earth and sunshine the life within burst the outside shell and leaving it behind pushed straight upward toward God and the sunlight. Oh the infinite wonder of it! The beautiful and wonderful mystery of life!

There are many reasons why I think farmers are the most fortunate of all who toil. I have not always appreciated the advantages of farm life and if by these little chatty talks I can direct the attention of the women who read this page to some of the beauties and wondrous things that surround them on all sides, it will help them to forget, in a measure, the monotony of the daily cooking and cleaning and mending, for the life of the farm is hard and no one knows better about it than I do.

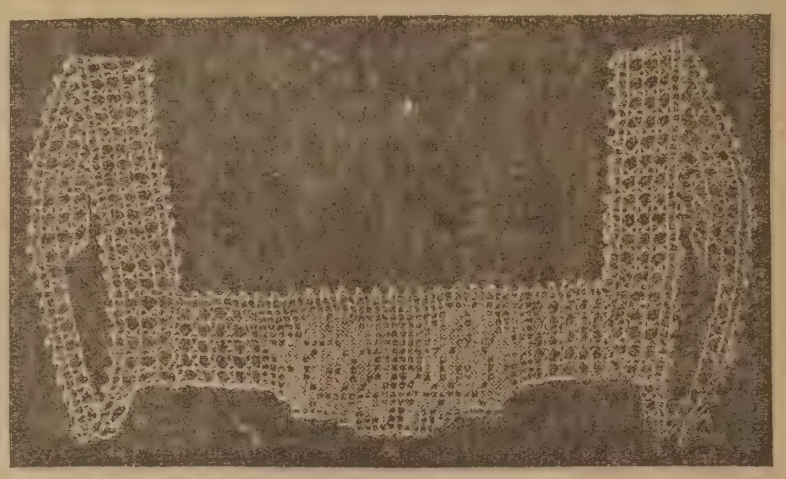
A. W. B.

President Indorses Y. M. C. A.

By an effective order, President Wilson recently indorsed in most positive terms the good work done by the Young Men's Christian association as an adjunct to the army and navy. The president still believes that the Y. M. C. A. shall continue as a valuable civil organization, adding:

"However, the results obtained are so beneficial and bear such a direct relation to efficiency, inasmuch as the association provision contributes to the happiness, content and morale of the personnel, that in order to unify the civilian betterment activities in the army, and further the work of the organization that has demonstrated its ability to render a service desired by both officers and men, official recognition is hereby given the Young Men's Christian association as a valuable adjunct and asset to the service. Officers are enjoined to render the fullest practicable assistance and cooperation in the maintenance and extension of the association, both at permanent posts and stations and in camp and field."

For the Very Big Holes.



A shoemaker's wooden last is invaluable for mending stockings and socks. When slipped over the last the stocking is held in the shape of the foot and the mended places will neither bulge nor draw, as is usually the case where the darning egg is used.

Howe'er it be, it seems to me,
'Tis only noble to be good.
Kind hearts are more than coronets,
And simple faith than Norman blood.
—Tennyson.

Crochet and Tatting Designs

By WINIFRED WORTH

Lacet and Filet Yoke.

Use two balls No. 60 Cordonnet. Chain 41. Follow pattern.

This is a combination of lacet and filet stitches. For filet always remember to ch. 5 at end of row. In one block or filled mesh there are always 4 t., in 2 there are 7, in 3 there are 10.

This pattern will look beautiful crocheted in pink or light blue Cordonnet.

For the Home Table

To make cream omelette place in a saucepan a tablespoonful of butter or butter substitute; as it melts add a level tablespoonful of flour and stir till perfectly smooth. Then add a cupful of sweet milk; cook till thickened, stirring constantly. Beat separately the whites and yolks of three eggs; mix the yolks with the hot white sauce, then add the stiff egg whites, season with salt and pepper and fry in hot drippings, turning carefully one half over the other half, when sure the omelette is set. Brown delicately, turn onto a heated platter and serve at once. This is a most delicious omelette and never fails. The quantities here given will serve four people moderately. The secret of a tender omelette is to cook it very slowly till the eggs are "set."

Near-Maple Syrup.

Make a plain sugar syrup of granulated sugar and water and, when it has boiled till thick enough, take from the stove and add a teaspoonful or less of maple favoring, which can be purchased from any grocer.

Sell Imnaha Ranch.

H. D. Akins has sold his lower Imnaha ranch near Enterprise (Ore.) of 640 acres, and about 430 head of cattle, to D. W. Warnock.

Wade in the Creek Behind the Farm.

Dear Aunt Nellie: I go to school every day and only missed six days on account of the measles. My teacher's name is Miss Steinback. I like her very much. I live on a farm of 80 acres and would not change with a city girl. A creek runs behind the barn. We go wading in the summer and catch fish and crabs. My papa is a hard worker and has 20 acres cleared. My mama keeps the house neat and sees that we children are clean. She works in the garden in the summer time and helps papa with the hay. We are milking 10 cows and I milk three of them myself. My brother Joseph milks three and papa milks the rest. We have three horses. Their names are Lizzie, Dick and Jimmy. I own a calf about five months old. She is black and white and I call her Spottie. I had nine rabbits and sold all of them and made $2.90 and also get $1.50 for milking. I have twin sisters whose names are Margaret and Frances. I have another sister, Mary. If any girls write to me I will surely answer. I told mama that nearly every girl is 11 and in the fifth grade. So am I.—Rosa Limmer, Winlock, Wash.

We'll All Be Looking for a Letter.

Dear Aunt Nellie: This is my third letter to the Corner. This time I am to tell you about our nice visitors. We had four nice visitors about two weeks ago. Can you guess who they were? It was my aunt and her family from St. Ignatius, Mont. She is my father's half sister. Their names are: Mary Finley and her daughter's Lucy Kicking-horse, the little girl, Helen Kicking-horse, and the man's name is Charlie Kickinghorse. We surely missed them when they left us. Papa gave his sister $16. They stayed at our house until my birthday was over and then went back home. I have six little calves now. Papa has one that makes seven. There are 15 children that go to my school. We have a nice teacher. We all like him very much. I am surely going to write to the Corner again. I want the cousins to look for another letter from me.—Sallie Selina Garry, Spokane No. 1, Indian Day School, Miles, Wash.

Is Going to Have a Flower Garden.

Dear Aunt Nellie: I saw my other letter printed, and was glad to see it in the paper. My colt's birthday was April 1. It was one year old. My father has the rheumatism and my mother has it, too. We are afraid that our brothers will have to go and fight. I like to read the Children's Corner very much. I have a new sister-in-law. She is 20. Her birthday is the 24th of March. I like to go to school very much. We have two dogs, their names are Penny and Fritz. We have very close neighbors. I am going to make a flower garden. My favorite flowers are sweet peas, poppies, buttercups, yellowbells and rockroses. Peanuts is my colt. I have to walk a little over a mile to school. My teacher's name is Edna Browning.—Eunice Martin, Riverside, Wash.

"The Man Without a Country."

Dear Aunt Nellie: I am 13 years old. I am going to write about my favorite book. My favorite book is "The Man Without a Country." It tells of the life of poor Philip Nolan. He cursed the United States and said he wished never to hear of her again. His wish was granted, as he was tried in court and sentenced to live on a ship out in the ocean all his life. He was never allowed to hear or read anything about the United States; but on his death bed a friend told him of the changes that had taken place in the United States, during the 56 years that he had been living on the ocean. When Philip Nolan died he asked to be buried in the ocean, for it had been his home, but he wished to have a stone set up at Fort Adams at Orleans in his memory. A man never loved his country as well as Philip Nolan did and it should be a lesson to every boy and girl to be loyal to their country.—Gladys May Plemon, Burbank, Wash.

Holly Will Raise Beans This Summer.

Dear Aunt Nellie: This is my third time to write to the Corner. We had a program at our schoolhouse the 31st of March. My papa got his foot hurt and he can't walk only on crutches. Our school was out the 27th of April. We thought the creek was going to wash our bridge out the other day. We play ball at school. My subject is my best friend. My best friends are my papa and mama. I would like to correspond with another boy. I am going to raise two or three acres of beans this year. I was very glad to see my letter in print. I read the Corner every time the paper comes. I haven't missed a day in school yet. I have two dogs. I have a cow and calf and a pony.—Holly Zinn, Lenore, Wash.

Edna Likes the Letters.

Dear Aunt Nellie: I like to read the letters. I am 11 years old and I am in the fifth grade. My teacher's name is Miss Clinton. It won't be very long till school will be out. We are taking examinations. I hope I will pass. Our teacher has taught two years and we are going to have a new teacher. I wish we could have Miss Clinton next year. We have five cows and three little calves. My birthday is May 10.—Edna Smith Rice Wash.

Edith's First Letter to the Corner.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and in the third grade. I have one pet kitten, and his name is Tom. We have two dogs, and the large one's name is Tip and the other one's name is Monty. We live on a 160-acre farm. We have two cows, their names are Cherry and Mott. I have two brothers and one sister. My sister's name is Olive and my brothers' names are Wallace and Verne. Olive is 10 years old and in the fourth grade. Verne is in the first grade and Wallace is not going to school yet. We have eight horses, and their names are Dave, Johnny, Bess, Jim, Major, Trilby, Nancy and Buck. —Edith Bannon, Antwyne, Wash.

The Bible Says:

Eats Sugar From Carolyn's Hand.

Dear Aunt Nellie: We have a 160-acre farm. I am 8 years old and in the third grade. This is my first year at school and I will finish the third grade this spring. I have a pet lamb. Her name is Bug. When she was little I fed her on a bottle. When I call her she will answer. She is a year old now. We have great times together. She likes to eat sugar from my hand. I have two brothers and no sister. My brother Ivan teaches school and Keith goes to high school. We have 30 sheep and 12 horses and six cows and calves. We have a Ford and I like to ride in it. I have a pony and I like to ride her too.—Carolyn R. Montanye, Colville, Wash.

Caught in the Stove Pipe Hole.

Dear Aunt Nellie: The worst day I can remember was when I was six years old. We live on a farm and had a smokehouse for meat. One day I shut my brother and sister in and then went on top and put my head through the stove pipe hole. There was a tin on it to fit the pipe. When my head was through the tin I noticed a big spider about six inches from my face which made it unpleasant. My older sister had to take the pinchers and take the tin off of the roof. They laughed at me which only made matters worse. I am now 13, but can remember that day.—Goldie Gaskill, Chesaw, Wash.

Name of the School Is St. Urban.

Dear Aunt Nellie: This is the second time I have written to the Corner. My father takes The Farmer. My teacher's name is Miss Beauchamp. I like her very much. I am eight years old and in the third grade and have light brown hair and brown eyes. I have three sisters and one brother. Their names are Rosa, Margareta and Frances. My brother's name is Joseph. Margareta and Frances like me. There are 22 children in my room at school. My brother is in the sixth grade. He is 13 years old. My sister is in the fifth grade and she is 11 years old. Our chickens are laying nicely now. I have five studies. My school is called St. Urban school. I had the measles and the grip.—Mary Limmer, Winlock, Wash.

Teacher's Alway Pleasant and Merry.

Dear Aunt Nellie: I enjoy the letters of the cousins to Aunt Nellie very much because my mother's name is Nellie. This is the first time I have written. I am 12 years old and I have two sisters and one brother. The subject I am going to choose is "My Best Friend." My best friends at school are my teachers and Miss Evans and Miss Myers. Miss Myers is my sewing teacher and Miss Evans is my teacher in other studies. They are both very nice and are always pleasant and merry. I think all the boys and girls like Miss Evans and Miss Myers.—Eileen M. Vogel, Kapowsin, Wash.

The Only Girl of Her School.

Dear Aunt Nellie: I am 8 years old. I go to the Ruark school. My teacher's name is Miss Mae Shapley. I ride to school. There are four pupils going to school and am the only girl. I live on a farm of 700 acres of land. My father has four little calves. One is black and the other three are spotted. I have four little kittens and they are black. Their eyes are not open yet. I have a little nephew. He was five months old Easter Sunday. They weighed him and he weighed 24 pounds.—Nettie Ruark, Pomeroy, Wash.

Brother Has Joined the Marines.

Dear Aunt Nellie: I am 11 years old. My birthday is September 18. I weigh 109 pounds. I have five brothers and four sisters. I have one brother that is dead. I have twin sisters, both are married and have families. I have three sisters and two brothers that are married. One of my brothers has joined the marines. He is 18 years old. I may never see him again. We have three big horses, two colts, one mule colt and two year old mule. My sister has some chickens. We have six little pigs and two big pigs and we live on a farm.—Abbie Gaskill, Chesaw, Wash.

Grace's Subject Is "My Chum."

Dear Aunt Nellie: This is the third time I have written. My subject will be My Chum. She is 11 years old and is about seven months older than I. She has blue eyes and reddish brown hair. She is chubby and I like her very much. The first time I saw her I liked her and sometimes we get in little scraps but make up again. I wish someone would write to me and I would answer them. I am 10 years old. My birthday is August 23d. I have light blue eyes and light brown hair. I weigh about 80 pounds.—Grace Humbly, Friday Harbor, Wash.

A Camping Trip to the Mountains.

Dear Aunt Nellie: I am a little girl of 12 years. I am staying in the country with my auntie and uncle. I walk a half mile to school and am in the seventh grade. My teacher's name is Leonard L. Heaphey and he tries to make it pleasant for us children. I am having a pleasant time riding with my cousin on the ponies. I like it better by a whole lot than I do in the city. On our vacations we have planned to take a camping trip to the mountains.—Retta Gray, Govan, Wash.

Have Lots of Fun at School.

Dear Aunt Nellie: I am going to write about my school. I go to Pleasant Valley school. My teacher's name is Miss Kerr. There are 21 kids in my school. They closed the school on account of smallpox this spring for a couple of weeks. They all had the whooping cough. I am eight years old and in the second grade. I just started to school last fall too. We have lots of fun at school.—Graham Potter, Hillyard, Wash.

Sit Together in Language Class.

Dear Aunt Nellie: My best friend is the subject I am going to tell about. My best friend is Leslie Fellows, a boy 8 years old. He is in the second grade and I am in the third. He lives about four miles from me. Leslie and I sit together when we have language class. I am 10 years old. My birthday is February 2. I have two pet chickens. They are very pretty—Frank Purcell, Pomeroy, Wash.

Feed the Lambs With a Bottle.

Dear Aunt Nellie: I am 10 years old. My birthday is the 19th of June. I am in the fifth grade. My teacher's name is Olin H. Thornton. We live about a mile and a half from school. We have two little lambs and we feed them with a bottle.—June Stiles, Fruitland, Wash.

Donald Likes to Ride the Pintos.

Dear Aunt Nellie: This is the first letter I have written to the Corner. I live in the South Basin. I am eight years old. It is one and a half miles to school. I have a dog and a cow and a calf. We have two pinto ponies and I like to ride them. I have a pair of sklis.—Donald M. Avin, Orin, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Marie Day, Mary Walker, Lydia Ervin, Jeannette Van Dyke, Luvelle Pompella, Florence Frohning, Margarette Gullixson, Rebecca Gullixson, Gertrude Ruchest, Cassius Orr, Ellen Purcell, Blanche Haquist, Laila Haquist, Lyda Augst, Louise Kramer, Rose Kramer.

Why Leave the Old Farm?

To the Editor of The Washington Farmer: I have been reading an article by E. A. Bryan on "The Push and Pull From the Country." My opinion is that the eight hour law has pushed the young men from the farms. Why leave the old farm? We old fellows work on the eight-hour system. We divide the 24 hours into three shifts, eight hours in the forenoon, eight hours in the afternoon, leaving eight hours which we have to sleep if he have our day's work completed. What can any young man ask for better than that? I know of a farmer that hired a man, agreeing to give him steady work. He worked until 1 o'clock in the morning and called him again at 4, at breakfast time. The hired man claimed that the contract was broken as the farmer had not given him steady work. Yes, better profits in farming would solve the problem, but will Brother Bryan tell us how to get better prices?

C. E. LUDDEN.

Arletta, Wash.

Grays Harbor Pomona Grange.

At the last meeting of the Grays Harbor Pomona Grange No. 28, which met at Summit, two new granges were reported since January 1, North River Valley Grange No. 641 and Wiskah Valley Grange No. 634. At the open meeting C. F. Monroe gave a talk on silos and C. M. McAlister of the Portland Stock Yards discussed the advantages of farmers cooperating in the selling of their beef and pork so as to ship in carload lots. It was decided to hold a picnic for the entire county at Satsop July 4, and committees were appointed. A class of 25 candidates were initiated in the fifth degree of P. and H. Summit Grange is reported to have served a very acceptable chicken supper at midnight. The next meeting of the Pomona grange will be held with the Wiskah Valley Grange No. 634 the third Saturday in July, afternoon and evening.

Newbill at Washington.

Professor T. J. Newbill, who has been in charge of the boys' and girls' clubs of Washington, has been called to Washington, D. C., by the agricultural department to aid in nationalizing the boys and girls' work.

PENNSYLVANIA MORTGAGE INV. CO.
SPOKANE, WASHINGTON.

FARM LANDS—FOR SALE 651 Continued.

MONTANA LAND;
GOOD LAND; PARTLY IN CROP;
JUDITH BASIN.
750 acres, best part of basin; 200 acres winter wheat, looks fine, half to buyer; 350 spring wheat, one-third to buyer; 650 acres steam plow land; not over 40 acres waste; nice spring and stream; 2½ miles to town; good house. Price $75 an acre, and worth every cent of it on cash basis. Will take good Palouse farm, worth $15,000 to $20,000, part payment, balance easy terms.

SHIELDS RIVER VALLEY.
720 acres in best part of famous Shields River valley; no better winter wheat section in northwest; 226 acres winter wheat; 75 acres oats and barley; 35 acres alfalfa; 250 inches water; plenty to irrigate 250 acres; fine trout stream; not over 40 acres waste land; new 5-room bungalow, big shed and granaries; good spring near the house; equal to best Palouse soil. One of the best grain and stock farms in the country; over 600 acres steam plow land; all crop goes for short time at $70 per acre. Will take good land in Washington, clear, up to $20,000, balance good terms.

FINE STOCK FARM.
560 acres, 2½ miles to good town; 250 acres timothy and clover; 100 acres in barley; 350 acres irrigated; very little waste land; 2½ miles to good town; good 7-room house; located in coal district; geologists say most of this land is underlaid with coal; buyer gets half the hay, one-third the barley and full conveyance of coal rights at $60 per acre. Will take good farm land in eastern Washington for about half, balance to suit.

640 acres, in good grain district; 450 in crop, one-third to buyer; not over 40 acres waste; good spring and stream; 2 miles to town. Price $45 per acre. Will take good eastern Washington land, clear, up to $15,000, balance good terms.

The above places are all good land, personally inspected and worth the money in cash. Have other good Montana lands, on which owners will take good land as part payment. Write and tell us what you have to trade.

HEGE & WATKINS CO.
715-16-17 PAULSEN BLDG., SPOKANE, WASH.

MONTANA LAND.
CROP GOES TO BUYER.
320 acres, in good grain district, 100 in crop, all goes to buyer; 90 per cent tillable; good spring. Price $22 per acre; good terms; no trade.

320 acres, 280 in crop, all goes, not over 15 acres waste land; some surface stone on part; good grain district; $35 an acre.

A GREAT BARGAIN FOR PROMPT ACTION.
800 acres in one of the very best grain districts of Montana; probably surest winter wheat crop district in Montana; 350 acres winter wheat, in fine condition; 150 acres spring grain; 150 acres fine hay; very little waste; lies nice and level, nearly all steam plow land; soil equal to the best in the west for grain; fine prospect for 30 to 40 bushels per acre on the wheat; in a district where 40 bushel crops are very common; fair set of buildings; 12 miles to good town, but good road; all the crop goes now at $60 per acre, but see us or call us on phone immediately if you want this place, as it is subject to withdrawal or raise in price.

HEGE & WATKINS CO.
715-16-17 Paulsen Bldg., Spokane, Wash.

330 ACRES, FENCED, CLOSE TO SCHOOL, town and Ry., in famous Shields River valley; nearly level; 250 acres cultivated; 256 inches decreed water; fine trout stream flows through farm; spring water piped into house; fairly good buildings; 120 acres in wheat, oats and barley; 60 acres alfalfa and timothy; two ordinary years' grain crops should pay for this farm, saying nothing of the dairying, hogs and live stock it will support in addition; $50 per acre, including all crops. It's a money maker right from the start. J. W. Hefferlin, farm opportunities, Livingston, Montana.

MONTANA LAND.
38,000 acres, $14 an acre, to be sold in section lots, 75 to 80 per cent tillable; 3 to 12 miles from railroad; Eastern Montana average rainfall 19 inches; raises good corn and all grains grown in Montana; deep rich soil, very little stone, average price in section lots, $14 an acre. New tract just put on the market this week. Go with us at once and get your choice.
Call or write for particulars.
HEGE & WATKINS CO.
715-16-17 Paulsen. Bldg., Spokane, Wash.

FOR SALE, OR EXCHANGE FOR SMALLer place—My 552-a. stock and grain ranch, 3 miles to town. Address owner, R. E. Warner, Crawfordsville, Oregon.

Grain and Produce Markets

Chicago Grain.

CHICAGO, June 2.—Extraordinary advances in the prices of future deliveries of wheat resulted today from attempts to purchase small amounts on a market bare of offerings. The extreme rise was 22c a bushel but quotations underwent a subsequent steep drop, and closed unsettled, with net gains of 8c to 9c, at $2.06 for July and $1.91 for September. Cash wheat, that is wheat for immediate delivery, did not follow the advance in futures. Corn finished 1 1-2c to 4 1-4c up, oats unchanged to 518c higher and provisions varying from 7c decline to a rise of 20c.

Pacific Northwest Grain.

SEATTLE, June 2.—Wheat—Bluestem, $2.46; Turkey red, $2.46; fortyfold, $2.44; club, $2.43; fife, $2.43; red Russian, $2.42.
Barley—$43 per ton.
TACOMA, Wash., June 2.—Wheat—Bluestem, $2.45; fortyfold, club and red fife, $2.43 red Russian, $2.41.
PORTLAND, Ore., June 2.—Wheat—Bluestem, $2.48; fortyfold, $2.43; club, $2.43; red Russian, $240
Oats—No 1 white feed, $47
Barley—No 1 feed, $42
WALLA WALLA, June 2—Wheat—Club, $2.27; bluestem, $2.35 .
Barley—$43@44.

Seattle Wheat.

SEATTLE, June 2.—Reports from the country this week indicate that there will be a few carloads of fortyfold, red fife and Russian on the market late in July, but that bluestem milling wheat will not be sufficiently ripened to offer for at least 60 days later. It is expected that a small amount of bluestem can be marketed from the Snake river district in August, but the new crop proper may not begin to move earlier than September.

The September option in the east, having stabilized to some extent, local buyers feel that if September options were reopened in Chicago that grain would be a good buy at this time. Now that the public demand that the rambler be thrown out has been appeased, millers and exporters here who all along felt that speculation was vital to the welfare of the grower and buyer alike are wondering what has become of the advantage in his expulsion. Flabby and inert markets have followed close on the heels of the action of the board of trade in all sections, and the zest and pip of the grain and milling trade has oozed away.

Portland Market.

PORTLAND, Ore., June 2.—Wool sales in eastern Oregon in the last week were small. Buyers freely bid current prices, but growers appear to be holding back for the public later in the month. Up to 51 cents has been paid for fine and 53 cents for coarse. The ideas of the majority of sellers are above these figures. Shearing has been completed at Echo and Pendleton, but elsewhere operations have been delayed by cold weather and the scarcity of labor.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $47 per ton.
Corn—Whole, $72; cracked, $73 per ton.
Millstuffs—Bran, $37 per ton; shorts, $40.
Barley—No. 1 feed, $42; brewing, nominal; rolled, $58.
Hay—Buying prices: Timothy, eastern Oregon, $30; alfalfa, $23; grain, $18@20.
Eggs—Oregon ranch, case counts, 32@32 1-2c per dozen; candled, 33 1-2c.
Poultry—Hens, 18@18 1-2c; ducks, 17@25c; turkeys, alive, 20@22c; dressed, 23@28c; geese, 12@14c.
Butter—City creamery, prints, 39@40c per pound; cubes, 37c.
Cheese—Oregon triplets, 24c; young Americas, 25c.
Dressed meats — Veal, 14 1-2@15c; pork, 19 1-2c.
Hops—Nominal.
Potatoes—Oregon jobbing price, $3.50@4.
Wool—Eastern Oregon, fine, 50@51c; coarse, 53@55c; valley, 52@55c.
Beans—California small white, 16 1-2c; large white, 16c per pound.
Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Live Stock Quotations.

At Chicago.

Sheep—Prime lambs, $13@13.50; good lambs, $12.50@12.75; wethers, $11@12.50; ewes, $10@11.

At Portland.

PORTLAND, Ore., June 2.—Hogs weak; receipts, 274. Prime heavy, $15.40@15.60; prime light, $15.25@15.50; bulk of packing grades, $15.30@15.40; rough heavies, $14.90@15.25; pigs and skips, $12.50@13.50; stock hogs, $12@13.
Cattle, no demand. Lower, receipts, 522. Steers, prime light, $9.25@9.50; prime heavy, $8.75@9.25; good, $8@8.50; cows, choice, $7.50@8.25; medium to good, $7.50@8; ordinary to fair, $7@7.50; heifers, $5@8.50; bulls, $5@7.50; calves, $7@8.50.
Sheep firm; receipts, 2794. Spring lambs, $13.50; shorn lambs, $11@12; shorn yearlings, $10.50@11; shorn yearlings, $10.50@11; shorn ewes, $9@9.50; prime shorn wethers, $10.25@11.

Spokane Stock Yards, Saturday.

Hogs—Receipts none, market steady. Prime heavy packing, $15.60@15.80; prime light packing, $15.40@15.60; rough heavy, $14.40@14.80; pigs, $12.60@13.75; stockers, $12.50@13.75.
Cattle—Receipts none; market steady. Prime heavy steers, $10.25@10.75; prime light steers, $10@10.25; good steers, $9.75@10; prime cows, $8.75@9.25; good cows, $8@8.75; common cows, $7@7.50; best heifers, $9@10; bulls, $6@8.25; calves, $8@10.25; stockers and feeders, $6@9.
Sheep—Receipts none; market steady. Prime lambs, $13@13.50; common lambs, $12@12.50; choice yearlings, shorn, $10.25@11; good yearlings, shorn, $9.50@10; choice ewes, $9@10.

Seattle Market.

SEATTLE, June 2.—The spud market is very firm for the week-end. Seattle jobbers are quoting up to $90 for locals and $95 for Yakima gems. Wholesalers claim that Yakima holders are quoting gems at $100 f. o. b. In isolated instances Western avenue merchants are holding for $125. Such a level is now regarded as possible for the summer cleanup. Continued cold weather has maintained the demand for old crop spuds.

Seattle creamerymen are widely at variance in their views of the butter market, and both the bull and bear faction are well represented, each faction contending that it is nearer right in its forecast of prices. That there is little for storage is also the fact, and the bulls are endeavoring to convince themselves that this market should be higher in order that they can bring in butter from outside the state.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 34c per dozen.
Poultry—Live hens, fat, over 4 lbs., 19c per lb.; 3 lbs. and under, 17c; old roosters, 12c per lb.; springs, 22c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 18@23c per lb.
Butter fat—42c per lb.; dairy butter, 28c per lb.
Beef—Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.
Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.
Veal—Fancy light, 13@15c per lb.; do heavy, 12@13c per lb.
Hides—Salted, 20c per lb.; salt kip, 32c per lb.; salted calf, 32c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 36c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 30@33c per lb.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3.50@3.75 cwt; new potatoes, 7c lb.
Seed Potatoes—Early Rose, $4@4.50 cwt.
Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.
Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwood, 40c lb; Solid Pack, 38c lb.
Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 35c lb; brick cheese, 30c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.
Eggs—Fresh local ranch eggs, $10.75 case.
Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.
Dress Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

WASTE NOT!
WAIT NOT!

BULK YOUR GRAIN!
YOU'LL NEED TO---

Weyerhaeuser fir grain tanks and granaries mean absolute conservation of waste—no waste labor, no waste hauling, no waste grain, no waste worry. Makes your grain harvest absolutely secure. Order NOW a

WEYERHAEUSER GRAIN TANK OR GRANARY

and play safe. Get your order in EARLY. Five hundred thousand bushels capacity already on our books. Railroad equipment overtaxed. Late buyers CANNOT be served.

BE PREPARED. BE BEFOREHAND. THIS IS OUR LAST CALL FOR 1917.

"Bulk Your Grain" Folder FREE.

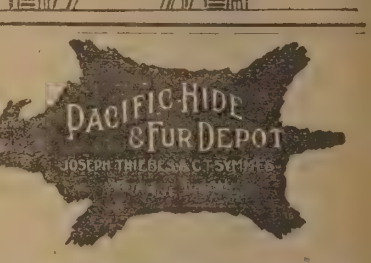
Everett, Wash.

Speed Governing Line Shaft

INCLUDES Cedar Rapids Governor Pulley with shaft 4 to 12 ft. long — pulleys and hangers according to length of shaft—heavy plank to which hangers are attached. Governor pulley prices

—as low as $12.00



Costs little more than the average friction clutch pulley. The governor with **a thousand different speeds**—controls any speed instantly. Regulates the speed of several pulleys on the same shaft—speed **regulated by a simple turn of the hand-wheel** on the governor and speed always uniformly maintained.

Install it yourself—with a screw driver. No service troubles—no figuring pulley sizes—attach it to the wall—the ceiling or the floor.

Ask Your Dealer About It

He'll gladly demonstrate it for you, show you how it will control your machinery and how easily it can be installed. Or write us for illustrated folder and prices of all sizes.

DON'T BE A SLACKER - - - - *100,000 Mechanics Needed* - - BE PREPARED

SERVE YOUR COUNTRY -- *Where you can serve it best*

POSITIONS that the SWEENEY AUTOMOBILE AND TRACTOR SCHOOL can train you to fill.

FOR THE MAN WHO HAS TO STAY AT HOME.

Tractor Expert Be a tractor mechanic. Go on the farms and help your country by running tractors. They must be used if we increase our food supply. Farm labor is scarce. Tractors must do the work. One man on a Tractor takes the place of three men with teams.

Shell Maker Learn shell making. You get the actual Lathe and Drill Press experience here that will enable you to give this class of Service, and not only help your Country, but will receive the big wages paid for this work.

Garage Manager Thousands of Automobile Mechanics want to go in the Army, Navy and Aeroplane Service. Business as usual must be carried on. We can train men to take these mechanics' places at home. For the man not called and those under or over military age, there are wonderful opportunities to get in the fastest growing, most profitable business in the world, and still show your loyalty.

Aeroplane Motor Expert We must build thousands of Aeroplanes and will need expert Mechanics to test and assemble the high speed motors used in these machines. The ordinary mechanic can not handle these motors.

FOR THE MAN THAT JOINS THE COLORS.

Truck Operator in Government Service 1,000,000 men will be sent to War, and 35,000 trucks must go with them Think of the vast number of trained mechanics that will be needed to operate and repair these trucks. The success of our soldiers will depend entirely on the efficiency of the truck service back of them, to bring up the ammunition and supplies.

Navy Mechanics You can enter this branch of service as Mechanic, second class, with petty officers' pay and privileges, and excellent opportunities for advancement, for training counts in this service.

Write today for my free Catalogue that explains how the SWEENEY AUTOMOBILE AND TRACTOR SCHOOL can teach you to serve your Country and help yourself.

E. J. SWEENEY, President.

SWEENEY AUTOMOBILE AND TRACTOR SCHOOL

A Whitman County Farm Home.

One of the fine farm houses in Whitman county, Wash., owned by Mr. and Mrs. E. L. Moys near Albion. Mr. and Mrs. Moys are pioneers in Whitman county and they own 334 acres of some of the best land in the Palouse country. This new house has lately been completed and has all the late and up-to-date improvements, including an electric light plant and a heating plant.

Have Got the Spirit

Boys Plant Four Acres of Beans

The Washington Farmer has received the following news from O. T. McWhorter, chairman of the agricultural preparedness committee of Jefferson county.

The Port Townsend schools, Francis Drake, superintendent, have installed a community canning plant which will handle 1000 cans per day. It is the plan to use this plant to handle perishable vegetables grown by the Boys' and Girls' clubs of the schools and to help in conserving the farm products which usually go to waste about the town and immediate district. The boys of the schools have all told about four acres of beans planted on the town lots of the city.

It is interesting to add that the slogan of the committee is in keeping with the vigorous prosecution of greatern food production, "Dig and Produce —Your Country Demands It." The Jefferson county committee's executive board is composed of its chairman, O. T. McWhorter; H. D. Hopkins, Port Townsend; P. P. Bowman, Uncas; Samnel Curry, Chimacum; H. J. Lipsett, Port Ludlow; Edith Delanty, county superintendent of schools, and Tom W. Helman, secretary, Port Townsend.

Club Work in Whitman

To the Editor of The Washington Farmer: Not having a county agriculturist, nor any real club leader, our boys and girls did not follow club work through to the finish last year. This year some of our business men have decided to try to get our young people started in a small way, and to this end have offered prizes along certain lines. There are no conditions imposed for the keeping of records and no formality of any kind is involved which could afford an excuse to any boy or girl to quit after having once started. The conditions are open to any boy or girl not more than 20 years of age.

We hope that by next year our young people will have a desire to get into the regular state boys' and girls' club work. A prize of $15 is offered for the best quarter acre of field peas, $10 for the best quarter acre of potatoes, $10 for the best beef animal, any age or breed, and $10 for best pig or hog from pork standpoint. Similar prizes will be offered for other products including individual displays of vegetables and grains, fruit, canned goods and manual training exhibits. Special prizes will also be offered for other live stock, especially sheep and horses.

The state college has offered to furnish a man who will observe methods employed by the contestants and award the prizes.

Rosalia, Wash. E. W. WAGNER.

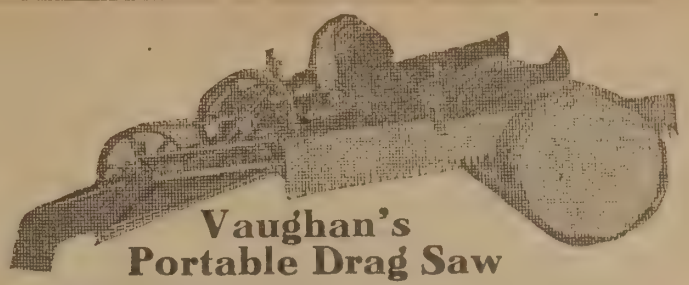
POTATO EYES FOR SEED

Must Have the Soil Well Fitted.

To the Editor of The Washington Farmer: I am a woman 68 years old, and am mother, mother-in-law and grandmother.

We raised our own seed potatoes last year, good, properly selected seed, sufficient to plant all the available ground at our command; the variety is mostly Burbank. And now I wish to say something about planting potato eyes.

My knowledge was gained first by observing the work done by my father during the closing of the civil war in this country and later by experience of my own. My father was a specialist on potato growing and in the early 60s he found it necessary to economize with potatoes as food for his family and at the same time plant crops of potatoes. It was the year 1863 that he planted several acres with seed eyes, using a corn planting bag to carry the seed eyes and drop from. He planted with a hoe on well-prepared and fertile soil and he claimed the yield was as good as when he used larger portions of the potatoes. On a part of the ground he planted six rows, using one eye in first row, two in the next and so on until the last row contained six eyes. The main crop contained an average of four eyes to the hill. He decided that from three to four was best. His seed was cut with a sharp-pointed jackknife in a conical shape. He followed the eye planting all his life.



I have been an active gardener for more than 30 years and have been as successful with seed eyes as with larger pieces, but would advise those using eyes to have the soil well-fitted and not to plant more than four or five inches deep. I wish to add that father used only large potatoes to cut the seed from and planted them the same week, when using seed ends he made four pieces from a large end.

In closing I wish to say that I subscribed for The Washington Farmer last fall. It is a three-year subscription and I hope to renew before it expires. We like the paper very much and believe you are doing a much needed work. ESTHER N. TAFT.

Lebam, Wash.

Greenacres Fruit in Scotland.

Payment on a record shipment of Yellow Newtown apples from the Greenacres district, sold in Glasgow, Scotland, before the recent restrictions of apple shipments became effective, has been received by the Spokane Fruitgrowers' company. L. J. Blot, sales manager, reports that the Greenacres growers will realize $1.93 per box for the carload of 630 boxes. In Glasgow the shipment sold on the basis of $3.53 a box.

Vaughan's Portable Drag Saw

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 3½ H. P. gasline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $140 f. o. b. Spokane and common points.

NEWS FOR BREEDERS

Shorthorns to Be at Union Show

The Shorthorn bull here shown is General Hampton 390583 by Hampton Spray, that was grand champion at the American Royal a few years ago and weighed 2800 pounds. His dam is Mistletoe 2d out of Imp. Mistletoe 15th. He is owned by W. W. Green & Sons of Union, Ore., who brought him to Oregon from Oklahoma, together with 30 head more of registered Shorthorns, when they came to Oregon two years ago. General Hampton has universally sired high-class progeny and he and some of his offspring will be contenders at the Shorthorn show in connection with the Union, Ore., stock show June 12-15. It will be remembered the Messrs. Green bought the great cow Scottish Flower 3d at the Pacific International Stock show sale last winter. They expect to add to their herd as occasion demands.

At the right is shown Ringleader's Ruby, the beautiful and richly bred Shorthorn heifer purchased by W. J. Townley of Union, Ore., last December, at the Pacific International Shorthorn sale for $705. She is by Ringleader, son of the great Ringmaster, that was twice grand champion at the Chicago International. Her dam is Roselawn Queen 56th, by Gibson's Goods, son of Choice of All. Mr. Townley has been a breeder of Shorthorns in the Grande Ronde valley for many years. He now has 145 head, including this year's calves, and will make a strong exhibit at the Union Stock show.

From the W. A. Forrest Herd

These are, from left to right, Maid Oma, with a butter record of 541.31 pounds in a year; Maid Oonan, 544 pounds; Zila's Pride, 609.98 pounds; Lutn Bell's Queen, 333 pounds 15 ounces. They are all Class AA, R. of M. cows and belong to W. A. Forrest of McMinnville, and will be in his sale June 12.

Brings Hampshires From East.

Frank Brown Jr., of Carlton, Ore., has returned from a trip to Ohio with two carloads of Hampshire ewes selected from the leading breeders of New York state and Ohio.

A Fielder's Glove Like the League Players Use

Order by Number.

The Washington Farmer

Premium Dept., Review building, Spokane, Wash.

McArthur & Stauff Sale.

At the McArthur and Stauff sale at Rickreall, Ore., June 27, all the pregnant cows and heifers will have been bred to Holger and all young bulls sired by him.

Thomas Williams of Forest Grove owns three daughters of these young cows, and they are all making fine records as senior 3-year-olds.

Olalla has made 391.78 lbs. of butterfat in five months and has averaged 6.35.

Jersey Style has produced 282.72 lbs. of butterfat in five months and has averaged 5.58 on her tests.

Dina Dorff has made 207.38 lbs. of fat in four months.

Fine Lot of Colts.

M. S. Levy of Union, Ore., who has the largest herd of Shetland ponies in the northwest, reports a fine lot of colts this spring. So far all the colts have come strong and have lived. He expects about 40. His herd sire is by the great Prince of Wales and the colts are showing much quality.

H. A.

ADD TO HERD OF HEREFORDS.

Platt Brothers of Genesee, Idaho, have recently added another carload of Herefords, purchased in Iowa, to their fine herd of registered Hereford cattle. Roy Jacobs of New London, Iowa, accompanied the shipment and will remain as herdsman of the Platt Brothers' herd, which now numbers over 100 head. As Mr. Jacob's father was a herder of purebred stock, his early training and practical experience is along that line. He is a graduate of the Iowa Agricultural college and has won honors in judging contests at the Iowa State fair. He comes highly recommended. The Platt Brothers started their herd three years ago with the idea of raising their own bulls for their range cattle. They with a partner, Mr. Jones, carry about 1500 head. Their purebred herd has now increased to about 100 head, and they will have a surplus to sell. D. G. S.

JERSEYS AT AUCTION

June 20, 1917

Ninety head of choice registered Jerseys, including cows in milk, herd bulls, and younger animals, both sexes.

An ideal opportunity to secure a foundation herd, milking cows or a herd bull of richest breeding and good individuality.

Complete catalog will be issued. Send name and one will be mailed when published.

SALE OF THE FINEST DAIRY CATTLE EVER OFFERED IN WHITMAN COUNTY
Wednesday, June 27th, at 10:30 a. m.
The North Slope Dairy Farm
JAMES C. GRAHAM, Owner,
Will sell his complete herd at
PUBLIC AUCTION
30 HEAD OF REGISTERED AND GRADE HOLSTEIN CATTLE
PRODUCERS PROFIT MAKERS INDIVIDUALITY HEALTH SIZE AND CONDITION

Everything necessary to make the dairy 100 per cent perfect.

PRODUCERS—This herd has stood first and in a class by itself in the Whitman and Spokane County Cow Testing Association. This applies for the individual and the herd.

PROFIT MAKERS—This herd shows a wonderful profit for each year's work since the foundation was laid seven years ago. Several cows show over $200.00 profit and the lowest cow over $150. This wonderful performance is perhaps unequaled by any other herd in the west.

INDIVIDUALITY—More blue and red ribbons have been won by this herd than any other Holstein herd in Whitman county. They are surely a splendid lot.

HEALTH—This herd has always been under state supervision. A reactor to the tuberculine test has never been found. State certificates will be furnished with each animal over 6 months of age.

SIZE and CONDITION—The two-year-olds weigh about 1000 pounds. The cows up to 1700 pounds. The cattle are in the very best of condition.

Farm is located 2½ miles south of Palouse, Wash.
For terms, arrange with Clerk of sale.

VOL. XL. NO. 24. JUNE 14, 1917. ** WEEKLY.

Farm Bank Soon to Have Million Out

Money Being Distributed Among Borrowers as Rapidly as Sound Methods Permit

The vital influence that the Spokane district branch of the federal farm loan bank is to exercise in the financing of farming operations in Washington, Oregon, Idaho and Montana is indicated in part by the fact that already loans totaling more than $1,300,000 have been approved by the bank officials.

Of this amount approximately $35,000 is already in the hands of the farmers seeking loans, and more is going out at the rate of several thousands of dollars a day, depending solely upon the ability of the legal department of the bank to examine and approve the abstracts of title to the farms upon which loans are desired to be made and the condition of the title itself. The lands have been appraised by the appraising committee of the local associations and these appraisals approved by the appraiser of the land bank, but under the policy of "safety first" adopted by the bank officers it is necessary that the titles be known to be accurate and clear of all encumbrance, except when such encumbrance can be paid off from the proceeds of the loan.

The loans already made and those approved as indicated above comprise all those sought by the charter members of 30 local associations, the charters to which have already been granted, and of which 12 are in Washington, nine in Montana, six in Idaho and three in Oregon. The work of appraising farms in Oregon and Idaho was delayed in beginning, when the organization was in process of formation, and for this reason fewer association charters have been approved to date in those states than in Washington and Montana. The work is now progressing rapidly, however, in all sections of the northwest.

Up to the present time applications have been received for charters from 687 local associations, including the 30 already chartered. The total loans asked by this large number of associations is approximately $23,000,000, including the $1,300,000 already approved.

In view of this large amount of business already under way, including the placing of money already in the hands of a number of farmers, and the assurance that before many weeks more than $1,000,000 in loans will be made, the progress made by the bank appears little less than remarkable. It was predicted at the time of the beginning of the organization that the first loans could not be reached before July 1, but by that time much of the first million dollars will be in the hands of the borrowers.

"We are perfecting the organization as rapidly as can be done under reasonable consideration of economy and safety," said President D. G. O'Shea to a representative of The Farmer, emphasizing, as always, the imperative need of absolute soundness of all actions of the bank. "We have an immense territory to cover, and the loan system we succeed in perfecting must be for all time. We are organizing from the very bottom, and it can not be done in a day, but we are covering the ground as rapidly as possible.

"We have examined and approved the applications of 30 associations, for which charters have been issued, and have several other associations almost completed, but awaiting further inquiry. We are making loans to the members of the 30 associations as fast as abstracts can be examined and approved.

All Service Is Free.

"All the work of the appraisers and examination of titles is done without charge by the land bank, though some abstracts involve a large amount of detail and inquiry."

The large force of the Spokane bank are rushing the work of appraisals to enable them to send the loans to the applicants at the earliest possible date. The applications are taken up in systematic order to accommodate the largest number of borrowers possible in the shortest time. Numerous inquiries are being received, say the officers, asking when appraisals will be approved and loans made. Their reply is always in substance, "As soon as we can possibly do so."

The following are the locations of the associations already granted charters, and the amount of the loans approved for each such association, up to the present date:

Washington.

Deer Park, Spokane county	$23,000

JUNE 14, FLAG DAY.

Today, June 14, is flag day throughout the nation, commemorating the anniversary of the formal adoption of the United States flag in its present form as the national emblem. This year as never before since the observance of the day became a custom should flag demonstrations be made. This year the honor and power of the nation have been questioned; this year American citizens are called upon to respond to the call of patriotism for loyal service to their country at home or abroad. Already many thousands have offered their service. Already hundreds of thousands have undertaken to do their bits by producing or saving something that is needed to win the war. Already the army of the United States is represented on European soil by General John J. Pershing and his staff of officers. The Stars and Stripes is with them, and soon will be leading an American army into mortal combat with the enemy of America and of humanity. Today, above all days, show honor to Old Glory.

Farm Women Play Big Part

Housekeepers Will Produce Foodstuff to Preserve for Winter Uses; Much Canning and Drying Will Be Done

MALAGA, Chelan County, Washington, May 25.—Peach trees are in full bloom and apple trees just coming in bloom. All give promise of a good crop so far. There was a frost here two nights, recently, and some are afraid their cherry trees were killed. A great deal of alfalfa was winter killed and will have to be reseeded this spring and is something that has not happened here in years. There is more garden stuff such as potatoes, beans and cabbage, and corn being put in here than ever before. The farmers here in the recent past have not raised nearly as much of the foodstuff as the used to. For instance, only a very few here raise spring garden stuff such as asparagus and evergreen onion and rhubarb. Most of the farmers have not a berry on the place. Strawberries and all kinds of later berries do fine here and could be raised for home consumption. Pigs have never been raised for home use either. Most of the farmers have plenty of milk and every one has small patches of alfalfa that could be hog fenced with little expense, making summer pig feed. Farmers who have raised corn here for winter pig feed have had good success with it. To better farm conditions more attention will have to be paid to general crops, large and small, instead of letting potatoes freeze in the ground; also carrots, beets, and other garden stuff that helps to make the farmer's table. A great deal of fruit is canned and dried here every year, and I am sure more will be canned and dried this year than ever before. The farm women here are planning on putting up garden stuff for winter use in every known way. The great armies of women on the farms are going to come to the front and surprise every one with their ways and means of home production of foodstuff, and I see in towns that the women there are doing their bit, also, by using every spare foot of ground for garden, helping to make lighter the store bills. MRS. O. ALLENBAUGH.

Need More Pigs Annually.

SOUTH BEND, Jacific County, Wash., May 28.—The number of live stock in this community is about the same this year as it was last year. Cattle are in their prime and the pastures are in excellent condition. We need more pigs and sheep to increase the meat supply. There are some pigs kept bu very few sheep. Not many farmers keep cattle for beef purposes. Dairy products are raising in value. The nearest condensery pays 20 cents a gallon for 3.5 per cent milk, pays the express and washes the cans. To the consumer, milk is retailing at 33 cents and 40 cents a gallon. The Menlo farmers are rebuilding their cheese factory which was destroyed by fire last winter. Some farmers are going to try an experimental patch of buckwheat. MRS. WINNIFRED BUCKINGHAM.

Peas Will Help.

SPOKANE, Spokane County, Wash., May 24.—I find that in a great many places throughout the wheat growing section the winter wheat has been badly hurt. In some places it has been sufficiently damaged to make it necessary to reseed the fields to spring wheat. However, this method of handling the ground where wheat has failed to stand the winter has been limited to some extent on account of the high price of seed wheat this spring. Throughout Spokane county, however, most of the large farmers are prepared to handle this difficulty because they kept their own seed. A great deal, of course, has been done toward greater food production in Spokane county through the planting of peas on the summer fallow land. This plan has gone forward and is still in operation to a great extent. Many acres of beans are going in this spring on the well elevated lands where frosts are not likely to occur, and also considerable area is being devoted to potatoes. Much clover is being planted in order to furnish cheaper feed for the live stock and a great deal of attention is being paid to keeping the brood sows from being slaughtered which come to the local stock yards in Spokane. In connection with the greater food production and the enormous use of the summer fallow for growing peas it has become very apparent that the farmers in Spokane county are devoting themselves diligently to farming this spring. Every effort is being made to get the land into crop as soon as possible. At the present time perhaps two-thirds of the land which would otherwise be summer fallowed has been plowed ready for the pea crop in this county. J. R. SHINN.

Wages High; Help Scarce.

MEAD, Spokane county, Wash., May 31.—There has been little change in the amount of crops sown or planted this year. A little more spring wheat and oats will be sown, taking the place of alfalfa frozen out on lowlands, and a few more peas than usual. High wages and scarcity of help have prevented any great increase in acreage cultivated. I do not believe it could be made generally practicable to build a house and hire a man and family the year round in this locality until things generally become more stabilized. Men prefer taking chances on rented places, no matter how unpromising, rather than a sure income under some one else. A change would also have to be made in the general type of farming before it would pay to keep men the year round. I do not believe the western country is ready for that yet. GEORGE HINGSTON.

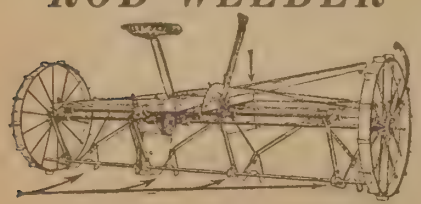
Farmers Doing Their Best.

GRANDVIEW, Yakima county, Wash., May 21.—Every one is doing his best to put in a little extra gardan to cut the high cost of living. There are several pieces of land that could be farmed. I have thought that we might be more self-supporting than we are by being more economical and raising more grain. I think there is more wheat sown than ever before and the farmers expect to thresh it. The farms are generally too small for a hired man the year through, but I believe it would be a good plan to build a house on every 40-acre tract for the help to live in. E. H. FAULKNER.

Fruit Crop Enormous.

TOPPENISH, Yakima County, Wash., May 28.—Wheat, oats and barley, while a little late, are looking fine. Alfalfa is late and the first cutting will be light; timothy is a little better, but not up to the average; corn is very late, but is a pretty good stand and is now doing well; onions are fine, potatoes late, but improving in appearance every day; sugar beets are doing well and they are thinning the earliest ones. Some were planted on too dry a ground and are not a good stand. A few have plowed them up and replanted, and a few have planted some other crop in their place. The acreage of canteloupes and melons is the smallest on the reservation for many years, and those that are planted are not looking well; too cold.

Dairy cows are doing fine; pastures are pretty good now and high-priced butterfat is causing dairymen to take a little better care of their cows. The acreage of hay is smaller than usual, while potatoes are little larger than for a few years. The vicinity of Toppenish and Wapato have 3000 acres of sugar beet which is mostly alfalfa sod. The Yakima valley has the greatest fruit crop in its entire history. There was almost nothing killed by the frost and the bloom in most instances was heavy. Some trees that were heavily laden last year are a little shy this year and some varieties of sweet cherries bloomed heavily but did not set well. There are very few strawberries in the vicinity, but they are looking fine. Blackberries and raspberries and loganberries are badly winter killed and the yield will be very light. Gardens are late. The poultry hatch is light because of the high price of feed. Nearly everybody is cutting down their flocks and some are quitting the business entirely. The pig industry is receiving considerable impetus from clubs and the number of dairy cows has increased since last year. The Mutual Creamery company will open for business about the middle of June. They will manufacture cheese, butter, ice cream and casein, and will condense milk for wholesale trade. They will be equipped for handling about 20,000 pounds of milk daily. C. A. WYCOFF.



Great Crops Are In.

CENTERVILLE, Klickitat County, Wash., May 21.—We have sown all the grain possible in this county and even a good deal of summer fallow is sown over to spring grain, to increase the crop output this year. The high prices did not stop the seeding if the seed was to be had. A great crop of potatoes as well as other garden stuff is in the ground and I think an unusual amount of peas and corn will be put in. There is not much of the year 'round hired help here, so we don't need the homes for the extra help, but it is a common practice to have a house for the hired man in the fruit district. Fruit has a good prospect up to the present time, with very little indication of frost. We have had quite a few light rains, enough to help the spring sown grain. The fall grain has come out very fast with a prospect of a part of a crop. CLARENCE A. LESTER.

Politicians to Blame.

WALLA WALLA, Walla Walla County, Wash., May 27.—We are getting along fairly well with farm conditions as backward as they have been this spring. Help for the farm is getting more of a serious problem every day. The only suggestion I have to make would be the lifting of the Chinese exclusion act during the war. I do not want to find fault with the farm laborer, but the best of them are either renting or have farms of their own. Now the dear public wants the farmer to raise more and are taking away part of the too scarce help, which means that those raising crops that necessitate man labor will have to cut down those crops and plant machine handled crops instead. Nobody to blame but politicians. This may start something, but I hope it will if the war lasts for two or three years more as some of the best posted claim it will. Producing enough food will be the greatest problem this country has ever had before it. W. A. RITZ.

Beware of Stock Selling Schemes

Northwest General Trading Company's Swindling Tactics Repeated

Stock selling schemes like that practiced by the Northwestern General Trading company at Spokane, continue to find favor with swindle promoters. For a time they make easy money for the promoters and find ready acceptance with a large number of people and especially appeal to farmers through their alleged cooperative plans.

Half a dozen concerns are under investigation by the government in Chicago and The Farmer is glad to note that there is no letup in the alertness with which the authorities are ferreting out concerns which swindle farmers and others throughout the country.

The following report is from the Chicago Tribune of May 20:

Further evidence of the methods employed by the Riley-Schubert-Grossman company and Curtis, Miller & Co. came into the hands of government officials yesterday, who are making an investigation of the stock-selling methods of these and six other "mail order" concerns in Chicago.

Financial statements of the company of Samuel M. Grossman which were obtained by the government show that generous commissions have been paid to sales agents for the disposal of the stock issues of this concern, and that in many instances the money paid out as sales commissions and collection expenses exceeded the sum for which the stock certificate was sold.

Where Is the $950,000?

Grossman, according to his own statement, has sold about $1,250,000 of the $5,000,000 stock issue of his company, which he arranged last winter to dispose of to investors over the country. He has merchandise in his plant which he says is worth "over $300,000." The government is seeking to learn what has become of the $950,000 that has been obtained from the sale of stock and is not represented in the merchandise of the company.

Exact figures as to the amount of commissions paid by the Curtis-Miller concern last year to its sales agents for disposing of its stock have been obtained by the government. The cost of selling $127,498 of preferred stock amounted to $104,000 alone, while collection expenses on this and the profit-sharing certificates were over $32,000. The agents' commissions for selling the profit-sharing certificates amounted to $72,970.

Salesmen Swindle Company.

The chief cause of the deficit of $259,873 in the financial affairs of this company at the end of the year was caused by the heavy outlays to stock salesmen. Much of this money does not represent legitimate sales of stock, being commissions paid out on fake stock orders that were not discovered until after the salesmen left the employ of the company and went to another concern engaged in similar business.

The evidence in the possession of the government shows that the company divided these commissions between assets and operating expenses in an effort to conceal the tremendous losses which the company was suffering.

Figures supplied to a commercial organization in Chicago yesterday by a stock salesman giving the name of Kaplan show that during the first four days of this week the cash mail order receipts of Curtis, Miller & Co. were $85.01 and the merchandise demands on profit-sharing certificates was $4,-129,92.

On May 14 the holders of profit-sharing certificates made demands for merchandise amounting to $526.99, while mail order cash receipts were $22.01. On May 15 the company had merchandising demands involving $1,020.62 and cash receipts of $17.02.

The following day the merchandise demands were $1,378.66 and the cash receipts on mail orders were $35.39. On May 17 the company had merchandising demands of $1140,.02 and received cash by mail $10.50.

Letters and advertising matter sent through the mails by these companies to stock and profit-sharing certificate holders continued to pour in yesterday to Postoffice Inspector A. E. Germer, who is conducting the inquiry for the postal department.

Government to Aid Bulk Method

Federal Agents to Promote Improved Grain Handling

Three agents are to be put into the Inland Empire field by the government to help in preparing for the change to the bulk handling system of grain. This is the news announced by L. M. Jeffers of Portland, federal grain supervisor in charge of the district. Following is the statement outlined by Mr. Jeffers: "The United States department of agriculture, realizing the importance of the economical handling of grain, has made arrangements to pay especial attention to the bulk handling of grain in the Pacific northwest. During the past two years the department has done a limited amount of work in studying grain-handling conditions in this section and is now planning on having three specialists devote their entire time to this question.

Producers Need Assistance.

"The department appreciates that at the present time it is of utmost importance that immediate assistance be given to the grain producers and handlers. The rapid and economical handling of grain is of especial importance at the present time as a conservation measure and the department desires to do all it can along this line.

"The department representatives will be placed in the field at an early date for the purpose of giving advice and assistance to the farmers and grain dealers who are installing or contemplat the installation of bulk handling equipment. These men will not be theorists, but are men who have actually built and operated elevators and are well qualified for the work for which they have been chosen.

Headquarters Are Established.

"The grain-producing sections of Oregon, Washington and Idaho will be covered in these activities, and it is hoped that this line of work will be of immediate benefit. The office headquarters of these men will be at 310 Worcester building, and the work will be carried on under the direction of L. M. Jeffers, grain supervision in charge of this district.

"G. Lansing Hurd, who has previously been engaged in this work in connection with the extension service of the Oregon Agricultural college, is one of the men assigned to these activities and will devote a large part of his time to meeting with farmers and others who are especially interested."

Washington Portraits No. 19.

Charles E. Kline.

Charles E. Kline of Burke has had an exceptional showing in growing Sudan grass this last year. Mr. Kline writes regarding the planting and tilling of the soil of the Sudan grass as follows:

"I summer fallowed the ground to begin with. About May 15 (1916) I planted the seed with a Lister, in rows about three feet apart. The seed was distributed about the same as a wheat drill would sow wheat, using about three pounds of seed per acre. Later I harrowed the ground and kept the ground free from weeds. I also cultivated the ground, using sweeps instead of shovels on the cultivator. I cut this crop only once, as I desired to get a good crop of seed. I cut it about the first of October, using a reaper, which put it off in piles, the tops being all one way. Later I fastened a knife, with a handle on it, to the low side of the header-bed and two persons topped it, one operating the knife and the other putting the grass under the knife and clipping the ends off. One can top an armful at one operation. The tops were then stored in a dry place and later were threshed with a threshing machine. The machine has to be run very slowly to prevent throwing the seed over. This was recleaned later. From four acres treated in this way I got 16 sacks of clear seed, each sack averaging 80 pounds. I also had six tons of hay, making one and a half tons per acre."

The next in the series of Washington portraits will be that of H. E. Goldsworthy of Rosalia and will be given in next week's issue of The Washington Farmer.

Has Had Good Luck With Colts

To the Editor of The Washington Farmer: I have been enjoying the pictures and sketches in your paper from the different stockmen and how they take care of their stock, so I will send you a picture of our two Percheron stallions, McKinley and Edmont.

I believe in working the stallion at light work during the breeding season and then let him do his part the rest of the year. I have made this a practice for seven years and have had put very few crippled or weak colts. We also do all the farm work with registered Percheron mares that are raising the colts. The mares usually have about two weeks' layoff at foaling time, but have worked them until the day of foaling and put them to work in eight or 10 days with good success.

Load of Potatoes Brings Grower $331

Recently Charles H. Greely of Ridgefield, Wash., the potato king of Clarke county as he is commonly referred to, hauled a record load of potatoes to the depot here from where they were shipped. The load was drawn by four horses and brought the grower $331.20. It was composed of 69 sacks and the estimated weight was 8280 pounds. This is said to be the record wagon-load of potatoes, both in number of sacks of spuds and price received, ever sold in this country. The potatoes were grown on the farm of Mr. Greely in the Pioneer section, four miles east of Ridgefield, which is one of the richest spud growing districts in the state of Washington. It raises and ships more sacks of potatoes than any other section for its size in the state. Mr. Greely in all will have about 90 acres planted to this article of food while scores of other farmers will have somewhat reduced potato acreages ranging from 10 to 40 acres. This year will see one of the largest potato and bean acreages ever planted in this part of the state. It has carefully been estimated that there will be approximately 1500 acres in potatoes and nearly 100 acres in beans

E. L. S.

Although I am not a farmer I like the paper very much and generally read from cover to cover.

No Mistake in Buying Liberty Bond

Do You Want to Prove Your Patriotism? If So, Buy a Government Bond

No one ever made a mistake in buying a United States government bond. Other forms of investment, other alluring schemes of a speculative nature, may seem more enticing when Uncle Sam is offering his promise to pay, but as the months pass by people often wish that they had left them alone and bought bonds instead.

An American periodical recently ran a series of articles descriptive of the contents of safety deposit boxes as they are revealed when estates are administered, or, in a time of financial strees or misfortune, the owner ransacks them in a forlorn hope of finding something on which he can realize a few dollars.

In a great majority of cases the boxes are largely filled with worthless stocks and deeds to valueless property, which had proved treacherously inviting when they were purchased. Title to wild cat mining stocks, deeds for ill-chosen boom town lots, stock in such schemes as the swindling Northwestern General Trading company, oil stocks, interest in Mexican or South American coffee and rubber plantations, and stocks in inventions that promised 1000 per cent profit and return the holder 100 per cent loss.

It is not difficult to imagine the joyful surprise that would come to a bereaved family that found among such evidences of bad investments a United States government bond or two.

The Farmer takes an especial interest in this important subject. As its readers know, it is resolutely opposed to all kinds of wildcat schemes to extract money from farmers and all others who have to work hard to make ends meet and lay by something for adversity and old age. It has an abiding faith in Uncle Sam and has no hesitancy in advising the public to back him with their dollars—faith in his promise to pay, and faith in the almost boundless resources that are back of that promise. It is therefore glad to give space to the following appeal from A. C. Kains, chairman of the Pacific Coast Liberty loan committee:

"The patriotism that counts for most at the moment is the flotation of the Liberty loan, which means the providing of the money to carry out the plans of the United States to win the war.

"Every patriotic man will buy one or more bonds, or, if he can not afford it, part of a bond. If it is only a quarter of a bond it will prove his patriotism.

"Make some sacrifice, if necessary, stop smoking for a few weeks in order to buy a bond, for the point every one must see is that the success of the United States in this war depends upon the flotation of this loan and if the United States is not successful in this war, the United States will have to pay a huge indemnity to its enemies, and then the financial obligation every one of us must pay will be far greater than the amount we are now asked to pay. Then too, the bonds are a very good investment, they are tax free and will probably sell at a premium, so buy a bond; you are not showing your patriotism, but putting your money into a safe investment, like a savings bank.

"You are simply lending your money to the United States government to help that government of which you are a part, to prevent harm coming to this nation.

"What sort of a man is he who enters a man's house, takes the man's food, is harbored by the host and then stabs him in the back?

"What sort of a man is he, who is harbored by another and refuses to help that other when they are in trouble, but sides with the other's enemies?

"Do you want a safe investment? Buy a Liberty bond. Buy a United States government bond.

"Do you want to prove your patriotism? Buy a government bond.

"Do you want to hand your children a proud heritage? Be able to tell them you helped your country when your contry needed help.

"Don't make your children's father a slacker.

"Don't put your children in a position where they have to hide their faces in shame because their father was not a patriot. Buy a government bond. Buy a Liberty bond."

Model Dairy Is Built Up on Palouse Wheat Farm

When the name Palouse is mentioned one's mind conjures up a picture of vast grain fields, for the Palouse country has rightly earned its name. Whitman county is one of the largest wheat-producing counties of the United States. Seven years ago James C. Graham purshased 160 acres, two and a half miles south of Palouse and started in to make a dairy ranch in a wheat country pay.

The mistake made by a large per cent of the dairymen of today in thinking 'a cow is a cow' was not made by Mr. Graham. After using such care in selecting his cows he reasoned that "any old bull" wouldn't do if he was to depend on his calves for his future cows.

The herd he built up was one of the first to enter the cow-testing association in that locality. Only half the herd is registered, yet as a herd they stand in a class by themselves.

A careful set of books has been kept, and Mr. Graham reports as a result of the seven years' dairying $20,000 has been made from this herd.

The acres of the North Slope Dairy ranch have been wonderfully built up since Mr. Graham purchased them. They have doubled in production. Splendid crops of hay, grain and green forage can be produced, and with plenty of pasture the cattle do well and thrive in this wheat section.

Owing to ill health Mr. Graham has sold his farm and is now going to dispose of his herd.

The pictures above are snapshots of the Blacks and Whites on the Graham farm. On the left below is the herd bull and on the right a bunch of his calves.

World Famine

Looms as More Than a Possibility

The time is coming, is in fact at hand, when an obstacle that threatens to become insurmountable will challenge, or challenges now, a force that must, in the name of humanity, be made irresistible. Hunger to the point of actual want and starvation faces the world.

The food needs of the world for the next twelve months are such as to require the greatest possible production and saving of foods by the people left free to produce and to save. Cold figures declare it. So many mouths to feed at so many pounds per week or month needed to sustain life and activity; so many pounds of food now on hand and so many capable of production this crop season.

With the needs in one pan of the balance and the possible supply in the other, the needs will outweigh the supply unless every man and woman and child left free to produce something or to save something produces or saves that something.

Says Herbert C. Hoover, recently appointed United States food controller:

"All these conditions throw upon North America the brunt of the burden of supplying our co-belligerents with the human and animal food necessary to maintain their great armies in fighting condition, as well as to keep alive and efficient the families of the fighters and the great industrial army at home.

"The exports from American necessary to meet these needs, which absolutely must be met if the war is to be won or even is to be carried on at all during the next year, must be immensely greater than they have been in normal times.

"The requirements in cereals alone for the next year of the allies, and the few neutrals whose needs must be given some consideration, are 1,000,000,000 bushels. The needs of meats, fats and sugar also are enormous. Native production and imports from other countries can meet but a part of these requirements. What is left must come from us, yet this amount is far beyond any surplus that we shall have if we try to maintain our normal consumption. Our wheat prospects for this year are not encouraging. A reasonable forecast would indicate a crop of between 650,000,000 and 700,000,000 bushels. We have never exported more than 500,000,000 bushels of cereals a year, yet the needs abroad are for twice that.

"The moral is clear: Our consumption must be reduced. This can be done, first, by elimination of waste; second, by the substitution for the kinds of food needed by the allies of food not so needed, but which we can just as well use, as corn for wheat, poultry and eggs for red meat and so on; third, by voluntarily restricting ourselves to a sufficient and sensible ration, which, rather than being hurtful, will be of advantage to us physically, and if done at a little sacrifice of preference of taste or inclination for a feeling of overrepletion will be of great advantage to us morally."

Before he sailed from Europe, after having been driven out of Belgium by the declaration of war between the United States and Germany, Mr. Hoover sent a message to this country in which were these remarkable words:

"I feel it my duty to emphasize that the food situation is one of the utmost gravity, which, unless it is solved, may possibly result in the collapse of everything we hold dear in civilization. The only hope of providing the deficiency is by the elimination of waste, and actual and rigorous self-sacrifice on the part of the American people. We must plant everything and everywhere it will grow, or this time next year the food problem will be absolutely unsolvable, and the world will face absolute starvation."

State Grange Meets at Wenatchee

From 600 to 800 Representatives of the Patrons of Husbandry in 24th Annual Session

By PAUL E. TRIEM

The twenty-fourth session of the Washington State Grange, which was held in Wenatchee from the 5th to the 8th of June, was, in some respects, one of the most important annual sessions in the history of the organization. When from 600 to 800 representatives of the patrons of husbandry get together, in these stirring times, things are pretty apt to happen.

Secretary Lewis' report shows that there are now 337 granges with a total membership of 14,252 in the state of Washington, as contrasted with 327 granges and 13,206 members last year. Thirty-nine new granges have been organized, and four granges have been reorganized. Spokane is the banner county for the number of granges, with King taking the lead for the number of members.

In the matter of formal resolutions, the grange went on record as favoring:

1. Federal ownership and operation of railways.
2. Federal control of distribution of food products.
3. Universal suffrage.

And as opposed to:

1. Partizan politics.
2. The importation of oriental labor.

Auto Ride and Banquet.

On the opening day, the guests were met at the various incoming trains by members of the local committee on arrangements, composed of J. T. Compton, H. I. Shotwell, C. F. Keiser, C. A. Ferrin and Mrs. U. G. Pyle, and were conducted to the place of registration. Following registration, tickets for the auto ride to take place in the afternoon and the banquet in the evening were distributed, and the visitors were directed to comfortable rooms reserved for the delegates at various local hotels. This part of the work was accomplished with unusual expedition.

State Master C. B. Kegley's annual address was delivered in the afternoon. Mr. Kegley referred briefly to the present development of Wenatchee valley, and reminded his auditors of a not very distant past when sage brush covered most of the land now occupied by orchards.

Turning to the subject of the great war, Mr. Kegley reaffirmed the statement of President Wilson that this is a war for democracy, but went on to tell his audience that our army is not organized on a democratic basis.

"The resolution asking for the reorganization of the army and navy on democratic lines, adopted at our last session," said Mr. Kegley, "should again be indorsed and plans made to see that support is aroused throughout the country to carry it into effect. An army organized on the lines of the old monarchial ideas of common soldiers and aristocratic officers, a class apart, is the most inefficient for fighting for world democracy and would be a constant menace to democracy at home."

Mr. Kegley referred to the part the farmers' national committee has taken in developing plans for financing the war, and urged the delegates to do their share in backing up this propaganda.

"To me it seems very clear," he declared, "that we should insist with all our might that the war be paid for as we go and that not a single dollar shall be left for our children, or our children's children, to pay, until the last dollar of accumulated wealth has been exhausted."

A topic dominant throughout the session of the grange, on the street and in the hotel lobbies, was brought out in the master's address. Mr. Kegley and apparently a vast majority of the delegates are in favor of a federal guarantee of minimum prices to be paid producers.

"By simply guaranteeing to farmers a minimum price, and leaving the supply and demand to regulate the price above the minimum, two most vitally important things are insured: First, that distribution shall be where the need is most urgent; and, second, that the increased price will go to the producer, where it belongs."

This, the state master adds, will be all the incentive needed to secure a maximum production of food crops.

A government owned merchant marine was discussed in the light of what the shipping board has recently done in this direction. Turning to the federal farm loan act, Mr. Kegley expressed his unwavering confidence in its value to the farmer.

"I would not have accepted a position in the federal farm loan bank had I not firmly believed that the rural credit act was a great thing for the farmer, and that it was my duty to do all that I could to see that the farmers whom I have served so long got all possible advantage from it."

Following the master's speech, the delegates were taken by auto to visit various beauty spots and particularly various typical farms in the valley. Many of those present could remember a time when the faithful cayuse and the buckboard furnished the standard means of conveyance in Chelan county, and when the sight of an automobile going down Wenatchee avenue would have caused a panic. Now the streets are lined with standing cars, and, even with 600 guests to look after, there was no difficulty in providing ample room for all. The opportunity to inspect the fruit lands where the big red apples, famous in history, are raised, was one greatly appreciated by all the visitors.

The guests brought tremendous appetites back with them, and the banquet which followed was undoubtedly one of the big events of the session. It is estimated that about 800 were served, and 24 hours later scattered groups along the street could be found telling each other how fine everything tasted.

Public Reception.

A public reception, held in the city park, followed the banquet. Music was furnished by the ladies' quartet of Beacon Hill Grange and by the Apollo club, a local organization of 30 members. A warm wind blew at times through the branches of the trees, and motor cars whizzed past, with a subdued rustling of tires. Many a delegate from a distant corner of the great state of Washington will look back to that summer evening reception in the little city nestling on the banks of the great, silent river with a smile of reminiscent pleasure.

Governor Lister, who was to have been one of the principal speakers of the evening, was detained in Olympia. Commissioner of Agriculture E. F. Benson appeared for the governor. Addresses by various members of the grange and by outside speakers whose interests were in some way connected with those of the order filled the evening. Probably the "hit" of the program was a straight-from-the-shoulder talk, interspersed with humorous stories and with epigrams carrying a barbed point, delivered by F. L. Lindley, of the Ford Service bureau. Mr. Lindley is able to present very convincingly the advantages of service and citizenship, as opposed to selfish individualism.

The election of officers, which took place on Wednesday, set at rest various rumors which had been much in the foreground. Many of the delegates were convinced that Mr. Kegley could not be induced to accept the office of another term. Various more or less promising candidates were discussed, but there was a very evident lack of unanimity in any one of them. The first ballot settled the whole matter, however, as Mr. Kegley was reelected by a vote of 283 out of 310 votes cast. Fred Chamberlain of Puyallup and H. A. McCormick of North Yakima shared the minority vote.

One of the features of the grange, which is never set down on the program, but which, nevertheless, exerts a powerful influence on every delegate, is the informal discussion which takes

(Continued on page twelve.)

OFFICERS OF THE STATE GRANGE.

The following officers of the Washington State Grange were elected for the ensuing two years: Master, C. B. Kegley, Spokane; overseer, William Bouck, Sedro-Woolley; lecturer, L. L. Snow, Olympia; steward, Lewis Exstine, Winlock; assistant steward, Bert Curry, Meyers Falls; chaplain, Laura S. Bouck, Sedro-Woolley; treasurer, Frank Field, Snohomish; secretary, Fred W. Lewis, Tumwater; gate keeper, Ivan Compton, Wenatchee; ceres, Mrs. Augusta Kegley, Spokane; pomona, Mrs. C. F. Keiser, Wenatchee; flora, Mrs. Margaret A. Wing, Washougal; lady assistant steward, Mrs. Anna Miller, Pullman; member executive committee, U. S. Case of Prosser.

Meeting of Grange at Wenatchee Was Scene of Much Activity and Conference

Here are a few snapshots of scenes at the meeting of the state grange last week. At the left is a snap of William Bouck, who was elected state overseer. As indicated by the photo, Mr. Bouck is a man of action. Next is a group of boy grangers, among the most keenly interested attendants at the session. They are Carl Hill of Swofford, Merle Bennett of Colville and Elmer Wilkes of Rice. The second photo from the right shows State Master C. B. Kegley of Spokane, who was overwhelmingly elected to succeed himself. The group at the right are Mr. and Mrs. W. G. Foster of Boistfort, and at the extreme right Mr. Johnson of Puyallup.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Use Home-Grown Products

Official figures show that in the year 1916 there were shipped out of the state of Washington over 22,000 carloads of Washington grown fruit, of which over 16,000 cars were apples.

Figures for the previous year, 1915, which no doubt correspond reasonably closely with those that might be compiled for 1916, show that there were nearly 2000 carloads of oranges, lemons and bananas shipped into the state.

It is especially interesting in this connection to read the figures for one city (Seattle). In the year 1914 there were shipped into Seattle from various points about the state 720 carloads of apples. During the same year there were shipped in from other states 829 carloads of oranges, lemons and bananas. There was consumption of considerable locally grown fruit in Seattle, of course, but the figures indicate that of the fruit used that year in that city, approximately half was imported from other states, while large quantities of Washington grown fruit was being exported.

The suggestion to patronize home industry is always timely, but it is especially so in times when conditions make transportation difficult and costly. The people of Washington need a variety of fruit, but by far the greater part of the fruit eaten in Washington should be the famous Washington apple, than which there is no more healthful nor palatable fruit grown. It is well and good to invade distant markets with Washington produce, but little is gained by either producer or consumer when the produce of this state is shipped to New York and the produce of Florida or southern California is shipped into this state. If something has to be a drug on the market of this state let it be fruits from the tropics or sub-tropics, not Washington grown apples.

"Something Just as Good"

It used to be that we thought anybody who tried to substitute was the worst of people. Now, when there is an actual shortage, the man who can find a substitute for anything is a benefactor of the human race. So times change.

There is a shortage of tin plate and we must all use other containers when possible that there may be enough left to go around.

There is a shortage of glass, too, and the housewife who puts up quantities of fruit and vegetables is going to have trouble this year unless she uses great care and some ingenuity.

Elaborate containers for foods which do not spoil are unnecessary. Many containers may be used again, even though it is customary to throw them away.

Let us think of saving, and it is likely that we will discover new ways and better ones. As soon as we can convince people that there is a real shortage the native skill and ingenuity of Americans will "find a way."

Banks Asked to Aid Farmers

Secretary of the Treasury McAdoo has issued a special appeal to the bankers of the United States to lend all possible aid to the farmers in raising larger food crops.

Mr. McAdoo points out that unusual extensions of credit are needed. If the farmers are to speed up production they will need more machinery, more horsepower, more tractors, more seed, more labor.

> "Seeds are very high and money should be furnished to help the farmer secure them. Labor is scarce and wages are high, and the payment of labor requires cash."

The federal reserve system can help some, and the federal farm loan law is now taking care of long-time loans, but Secretary McAdoo urges that "the thing needed now is an extraordinary activity on the part of the financial interests of the country in seeking out places where short-time personal loans may be made for the express purpose of extending agricultural operations beyond their normal limits."

Turning then to the farmer, the secretary advises that he take advantage of the benefits of collective borrowing.

> "The credit union is in use in Massachusetts, Connecticut, New Jersey and North Carolina. Where the laws do not expressly provide for them they might be formed by voluntary associations. Where the demand is for short-time credit, it should be met by local banks, and it can be met with entire safety through this 'credit union' or collective borrowing system. A special authorization by statute law is not generally necessary."

We should think the national farm loan associations, of which we now have more than 600 organized in the Pacific northwest, could be quickly turned to double service here by constituting themselves as "credit unions" to obtain short-time loans at low interest rates for their members.

Meanwhile The Farmer advises its readers to write to the department of agriculture, Washington, D. C., for a copy of Farmers' Bulletin No. 654, entitled "How the Farmers May Improve Their Personal Credit."

Do Your Bit by Saving a Bite

Two great needs confront us, and we can not say which is the more important—producing food and saving food. Every bite we produce or save above our own needs will help support our own armies or those of our friends and allies. Every person should do his part, be it large or small.

The Farmers' Attitude

Everybody is talking war, with the exception of many of the farmers. Everybody is telling how the war should be carried on; what will defeat the kaiser; how the crops ought to be planted, cultivated and harvested; what plans should be adopted; how the president should treat congress, and so on and so on—except the farmer.

He does not say very much, but he plugs right along. The farmer is inclined to silences, but the world may be thankful he is also inclined to hard and effective labor. He understands what the need is right now, better than a good many glib talkers, and he is doing about all that can be done.

If everybody does his part as well the outcome of the war will not long remain in doubt.

The Hog and the Speculator

There is nothing the matter with a hog—as a hog. He should be kept in his place, that is all—and his place is in the hog yard. He is a dismal failure in the parlor, in spite of the old song. He is a failure as a companion, and he furnishes a poor example when it comes to table manners. Carefully stuffed and kept in his own proper environment, he lives his life and dies that we may feed on fresh pork, ham and bacon.

It is much the same with the speculator in food—the man with the behavior of the hog, who is compared to the hog so often. There is nothing the matter with him in his proper place. In a striped suit behind the bars he may be rendered useful. His tough hide should make admirable shoe soles, and as a horrible example he might point a moral and make more forcible if not adorn a tale.

Washington Gleanings

The King county grange fair is to be held in Renton, September 14, 15 and 16.

Farmers living in the vicinity of Clarkston are building two large grain elevators to handle this year's grain crop in bulk. One has a capacity of 150,000 bushels and the other of about 100,000 bushels.

An average of 12 pounds of wool to the fleece is the record made by Fred Smith, a prominent sheepman of Granddalles. Some of the fleeces ran to 18 pounds.

A campaign of education with the purpose of interesting every dairyman in the advantages of feeding ensilage over dry feed in winter has been launched by Manager M. Iverson of the Farmers' Mutual Creamery of Tonasket.

The school section on Nob Hill, Yakima, opened for cultivation this spring is rapidly being developed. On some of the tracts the sage brush is just being dug out, on others it is piled ready for burning, while some tracts are being plowed and are almost ready for tree planting.

Harry Armitage of North Yakima, dealing for himself and in connection with I. Koshland, has closed deals for 112,000 pounds of wool in five lots from Washington producers. The prices are stated to range from 45 to 50 cents and the total amount of the deal is about $50,000.

A. A. Prince, secretary and assistant sales manager of the Northwestern Fruit Exchange, has left for an extended trip over the markets, which will require about three months to complete. Special plans are under way looking to the development of new markets for the northwestern boxed apples. Attention will be paid to the small markets.

The stockmen of Yakima valley, especially the sheepmen, have been heavy investors in range lands this spring and dealers in that form of real estate say the market is active and many negotiations still are pending. A check made on the volume of the business since the first of the year shows that 63 sections have been sold, representing a total of 40,320 acres.

The Tieton project will increase its cultivated areas by 300 acres this year, according to figures given by G. C. Finley, superintendent of irrigation for the project. The increase is largely due to the call for agricultural preparedness. Mr. Finley reports that 1400 acres was the increase for the season of 1915 and 1600 for the season of 1916, while 3000 acres or more will be put under cultivation this year, bringing the total to 26,000 acres on the project. The total irrigable acreage under the project is 34,000 acres.

What Others Say

Review, Toppenish: The present consumption of wheat flour could be decreased by a third in the average American home without suffering or special inconvenience. In a bygone generation corn meal was the basis of a considerable portion of the household bill of fare. It should be restored to its old-time favor.

Courier-Press, Dayton: There will doubtless be a very large crop of fruits and vegetables raised in the Dayton section this year, and unless measures are soon taken to care for the surplus fruit and vegetables the producers will become discouraged because they will not receive returns for their labor.

Record, Ellensburg: More home labor in the kitchen, fewer parties and pink teas and time spent on making impossible cats on blue linen, would go far toward stocking the larder with wholesome food, and keeping it so stocked. Our grandmothers never saw a tin can in a store, and they got along just as well and lived out the full measure of their days.

How Railroads Figured

Ask $375,000,000 a Year for $60,000,000 Losses

When the Adamson bill was before congress last summer, The Farmer predicted that if the demands of the trainmen were granted, the railway managers would make that action of congress and the president the basis of a call for higher freight rates, and would try to turn the Adamson law to their own profit by calling for an advance in rates that would far more than compensate them.

That prediction is now verified. They want $375,000,000 more a year, and in their own figures only claim that the Adamson law is costing them $60,000,000 a year.

When the railroads put in their claim for a 15 per cent advance in freight rates, The Farmer pointed out that if it were granted, the increase would take $375,000,000 yearly out of the pockets of the farmers and other producers and consumers.

The railroads admit the accuracy of that estimate, but argue that a still greater sum of $477,000,000 is needed to cover their increased expenses.

But at least $225,000,000 of that great sum is asked for new rails, locomotives and cars, and is not properly chargeable as expenses. The railroads have had seven years of prosperity and should have kept stocked up with cars and locomotives instead of paying out so large a proportion of their earnings in dividends to their stockholders.

As matter of fact there is no probability that they would buy $195,000,000 worth of locomotives and cars if they were granted the rate increase. It is more likely they would use the money to pay still greater profits on their stocks.

The roads are now under the direction of a war board of five railway managers, and that board has directed them to save on cars and locomotives by cutting down passenger service and loading existing freight cars more heavily.

For instance, the New York, New Haven & Hartford has complied by canceling 199 trains, or 10 per cent of its passenger service.

The Erie has taken off 75 passenger trains, and other roads generally will follow suit.

The railways conduct a bureau of railway news to give wide publicity to their arguments for higher freight rates. This bureau admits that American railways showed a gain of $79,000,000 in earnings in the first quarter of 1917, but asserts that, notwithstanding this increase in traffic, they suffered a loss of $26,000,000 in profit in comparison with the same period last year.

But the New York Commercial, a daily newspaper that specializes on business and railroad news, points out that no mention is made by the bureau representing the railroads of the unusual weather conditions that held down their earnings during the first three months of 1917. Only a few days ago President Earling of the Chicago, Milwaukee & St. Paul said the weather after January 1 was the worst he had ever experienced during his 52 years of railroading. He made that statement to explain why the expenses of his company had been high. Regarding the future, he said the outlook was decidedly bright.

The Farmer does not hesitate to declare that it would be an act of gross injustice for the interstate commerce commission to let the western railroads advance their freight rates. All the transcontinental lines are doing remarkably well. The Wall Street Journal admits that the Union Pacific, the Southern Pacific, the Atchison, the Burlington, the Chicago & Northwestern, the Great Northern and the Northern Pacific "are paying dividends upon their common stock ranging from 6 to 9 per cent."

Some of these transcontinental systems have increased their profits amazingly in the last three or four years. We happen to have at hand the official figures of the Southern Pacific's profits in the first four months of 1917. They were $16,870,199. Two years ago the Southern Pacific's profits in the corresponding period, the first four months of 1915, were only $9,530,217. The profits of this system have nearly doubled in two years, and that in spite of higher wages and increased costs of operation.

We can not believe that the interstate commerce commission will allow these highly prosperous roads to lay yet heavier burdens on the producers of the Pacific northwest.

State College Grange.

A local grange has been organized at the State College of Washington. There were 50 members of the experiment station and extension staff present. The following officers were elected: Worthy master, George Severance; overseer, Dr. F. D. Heald; lecturer, Professor J. R. Barnett; chaplain, Mrs. Leonard Hagnauer; steward, E. F. Gaines; assistant steward, A. B. Nystrom, treasurer, Mrs. F. J. Newbill; secretary, C. E. Howell; lady assistant steward, Mrs. W. K. Whitaker; gatekeeper, E. B. Krantz; ceres, Mrs. R. J. Barnett; pamona, Mrs. A. B. Nystrom; flora, Miss Walker.

The grange was installed by Frederick W. Hodges of the Ewartsville grange. The new grange has 50 charter members and will be known as the State College grange. It was organized for the purpose of getting in closer touch with farming problems and for keeping farmers in closer touch with experimental and extension work done by the state college. The meetings will be held semi-weekly.

More Purebred Shorthorns.

Frank Rothrock, for the Day & Rothrock herd, at the Hercules farm near Sprague, recently returned from the middle west, having bought 32 head of purebred Shorthorns for approximately $16,000. He purchased one car from the Hopley stock farm of Atlantic, Iowa, at a sale where the animals averaged $627 each. The second car was purchased from S. G. Eliason of Montevideo, Minn., the prices paid being from $500 to $900 each. All the animals purchased in the middle west are cows, some with calves. The recent purchase will bring up the Hercules herd to 158 head.

Want a "Home Crew"

To the Editor of The Washington Farmer: On our farm we never employ strangers. We find a man with a family quite satisfactory. Their house was half a mile from ours, but in sight.

When our only son started to school we took an orphan boy of 11. A boy can do a lot of work, easy in itself, but hard when added to the day's work in the field.

He stayed with us six years, and after three years' absence he is working for us again, and today one of our prominent thresher men offered him two bits a day above running wages to help him thresh because he wanted a home crew.

That expresses the thought exactly, "a home crew." The man who hires in a community takes an interest in its affairs, has a home there, is the better man.

We should take our hired help into our homes. We don't want to hire questionable characters. Let a man take credentials when he goes into a new neighborhood; other business men require it; it is more important that the farmer should. Our help eat at the tables and are with our boys all day.

Sometimes boys from the city who are idle and a problem to the probation officer are a help on the farm. Often they do a lot of work if some one they like can be with them constantly. We kept two such boys over a year. This makes extra work for the woman, but it helps the boys, and their company is worth something if one has no boys.

MARILLA KIDWELL.

Garfield, Wash.

No Place for Them.

"Any beech trees on your place?"

"Oh, no, we are not near the ocean. We have no beach."

Stevens County Fair

Stevens county is commencing now to prepare for its fourth annual fair to be held at Colville, Wash. The fair is a combination of the Stevens County Live Stock association, organized for the promotion of the live stock industry, and the school children's agricultural and industrial exhibit under the supervision of county superintendent of schools. No admission fee is charged and about $1700 will be offered as prizes.

Last year the county held nine community fairs in different parts of the county, 72 districts were represented, representing 150 teachers. Over 1000 different articles were entered in the different exhibits. The winners at the community fairs entered their exhibits in the county fair for the final contest. One school after driving 20 miles in a lumber wagon arrived in time to take part in the parade held at 10 a. m.

Recently Miss Staunard, county superintendent, sent out letters addressed to the scholars in care of their teachers, asking replies to these questions:

1. What are you planning to bring to the fair?
2. What can the pupils, teachers and county superintendent do to make the fair a greater success?
3. What can the parents do to make the fair a greater success?

Up to date over 1000 replies have been received. She has evidently struck the keynote to rouse the enthusiasm.

D. G. S.

Pioneer Picnic June 26-28.

The Crab Creek Pioneer picnic will be held for three days instead of four this year. The date was postponed from June 19 to June 26, owing to conflicting dates with chautauquas which will be held in Ritzville, Sprague and Davenport. It was agreed not to sign up any chautauquas or anything else on the regular dates for the picnic in the future. The directors allowed a purse of $100 a day for baseball for the three days instead of $75 for four days as last year. A. D. Davis, who is in charge of this sport, will arrange games at once. George Wilson, who has the racing in charge, will have $1950 for purses against $1700 offered last year. The association has a balance of $950 on hand.

Britain Fixes Prices.

The food control of Great Britain has fixed the price for wheat and oats of the 1917 crop at 60 shillings ($14.40) for 504 pounds of wheat of first quality and 38 shillings 6 pence ($9.24) for 336 pounds of first quality oats.

Buys Montana Farm.

Word from Melrose, Mont., is to the effect that James D. Kennedy, one of the best sheepmen in the Dubois (Idaho) country, and who for several years was with the Denning & Clark Live Stock company of Dubois, has purchased the Fisher & Hample live stock outfit at Melrose and will be in active charge from now on.

To The Washington Farmer: I like The Washington Farmer because it is progressive and up-to-date. Every farmer in the great Northwest should take it and read it.

C. E. LUDDEN.

Arletta, Wash.

Stretch of Concrete on the Ohio River Road near Parkersburg, W. Va. Built in 1915 under the direction of Burdett Woodyard, Engineer.

The Farmer Can Pull Himself Out of the Mud

FARMERS know the value of permanent roads in their communities. They can get them if they act along the following definite lines:

1. All main highways should be built of concrete to withstand motor car traffic.

2. It is far better to lay out and build at once a system of concrete roads than to build a few scattered miles every year between stretches of mud.

3. It is better to raise a lot of money by a good roads bond issue and build right, than to spend each year the road funds on hand in temporary construction.

4. Concrete is as desirable for roads as for other important structures; and it is the least expensive permanent road material.

Some farmers may not like a bond issue. They do not realize that a very few cents a year per acre is enough to pay off the bonds and all interest.

In Illinois it has been figured out by the State Highway Commissioners that a system of four thousand miles of permanent roads would tax farm land less than three cents per acre per year for twenty years. That's nothing. The whole four thousand miles can be built at once and make a tremendous saving in annual upkeep.

The farmer should act. He can spread information among his neighbors, he can talk to his road officials, influence his lawmakers to pass a good roads bond issue; and he can vote for it.

This Association can give you reliable information about the cost of building concrete roads and how to go about it. Write for Bulletin No. 136.

CONCRETE FOR PERMANENCE

A. B. NYSTROM, Editorial Contributor

Questions
Are Answered by A. B. Nystrom

I am desirous of information as to the raising the test of cows' milk by feeding such feeds as are required. I have been told that this can not be done in this way, but such a statement does not appeal favorably to me.
G. G. S., Everson, Wash.

We can not change permanently, nor for a very long time, the test of any cow by changing the methods of feeding. This has been tried at various experiment stations, and the results have been the same in every case. However, there are times when the test can be increased for a short period of time, as for example, just after a cow freshens. For instance, a cow that would normally test 4 per cent can be made to test as high as 5 per cent or 6 per cent for a week or 10 days, following freshening. This can be done by feeding and handling the cow in such a way that she will be fat at the time she drops her calf. After this time, if the feed is largely of a high protein nature, that is, if such feeds as alfalfa, bran, oil meal, cotton seed meal and other high protein feeds are fed to a greater extent than carbonaceous feeds, you will find that the cow will get thin quickly and will seem to take the fat from her back, so to speak, and put it into the milk pail. This is what is done sometimes in making short tests for a week or 14 days, but the test does not remain at this high point very long. In fact, only so long as the cow has the strength to hold up under the abnormal feeding.

Feeding ordinary feed will not change the fat content except as it increases or decreases the milk flow; usually as a cow gives more milk her tests become lower, and when the flow diminishes the test becomes higher. The general statement to make in this connection is that you can not feed fat into the milk.

Substitute for Alfalfa Hay.

Could you tell me of some feed or feeds for dairy cows which would take the place of alfalfa hay for a short time? Cows are on pasture but pasture is very short at present and hay almost impossible to get here.
H. B., Renton, Wash.

Cows should have some roughage of some kind and if they are getting some succulent feed they should have in addition some dry roughage. We prefer using the legume hay, such as alfalfa, clover, peas, vetch, etc., but in the absence of these I would get some properly cured grain hay, oats being preferred.

The Bang System.

What is the "Bang" system for handling tubercular cattle?
O. L. O., Seattle, Wash.

The Bang system for handling tubercular cattle is that of isolating those that have reacted to the test, feeding them separately and having separate attendants for them, so that there will be no chance of infecting healthy animals. These cows are left this way until they drop their calves and the calves are taken from them immediately, before they have a chance to take any of the milk from their mothers, and raised on milk that is free from the tubercular organisms. It is simply taking advantage of the fact that healthy calves can be raised from tubercular animals if they do not get infected milk.

Yamhill County Report

Fifty-one cows in the Yamhill County (Ore.) Cow Testing association during the month of May. W. H. Hubbard, who does the testing, has compiled the following list of cows which made over 50 pounds of butterfat during the month of May:

Name of Cow or Number	Breed	Owner	Butter Fat

SAVE YOUR SILAGE

PERFECTLY cut silage prevents air pockets and the result is less spoilage. Purchase a Rowell Automatic Cutter and get perfect service. STRONG, EASY RUNNING, no danger, made in seven sizes. Investigate before you buy. *Free Illustrated Catalog.*

The I. B. Rowell Co.
Waukesha, Wis.

Cream Output Doubled.

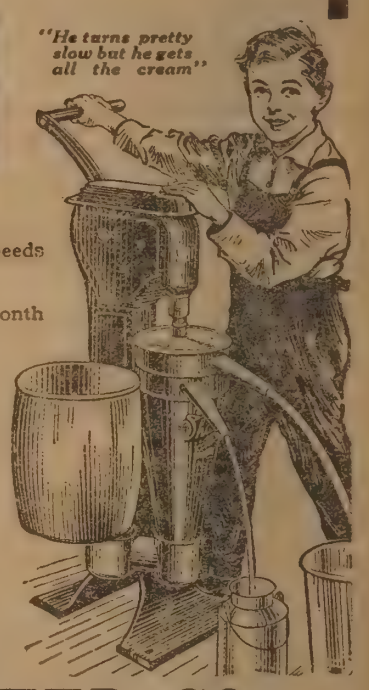
Despite the wet weather and the delayed planting season, preparations for a big acreage of grain and other foodstuffs in Polk County, Oregon, have been planted, although a large acreage is waiting for the rains to stop.

Fall grain is in excellent condition and farmers in all parts of the country report a successful growth thus far. Clover is making an advance since the spring rains set in, and dairymen believe the flush cream season will be extended beyond the usual time this year on account of the big growth of grass in pastures. The cream production of the county has been nearly doubled during the last two weeks.

Year's Output $50,000.

The Satsop, Washington, cooperative cheese factory sold $49,351 worth of cheese during the year ending May 1, according to the annual report of Secretary Johnson. The cheese brought an average of 17 cents a pound, while in its making 2,529,511 pounds of milk were consumed. The plant today is operating on a larger scale than ever and is unable to handle all the milk and butterfat offered to it. During April alone over $4400 was distributed to the ranchers supplying the factory with butterfat.

To Drill for Artesian Water.



W. J. Roup, the well-known dry farmer in Fertile valley, near Emmett, Idaho, has plans made to sink for artesian water on his ranch. Mr. Roup expects to put a drill down from the bottom of his present dug well, which is 348 feet deep. It will be remembered that warm water, almost hot, was struck in this well a few months ago. A strong flow of artesian water in that section would mean the opening up of a large area of as fine a body of rich farm land as lies outdoors.

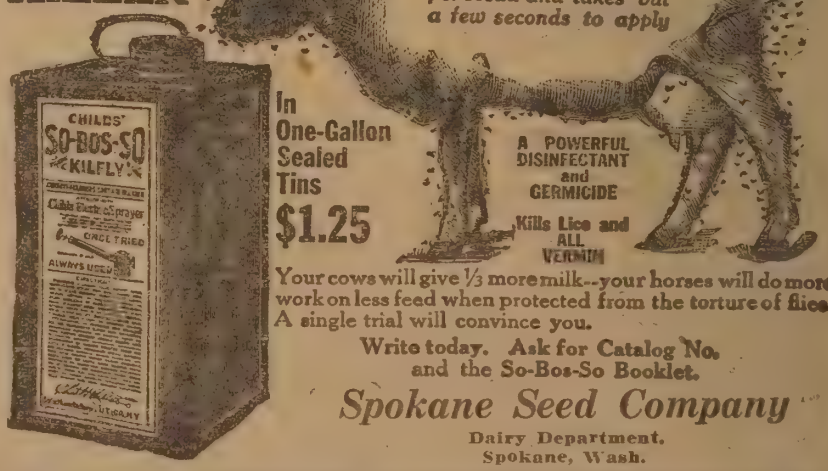
Use SHARPLES To Prevent Cream-Waste

Sharples is the *only* separator that skims absolutely clean at *all* speeds. All other separators lose considerable cream when turned below speed—admitted by leading experiment stations and all separator manufacturers. Average loss from this cause is 10 lbs. of butter per cow per year, or 80,000,000 lbs. in the United States alone! Sharples would save it all!—due to the wonderful Suction-feed, which automatically regulates the milk-feed so as to insure clean skimming whether you turn fast or slow.

Sharples is an absolute necessity *now*—when the world is clamoring for "more fat." It is the *only* separator that gets *all* the butter-fat out of the milk. Prevent waste by getting a Sharples—and get it *now,* while you can. Ask nearest Sharples dealer to explain it.

SHARPLES
Famous Suction-Feed
Skims clean at any Speed
SEPARATOR

the *only* separator that:
—skims clean at widely-varying speeds
—gives cream of unchanging thickness—all speeds
—has just *one* piece in bowl—no discs
—skims milk faster when you turn quicker
—has knee-low supply tank and once-a-month oiling



Made and guaranteed practically forever by the oldest and greatest separator factory in America. Over a million Sharples users! See your dealer and write for catalog today—address Department 49

To Produce More Pork

By LEE M. LAMPSON, Kennewick, Wash.

High prices are stimulating production very materially in Benton county, Washington. The agitation for a greater food production, the organization of food supply committees and so forth, and their work have also added considerably to the increase. The county has a central war food committee which has done considerable work in stimulation and providing means for greater production.

The local committees of the county agricultural council have made a list of all of the female hogs that were not being used for breeding stock, and a list of all who would buy one or more of these to put into the breeding-pens. These lists have been used locally and forwarded to the county agriculturist. By putting the owners of sows that were being fattened for the market and prospective purchasers in communication with each other we have been able to divert a great many sows from the fattening pens to the breeding pens; thus increasing pork production here considerable this year, and there will be a great deal more of this work done before this summer is over.

Warranted to Give Satisfaction.

Gombault's

Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O.

Blacklegoids

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Write for free booklets on Blackleg, with full information about Blacklegoids.

PARKE, DAVIS & CO.

Dept. Animal Industry. DETROIT, MICH.

The Purebred Sire

The following facts, given in a recent leaflet issued by the Wisconsin Livestock Breeders' association' may be duplicated most anywhere in the country.

In this leaflet it is stated that a certain farmer had for several years been breeding his mare to a grade stallion. He finally decided to patronize a purebred. Some time after he held an auction sale. Yearlings, two-year-olds, and three-year-olds, all by the grade sire, sold for $37, $55 and $76 a head respectively, while weanlings from the same mares, sired by a purebred stallion, averaged $101 each.

In another instance, it is reported that a company of farmers purchased a two-year-old purebred stallion. He was considered so good that the service fee was placed at $25—$10 more than any competitor. A three-year-old gelding sired by him was sold to a dealer for $625, and not one went for less than $225. A pair of grade mares sired by the same horse was sold to a man in Tennessee for $750, while a colt not over 20 months old was sold at public auction for $700.

These are not isolated cases but are given simply to show the greater profits that result from the use of purebred sires. Sound, high-class horses are the ideal farm power, and good mares bred to purebred sires of the same breed and conformation pay good profits, not only in the colts they produce, as has been shown, but also in the labor they perform. Poor horses render poor service and often cost more to keep than they are worth. The loss in feed consumed and lack of labor performed by the inferior and scrub horses of the country is enormous. This expense can be greatly reduced if farmers and mare owners will breed their mares to the right sort of stallions and produce the kind of horses the farm requires and the market demands.

Meat Freezing in New Zealand.

The fresh meat industry is becoming an important factor in the business and industrial life of New Zealand, having supplied exports during the past two years to the value of $75,045,532. During that time 1,145,531 quarters of beef were exported, 4,680,593 carcasses of mutton and 6,476,048 carcasses of lamb.

Sheep Dips for Argentina.

Imports of sheep dips of all kinds into Argentina during the five years from 1910 to 1914, inclusive, amounted to 70,439,064 pounds, valued at $9,249,704, of which England supplied 64,837,555 pounds, valued at $8,514,148; United States, 3,063,205 pounds, valued at $402,248.

Veterinary

Dr. S. B. Nelson

Removing Warts—How can warts on the generative organs of a horse be cured?—A. B.

Answer—It depends upon how large the warts are. If they have only a small neck they should be removed by surgical interference and then an astringent applied to the stump. The astringent to be used may be either tannic acid or alum, tannic acid is preferable. If the warts are small, then you might try the application of either castor oil or the American mineral oil to the warts once every two or three days.

Throat Trouble—I have a bull that has a growth in his throat, making it hard for him to breathe. He is 3 years old and feeds well.

C. L. H., Lewis, Wash.

Answer—I think the best thing that you can do, if you have a veterinary close to you, is to have him see the bull and prescribe for you after he has made a careful personal physical examination of the trouble in the throat.

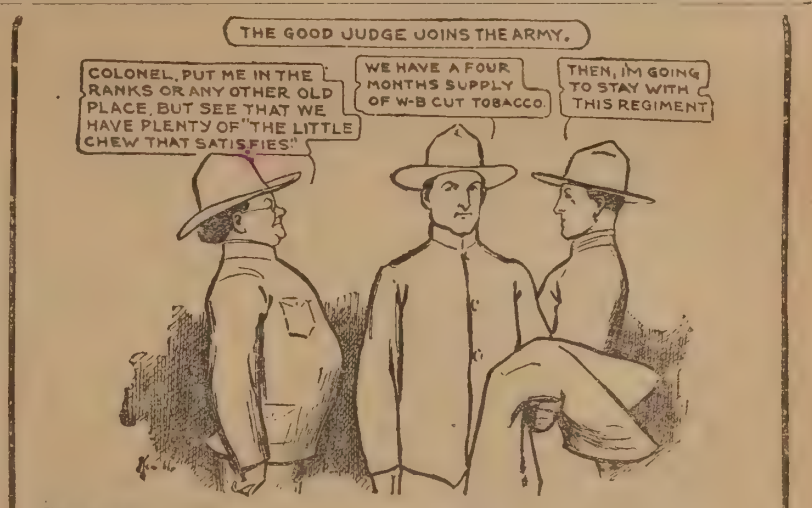
If you do not have a veterinarian convenient to call, I would suggest to you that you rub on the swelling or growth in his throat iodine ointment, U. S. P., and also give him internally one dram of potassium iodide in one pint of water once daily for a week.

Twenty Million Miles of Telephone Wire

The telephone wire in use in the Bell System is long enough to run from the earth to the moon and back again forty times.

The Bell System has about twice as much telephone wire as all Europe.

More than 500,000 new telephones are being added to the Bell System yearly—almost as many as the total number of telephones in England.



In twelve months the Bell System adds enough telephones to duplicate the entire telephone systems of France, Italy and Switzerland combined.

In proportion to population the extension of the Bell System in the United States is equal in two years to the total telephone progress of Europe since the telephone was invented—a period of about forty years.

The Bell System fills the telephone needs of the American people with a thoroughness and a spirit of public service which are without parallel the world over.

Preserving Eggs

To the Editor: Would you kindly publish in your paper an authentic article on safe methods (or the safest method) of storing eggs.—J. J., Rexburg, Idaho.

In the May 31 issue a simple method of preserving eggs in lime water was given. The waterglass method is very commonly used and is as satisfactory as any. The liquid waterglass is purchased at the drug stores and it is diluted to one part to 9 or 10 of water. The water should be previously boiled to sterilize it and then allowed to cool. One measure of waterglass to ten measures of water should then be mixed together. The eggs may then be dropped into the liquid. Crocks or glass jars or wooden pails or kegs may be used. A quantity of the mixture may be made up at one time and the eggs put into it daily as gathered until the crock or pail is about full. Leave about an inch of liquid above the eggs. The liquid will evaporate some during the summer. A lid or cover on the jar will prevent some evaporation.

The eggs should be clean and there should be no cracked ones among them. It is better not to wash the dirty eggs, as washed eggs will not keep as well as unwashed eggs. J. D.

Pens or Free Range?

Should Hens Be Kept in House?

By PAUL E. TRIEM.

George Thompson of the White River valley of Washington is perfectly willing to admit that there are hens which will lay more eggs than his 900 White Leghorns. As a matter of fact, his flock averaged more eggs per hen the first year he was in the business than they will this year, but——

"They couldn't stand the strain," he explains. "I fed them high and crowded them in every possible way, and, while I got the eggs, I found there was such a thing as overdoing the intensive system. My hens will average about 125 eggs each per year; at 2 cents for each egg, as an average price, that is $2.50 per head, gross. It costs us about $1.30 a head to feed our chickens by the year, which leaves a net profit of $1.20 per head. As a matter of fact, they did a little better than that last year, averaging $1.25 net profit."

The disconcerting thing about Mr. Thompson's system of poultry raising is that he keeps books on himself and the hens. He doesn't have to guess, and this absence of guesswork is apt to chill the enthusiasm of the amateur suffering from a bad attack of chicken fever.

"I believe there is more real money in chickens than in any other crop around here," Mr. Thompson says. "But you've got to live with your flock a good deal of the time. For instance, I feed my laying hens five, or even six, times a day, milk, sprouted oats, grain, dry mash, lawn clippings; and the result is that they never suffer from their lack of free range—for my layers never leave the two-story house in which they live."

This two-story house is another illustration of the Thompson theory that you must cut all the notches if you are to get the money which is to be made with poultry. It is light and dry, with scratching shed below and living and laying quarters above; but it isn't a costly house. Mr. Thompson says it cost him "scarcely anything." That, of course, is in comparison with some of the tremendously expensive poultry plants which have been erected, many of them by city farmers who have figured out how to make a fortune in a few years in chickens.

Mr. Thompson has a small patch in which he grows wheat for the chickens to thresh themselves. He considers that another secret of keeping hens confined without impairing their vitality—first, cleanliness and variety of food and second, plenty of exercise. Wheat hay with the grain in it is even better than grain thrown into straw litter.

"Running an incubator is pretty much a profession in itself," the man of the place explains. "I tried it the first season, but my chicks cost me more than they do now. And you can buy as healthy stock as you can raise. One of my neighbors bought 4000 day-old chicks in California, and says that out of the whole bunch only 40 were killed in shipment. That shows you whether or not they are healthy."

Most of the Thompson eggs are sold direct to the consumer, usually a restaurant or hotel. And they are sold on honor.

"One of the biggest black eyes to the poultry business has been the lack of ordinary honesty and common sense of some of the men in it," Mr. Thompson says. "When hens are turned loose to wander all over the farm, it isn't going to be long before nests of clean, fresh-looking eggs will be found in the fence corners or in the grain fields. It's a big temptation to sell them—they look fresh. But the man who yields to this sort of temptation isn't a good business man. I can't afford to take any chances with my eggs. Every one I sell is strictly fresh, beyond the possibility of a doubt."

On a farm of 55 acres of course there is more than one string to the marketing bow. On the Thompson place there is accomodation for 35 cows. Also there is a loganberry patch of two and a half acres. But, above all the rest, the boss values his flock of Leghorns.

"People say chicken raising is too confining," he comments. "Well, let me tell you it isn't half as bad as some other things. In the winter, for instance, I don't have to get up till 7 o'clock. It isn't light before that, and I couldn't feed the chickens sooner, no matter how much I wanted to. In the summer I can throw down their first feed the night before, if I don't want to get up at daylight. Some of my neighbors who have gone pretty extensively into the dairy business, on the other hand, have to be out of bed by 2 or 3 o'clock the year around in order to catch the city markets. Chickens are good enough for me."

Owing to the question raised by Mr. Thompson of denying poultry free range, this article was submitted to James Dryden, editorial contributor of the poultry department of the Farmer. He replied as follows:

In describing the methods followed by George Thompson in keeping poultry, Paul E. Triem raises a question that commercial poultry keepers should carefully consider. I refer to the method of keeping the fowls shut in the house all the year. So far as they are given, Mr. Thompson's reasons for confining the hens are that he doesn't lose any eggs and that they are always gathered when they are fresh. It is no doubt true that hens having free range often steal their nests and the eggs are either lost or are found after they have lost a good deal of their freshness. But this need not necessarily be the case. With good nesting arrangements, the hens will lay in the houses in preference to finding a nest in the field or fence corner. When once they get started to lay in the houses they will always come back to the same nest to lay.

Supposing some eggs are lost under the free range system, it may even be that the poultry man will get more eggs than he would if his flock was confined in the house all the time. At any rate, the question of whether the eggs are lost or not lost does not settle the point of free range versus confinement.

I believe poultrymen make a mistake in keeping their fowls confined in the house all the time, if they wish to make a permanent success of their business.

There is no question but they will lay well under close confinement if they have the right care and have been bred right. I have had a pen of fowls average over 200 eggs in a year where they were never out of the house in the year, but that does not prove that that is the best system.

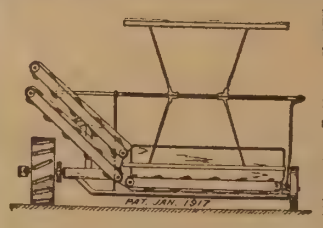
A good-laying hen will stand a lot of abuse and lay well, but if it is continued unto the second, third and fourth generations it is sure to show a bad effect.

The main points, however, in favor of close confinement, which Mr. Thompson does not mention but which he no doubt fully appreciates, is that it saves somewhat in labor and some in investment, because little land is needed. Labor-saving devices, however, do not always save profits, and the profits are not always measured by the amount invested.

I know of a number of poultrymen who are doing well with flocks kept shut up all the time, but they have not been very long at it. Hens that are shut up all the time are not good breeders. If the same hens are used to reproduce the flock, it will only be a few years until the health and vigor of the stock has reached such a point that the production is too low to make a satisfactory profit. The best plan in the end is to give the hens free range on clean ground.

Case of Wry Neck.

To the Editor: I lose a hen or two about once in three or four months. Usually I find them sick or dead in the morning on the floor in the roost room. Symptoms are similar to meningitis—legs sprawled and not controlled, head bent back, no visible marks or signs of ailment. The hens are Barred Rocks and are young, healthy, well fed and good layers. They have free range and an open house, open to weasels, but I find no marks. There are no previous signs of sickness, and death is sure and soon. Where they live a few days they may appear dull and sleepy. They usually seem in much pain. S. G.



The above describes a case of wry neck. It is commonly associated with an over-fat condition. Heavy feeding, especially of stimulating foods, and little exercise, are usually the cause. Lighter feeding of grain for a while, fed in a deep litter of straw, more green food, milk or buttermilk, all they will drink, or meat foods in case milk is not available, is advisable. A dose of epsom salts, 25 grains per fowl, dissolved and mixed in a mash food, should be given.

Shipping Stock to Prineville.

Joe Brown, who resides on a rural route from Corvallis, Ore., and his brother, Lee Brown, of soap Creek, have shipped carloads of stock, comprising over 200 head of fine animals, to Prineville, eastern Oregon, where the animals will be turned on the ranges in that vicinity to fatten.

GOOD NEWS FOR RENTERS AND FARM OWNERS' SONS

You can get a rich 160-acre farm free this spring, excellent for growing grain and mixed farming. Write for copy of "The Home Seekers' and Settlers' Guide." It gives full facts and tells what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings St., Vancouver, B. C., Canada.—Adv.

Lucore's Binder Canvas Protector

Stops heavy or tangled grain or forage crops catching on front corner of your canvas slats, which causes stopping, wearing and tearing of your binder canvas. Easily applied, costs little, and will more than double the life of your canvas. Ask your dealer if he does not keep them; count your slats, add 5c each, and send to me direct, and I will mail them to you, postage prepaid.

G. F. LUCORE, Patentee and Mfgr., Arriba, Colo.

These pads are protected in U. S., Canada, England and Australia.

This is the year for big poultry profits.

Feed That Brings Premium-Poultry

JUST take a look at the newspaper clippings shown in the corner of this ad. Will you be able to cash in on the high prices premium-poultry will bring this year? Right now you should be preparing your flock, so you will have fat, healthy broilers when the market is highest. For profit-insurance get

Albers "Progressive" Developing and Scratch Food

Its cost will come back to you in extra profit and increased production. Never before have you had such an opportunity to make your flock pay real dividends. Get a supply of Albers "Progressive" Developing and Scratch Food now, and cash in on the high prices.

A garden in the back yard and a flag in front are the twin symbols of patriotism now. If you can not have both, better have the garden.

In the future we will have a "government of the people, for the people and by the people"; or will it be a government of the people for the kaiser. The outcome of the war will settle that question.

In Virginia in the counties of Prince Edwards, Halifax, Mecklinburg, Appomattox, Lunanburg, Nottowa, Cumberland and Buckingham thousands of acres on which they formerly grew tobacco, are being planted to beans, peas and alfalfa. Many farms are also being converted into stock rnches for the production of meats. A double motive seems to be the inspiration for this movement. The first is, that it is bad economy and unpatriotic to devote so much land and labor to the production of a commodity that is a luxury pure and simple, and one that tends to devitalize the nation when in this hour of peril we need food and must have it, or Germany will be our conqueror. The second motive is that they have grown tobacco on the land until they have devitalized the soil. If they would save their farms from depletion and themselves from poverty they must grow leguminous crops.

G. L.

Freezing of Fruit Buds

A bulletin issued by the Utah experiment station bearing the names of E. L. West and N. E. Edelston, contains such valuable information on the subject of the freezing of fruit buds that I think better to call attention to it now, although the danger of frost for this season is past. The conclusions are the results of most careful experiments in the laboratory as well as observations in the field. G. L.

To kill plant tissue by freezing, either the cell wall must be ruptured when the ice forms, or else after the ice forms it must thaw rapidly. An occasional case of ice formation and slow thawing without death resulting to the tissue has been observed.

Buds will stand a lower temperature by several degrees than the freezing point of the expressed sap, and the sap freezes three or four degrees below the freezing point of pure water.

The literature on the subject might lead one to infer that the buds have a definite freezing point, and that when the orchard reaches this temperature practically all of the buds are frozen and the crop for that year is to be a failure. This is not the case.

The further developed the buds are the more sensitive they are to frost.

There is a range of at least five degrees Fahrenheit between the temperature at which only about five percent of the buds are damaged and the temperature that will kill all of them.

In the case of Double Nattie cherries when the fruit is setting, 2 degrees Fahrenheit caused no damage, and 24 degrees killed practically all of them.

With Jonathan apple blossoms in full bloom, 28.5 degrees Fahrenheit caused no damage, and 24 degrees killed about half of them.

The temperatures which will kill about 50 per cent of the buds of the Elberta peach are as follows: When they are slightly swollen, 14 degrees; when well swollen, 18 degrees; when they are showing pink, 24 degrees; when in full bloom, 25 degrees, and when the fruit is setting, 28 degrees Fahrenheit.

Where a Tree Feeds

A tree sends its roots at least as far as the branches above the ground. It is the newly developed roots that take up the nourishment, and these are at the ends of the new roots just as the leaves are on the new branches. This means that water or manure to do the most good must be spread over a surface reaching out at least as far from the tree as the overhang of the branches. Where the rainfall is light grass and weeds should be kept from growing over the roots of the tree, as these will get the moisture first when it rains and there may not be enough to allow any to pass to the tree roots. There are few places so dry that a tree will not make a good growth if it gets all the moisture that falls on the ground occupied with its roots, says the extension department of the North Dakota Agricultural college.

Fruit Outlook Good.

The outlook for a bumber prune crop during the 1917 season in excellent, according to Fred Strang, Douglas county (Ore.) fruit inspector, who has returned from visiting at Looking Glass, Winston and other parts of the country. Mr. Strang says apples are also in the best of condition and the pear yield will be the heaviest in the history of the county. Strawberries are a month late, and it is doubtful whether they will ripen in time for the festival, which will be held in May.

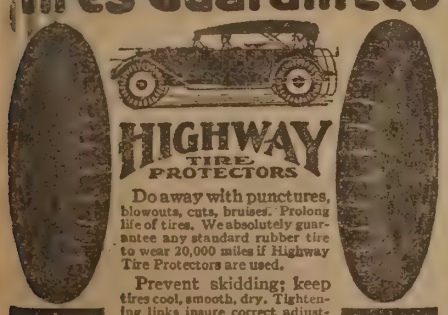
THE FARM GARDEN

ARTICLE 14.

Growing Celery

Celery is another of the vegetables which few garderers try except those growing for the market. It is difficult to grow celery satisfactorily, but for persons who like it and who enjoy solving a garden problem it is a highly desirable addition to the garden.

Celery must be started in a hot bed or some other sheltered soil, and must later be transplanted to the open. Plants may be purchased from dealers or greenhouses, and in most cases the farm gardener probably would find this the most satisfactory method of securing the plants. Owing to the lateness of the spring in most sections of the northwest, it is still time enough to set out the first crop, though in some localities it is too late.



Celery must have good soil and generous moisture. Low lands are best, but they must be drained if strongly subirrigated.

The plants should be set out in rows about three feet apart if boards are to be used for blanching, or four to six feet apart if the blanching is to be done by piling soil about them. The plants should be set about six inches apart in the rows. Early celery in general should be blanched by the use of boards, though with the later crop it is frequently found more satisfactory to blanch with dirt. The blanching process consists of shutting off the light from the stems, but in so doing there should be care taken that the air is not too rigidly shut away. The soil about the plants at all times should be extremely well cultivated so as to permit aeration about the roots and the blanching stems. Some two weeks are necessary to secure a good blanch.

The crop must be cut below the surface of the ground when harvested. If the plants are to be stored in the cellar for winter use they should be taken root and all and set in moist earth or sand. They may also be packed in trenches, sided by boards and covered with straw.

Pershing Is in Europe

Staff Will Get Ready for Warfare

The first United States soldiers have landed on European soil preparatory to placing a portion of the army of this country into the actual warfare with England, France and their allies against Germany and her allies. So well was the plan of the army kept secret that the American people knew nothing of the movement of the proposed Pershing expedition until the news was cabled that General Pershing and his staff of 56 men, with a small accompaniment of private soldiers, had landed in England. When it is intended to send an army to follow Pershing is being kept as strictly secret as a necessary precaution against information reaching the enemy. General Pershing will occupy the meantime familiarizing himself with the problem that confronts the United States army in Europe, and with learning the plans of the allies into which the army of this country will attempt to fit itself, as a cog in a wheel.

Naval Secrets Escape.

Secretary Josephus Daniels of the U. S. navy has isued a formal statement that naval secrets of utmost importance have leaked into the hands of German officials, and has called upon all persons in this country who know of naval or military plans to use the utmost effort to conceal them. Spy control and leakage of official information that would be valuable to the enemy constitutes one of the gravest menaces in this critical time.

Registration Is Effected.

As a result of registration day, June 5, approximately 10,000,000 men aged from 21 to 30 years, inclusive, have been formally listed for future war developments under the selective draft law passed by congress a few weeks ago. In a general way the number of men eligible under the law for registration was overestimated, in some states as much as 25 per cent. This registration does not mean that all these men are to be mustered into the army. Those specially fit for service will be drawn as needed, possibly as high as one million men within the coming 12 months if the war continues. Those physically unfit for service, specially valuable to the government in their present occupations, or having dependents to support, will be given consideration for exemption under the present plans of the government. Registration day was passed with practically no disturbance of any kind in the nature of opposition to registration as had been feared. It is also believed that comparatively few eligible persons evaded registration, though means are now being put into effect to bring slackers to justice. Evasion penalities are severe.

State Grange Meets at Wenatchee

(Continued from page five.)

place on every street corner and in every hotel lobby in the convention city. Probably no more direct and reliable index of public opinion throughout the state could be obtained than a complete tabulation of these topics and opinions at one of the annual grange meetings. At the present session, the spirit of the times was reflected in the talk of the delegates. War and its logical effect on the production and marketing of food crops was probably foremost in interest.

Production of Foodstuffs.

A summary of statewide opinion, as expressed by these active farmers, would seem to indicate two things: First, that the production of foodstuffs has been greatly stimulated by the patriotic appeals made to the farmers; and, second, that a still greater increase could have been secured had the producer been certain that there would be no glutting of the markets. Under the first of these heads, the actual increase, it was stated by farmers from practically every part of the state that while the spring is backward, with fair weather conditions from now on, the state of Washington will be able to do its share in feeding the world. Hay is said to be better than average, the fruit prospects are excellent, there has been an effort made to counteract the winter injury to wheat by spring seeding, while the production of such table crops as potatoes and beans has been greatly augmented by the utilization of many small tracts, unused in former years. But the marketing problem is still the weak spot in our national armor: the effort to increase production without insuring efficient selling was declared by one delegate to be like trying to shingle the house before the foundation was built. Another said: "I planted two acres of potatoes. I could as easily have put in 20, and as a matter of fact my part of the state, the Palouse country, could feed the nation with potatoes if we knew we could get an average price of a cent a pound for them!"

Farm Topics in Evidence.

Among topics of strictly agricultural interest which were much in evidence in the crowd were the relative advantages of horses and tractors; dual purpose cattle versus the beef or dairy types; peas for summerfallow land; alfalfa in orchards; silos and ensilage, and the late spring. A straw vote would probably show that the farmers of the state are watching the tractor with keen interest, and are willing to be "shown." One man commented: "I have to feed my horses at least six months of the year when I can't use them. A tractor wouldn't eat when it wasn't working—but will it do the business? Will it plow side hill land, for instance? I want to know some of these things before I buy."

There is evidently a considerable interest in dual purpose cattle, but the difficulty of securing breeding stock at possible prices has confined this interest largely to discussion, heretofore.

The grange adjourned on the evening of June 8, to meet next year at Walla Walla.

Small Orchard, Garden Truck and Chickens

F. W. Thurber of Buckeye, Spokane county, who attended the grange session, prefers to carry his eggs in several baskets.

"We have a small orchard," explains Mr. Thurber, "but that's only part of our farm. In addition, we raise a good deal of truck, to be sold in the city, and we have a nice bunch of chickens. No, I don't think there's much money in poultry just now, but on a diversified place like ours, the hens can pick up a considerable part of their living. We can certainly make a profit on them if any one can."

In Many Lines Smaller Producer Crowded Out

E. Bowles of Prosser, Washington, does not find it necessary to sell his chickens, even if feed prices are high.

"And when you get right down to the logic of the situation," Mr. Bowles adds, "I believe you will find that it is not so much the high price of feed which is forcing some poultrymen out, as it is the tendency for large business to replace smaller ones, in every line. A time has already come when it is hard to make a profit on a few hundred hens. With three or four thousand, a man can work to good advantage. He can buy and sell better, and can organize his work more efficiently. The small producer has been crowded out in many lines, and I do not see how he can continue to handle poultry at a profit. The margin of profit, at best, is too narrow."

Orhcard Good Investment If One Stays With It

A. E. Iliff of Omak admits that financing a growing orchard isn't the easiest thing in the world, but he believes in the long run it is a mighty safe investment.

"I've knocked around here in this western country, following my trade of carpentering, till I've had enough of it," Mr. Iliff comments. "Now I'm an orchardist, and you couldn't drag me back to city life with a team of horses. It isn't easy—my wife and I have both worked hard and long since we became farmers—but there's a freedom about it that you can't get in town. No, we haven't gotten rich—not yet; but I'm satisfied the orchard is a good investment, if we stay with it. As to whether I'm apt to stay or not, I'll just tell you that I was born mighty close to the Mason and Dixon line. We are all stayers where I came from."

High Water Makes Him Think of Home Lands

R. H. Mitchell of Kalama looked with considerable pessimism on the warm weather which he found waiting him at Wenatchee when he attended the meeting of the grange.

"I'm just wondering what this will do to us, down the river," he explained. "The water was within a foot or so of last year's high water mark when I left home, and if this warm spell is general in the foothills of the Columbia and Snake rivers, we're apt to have a serious flood. Much of our land is dyked, but I'm afraid a sudden rise in the river would sweep away all barriers. The resulting damage would amount to thousands of dollars."

Increase of Alfalfa Planted in Orchards

T. N. Buchanan of Okanogan reports an increase of alfalfa planted orchards in his part of the state. Many of the farmers are sowing every other row, while some are planting the entire orchard. There is a double benefit from this, as the hay secured is worth considerable money in these days of high priced feed, while the humus and nitrogen added to the soil by the alfalfa roots are a decided advantage. Mr. Buchanan says that during his recent visit to Wenatchee, at the time of the meeting of the state grange, he noticed that many of the Wenatchee orchardists were following this same system.

Farm Bank Is Lending Money

Many Points of Law Must Be Complied With.

Important questions, though in many cases considered insignificant by persons not familiar with the workings of the farm loan system, are constantly coming up in the negotiation and making of loans. Here are certain matters to which President O'Shea calls attention:

When application for a loan is made, it must show the exact legal description of the land on which the loan is sought. It is not sufficient to describe it as "in the vicinity of" such-and-such a town, as one applicant described his place.

Each association must have one committee of appraisers among its members, but must have only one such committee. Some associations covering considerable territory have appointed more than one such committee. the bank board having to hold appraisals made by them irregular. Each committee is composed of three regular members, with one additional, alternate member, who takes the place of any member of the committee when appraisal of such member's own land is under consideration. The members of these committees must themselves be borrowers.

An administrator of an estate can not, under the provisions of the law, be a member of an association to make loans for the estate. He can, of course, be a member to secure loans on land belonging to himself personally, but not as part of the estate. In like manner, a guardian of a minor can not be a member of an association to borrow money for such minor, though he may be a member to borrow for himself on his own land.

Saving Powder in Land Clearing.

By J. R. MATTERN.

Under the pressure of high profits to be made and of national demand for more food crops the need for more powder than ever before in land clearing operations comes just at a time when powder prices are high. In spite of this costs of clearing should be kept down, and they can be reduced if proper economy in the use of explosives is practiced. It is the same with explosives as with many other things—they have been used wastefully. Powder this year must replace much costly labor. Electric firing of several charges together is one of the greatest means of saving powder that so far has been developed. By this system of firing big stumps can be taken out completely with three-fourths the total amount of powder usually required for single charges and fuse firing. In addition the holes left, when loading is done skilfully, are only half as big as when single charges are used to accomplish equal results.

The handbook of the powdermaker gives the complete details about this method of blasting, and describes many other short cuts of late development that every one who removes stumps or makes ditches this year should know. The man who is fully informed about new methods, late improved explosives and other factors will be able to do economical work.

Caring for Pigs

Sow a Catch Crop of Barley

By WILLIAM HISLOP.

Plan to sow a catch crop of barley for the little pigs as soon as the land is workable. Such forage will shoot the pigs along.

If possible, provide a ration of skimmed milk and shorts for the young pigs while they are nursing. Three pounds of skimmed milk to one pound of shorts is the proper proportion to use. Feed this in a creep to which young pigs have access all the time. Feed their mothers in a separate pen. A good ration for the latter would be:

Sixty pounds of barley, 30 pounds of shorts and 10 pounds of tankage.

Do not forget to provide crude oil to kill the lice that may infest the hogs. Give your breeding stock a worm medicine to drive out intestinal parasites. The following is the proper dose for a 100-pound pig:

Santonin	5 grains
Calomel	2 grains
Areca nut	2 drams
Sodium bicarbonate	1 dram

The following formula is to prevent worms:

Common salt	3 pounds
Glauber's salts	3 pounds
Salsoda	3 pounds
Copperas	3 pounds
Sulphur	1 pound

This mixture should be placed in boxes 12x12x4 inches and kept under cover before the pigs all the time.

Might it not be advisable to use a self-feeder for hogs weighing 100 pounds that are being fattened for the market? The self-choice or "cafeteria" plan of feeding hogs while they are fattening on clover, alfalfa or other pasture, has been demonstrated to be a most efficient way of producing commercial pork. No farmer can at the present time afford to feed hogs in dry lot on a straight grain ration of barley alone or wheat alone or corn alone. Supplemental feeds high in protein, such as tankage, skimmed milk or buttermilk, are essential to profitable production today. Likewise, green succulent forages cheapen production costs.

Tankage to the amount of 10 per cent of the weight of the ration should be used. Skimmed milk and buttermilk each having a high feeding value, should be fed in the proportion of two pounds of the milk to one pound of grain. In fattening hogs on alfalfa or clover pasturage tankage should be used to the extent of 5 per cent of the weight of the grain ration.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XIV.

Fresh fruit on the table was more than a luxury—it was a sensation!

Twenty-five years ago the pioneer settlers in the Big Bend region of eastern Washington grew practically no fruit on their farms. Fresh fruit on the table was more than a luxury—it was a sensation! I remember well the first fresh strawberries I ever saw. There was a French "squaw man" living on Wilson creek about 16 miles east of our claim, who raised strawberries. He and his halfbreed children peddled the berries through the sparsely settled country. Customers were five to fifteen miles apart, yet Old Man Whitlow sold his berry crop in that way.

One day Mr. Whitlow stopped at our place with some strawberries. Mother had no money, but traded him three or four dozen eggs. I was out playing in the wild grass when the transaction was made, so she planned a surprise for me. When I came in she told me she had "bought something" from Old Man Whitlow. Secretly, pretending to be wholly uninterested, I began to nose about for the "something."

Down in the cellar an alien but delicious odor assailed my nostrils, and I followed the scent. It led me to a big trunk in which I knew mother occasionally stored such delicacies as cookies and doughnuts.

In great excitement, I lifted the lid slightly and peered inside. The alien but fascinating odor was fairly intoxicating to me. I saw concealed in the trunk mother's big stone crock partly filled with fruit of a kind I had never seen before, but which, by some animal instinct, perhaps, I recognized as strawberries.

I looked at the berries for a long time, noticing that they were red, heart shaped, and with tiny yellow "stickers" in their sides. I supposed that the stickers were straws, accounting for the name "strawberries." It did not occur to me that I might taste one of the berries. I merely looked at them and smelled them; and when I had looked and smelled my fill, reverently closed the trunk and stole away. I felt I had invaded sacred precincts and felt somewhat ashamed.

Mother surprised me with a strawberry shortcake. I dutifully pretended to be surprised, and consumed as much of the cake and berries as was put before me.

The larger part of the fruit we had was dried. There were dried apples, dried prunes, dried apricots and dried peaches. That was all, I think. My parents settled in the Big Bend on the claim five miles south of Hartline, when I was eight, and, for several years after that, drove each summer in a "covered wagon" to the Walla Walla valley for a load of dried and canned fruit. During the summer mother would dry fruit "on the shares" and father worked in the harvest fields with his team.

My part of the summer's work was to "cut fruit." The drying was done in the sun. Boards were laid out in the form of wide, long tables, and over the bare boards were spread the cut halves of peaches, prunes, plums, apricots, and the quarters or eighths of apples. The very large apples were cut in eighths. The apples were peeled for dying, and the peeling with a dull "caseknife" was a tiresome job. Really, it was a good trick to peel the apples and slice and core them so as to get out all the seeds and core and still waste none of the fruit. We got an "apple peeler" finally, and this, at my age of 10, seemed the most wonderful mechanical contrivance of the age.

I sat on the shady side of the smoke house and cut fruit day after day. The weather was hot and the air was full of bees, yellow jackets and hornets. Of bees I was unafraid. Yellow jackets were worse. They have a fiendish curiosity, and if one's shirt is unbuttoned or there is a hole in his pants, they are apt to crawl in just to see what is inside. Trouble begins as soon as they get in. Often I jumped from my box with a howl, feeling the sting of a yellow jacket that had gotten through a hole in my rather meager armor.

Also, as I cut peaches, prunes, apricots and plums, quite a pile of seeds would accumulate about me. The yellow jackets swarmed about the seed pile, and, incidentally, my bare legs. By and by I would be stung again; whereupon I would cease cutting fruit and slay all the "jackets" in sight. I learned the trick of setting open jugs partly filled with water near me. Out of curiosity the yellow jackets would crawl into the open jugs, fall in the water and drown.

Once a hornet attacked me without provocation. It stung me on top of the head, though not severely, my hair serving as a protection against the full thrust of the sting. I defended myself with a club as large as I could wield, with which I was lucky enough to bat the warlike bug to the earth. With furious blows delivered with all my 10-year-old might, I beat the hornet into the dust.

One summer father nearly died with typhoid fever. While he was sick one of our two horses died of pneumonia. Mother took care of father, dried and canned fruit, cooked for harvest hands and kept in good health and cheerful, in spite of toil and worry. When not cutting fruit I played up and down the creek with other children of my age. I remember how they looked at me in an awestricken way and remarked to each other in undertones that my father was liable not to "get well."

That summer we were staying at the Stanfield ranch on Dry creek in the Walla Walla valley. Uncle Bill Stanfield and his wife, Aunt Sally, were of the old-ime, pioneer stock. They crossed the plains in '49, Uncle Bill driving an ox team and Aunt Sally, then a girl, walking much of the way. They were full of the genuine, old-fashioned kindness and hospitality which is becoming rare, I think, with the passing of pioneers.

Such a family as we were with all our troubles must have been a real tax on the hospitality of Aunt Sally and Uncle Bill. But I know they never gave the matter a thought. They were principally concerned for the recovery of father and our sick horse, poor Old Rock.

During the days of his sickness the horse stood with drooping head on the manure pile behind the barn. Every morning I went out to look at him and on one of these occasions found him dead.

Father got well, though not in time to do any work during that harvest. From a friend he borrowed money to buy another horse, a tall, rangy fellow named Aleck. We loaded our wagon with dried and canned fruit, vegetables of the long-keeping kind such as potatoes, beets, turnips and carrots and started for the Big Bend early in the fall.

Uncle Bill Stanfield's good qualities were appreciated by others besides us, I know; and among his admirers was the Rev. Sam Driver, the traveling Methodist preacher of the Walla Walla valley in pioneer days. Uncle Bill could and did swear every hour of the day, artistically and musically. In the morning when he went out to milk the cows his swearing chimed in with the early crowing of roosters, the quacking of ducks and the demoniac shrieks of the guineas in a way that outclassed any "farm yard medley" ever produced.

But notwithstanding Uncle Bill's dreadful habit of swearing instantly, in anger or in mirth, Preacher Sam Driver, who in his ministerial perigrinations through the Walla Walla valley had plucked whole shoals of souls from the burning, always headed straight for Uncle Bill's place every time he came through the Dry Creek valley. He seemed utterly callous to Uncle Bill's swearing—knew it was a part of him, likely.

In the Stanfield home Preacher Sam always called morning prayer, and everybody kneeled, Uncle Sam with the rest, and as devout as any. I am sure that on many occasions he was swearing out in the barnyard 10 minutes after morning prayer; and one occasion when Uncle Bill and Preacher Sam left the house together Bill was swearing at the rheumatic twinges occasioned in his knees by the recent prayer before he and Preacher Sam had reached the gate.

Some one asked Sam Driver why he always stopped at Uncle Bill's place when Bill swore so dreadfully. Preacher Sam replied that he would sooner hear Bill Stanfield swear than some others pray—because Uncle Bill swore like he meant it.

At the age of 15 years the Bunchgrass boy is anxious to earn money. He says: "An opportunity came to me to get rich right away—so I thought." The next chapter tells of his experiences as a book agent and how he enabled the publishing company to start their fourth mile of copies of this wonderful history.

Mutual Fire Insurance

The organization and management of farmers' mutual fire insurance companies is discussed in detail in a new publication of the United States department of agriculture, bulletin No. 530. These companies, it is said, represent one of the most successful forms of rural cooperation in the United States. Nearly 2000 of them are in existence and the total amount of insurance they have outstanding exceeds five and one-fourth billion dollars. In some states of the middle west, fully three-quarters of all the insurable farm property is insured in companies managed by the farmers themselves, and organizations of this character exist in every state except in Florida, Mississippi, Louisiana, New Mexico, Arizona and Nevada. The increasing number and size of these companies make it important that they should be founded on sound principles. The bulletin already mentioned takes up the problems that are likely to arise and discusses them fully. In addition, suggestive articles of incorporation and bylaws are contained in the appendix, together with forms of application and policy blanks.

Imported Crop Pests.

More than one-half of our principal crop pests have been accidentally imported from other countries.

Ye Have Heard That It Was Said by Them of Old Time

THE EIGHTH COMMANDMENT. "Thou shalt not steal."—Exodus 20:15.

Amid the thunders of Sinai, Jehovah not only announced the duties of man to his Creator, but also toward his fellow men. He laid down rules for his observance of personal rights and also recognized in this commandment the rights of property.

In that ideal state to which certain visionary folks look forward to, when there will be no private ownership of anything, there can be no theft. How can one steal what belongs to nobody?

Implanted deep in the human breast is the desire to own things, to have them and use them and enjoy them. This is recognized in this mandate, and the observance of property rights is carefully and strictly enjoined.

The statement that the world owes anybody a living finds no justification here or elsewhere in the Bible. The title to property is defended and declared.

If every potential thief thought before he stole that theft is taking what does not belong to him, and that there is no justification for theft, we think the thieves would be fewer. Scrupulous honesty is not so common as it ought to be. Keeping within the law is not enough. H. H. B.

Does Farmer Earn What He Gets?

By GRANVILLE LOWTHER

If any one thinks the farmer does not earn what he gets, I want to outline the following program, and see how many merchants, railroad employes, traveling salesmen, manufacturers, bankers or members of the labor unions are willing to follow out his plan. I will give a concrete case: Mr. Hall is 65 years of age.

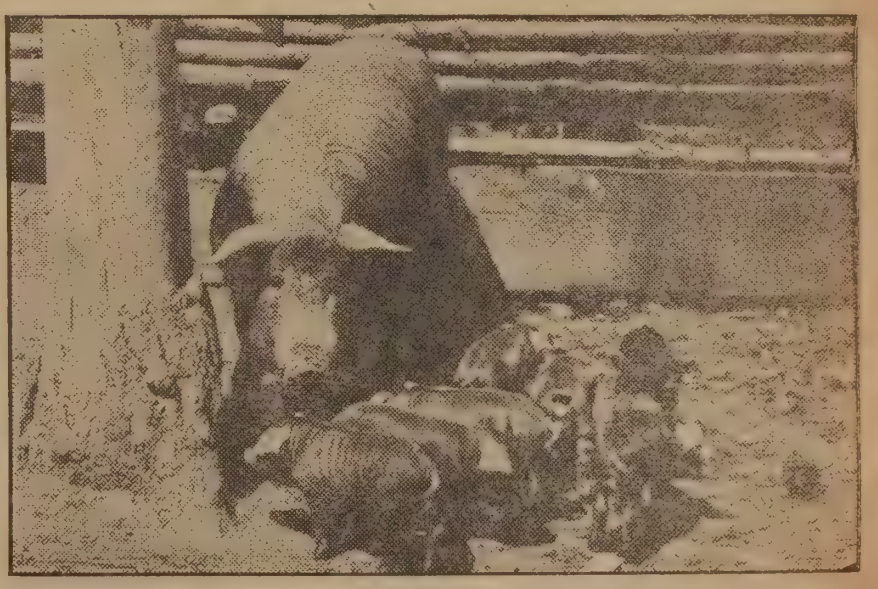
He rises at 4:30 o'clock in the morning.

He irrigates until 6.

Eats his breakfast.

Hitches up his team, drives to another place, is ready to begin work with the men employed, and works until noon.

Eats his dinner.



Works until 6 o'clock.

Drives home, eats his supper, and irrigates until dark, which is somewhere between 8 and 9 o'clock.

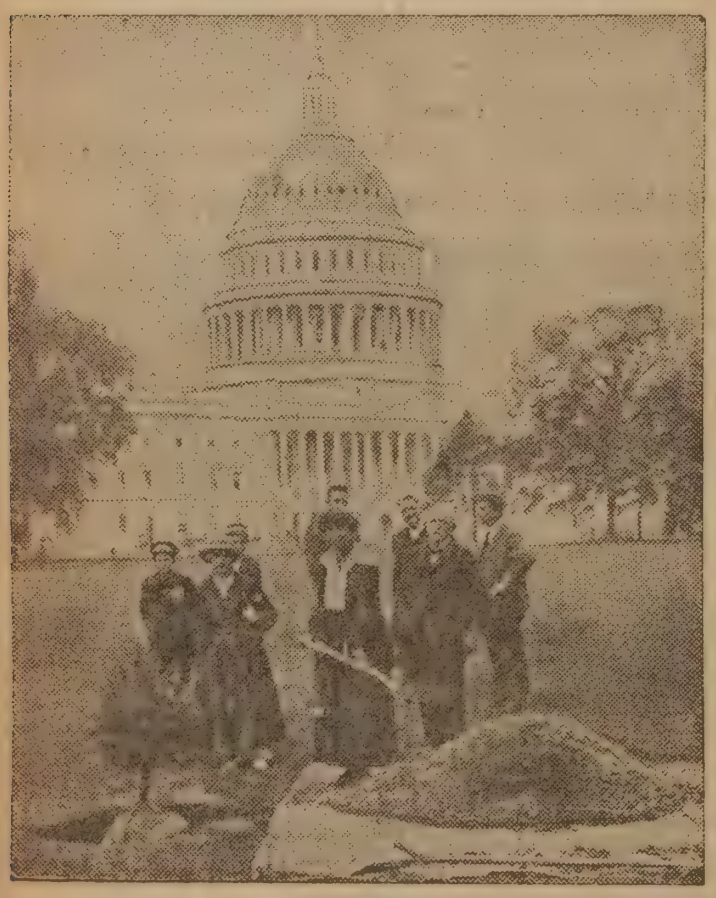
In other words, Mr. Hall works 14 hours every day, and the work of irrigation goes on holidays and Sundays. In fact, he has no holidays during the fruit and farming season.

Now, Mr. Hall is not an exception. There are thousands of farmers working in a similar manner. Who should have the bulk of the profits, the producers or the speculators?

Hogs Offer Quickest Meat Supply

In this time when there is great demand for meat animals, it is vital that effort be placed on production that will result in the greatest amount of meat in the shortest possible time. The hog undoubtedly is the animal with these possibilities. Aside from the chicken and the sheep, he is about the only animay that may be ready for market within less than a year. From a small beginning a considerable number of animals may be raised and placed on the market at 6 to 8 or 10 months, if properly cared for. Five reasonably good brood sows should produce with just reasonable care and success no fewer than 25 pigs and rear them to maturity. These pigs, if made to weigh 200 pounds at the age of 8 to 10 months, which can be done with reasonable care, means 5000 pounds of marketable product. The farmer can not afford to overlook the possibility of hog production as a "rush" war measure, and hence a "rush" profit measure.

All the World's a Stage, and All the Men and Women Merely Players



To Instruct American Aviators

Copyrighted by International Film Service.

Captain E. A. Kelly of the British Royal Flying corps, was in New York recently, making arrangements for a flight from that city to Wheeling, W. Va. Captain Kelly is on six months' furlough recovering from wounds of the feet, inflicted when he was brought down by a German aeroplane somewhere in France. On arrival at Wheeling Captain Kelly will act as aviation instructor at a school for American army aviators.

Miss Rankin in Outdoor Role

Copyrighted by International Film Service.

Miss Jeanette Rankin of Montana, the only congresswoman, has added agriculture or horticulture to her list of accomplishments. With the aid of several moving picture cameras, a handful of spectators and a pair of diminutive trees, Miss Rankin added to the landscape of the capitol grounds. She planted a fir tree and a California redwood. The picture shows her throwing back the earth after planting one of the trees.

Covering Attack With Barrage Fire

Copyrighted by International Film Service.

The stirring events connected with the allied advances on the western front have taken public attention from the east, where Serbs and Bulgars are fighting daily. This remarkable photograph shows Bulgarians seeking to counter attack and being prevented from doing so by the Serbian barrage fire. The shells are seen bursting immediately before them.

Searching Ruins for Cyclone Dead

Copyrighted by International Film Service.

More than 200 persons were killed and millions of dollars' worth of damage done by the cyclones that swept eight middle western states. This photograph shows relief workers searching amid the ruins for the dead in Twelfth street, Mattoon, Ill., where 90 blocks were razed.

The U-Bubble Busts.

—Wichita Eagle.

Premier of Hungary.

According to dispatches from Budapest, Count Jules Andrassy has been named premier of Hungary by Emperor Charles of Austria-Hungary. Count Andrassy is a former premier and a man of considerable force in Hungarian politics.

A TRUE GHOST STORY

By E. A. BRYAN

It is 40 years since she told me the story, and my pulses were then young enough to be responsive to the movements of the tale. My aunt was then 80, and the incident belonged to her young womanhood—so it is nearly a century since the event occurred.

Aunt was a good Christian woman, and Christians were not supposed to believe in ghosts, at least not to fear them. She had read the entire Bible—the books of Chronicles and all—one or more times every year since she was married the first time, and nothing in it had taught her to believe that departed spirits would return until that great day when all should stand before the white throne to answer for the deeds done in the body. Nevertheless, she admitted that things had occurred many times which she could not explain. She had trained herself, therefore, to shut her eyes to appearances and trust to "the eye of faith" when things hard to understand disturbed the tenets of her religion.

The night on which she told me the story of little Mary Miller was one long to be remembered. The old weather-boarded log house in which my aunt had lived for two generations stood in the middle of the farm, away back from the public road. Time had filled it with chinks and crannies, through every one of which the wind that night shrieked and sighed and mourned with such wierd notes that, with less provocation, one might well fancy that he was beset by millions of squeaking and gibbering ghosts, hurtling through the air, bent on such errands as ghosts alone are supposed to undertake. Half a mile away, in plain sight, stood the ancient brick church, and beside it the old graveyard, crowded with old-fashioned flat tombstones and overgrown with bushes and brambles.

In the old sitting room, where we sat, the fire of hickory embers burned low and blue in front of the huge, charred back log. There was not enough light, except for an intermittent flame, to lighten up the heavy blackened beams of the ceiling or reveal the pattern of the patchwork quilt on the old fourposter in the corner.

Age had not dimmed the fire of my aunt's eager black eyes, especially when she was deeply in earnest, and at such times the tremulo in her voice made an appeal which betokened not weakness, but deep emotion.

She sat on one side of the wide-spreading fireplace, with hands folded over the top of her hickory cane, her piercing eyes gazing into the bed of coals. I sat on the other side, wooden poker in hand, with which to stir the dying embers, as occasion required, or to spot a chance spark which might fly out upon the rag carpet.

"It was a strange experience," began my aunt, "and taught me how easily our mortal eyes are deceived. I did not get over the effects of it for weeks, and in fact," said she, with a sigh, "I am not sure that my baby that was born some months later did not owe her weakened constitution and her early death to that night's experience.

"We were living in this house then, and it was through that door behind you that the strange apparition first appeared." I cast a hasty glance over my shoulder into the darkness in the direction I knew the door to be, but only a sudden swelling of the deep undertone of the sobbing and sighing wind answered to my fearsome glance.

"It was in May," continued my aunt, "and my baby was born the following August. The doors and windows were all open to admit the coolness of the night after a hot day. Sarah, the daughter of a neighbor, who was to be with me until after the baby should come, was ironing in the kitchen while I was dampening the clothes.

"We had just been talking of little Mary Miller, who had been buried that afternoon in our graveyard by the church, whose sudden and somewhat mysterious death had shocked the whole neighborhood and was weighing down heavily on our minds and hearts.

"There were two Miller families in the community. One was a blacksmith, whose shop stood at the crossroads. He was a good man, a member of our church, always kind to his children and a good provider for his family. His brother, the shoemaker, lived in the outskirts of the village. He was inoffensive enough when he was sober, but a regular fiend when he was under the influence of liquor, and that was a good deal of the time. He had a large family, mostly girls, and was so cruel that the older ones were glad to leave home as soon as they were old enough to work. More than once he had broken up the furniture and smashed the dishes and driven the family out of the house. His wife, a quiet, patient creature, foolishly enough, tried to hide his brutality or excuse his failure to provide for the family.

"Mary, the daughter who had just been buried, was a slip of a girl, about 12 years old, tall for her age, black-eyed and never looked like she had enough to eat, which I suppose she hadn't, poor thing. She and her cousin Mary, the blacksmith's daughter, were about the same age, were together in school and looked very much alike—they took after the Millers.

"The shoemaker had been on one of his big sprees, and, from what the neighbors had said, had been worse than usual. Whether the poor wife was beaten or not nobody ever knew, or whether he had struck the child a blow with a shoemaker's hammer or a chair will never be known, but it was certain that he had abused the family terribly, and then had staggered off to the saloon for more drink and until he was dead drunk, from which he did not come home until the next night after it was all over.

"When the neighbors learned next day that Mary was sick her mother said that she couldn't make out what was the matter with her. She had complained of a terrible headache the night before and had a raging fever and was out of her head part of the time. There was no doctor in the community, and poor people in those days didn't usually send for the doctor anyway. The mother said she thought Mary would be better after another night's sleep. But about 9 o'clock in the evening there was a turn for the worse, and spasms were threatened, and one of the children ran for the neighbors. The convulsions continued and before 10 o'clock the child was dead.

"Our Sarah helped make the shroud the next morning. In those days they were always buried in shrouds, which were a sort of nightgown, only opened down the back. The carpenter made the coffin, and, as the weather was hot, they had the funeral at 4 o'clock that afternoon. Nobody thought of an inquest. People didn't like to say it out loud, but the question in the minds of many was "Was it murder or was the death due to natural causes?' Some of the men at the funeral glared at poor old Miller as though they would like to eat him. There were just a few of the neighbors at the funeral.

"No wonder our Sarah was nervous after working with the should and talking over the sudden death, and then going to the funeral. We didn't usually sit up so late, but the day had been so hot and the night was so cool, and we knew we couldn't sleep anyway for thinking and wondering about it, and we were behind with our work anyway.

"We didn't notice how time was passing until Sarah, looking up to the clock exclaimed 'La, me, it's midnight.' Just then a slight noise made me peer into the sitting room, and there in the doorway stood a tall, slim, blackeyed girl in a white shroud. She was in her bare feet. Her face was as white as the shroud she wore. Her piercing black eyes were wide open and stared straight before her. I gurgled and Sarah looked and screamed. The child moved slowly toward us, and we retreated behind the table, and as she came on we continued to retreat through the bedroom door and climbed onto the bed. She followed, her big black eyes seeming to look straight through us. We stood there speechless and trembling as the girl continued to move toward us. My first thought was, 'She has come to tell us the cause of her death.' Cold and trembling we waited for her to speak, but she said nothing. I struggled to speak, but my tongue stuck in my throat and my hair seemed to stand on end.

"Sarah was the first to speak. 'Why,' said she, 'as I live, it's little Mary Miller!'

"'Yes,' admitted I dazedly, 'it must be little Mary Miller. She has come to tell us. I never would have believed it.'

"'No,' exclaimed Sarah, 'I mean it's the blacksmith's Mary. You know they look so much alike. You know the blacksmith's Mary is a som—what do you call it? She walks in her sleep.'

"'Oh, a somnambulist,' you mean.'

"We both climbed off the bed, more dead than alive. We spoke to Mary and shook her but could not wake her. Each one took an arm and we led her down to the crossroads to her father's house. As soon as we entered the door she darted to her bed, still asleep, eyes wide open.

"I think the shock was too much for me, but it proved to me that there are no real ghosts," said my aunt, as she arose and gazed at the old clock above the mantel. "Why," exclaimed she, "it's just 12 o'clock again."

Quality of Production

By WILLIAM HISLOP.

Avoid keeping your breeding stock in diary barns because such places harbor the germs of tuberculosis and abortion. More stock has been killed by being housed in poorly ventilated, high-priced barns than ever was killed in well ventilated, but cheaply constructed buildings.

In war time, when every ounce of national strength is needed, the producers of the nation's meat should supersede at once all methods of waste by methods of conservation.

They should emphasize quality of production as well as quantity, and put quality first every time.

It would be the height of folly to save for breeding purposes all the females produced in the herds. Select only the very best females—the ones that promise well as efficient producers.

Mediocrity should be avoided in selecting breeding stock. Mate only the best. Raise your standards of production. If you do the future will reward you, for it is very bright from the stockman's standpoint.

Sufficient Cause.

"What started the fight?"

"Well, you see, Jones handed him an item stating that he was engaged in raising chicks, and it came out in print that he was engaged in raising checks."

REAL HOMES at Milan Farms

on Great Northern Railroad, only 25 miles from Spokane, the metropolis of the Inland Empire and live stock, fruitgrowing and grain center of the Pacific Northwest.

Especially adapted to dairying, diversified farming, stock and poultry raising. Free rural delivery daily, excellent schools, splendid roads, long distance telephones and near fine lakes and streams. Soil rich, with ample moisture.

Every acre put on the market last year was sold, indicating attractiveness of our proposition. Additional acreage now ready at prices from $7.50 an acre up, on terms to suit purchaser.

SPECIAL OFFER TO JUNE 1

All purchases to June 1 secure service of man with team, stump puller and carpenter for one week free.

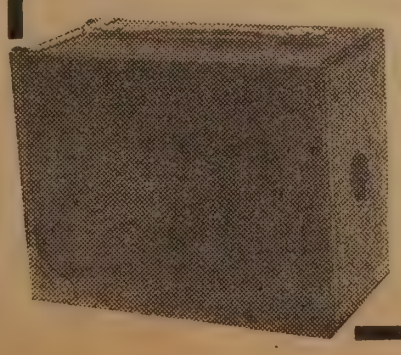
Write for attractive folder giving exact facts about these lands and the best opportunity for securing the most attractive farm home in the northwest.

MILAN FARMS DEVELOPMENT CO.

1322 Old Nat'l Bank Bldg., Spokane.

A Dandy Premo Janior

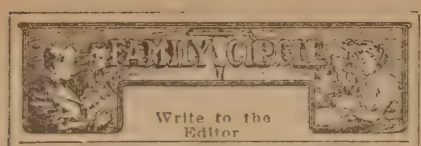
CAMERA FREE *to Boys and Girls*



TAKES PICTURES JUST LIKE THIS.

Don't you want this excellent camera? Just think of the fun it will be to take the pictures of boy and girl friends, of your pets, and of the many, many interesting things you will see this summer!

YOU Can Have It FREE



The way to get it is this: Go to two neighbors and tell them if they will subscribe to THE WASHINGTON FARMER one year they will be helping you get a camera. Ask each of them to give you one dollar for the subscription, and when you have the two dollars send it to us and we will immediately send you the camera. If the first two neighbors you call on are already taking THE WASHINGTON FARMER, try other neighbors until you get the two subscriptions. It won't take but a little bit, and then the camera will be yours, to take pictures with for years to come.

Start out for your two subscriptions today. A renewal subscription counts just the same as a new one. Send the two subscriptions and $2 to

How the Women Help

It is hardly to the point to ask the question, What can the women do to end the war? because they are doing well now. A very large part of the $700,000,000 worth of poultry and eggs produced in the United States last year was a result of women's work. They are making no special business of poultry keeping, it is true, except in special cases, but they are embracing their opportunity, with the above result. The opportunities consist, in many cases, of an old shed for a poultry house, a few speckled hens and a granary and an apron. The feed bin and the apron are of considerable help when the "boss" isn't around.

Poultry on the farm, cared for very largely by the women, has been paying the grocery bills for years, buying the shoes, and when crops are poor, paying the tobacco bills.

The egg basket will help to win the war. The special opportunity for the women now is to insist upon a good poultry house for the flock, a liberal allowance of feed for the chickens, and one hundred good laying hens instead of fifty poor ones. This would mean an increase in the production of poultry and eggs of about half a billion dollars a year. The poultry crop for the present year should total one billion dollars. If it requires a thousand dollars to equip and feed a soldier for a year, the money value of the poultry crop will maintain an army of a million soldiers.

The women are doing their bit, but with a little help will do a bit more.

Secrets of Health and Happiness

If You Have "Tinea Tonsurans"

By DR. LEONARD KEENE HIRSHBERG.
A. B., M. A., M. D. (Johns Hopkins University).

Ringworms, scientifically known as "tinea tonsurans," are neither rings nor worms, but are really patches of mouldy skin or fungus growths on the epidermis. Yet ringworms may feel "crawly and itchy" as they sprout from the cuticle.

Dr. Hirshberg.

Examined under a high-powered microscope, the crusts, scales or fluffy discs at the edge of the ringworm, if moistened and soaked a bit in soda water, resemble the stems and twigs, branch and boughts of the spreading chestnut tree. If you plant in gelatin or beef boughs of the web-like shreds, they will flourish like a green bay tree. Indeed, you may be amazed to see them look like the bluish-green mold observable on stale bread or preserves.

Next to scabies or the itch, ringworms are a most common and prevalent dermal affliction. Like dirt itself, they are almost always with us.

Ringworms may occur on the face, chin, forehead, armpits or any area of the cuticle. Finger nail ringworms are the worst kind, and appear to bend, break and loosen the nails. These require vigilant and patient treatment by vigorous disinfectants in collodion. The lost, torn, broken and bent finger nails are slow to return. Indeed, the trouble itself is not always recognized because the typical appearance of the ringworm is not present.

Ringworms on the legs are raised, thick and red, with sharp edges. They must be diligently scrubbed off with a cheap hand brush, which is afterward destroyed or put in formalin. The ringworms are then washed with soda and finally massaged with ammoniated mercury ointment. This is to be repeated several times, after which the affected parts should be left severely alone.

Mild examples of ringworm on velvety, downless cheeks or arms may first be treated with an ointment composed of 15 grains of benzoic acid, 15 grains of salicylic acid, three teaspoonfuls of cocoanut oil and two tablespoonfuls or one ounce of vaseline. Tincture of iodine ought to be applied before this benzoic acid ointment. The last is to be kept on constantly.

I have often been asked what will stop a young man smoking cigarettes and cigars. First, the will to stop must be invoked. Then gum or caramel candies are to be chewed whenever the impulse to smoke appears. Slippery elm, licorice balls and a full stomach counteract the craving. Glycerite of tannin may be applied to the gums, tongue and smoke-thirsty parts.

The question of a treatment for stopping the craving of alcoholic liquors is also asked many times. There is a treatment, but it is preferably carried forth in a hospital or sanatorium. It is rarely successful at home. Moreover, the drugs used are dangerous except in the hands of those skilled in their use.

Do You Know That

Temptations resisted are stepping stones to success?

Crochet and Tatting Designs

By WINIFRED WORTH

Antique Yoke.

The patient crochet worker will find great reward for her time in making this attractive yoke.

Two balls No. 60 Cordonnet. Follow pattern. When complete finish off with 2 rows of 2 ch. 1 t. Then add scallop.

Begin in 5th hole. 9 tu. catch in 7th hole sl. st. to 8th hole. 1 t. 1 ch. in each 9 t. turn ch. 3. 1 t. 1 ch. 4 times 1 t. 1 ch. 1 t. 1 ch. in same space. 1 t. 1 ch. 4 times 1 t. 1 ch. 1 t. 1 ch. in same space. Catch in 9th hole sl. st. to 10th 1 t. 1 ch. to end. Turn 1 t. 1 ch. tu. Repeat until you reach 2 st. in 1 space of previous row. Ad 1 t. 1 ch. twice in same space. Finish row. Sl. st. to next hole, repeat to end of row, turn, and on last row add p. to every t. **This completes one fan.**

But pleasures are like poppies spread,
You seize the flower, its bloom is shed;
Or, like the snow-fall in the river,
A moment white, then melts forever. —Burns.

Dry Fruit and Vegetables.

Whenever practicable the housewife should dry her winter supply of fruits and vegetables, says Sarah L. Lewis, assistant professor of domestic science of the Oregon Agricultural college.

String beans should be prepared as for cooking and then dried in the sun or a warming oven. They will keep nicely all winter and are very delicious, but they must be soaked over night before using. By parboiling the beans before drying they require less cooking afterward.

Frock for Young Girl.

For little girls from 6 to 12 years old are made these frocks like smocks of rough white shantung silk. The collar is nothing but a soft bias piece of coarse woven saffron silk knotted low in front, and at the pointed ends are embroidered two purple roses, or even three, mabye, says the Kansas City Star.

Curried Lamb With Rice Border.

One pound lean lamb, one cup rice, one tablespoon cut onion, one teaspoon curry powder, one teaspoon salt, one tablespoon cut parsley, one tablespoon flour. Wipe the lamb with wet piece of cheesecloth, put in saucepan, cover with boiling water, add onion and salt and boil slowly two hours, or until tender. Mix the curry powder and flour with a little cold water, and add to the meat. Boil five minutes. The rice is washed, boiled, blanched and dusted with salt as usual, and put around the edge of platter. Put the meat and gravy in center; sprinkle parsley and dust with paprika.

COMFORT

Cook in a cool, comfortable kitchen this summer. An oil cook stove is comparatively inexpensive to buy and it will soon pay for itself in comfort and lower fuel expense. Meals in a jiffy, and a cool kitchen in summer.
Bakes, broils, roasts, toasts. Better cooking because of the steady, evenly-distributed heat. More convenient than a wood or coal stove for all the year 'round cooking, and more economical.
The long blue chimneys prevent all smoke and smell.
In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

NEW PERFECTION OIL COOK-STOVE

STANDARD OIL COMPANY
(California)

Boat Riding on the Columbia.

Dear Aunt Nellie: I am 12 years old and my birthday is June 30, and I am in the sixth grade. My teacher's name is Mr. Ryman. We live a quarter of a mile from school. We live at Cliffs, but we get our mail at Columbus, five miles from our place. We have four horses, one of them is mine. Her name is Gady. I ride her quite a bit. She is brown. We have three sheep, one cat, one dog and some chickens. We call the sheep Pearl, Betty and Pet. I have two sisters. My oldest sister's name is Hazel, and baby's name is Mildred. We live near the Columbia river, and go swimming and boat riding in the summer. We set a hen and put 15 eggs under her and only four hatched and two of them died. There are two left, and they are mine. I help mamma do the dishes, and sweep the floors. I help her plant the garden. We have a garden drill. We have planted a lot of flowers and a garden. I have a garden by myself. Our school closed May 18. I can embroider and crochet. I like to read the Children's Corner, and would like to win a prize.—Beulah Walker, Columbus, Wash.

The Easter Rabbit Came All Right.

Dear Aunt Nellie: I wish some girl of my own age, which is 10, would correspond with me. I think Anna S. Hutsell wrote a nice letter. This is my fourth letter to the Corner. Whenever the Farmer comes into the house I always look for the Children's Corner. I help mamma with the housework. In the summer I milk two cows. I will tell you about my sister's surprise and my brother's and mine. It was last Easter. We children went upstairs to bed. In the morning my brother got up to make oil meal for the calf. In the oil meal drawer he found a green egg. Mamma called Louida, my sister, and I. So I went downstairs to set the table, and under a bucket I found a pink egg. Then my sister went to get her shoes, and in one was a purple egg. That morning, before it was daylight, she asked "Has the Easter rabbit come yet?" I said I did not know. When she found the candy in her shoe she came downstairs as fast as her little legs could carry her and showed us. She said, "I put on my shoe and I felt something in it. I looked, and there was this purple egg."—Theresa S. Wilson, Grays River, Wash.

Ethel Is Not Lonesome on the Farm.

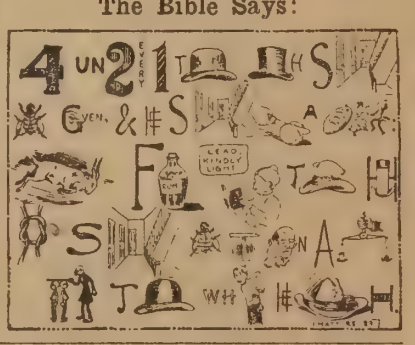
Dear Aunt Nellie: I am 14 years old. I go to Cliff's school, but we get our mail at Columbus, Wash. We have 10 pupils in our school. Our teacher's name is Mr. Ryman. I haven't been in Washington quite a year. I have one sister and two brothers. My sister's name is Lily and my oldest brother's name is Arthur and my youngest brother's name is Melvin. I wash the dishes and clean up the house before I go to school. We have 204 little chickens and eight old hens. We have a cow and a calf. I planted some garden seeds and more than 13 packages of flower seeds, some of them are up. I have so much to do on the farm that I do not get very lonesome. We will soon have a post-office at Cliffs. Columbus is five miles from our place. I can crochet and tat and can do other needlework. I have one quilt made. I like to crochet the best.—Ethel May Miller, Columbus, Wash.

Earned a Flag for the Schoolroom.

Dear Aunt Nellie: This is the first time that I have ever written to the Corner, but I hope it won't be the last time. I was 13 years old the 30th of January. I am in the seventh grade at school. I go to the town school. I am going to tell how we earned our flag. Our room at school didn't have any flag. Miss Averill, our teacher, thought it would be nice for us to earn it. One morning she brought to school a box of little silk flags. We were to sell them at 5 cents apiece. To make it more interesting, we chose up sides and the side that sold the least was to give a program. Altogether we made over $11 dollars. We took part of the money and got a large flag. The rest went for books for our library. The day that our big flag came we had a big program and every one was in it. We have it up in our schoolroom now. It is very pretty. I wish some one of my age would write to me.—Bernice Baker, Box 267, Colfax, Wash.

Best of All She Likes to Cook.

Dear Aunt Nellie: I live on the Twin Roy and 16 miles from Tacoma. Papa Royand 16 miles from Tacoma. Papa takes cream and eggs to Tacoma every week. We have six milch cows. Their Molly and Eva. We have six calves Molly and Sva. We have six calves and their names are Lady, Baby, Fawn, Girlie, Spot and Snips. We have two horses and 200 chickens. I have three brothers, who are all younger than myself. We go to the Oak Knoll school, one-fourth of a mile from our house. Our teacher's name is Eugenie Hicker. I am 12 years old and am in the eighth grade. My birthday is July 1. I like the farm very much and would not trade it for any city home. I help mother in many ways, such as sweeping the floors, making the beds, washing the dishes, but, best of all, I like to cook the meals. In the winter time I go sleigh riding with my friends. We hav a big bobsled and my brothers and I coast down the big hill on our farm in it. In the summer I make a garden of my own and help mama and papa with theirs. I have one pet cow and one pet cat that I like very much.—Esther M. Bower, Roy, Wash.



The Country Side Usually Wins.

Dear Aunt Nellie: My favorite study in school is grammar. We often have debates at school and our favorite topic is: Resolved, That we can get more pleasure from living in the country than in the city. I have always been on the country side and usually the country side wins, (not because I was on that side though). I will tell you why I would rather live in the country—because we have pure air, we can go picking berries, go swimming and fishing in the lakes and streams, climb trees, and roam through the woods. Well I would rather live in the country than in the city. I live on a 40-acre farm in Whitby Island. Before we came here we lived in Ballard or Seattle, Wash., and before we came to Seattle we lived in Alaska. I lived in Alaska 10 years. I would like to go up there again just for a visit. I am 13 years old and my birthday is the 12th of March. I would be very glad to write to any of the cousins if they would write to me.—Amy Lauth, Clinton, Wash.

About Edith and Her Twin Sister.

Dear Aunt Nellie: I am a little girl 9 years old. I live on a 160-acre farm. I have two sisters and one brother. One is my twin sister. Her name is Edna Ida and my name is Edith Irma. Our brother's name is Clarence. He is 11 years old and in the sixth grade. Our baby sister is 5 years old. Her name is Thelma, but she does not go to school yet. Our school will be out in three weeks, but if I do not miss in that time I will neither be absent or tardy for three years. I go sick or well. We love to go to school better than anything else. We have a mile to walk to school, and our teacher's name is Miss Emma McCabe. We are in the fourth grade. We have a pony to ride. We have a piano, but I can't play much yet, but mama says she will give us

The Bible Says:

lessons when we get a little older. I help mama do the work in vacation. I wash dishes, peal the potatoes, sweep and dust and help pick fruit to can. I love to live on the farm. I have two pet cats and two little pigs. I love to read the letters in the Corner.—Edith Peterson, Pomeroy, Wash.

School Is Not Far From Home.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner and I hope it won't be the last. I am a girl 10 years of age. I am in the third grade. My birthday is the 11th of February. My teacher's name is Bess McGuire. I like her fine. I had the measles a few weeks ago. I have six sisters and one brother. We have eight cows, one pig, 20 ducks and around 30 chickens. We got a dog and cat which we found this winter. We have 20 acres of land. I go to school which is not very far from home. Every week I run and meet papa and get the Farmer first so I can read the Children's Corner. I wish I could win a prize. I saw a girl's letter in the Corner last time. She was born February 11 and 10 years old. Her name was Agnes Davis and she lived in Hulby, Wash. I wrote her a card a few days ago.—Pernille Hanson, Lakewood, Wash.

Play and March by Grafonola Music.

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I like the Corner very much. I hope we can keep it always. I like to go to school. I am 12 years old. The flowers are all in bloom here now. I have been flower-picking three times already. I am sending you a yellow-bell. I have for pets one cow, one cat, five bantams and lots of big chickens. I like to make flower gardens. I am putting lots of garden in. I am in the fifth grade. We had a test in geography today. I don't know what I got, for I haven't got my paper yet. We have a grafonola in the school. We play and march by it. One of my bantams hid her nest and I found it. It had 10 eggs in it. My sister found a bantam's nest with 11 eggs in it.—Rosalie Arledge, Dixie, Wash.

Children All Cleaned Up the Yard.

Dear Aunt Nellie: I am the oldest girl in our family and I have four sisters. Their names are Louise, Josephine, Jennie and Priscilla. Louise is 8 years old and in the fourth grade. My cousin stays with us. His name is George and he is in the sixth grade. He is 14 years old. I am 10 years old and in the sixth grade. George, Louise and I are going to have a garden. There is going to be pumpkins, carrots, mignonettes and poppies in our garden. We have three chickens and six ducks and we get a few eggs from them. We walk a mile and a quarter to school. The school is red and has a green roof on it. There is only one room in our schoolhouse and two halls. We had a basket social up at the schoolhouse April 7 and they got $21. Friday afternoon at 2 o'clock all the children helped clean up the yard and we made three or four fires. There are 26 pupils in school. Eight of them are boys and 18 are girls. My teacher's name is Miss Shelly.—Florence Hwang, Olalla, Wash.

Wilber Likes His New Home Fine.

Dear Aunt Nellie: I will be 10 years old the 22d of September. I go to school. The name of our school is the Hart school. It is two miles from our place. We came here last fall from Mansfield, Wash. We like our new home. We have a lot of trees on it. I have five brothers. Their names are Wallace, Arthur, Ralph, Howard and Nelson. Wallace is older than I am and the others are all younger. I am going to school. I have two brothers going to school. There are 15 pupils in our school. Our school is out the 18th of May. This is the first time I have written to the Corner.—Wilber Davis, Davenport, Wash.

Day Her Dog Died Was the Worst.

Dear Aunt Nellie: I enjoy reading the letters very much. The subject I am going to write on is, "My Worst Day." One day in summer I went to see my friend, Katie Schierman, and stayed all afternoon. When I got home my brothers came and told me my pet dog was dead. They said a naughty man ran over him. I felt very badly all the rest of the day. We had another pup and he is my pet dog now. I have not forgotten my first pet dog. I am 14 years old and I am in the sixth grade. My teacher's name is Miss Busby. I like her just fine. I will write again.—Leona Machlied, La Crosse, Wash.

Reads the Corner Every Week.

Dear Aunt Nellie: I am 11 years old and I am in the fifth grade. I have a sister and three brothers. My sister is 12 years old and my oldest brother is 22 years old. My other brother is 18 and my youngest brother is 16. I live on an 80-acre farm. We have 20 cows, three calves and two horses. We have about 30 chickens and two big sheep and three little lambs. I go to the normal school. There are 104 pupils in our school. My teacher's name is Mary McDougall. I read the Children's Corner every time we get the paper.—Esther Dale, Stanwood, Wash.

Effie Likes to Play the Piano.

Dear Aunt Nellie: I have been reading the Children's Corner and like it very much, so I thought I would write. I am 9 years old and I am in the fourth grade. My teacher's name is Harriet Snodgrass. I only missed two days of school. I have three brothers. Their names are Elmer, Ora and Albert. We live on a farm of 640 acres. We have 99 chickens. We have 26 horses. We have four dogs. Their names are Curly, Heck, Fido and Nero. Curly is my dog. We have eight head of cattle. We have a car and a piano. I like to play.—Effie Grace Ludlington, Bright, Wash.

Likes the Children's Corner Best.

Dear Aunt Nellie: We take the Washington Farmer. I like the Children's Corner best. I live on a farm. My papa has 1000 acres on his farm. He has 250 head of cattle and 95 head of horses. I have a sister and a brother. Their names are Earl and Thelma. My birthday is the 19th of November. I go to the White Swan school. It is the 13th of April now. Our school will be out the 11th of May. I am in the fifth grade and 10 years old.—Neta Gallaher, Mansfield, Wash.

All Have the Whooping Cough.

Dear Aunt Nellie: I enjoy reading the Children's Corner, so I thought I would write and see if my letter would be in the Corner. I am 8 years old and am in the fourth grade. I have two sisters and two brothers. My sisters' names are Emily and Bernadine. My brothers' names are Overton and Robert. All in our family but mama and papa have the whooping cough. I go to the Sandy Bend school. I would like to correspond with anybody my age.—Helen Blanchard, Castle Rock, Wash.

Plays Hide and Seek With Her Dog.

Dear Aunt Nellie: I saw my letter in print and I thought I would write again. I am in the fourth grade. There are 12 pupils in the school I go to. My teacher's name is Miss Larson. I have a pet dog. His name is Ford. I can play hide and seek with him.—Edna Webb, Wilson Creek, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Hilma Engluad, Leona Jacks, Lucile Brannan, Velma McAtee, Sammie Robertson, Ida Dock, Annie Fowler, Grace Miller, Alexander Weitz, Bessie Cochran, Ethel Harriman, Grace McKibben, Barnetta Bartholomew, Ruth Crabb, Nettie Jackson, Joyce Hatch, Kenneth Redman, Helen Smith, Esther Dale, Doris Streeter.

To Get a Flag Write Soon

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Read Your History As It Happens

Do you realize that the days we are living through now are among the most momentous in the history of the world? Our country is making preparations for war on such a gigantic scale that the effects are felt in every home throughout the land. Our sons and brothers will soon be marching in the military encampments. In a few months they may be fighting a ruthless foe in foreign trenches, while our sisters and daughters are nursing wounded soldiers of France, Belgium, England and America. It is your duty, it is your opportunity to keep yourself and your family thoroughly in touch with these world-quaking, home-shaking events. Do not stop your ears to the call of the bugle. Do not shut your eyes to the glare of the campfire. The whole panorama of our modern history as it unfolds is faithfully reported by

The Twice-a-Week Spokesman-Review

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events.. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line where the history of our day is being set down in ink and blood.

A Timely Offer

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a worth-while saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers. It is a paper particularly welcome just at this time.

WORTH WHILE SAVING

Twice-a-Week Spokesman-Review for 1 year regular $1.00
The Washington Farmer for 3 years if subscribed for a year at a time..$3.00

Total value $4.00

Our Special Price for Both, $2.00

Big things are happening this week. Big things will happen next. To get the facts about these events, send in your order at once. Paid ahead subscriptions will be advanced from the dates to which they are paid.

Address orders to

The A B C of Road Construction

Road Surface Enters Into Cost of Hauling Produce

By FRANK W. GUILBERT.

Chairman Executive Committee Washington State Good Roads Association.

Some very interesting comparisons have been compiled showing the saving to be gained by improvement of road surfaces and keeping them in good condition at all times of the year.

We showed that excessive grades meant the limiting of loads for the haul in which these grades were permitted to remain. Or, that by reducing the pitches on a stretch of road the cost of transportation of the entire tonnage to be hauled over it would be affected and lessened.

Another element entering into the cost of hauling produce to market is the character of the road surface. Careful calculations have been made which go to show a very great saving in cost by reason of the variation from soft material, like loose sand and mud, to the other extreme in the nature of iron plates or rails.

From tests made covering a variety of materials the following facts were establishd:

It took 10 horses to pull 6270 pounds through sand and mud roads.

The same load on a loose gravel or common earth road required five horses to move it.

On a good gravel road two horses took care of the haul.

It was found that on a good macadam (presumably waterbound macadam) road only one horse took care of the 6270 pounds, and on steel rails only one-sixth of a horse power was required.

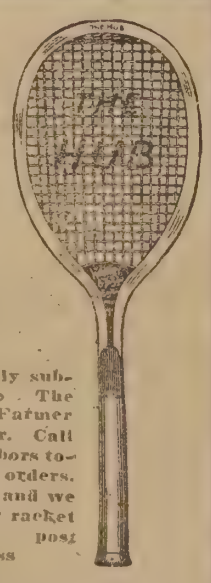
These tests all apply to haulage on a level road.

An interesting result was brought out in a test made with a narrow-tired wagon of the measure of force necessary to haul a wagon in a plowed field and the same wagon in a stubble field of tall wheat stubble.

On plowed ground the force required to pull the narrow tired wagon with a ton load straight ahead was found to be 808 pounds. In the stubble field it needed but 516 pounds of force. With a load of two tons in the plowed ground it took 1300 pounds and, with the same conditions governing, only 872 pounds in the stubble.

On a curve in the plowed ground 944 pounds of force were required to pull the wagon with the one-ton load. In the stubble field the result was obtained with the expenditure of a force of but 572 pounds.

This is interesting, especially to the farmer, and really has a bearing on the argument for compacted roads containing some binding factor.



Big Elevator for Spokane.

Simultaneously with purchasing additional ground for its Seattle plant, the Centennial Mill company has acquired a seven-acre tract site north of the Interstate fairgrounds on the Northern Pacific for the construction of a million-bushel terminal elevator in combination with a large flour mill of greater capacity than the present Spokane plant of the company on Howard street.

Talley to Teach at Mt. Vernon.

Wilfred H. Talley of the Washington State college will teach science in agriculture in the high school at Mt. Vernon, Skagit county. He will have charge also of the boys' and girls' club work during the summer.

Boys Girls

We are offering you one of the strongest and most durable tennis rackets on the market in return for three yearly subscriptions to The Farmer. The Farmer is $1.00 a year. Call on your neighbors today, get the orders, send the cash and we will ship your racket immediately, post paid. Address

The Motor Car
On the Farm

Pressure in Tires.

How many pounds air pressure should ordinarily be carried in tires in hot weather? L. D.

There is a more or less general impression that blowouts are liable to be caused by expansion of air in hot weather. Of course, some expansion occurs, but the accompanying pressure is not sufficient to be of serious consequence. The number of pounds increase in pressure is less than one-third the number of degrees increase in temperature. In other words, when the temperature of air in a tire rises 10 degrees the pressure is increased about three pounds.

A fixed rule for the inflation of tires can not be given owing to the fact that the same results are not experienced from the same degree of pressure under all conditions. The road conditions, speed, power, weight of machine and its load are some of the factors which have a direct bearing upon the inflation which will be most satisfactory.

The following simple formula is suggested by a tire manufacturer as a means of determining approximately the correct pressure. "For front tires multiply the width across tire by 15 to 18. A four-inch tire for example requires 60 to 72 pounds (4x15 equals 60), (4x18 equals 72.) For rear tires multiply by from 15 to 20 pounds instead of 15 to 18 pounds."

A good method is to pump up the tires in accordance with the formula and then, if necessary, reduce the pressure slightly until they do not cause excessive vibration to the car and there is not too great slippage of the rear wheels. Make a record of the pressure at this point and keep the tires at this pressure except when conditions are such as to make a change advantageous.

Three miles from Centerville, 4½ miles from Goldendale. Crop with place until harvest. $30 per acre. Terms. C. A. Lester, Centerville, Wash.

FOR SALE, OR EXCHANGE FOR SMALLer ranch—300-a. stock and grain ranch; big crop in; good pasture. Owner, M. Waters, Willamina, Ore.

80 ACRES, GARDEN SPOT OF IDAHO; 50 in crops; alfalfa, fruit, grain; terms. E. Cope, Ontario, Ore.

FARM LANDS—FOR SALE 651 Continued.

MONTANA LAND;
GOOD LAND; PARTLY IN CROP;
JUDITH BASIN.

750 acres, best part of basin; 200 acres winter wheat, looks fine, half to buyer; 350 spring wheat, one-third to buyer; 650 acres steam plow land, not over 40 acres waste; nice spring and stream; 2½ miles to town; good house. Price $75 an acre, and worth every cent of it on cash basis. Will take good Palouse farm, worth $15,000 to $20,000, part payment, balance easy terms.

SHIELDS RIVER VALLEY.

720 acres in best part of famous Shields River valley; no better winter wheat section in northwest; 226 acres winter wheat; 75 acres oats and barley; 35 acres alfalfa; 250 inches water; plenty to irrigate 250 acres; fine trout stream; not over 40 acres waste land; new 5-room bungalow, big shed and granaries; good spring near the house; equal to best Palouse soil. One of the best grain and stock farms in the country; over 600 acres steam plow land; all crop goes for short time at $70 per acre. Will take good land in Washington, clear, up to $20,000, balance good terms.

FINE STOCK FARM.

560 acres, 2½ miles to good town; 250 acres timothy and clover; 100 acres in barley; 350 acres irrigated; very little waste land; 2½ miles to good town; good 7-room house; located in coal district; geologists say most of this land is underlaid with coal; buyer gets half the hay, one-third the barley and full conveyance of coal rights at $60 per acre. Will take good farm land in eastern Washington for about half, balance to suit.

640 acres, in good grain district; 450 in crop, one-third to buyer; not over 40 acres waste; good spring and stream; 2 miles to town. Price $45 per acre. Will take good eastern Washington land, clear, up to $15,000, balance good terms.

The above places are all good land, personally inspected and worth the money in cash. Have other good Montana lands, on which owners will take good land as part payment. Write and tell us what you have to trade.

HEGE & WATKINS CO.
715-16-17 PAULSEN BLDG., SPOKANE, WASH.

MONTANA LAND,
CROP GOES TO BUYER.

320 acres, in good grain district, 100 in crop, all goes to buyer; 90 per cent tillable; good spring. Price $22 per acre; good terms; no trade.

320 acres, 280 in crop, all goes, not over 15 acres waste land; some surface stone on part; good grain district; $35 an acre.

A GREAT BARGAIN FOR PROMPT ACTION.

800 acres in one of the very best grain districts of Montana; probably surest winter wheat crop district in Montana; 350 acres winter wheat, in fine condition; 150 acres spring grain; 150 acres fine hay; very little waste; lies nice and level, nearly all steam plow land; soil equal to the best in the west for grain; fine prospect for 30 to 40 bushels per acre on the wheat; in a district where 40 bushel crops are very common; fair set of buildings; 12 miles to good town, but good road; all the crop goes now at $60 per acre, but see us or call us on phone immediately if you want this place, as it is subject to withdrawal or raise in price.

HEGE & WATKINS CO.
715-16-17 Paulsen Bldg., Spokane, Wash.

IMPROVED FARM.

331 acres, over 200 in high state of cultivation, practically all in crop, balance easily cleared; rich deep dark loam; running water; good buildings; water piped to buildings; fully equipped with stock and machinery; only 22 miles from Portland, on Pacific Highway, which will now be paved; an hour's run with auto; close to S. P. electric, and one of the best towns in the Willamette valley. This is a money-maker and will stand close investigation; best of reasons for selling.

CALLAN & KASER.
414 OREGON BLDG., PORTLAND, ORE.

MONTANA LAND.

38,000 acres, $14 an acre, to be sold in section lots, 75 to 80 per cent tillable; 3 to 12 miles from railroad; Eastern Montana average rainfall 19 inches; raises good corn and all grains grown in Montana; deep rich soil, very little stone, average price in section lots, $14 an acre. New tract just put on the market this week. Go with us at once and get your choice. Call or write for particulars.

HEGE & WATKINS CO.
715-16-17 Paulsen, Bldg., Spokane, Wash.

For
One of the Finest Residence
Properties in Spokane;
Cost Over $35,000. Price $22,000.
Reed Realty Co., 627 Peyton Bldg., Spokane.

Grain and Produce Markets

Chicago Grain.

CHICAGO, June 9.—Big jumps in wheat prices took place today as a result of the smallness of the 1917 crop indicated by the government report. After an extreme leap of 16 cents a bushel the market closed firm, 7c to 11c net higher, with July at $2.35 and September at $2.02. Corn gained ½c to 7¼c; oats, 1½c to 2c and provisions 15c to 30c.

It had been generally expected that wheat crop improvement during the last month would be shown to have been much greater than turned out to be the case.

Activity on a broad scale characterized the corn market. Heavy buying made prices advance rapidly. The chief stimulus to purchase came from cold weather. Considerable buying was said to be in progress on the theory that meats would continue to sell at high prices and corn, therefore, would be in urgent demand for feeding.

Bullish construction of the government crop report tended to lift oats. The official estimate of the yield was not so large as had been generally expected.

Cash Quotations.

CHICAGO, June 9.—Wheat—No. 2 and No. 3 red, nominal; No. 2 hard, $2.72; No. 3 hard, nominal.

Pacific Northwest Grain.

PORTLAND, Ore., June 9.—Grain—Wheat—Bluestem, $2.61; fortyfold, $2.56; club, $2.56; red Russian, $2.50.

Oats—No. 1 white feed, $46.50.

Barley—No. 1 feed, $42.

SEATTLE, Wash., June 9.—Wheat—Bluestem, $2.64; Turkey red, $2.64; fortyfold, $2.60; club, $2.60; fife, $2.60; red Russian, $2.60.

Barley, $44 per ton.

TACOMA, June 9.—Wheat—Bluestem, $2.63; fortyfold, club and red fife, $2.60; red Russian, $2.55.

WALLA WALLA, June 9.—Club wheat, $2.40; bluestem, $2.47.

Barley, $42@44.

San Francisco Grain.

SAN FRANCISCO, June 9.—Barley—December, $2; July new, $2.10 asked.

The Wool Market.

BOSTON, June 8.—The Commercial Bulletin will say tomorrow:

"The Boston wool market has been active during the last week, particularly on wool suitable for government uses. A little demand is in evidence for civilian purposes. Prices are higher by 2 to 3 cents a pound in the grease. Manufacturers are busily engaged on government work.

"In the west buyers are taking the new clip wools steadily, prices for which are also advancing. Scarcely any medium wools are available in the far west under 55 cents and some sales have been made of choice three-eighths clips at around 57 cents."

Scoured basis: Texas, fine 12 months, $1.55@1.60; fine 8 months, $1.35@1.40.

California, northern, $1.55@1.60; middle country, $1.25@1.30; southern, $1.10@1.15.

Oregon, eastern No. 1 staples, $1.55@1.60; eastern clothing, $1.30@1.35; valley No. 1, $1.95.

Territory, fine staple, $1.65@1.70; half blood combing, $1.45@1.50; three-eighths blood combing, $1.30@1.35; fine clothing, $1.35@1.40; fine medium clothing, $1.20@1.25.

Pulled: Extra, $1.75@1.80; AA, $1.65@1.75; A supers, $1.45@1.50.

Portland Wheat.

PORTLAND, Ore., June 9.—There is only a small demand for wheat coming from millers at the Coast and in the interior, but so light are remaining stocks that prices are being forced up at a rapid rate. Closing cash bids at the merchants' exchange were: Bluestem, $2.61; club and fortyfold, $2.56; red Russian, $2.50. Oats closed steady here at $46.50 bid, though there were sales at the same time on the Sound at $50. The oats situation is the same as wheat, stocks being practically exhausted.

The flour market is strong. There was a 40 cent advance in the latter part of the week to the $12 basis for patents, and another rise of the same extent is looked for in a day or two. Mill feed prices are gradually declining.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., June 9.—Hogs—Receipts, 8200; market 10c lower. Heavy, $15.10@15.30; mixed, $14.90@15.10; light, $14.75@15.10; pigs, $12.50@14.50; bulk of sales, $14.90@15.10.

Seattle Market.

SEATTLE, June 9.—Indications that the Kennewick berry season is drawing to a close, so far as this market is concerned, were furnished during the last three days in the diminishing size of the fruit. Jobbers have been endeavoring to get $3.75 per crate, but the quality was against them and only in a few instances would buyers pay within 25c of the price.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Wheat Prospect Is Poor.

WASHINGTON, June 8.—America's 1917 wheat crop, as forecast today by the department of agriculture, will fall far below normal despite a prospect for a more than ordinary yield of spring wheat.

A total yield estimated at 656,000,000 bushels will give the country 16,000,000 bushels more than last year's crop, but with the heavy demands from abroad and virtually no reserve store, it will not meet war needs unless the country practices the most rigid economy.

Winter Wheat Under Normal.

The department forecast a spring crop of 283,000,000 bushels, a big yield, but estimates of winter wheat production give a crop of only 373,000,000 bushels, 7,000,000 more than was forecast from the May 1 condition, but still far from the normal yield.

The United States itself normally uses more than 600,000,000 bushels. At the beginning of 1916 there were 164,000,000 bushels on hand carried over from the previous year's record crop.

Forecasts for Year.

Forecasts of production of the country's principal crops as estimated today by the crop reporting board of the department of agriculture from reports of condition on June 1 follows:

(Figures in millions in bushels, i. e., 000,000 omitted.)

	Forecast.	1916 Crop.	1911-15 Average.
Winter wheat	313	482	542
Spring wheat	283	158	264
All wheat	656	640	806
Oats	1381	1252	1230
Barley	214	181	197
Rye	57.9	47.4	41.4

Money-Making Jerseys

Ninety Head at Auction June 20, 1917

If you want foundation cows, bred heifers, herd bull or young stock, either sex, of the richest jersey breeding this sale will furnish an unparalleled opportunity for you. This herd has never been pampered or over developed, always kept in good working herd condition and for a herd of this size the average production is among the best and many animals in the herd are capable of making high records if given individual attention. This will be the sale where you will surely get more than your money's worth, as it contains "diamonds in the rough." Excellent individuals and no contagious abortion ever on farm. Every animal (except small calves) has been tuberculin tested by Dr. W. H. Lydle, state veternarian, and certificate of health given.

Sale to be held on farm half mile from Shedd. Catalog giving full particulars will be published. Send name and one will be mailed when published.

NEWS FOR BREEDERS

N. B. Pettibone of Grangeville, Idaho, recently purchased a very fine yearling Hereford bull from August Schroeder of Cottonwood, Idaho. The purchase price was $250.

G. Hendricks of Dufur, Ore., recently purchased from the Royston estate of Payette, Idaho, a very fine Poland China spring boar pig of strictly big type breeding. He was farrowed February 1 and on May 7 weighed 103 pounds, showing the quick growing quality of the big type.

The Malheur county fair at Ontario, Ore., will be held this year September 18-20. Owing to the general condition of the country and the financial condition of the fair there will be no horse racing, but a strong effort will be made to have a good agricultural and live stock show.

Howard McKinley of Cottonwood, Idaho, raises the large type of registered Poland-Chinas. He kept over 17 brood sows this year. His hogs are all in good condition. He has raised large litters of pigs and they are running in alfalfa six or eight inches high. He feeds oats, shorts and milk, and plenty of it. He considers the grain he is putting in his hogs the best investment he could make.

Orin Beinhart, Tamworth swine breeder of Kennewick, Wash., has been adding some new blood of very fine quality to his herd. He has two new herd boars, Glenary Fred 17544, bred by Dr. E. D. Thomas of Kalona, Iowa, and Pleasant Hill Monarch 20288, purchased from T. G. Scheer of Bethany, Ill. His sire, Watterson 9363, the 1020-pound grand champion at the Illinois Staet fair in 1916, and his dam, Pleasant Hill Belle 16221. He also purchased from the same party two spring gilts sired by Watterson, dam, Maple Grove Ruby 14946, first prize aged sow at the Illinois State fair in 1916. Mr. Beinhart is a young man, but he understands his business and is satisfied with nothing but the best. His new purchases will be of great value to the breed in the northwest.

Adam Blackstock of Givens, Idaho, reports that the young Red Polled bull, Valdo, that he purchased in New York last fall, has grown and developed well and promises to make a great bull. Mr. Blackstock has most of the D. L. Young Red Polled herd and has bred 19 of them to the new bull. He will show at the state fair of Idaho at Boise this fall and may compete at the Oregon State fair later. Mr. Blackstock has a fine herd of unregistered Polled Angust cattle and has been receiving good prices for some of them for beef. Mr. Blackstock's farm consists of 1000 acres, 200 of which is in cultivation. Some of his alfalfa was frozen out to some extent, but he has 40 acres of new alfalfa that promises a big crop. He can sell all the hay he is willing to in the stack to sheepmen.

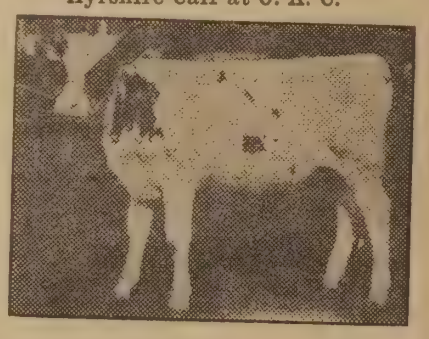
Three Holsteins for $1900.

H. R. Boomer, the Holstein breeder of New Plymouth, Idaho, recently sold three of his Holstein cows to the Carnation Stock Farm of Seattle, Wash., for $1900. The animals sold are Pioneer Daisy Clyde, 30.07 pounds of butter in seven days and 123 pounds in 30 days; Belle Segis Hope, daughter of Belle Segis 2nd, 31.5 pounds in seven days and she a daughter of the great matron, Belle Segis, 31.8 pounds, and Alma Walker, an untested daughter Artis DeKol Walker, out of Alice Coin Pietertje, 29 pounds as a three-year-old. The excellence of Mr. Boomer's herd is indicated by the prices paid by this great breeding firm for the three head. H. A.

BUILDS UP HERD OF JERSEY.

Bell Bros. of Cove, Ore., are building up a fine little herd of registered Jerseys with Fair Acres Lord 137430 at the head of the herd. This young bull is by Diamond's Lord Draconis, dam, Noble's Monine, 447 pounds of butter in a year, begun at 1 year and 11 months, and out of Moyane's Monine, 803 pounds. They showed a heifer at last year's union stock show that was awarded championship honors and looks now even sweeter than a year ago. They will show again. H. A.

Buys Fine Clydesdale.



N. K. West of La Grande, Ore., recently purchased the 3-year-old Clydesdale stallion, Prince Hopkins, a grandson of Baron's Pride and a very fine individual. He will be bred on the daughters of Dunure Edward, also a grandson of Baron's Pride.

To Meet Champions

When J. M. Royston came from Nebraska to Payette, Idaho, some 11 years ago, he brought a foundation herd of Poland China hogs with him. He was an ardent advocate of the big type and his hogs were of that type and breeding. Mr. Royston soon stood in the front rank of hog breeders in Idaho and did as much as any one man, while he lived, to popularize Poland Chinas. At his death, three years ago, his sons continued in the Poland China breeding business, and they have made good. They have shown at the Idaho state fairs two years and have secured their share of prizes and have sold many hogs throughout the northwest that have given satisfaction. I visited the farm recently and saw there a young boar, a year and eight months old, that impressed me as much as any hog I ever saw. He has a great back, large bone, is right up on his feet and about the best head and shortest neck I ever saw on a big type. He weighed 684 pounds in thin flesh. The best of it is that he was bred by the boys themselves. He is by Ohida, a boar Mr. Royston bought in Nebraska and out of Wonderful, a sow of their own breeding. This young boar will go up against the strongest of competition this coming fall, in both Idaho-bred and imported hogs.

He will meet the grand champion of last year, owned by J. E. Ferrell of Weiser, that J. E. McFadden said was good enough to win at the National Swine show. He will also meet one of the greatest bred boars in the United States, brought in from Iowa by Wilson brothers of Greenleaf, as well as other great ones. But, while it is not my province to judge and while a hog has time to go all to pieces before fair time, I am willing to hazard the opinion that if any hog can beat him, that hog will be grand champion at the state fair this fall. H. A.

Ayrshire Calf at O. A. C.

The above is a photo of an extremely richly bred Ayrshire bull calf lately purchased by Professor Graves, head of the dairy departmetn of the Oregon Agricultural college, from J. W. Clise of Seattle. He is by Peter Pan 26th, that was junior champion at the Panama-Pacific exposition and was sold by Mr. Clise to the William Galloway farms at Waterloo, Iowa, where he is now in service His dam is the great young cow, Willowmoor Etta 3d, that holds the Ayrshire junior 2-year-old world's record. Coming a few days under two years old, she produced 16,621 pounds of milk and 666.06 pounds of fat, or 783.6 pounds of butter, in a year. The Peter Pans have proven good producers as well as show animals, and in this youngster Professor Graves has certainly selected an animal that ought to make an impressive sire.—H. A.

Butterfield Stock at Salt Lake.

The Butterfield Live Stock company, the big sheep breeding firm of Weiser, Idaho, will have 6000 head in the great ram sale at Salt Lake, Utah, August 28-30. Two hundred of these will be Rambouillets, 200 Lincolns and 200 Hampshires. There will be about 4000 head in the sale and Mr. Butterfield expressed the belief that it will be fully as successful as last year's sale, when 2500 were disposed of at high prices.

Lambing was light all over the northwest and as there is a shortage that can not be overcome in a short time Mr. Butterfield does not look for any material reduction in the price of wool or mutton for some years. The Butterfield company sold their coarse wool for 44 cents a pound about the middle of April. H. A.

Miller Buys Primrose.

Climax, Duroc boar from the Primrose herd of J. W. Fruit, at Brooks, Ore., has been bought by C. C. Miller of Natron, Ore.

Live Stock Pointers.

J. J. Hagaboom of Lapwai has sold his entire herd of Poland Chinas.

W. T. Simmons, west of Volmer, has closed out his entire herd of Duroc Jersey hogs.

B. W. Kitteral, breeder of Berkshire hogs, has sold his entire herd.

William Cox, whose place is four miles northeast of Juliaetta, had 600 Duroc hogs last year. This year he has only 60, including little pigs. He has quit registering, and raised a few for his own use and sells the balance on the market. He still keeps full-blooded hogs and uses nothing but registered boars. Mr. Cox also is a breeder of Ayrshire cattle. He now has eight registered cattle, but none for sale. Mr. Crosby, three miles southeast of Juliaetta, also is a breeder of Duroc Jersey hogs, generally carries about 100 head, but is sold down to one sow and seven pigs. D. G. S.

SALE OF CHAMPOEG JERSEYS.

The dispersal sale of the Champoeg Jersey herd near Donald, Ore., Friday, June 22, will be historic in two ways. The herd grazes on the site of the ancient town whose name it bears, the place where the vote was taken that saved the northwest for the United States. The blood lines of the herd are historic blood, too. A third of the animals are close up in St. Mawes breeding, and over 10 per cent are of Rosarie's Olga Lad blood. Carnation Fern and Merry Maiden family lines are prominent. Perhaps the first thing a prospective buyer asks about a dispersal sale is, "Why?" Henry Zorn's Champoeg farm consists of 67 acres, and he has two other farms as well. It was neglect his farms or his herd, or get rid of one or the other, and so he is selling out.

WILL SELL GUERNSEYS.

One of the first dispersion sales of high grade Guernseys to take place in the Pacific northwest for some time will be that of G. G. Fullerton of Dayton, Wash., Monday, June 25, at Dayton. The entire herd of 75, for which is claimed a butterfat test of over 5 per cent, will sell. George A. Gue and Harry C. Cranke will auction the cattle.

Sybil's Noble Majesty.

L. S. Dillie & Son of Caldwell, Idaho, in April of this year received the young bull, Sybil's Noble Majesty, shown above. He is an imported Jersey, and is by Sybil's Gamboge, that goes back through Oxford Majesty to Oxford Lad. Sybil's Gamboge's dam, Oxford Sybil, also traces to Oxford Lad through Gamboge Knight, that is sire of a number of big producers, including one 900-pound cow and several producing sons. Sybil's Gamboge Majesty's dam is Majesty's Nobel Maid, and she traces to Oxford Lad on her sire's side and in two generations to Noble of Oaklands on her dam's side. It will thus be seen that this very handsome and showy young bull traces to the most desired strains of Island breeding. Mr. Dille has one Island-bred cow, the balance of his foundation herd being of pure St. Lambert breeding. From them he has a lot of sweet heifers by a son of Distinction's Noble, and, with a bull of this quality to use as a herd sire he ought to build up a very typy, as well as big producing, herd . H. A.

Starts Like a Winner.

The two fine Duroc Jersey gilts purchased by E. M. Pratt of Baker, Ore., at the Oregon State fair last fall from W. L. Sheard of Dayton, Ore., have developed into very promising young sows. One of them was first junior pig and she looks like a first prize animal yet.

PACIFIC NATIONAL DAIRY SHOW.

The dates for the Pacific National Dairy show have been set for November 16 to 23, inclusive. The directors have planned a very large show, including dairy stock, dairy machinery and dairy products at Portland.

Should Dip Sheep for Ticks

Shearing and Handling of Wool Should Be Understood

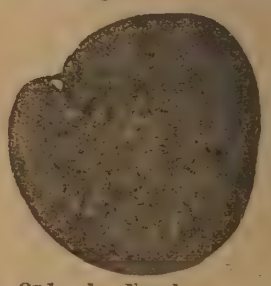
ARTICLE 9, by E. J. IDDINGS.

Dipping for ticks is advisable once or twice a year and at any rate, soon after shearing. Ticks become troublesome when fleeces are long and as soon as the wool is removed, go into the lambs. Dipping of the whole flock at this time means little trouble from the ticks until the next spring. Any of the standard powder or coal tar dips if used according to directions, are effective for ticks.

A dipping vat suitable for a small flock is 10 to 12 feet long, 4 feet deep and 16 to 18 inches wide. It may be made of galvanized iron or concrete. One end of the vat should be perpendicular. The other end should have a cleated slope or incline so that the animals may walk, or at least climb out of the vat. A drainining platform will result in a considerable saving of liquid.

Shearing and Wool Handling.

Shearing may be done with hand shears or with one of the simple forms of shearing machines. In some sections experienced shearers go from farm to farm and clip the farm flocks for a reasonable compensation. If the farmer is to shear his own flock and is inexperienced, he will shear at a more rapid rate and do better work with a machine. A machine suitable for shearing a farm flock can be purchased for from $10 to $15. A combination shearer and horse clipper can be had at a moderate increase of cost over the shearer alone.



Sheep should be sheared as soon in the spring as danger of hard storms is past. They should be shorn on a clean floor and the fleece kept free from dirt and foreign matter of all kinds. The tags on wool taken from the rear part of the legs, and twist when holding balls of manure should be removed separately. The fleece should be rolled into a neat, firm roll with the shorn ends on the outside.

Many twines, among which the sisal, are not suitable for tying wool, since they will not take the dye. Even a small portion of such twine remaining with the wool in the cloth after weaving will fail to take the dye and result in a much lower grade of cloth. Sheep men are now using special twines and among the most satisfactory are twines made of paper. These twines are dissolved and eliminated in the process of scouring.

Wool is most handily stored in wool sacks. These sacks may be ordered through a local merchant and, under farm facilities for packing, can be made to hold 200 to 250 pounds of wool.

Next week's article will deal with fitting sheep for the show ring at the fairs. It will be the last of this series.

W. A. Ritz, of Walla Walla.

Every Facility of College Mobilized for Farm Efficiency

The board of regents of the State college of Washington, together with President E. O. Holland and the other leaders in the big institution at Pullman, are this year throwing the facilities of the college unreservedly into the nationwide agricultural preparedness campaign. Appropriations originally designed for various miscellaneous needs of the college have been diverted from their original purposes and thrown into the farm educational branches. The college experiment and demonstration farm has been increased in acreage, farm extension work has been promoted with increased energy, club work has been extended, and the general movement for farm betterment has been given unprecedented impetus.

The photographs shown herewith are those of the five members of the board of regents of the college, who are devoting

Garford
MOTOR TRUCKS

"Profitable to Transport by Motor Truck"

—says Bennie E. Smathers
of Everett, Washington

"Hauling of dairy stock has become one of the most important branches of my business.

"Dairymen find it profitable to transport their cows by motor trucks rather than to drive them.

"My service is to move milch cows quickly without the usual loss sustained by moving them afoot—doing the work with a 1½ ton Garford Truck.

"I have increased my business to a radius of seventy-five miles.

"The dependability of my Garford—together with your good service has made this an extremely profitable investment—much more economical on gasoline than any other car or truck I ever handled.

"Have used the Garford for seven months—averaging 1000 miles a month with no cost for repairs."

SMATHERS TRANSFER
(Signed by Bennie E. Smathers)

Garfords are not *only* profitable for moving livestock—

Grain, hay, farm produce—especially the perishable kinds—can be far more economically carried by Garford trucks than by horse and wagon.

Hundreds of farmers in all parts of the country will testify to this.

And the farmer who operates a Garford is from one to five hours *nearer market* than the old fashioned horse-and-wagon farmer.

Garfords are working out in the fields and forests, all through the Northwest. They are proving themselves economical and reliable—and are earning far more than their keep.

Garford Motor Trucks are built in carrying capacities from one up to six tons. Any type of body you require is easily furnished.

Practical economy is the nation's watchword now. Do away with the old expensive wasteful horse method of hauling. Put a Garford at work. Save money.

All Hail, 10,000,000 Young Men!

Make the Keynote of the Fourth of July Celebration a Tribute to This Mighty Enrollment

How shall the program of the Fourth of July celebration this year give a fitting recognition to more than 100,000 young men who have just been enrolled in this state by the selective draft?

For the first time in its history the United States is engaged in a great world war, the greatest of all world wars. For the first time in its history the United States has enrolled the flower of its young manhood as the first great distinctive step to participate in that great world war.

Is not this the logical keynote for this year's national celebration of July Fourth? Nearly 10,000,000 men have enrolled themselves, most of them willingly and with unhesitating loyalty.

These 10,000,000 young men, whether they are selected to enter the army or whether they are commandeered for duty in needful occupations at home, each and all have their names enrolled and are awaiting their respective assignments.

The Washington Farmer belives that the Fourth of July celebration this year can have no more fitting purpose as its keynote than to pay tribute to this mighty enrolment of America's young manhood.

Whether in the war that is now shaking the nations to their very foundations or in the mighty economic and social problems which will follow this upheaval, these young men are to play the leading part. It is to them that the country looks, that not only the nation but the world as well shall, under God, have a new birth of freedom and that government of the people, by the people, for the people shall not perish from the earth.

There have been years when the celebration of our national anniversary was little more than shallow merriment, but this year it must not be so. We are entering upon the greatest war in the history of humankind. Our every resource of men and means must be, and is being, thrown into the conflict against inhumanity. For the first time in the history of America its young men have been systematically enrolled that they may be assigned to duties on the fields of battle or in the industries at home to render their greatest service to the country and to the world at large. Their orders will come, and it will be theirs not to reason why, theirs but to do, and, if necessary, to die for their country.

In this state more than 100,000 are listed, ready to be called whither and into what particular line of service they know not. Can the whole people of Washington more fittingly observe the great national holiday than by dedicating it to a recognition of the cause to which these young men have pledged themselves; than by dedicating it to a recognition of the dangers they are soon to brave and the honor they are bringing thereby to themselves and their country?

The Washington Farmer believes not, and it urges that in every community or village where the day is observed, the program be planned with the double purpose of recognition and dedication; recognition of the world-wide call of humanity and of the loyal answer made by those enrolled and those enlisted in the military or naval branches of the service; and dedication of those who go and those who remain at home to the cause of human righteousness.

Fruit Thinning Time Is Here

Thinning Is Necessary if Crop Is Wanted Every Year

By GRANVILLE LOWTHER.

If the best results are to be obtained, if the best fruit is to be developed and if the trees are expected to bear annually instead of every second year, the fruit must be thinned.

In blossoming nature seems to have provided for a great waste, for she generally produces more than she needs. The time, too, is upon us, and we must get about it if we are to do the work properly. In fact, before this reaches our readers the time will have passed for thinning of certain varieties in the earlier sections.

Thinning Apples.

The work should ordinarily begin the latter part of June or first of July.

1. Take off all wormy, scaly or defective apples.

2. Unless the tree has a light crop and has good vigor never leave more than one apple on a single fruit spur.

3. The apples on the tips of the branches should generally be removed. They seldom make first-grade fruit, for the same reason that when a tree is starving the top may become rosetted while the middle and lower limbs are healthy.

4. The large varieties should generally be thinned to about six inches apart, and the smaller varieties may be left closer.

5. Thinning by pruning is a good plan if the limbs are close, if they intertwine or are so matted together as to exclude the sunlight. Sunlight colors the fruit and color brings money.

6. In thinning never pull the apples from the spurs; cut them off with thinning shears. In pulling them off you almost always pull off fruit spurs and that damages the crop of the coming year.

Thinning Peaches.

1. Peaches should, when developed, never touch; therefore, they should be from two to four inches apart.

2. If the trees are unhealthy or old the peaches should be farther apart than indicated in rule number one, because the tree will not be able to mature a heavy crop.

3. If the tree is not bearing a heavy crop two peaches may be permitted to grow more nearly together than indicated, provided they grow on opposite sides of the same limb.

4. Always leave the largest, healthiest looking specimens, taking off the weak, defective and malformed.

5. Peaches grow on buds, and should be pulled off. In this they are unlike apples, that grow on fruit spurs and must be clipped off.

6. If the peach trees are old thinning by pruning is an excellent idea, but is not sufficient if the peaches crowd one another.

Increased Acreage Campaign.

More than $500 has been used in furnishing seed in connection with the increased acreage campaign in Thurston county, Wash. Efforts were made in furnishing seed to keep to one type as much as possible in order that marketing this crop might be facilitated, says C. H. Bergstrom, the county agent.

Buy Through Community Clubs

Is This the First Step Toward Practical Cooperation?

George W. Bassett, of the department of public service at Chicago, advises people to combat the high cost of living by organizing community buying clubs, and has set the example by organizing one in his community.

Mr. Bassett says coffee can be bought at a saving of 7 to 9 cents a pound; tea at 18 to 35 cents cheaper; canned corn at a saving of 60 cents a dozen; peas are 36 cents a dozen cheaper; tomatoes, 48 cents a dozen, and canned salmon at 48 to 72 cents less a dozen than the market prices for the same grade.

There are now five hundred cooperative stores in the United States, and the Cooperative League of America, now a year old, issues a monthly organ and some other educationsl matter. The league has nothing to sell. Its sole mission is to foster the cooperative spirit.

The New York Journal of Commerce, noting the growing demand for cooperation, offers timely and sensible advice.

"This course of development is not theory or prophecy merely," adds this authority. "It is history. In England it began in the little buying club of Rochdale weavers in 1844, and this has grown (without one backward slip) until the retail sales by the cooperative stores of the kingdom are over $700,000,000 annually, and they are supplying the wants of 15,000,000 persons.

"The retailers objected at first, and tried to boycott them with the wholesalers. Then the cooperators went into wholesaling, and the wholesalers tried to boycott them with the manufacturers; so the societies took the final step and began producing for themselves. Their resident agent at the New York Produce Exchange buys for them over $9,000,000 worth of foodstuffs annually. Their employes in production are some 37,000. They print their own publications and produce nearly every consumable article. Their own ships bring tea from their own lands in Ceylon and palm oil from their own lands in Africa. They grow wheat on their own lands in Canada, and have lately bought 10,000 more acres of wheat land there. They own several estates in Great Britain, some of which they use as convalescent homes. They perform every process from the soil to the kitchen, from the mine to the sales counter. They are more than important; they have become colossal."

This gives us an inspiring picture of true cooperation. One reason why the cooperative movement has been retarded in this country, and it is a chief reason, has been the springing up of bogus cooperative undertakings like the swindling Northwestern General Trading company, which fleeced farmers of the Pacific northwest out of hundreds of thousands of dollars. The reckless and criminal operations of the men who were recently convicted in the United States court in Spokane wrought almost irreparable injury to true and honest cooperation. After experiences of that nature people become cautious and are inclined to turn coldly against meritorious cooperation.

Land Bank Gives Service

President O'Shea Cites Proof of Its Success

When president D. G. O'Shea and the other members of the official board of the federal farm loan bank of the northwest district began organization in Spokane two months ago President O'Shea told The Farmer that was designed to give "the man on the farm an opportunity to finance his own affairs without profit to anybody on earth," and that if there were any profit made in the conduct of the business of the bank "it will be returned in dividends to the stockholder in the local farm loan associations, who are the borrowers."

This week he tells a representative of The Farmer that the success of the bank up to this time indicates that dividends will be paid to the farmers in Washington, Oregon, Idaho and Montana who are borrowers. It has been undertaken by the board of directors to finance the operations of the bank on a margin of one-half of 1 per cent of the business done, and President O'Shea is now convinced that on this basis a profit will be made, which profit will be returned to the borrowers in the form of dividends.

Bank Stands Rigid Test.

"If the test of success is that the law has given service to the farming people in whose interest it was framed," he says, "then it can be said that in the northwest district it is a conspicuous success for the reason that in the short period we have been here we have perfected farm loan organizations and issued and recommended charters for such in all parts of our district, extending from Sheridan county, in Montana, to the islands in Puget sound, and from the Canadian line to the southern parts of Idaho. Throught all that large teritrory we have been making loans already, and to that end have brought the benefits of the law to people covering a very wide area.

Enormous Loans Sought.

"For the one month of May we received, listed, tabulated and classified applications for farm loans aggregating the sum of $5,505,463. In the same month we appraised, examined carefully and finally approved applications in the aggregate sum of $1,144,485.

"Since the date of the approval of the said applications the land bank has been ready to complete the loans as soon as titles are furnished and mortgage papers properly executed and signed.

"On such showing, for the initial work of an organization that is entirely new and had nothing whatever to start with 60 days ago, the measure of success of the bank may be estimated. But if, on the other hand, success may be considered only from the measure of profit and loss, it can be said that the federal land bank is already almost on a paying basis, even on the narrow margin under which it is doing business. With the progress it is making, its earning capacity in a very short time will be sufficient to meet is current expenses, even if the collections be not made until a future period.

Will Pay Dividends.

"Not only will the federal bank be enabled to do business continuously on the margin of one-half of 1 per cent, which has been undertaken by all the land banks in the United States, but it will be enabled to pay dividends, unquestionably.

"In addition to those things it has extended its facilities in organizing associations and in training farmers how they should organize and conduct the business of their associations; it has made appraisals of lands for the applicants without charge or commission of any kind or nature whatsoever; it has drawn up all papers and mortgages without charge, and asks of the borrower that he pay only for securing the abstract and for recording the mortgage. Under this system there will be no renewals or future costs, for a loan, once made here, need never be touched until it is retired in full.

"During the short period of two months the bank has had to develop not only its own organization, its forms and systems, and its methods, but also the organization of various farm loan associations in this terirtory, and that with a very small force.

Service to All Classes Alike.

"In the course of a conversation during the bankers' convention in Spokane last week one gentleman was heard to charge that the land bank would not allow the applicants sufficient money on their applications to be of benefit to them. Another gentleman almost at the same time was heard to urge as one of the defects of the land bank system that almost anybody could borrow through it, and that some who have heretofore had little or no credit could secure service from the federal land bank. Both conclusions can not be correct, and the fact that wise and able men of the same class urge reasons so far apart and contrary to each other as is mentioned here may be considered to be the best evidence that the land bank is steering the proper and wise middle course of giving its service to all classes alike, even though some who have heretofore been unable to secure service receive consideration and attention from the representatives of the federal land bank."

New Charters Are Granted.

The following nine new charters have been issued to local farm loan associations during the last few days, bringing the total number up to 39, with loans approved for a total of nearly one and three-quarters million dollars:

Idaho.	
Spirit Lake, Kootenai county	$27,300
Gooding, Gooding county	32,850
Oregon.	
Wamic, Wasco county	28,900
Eugene, Lane county	75,650
Medford, Jackson county	30,500
The Dalles, Wasco county	36,200
Montana.	
Roundup, Musselshell county	57,800
Washington.	
Mead, Spokane county	31,650
Vancouver, Clarke county	58,650

Farm Market Director

Governor Ernest Lister, acting upon the recommendation of Professor George Severance of the state college at Pullman, has appointed Asher Hobson of Pullman to the position of state director of farm marketing. This position was created by the last legislature with a view to improvement of marketing conditions in this state. Mr. Hobson will assume the duties of his office at once, the problems being extraordinarily great and the need of

Asher Hobson, newly-appointed director of the department of state marketing.

their solution extraordinarily urgent at this time because of the conditions brought about by the world war.

Asher Hobson, newly appointed director of marketing, was graduated from the University of Kansas in 1913. Later he received a master's degree from the University of Wisconsin. While doing undergraduate work he majored in economics, his graduate work at Wisconsin consisting of research work under the direction of the Wisconsin experiment station and the office of markets and rural organization of the United States department of agriculture.

Came to Washington in 1916.

In 1914 he was made an agent in the office of markets and rural organization of the United States department of agriculture, with headquarters at the University of Wisconsin, and the year following accepted a position in agricultural economics at the same institution. In the fall of 1916 he was elected by the regents of the State College of Washington as instructor in economics. His close acquaintance with the problems of the farmer and producer from a standpoint of marketing and other economic questions made him a highly valuable man in the northwest field and in February of this year he was offered the position of cooperative markets and rural organization agent in the extension department, which he accepted in conjunction with his economic work at the institution. As a member of the extension faculty he cooperated with the federal department of markets and rural organization.

His work in this capacity included a study of rural organizations, such as the farm loan banks, farmers' creameries, farmers' dairy associations and rural marketing associations. He specialized to a certain extent in an investigation of the grading of farm products, including grain and potatoes.

In the food conservation campaign being conducted by the extension department of the college Professor Hobson assisted primarily in the labor situation. As an agent of the federal department of markets and rural organization he was called upon to secure data in the state of Washington as to the quantity of food products on hand and in cold storage, and has also given valuable services to the federal government and through it to the people of the state in that connection.

College Will Cooperate.

In his new position as state director of farm marketing Professor Hobson will retain a certain relationship with the extension service of the college, which will cooperate to the fullest with both the state department of farm marketing and the federal office of markets and rural organization.

Mr. Hobson is author, or joint author, of a number of publications of an agricultural economic nature.

Council of Defense

Fifteen Are Appointed by Lister

As a sort of "cabinet" to work with him and the other departments of the state government and organizations in the work to secure the maximum efficiency of the state in various lines of preparedness, Governor Ernest Lister has appointed 15 prominent citizens of the state. They will serve without pay and at their own expense, there being no appropriation for the work that they are designed to do. They probably will meet within a few days for organization and to lay plans for the work. It is expected that a large number of committees, including many other people of the state, will be formed to assist in carrying on the various lines of the service to be rendered.

The following are the members of the defense council as named by the governor:

Charles Hebberd, Spokane, food supply and conservation; E. P. Marsh, Everett, labor; A. L. Rogers, Waterville, farm labor; C. J. Lord, Olympia, shipbuilding; George Donald, North Yakima, transportation; Everett G. Griggs, Tacoma, lumber; W. A. Peters, Seattle, home defense; J. T. Heffernan, Seattle, manufacturing.

W. A. Lowman, Anacortes, fisheries; Mrs. J. S. McKee, Hoquiam, woman's work; J. G. Kelly, Walla Walla, publicity; W. E. Boeing, Seattle, aviation; Dr. Ernest C. Wheeler, Tacoma, sanitation and medicine; E. S. McCord, Seattle, legal and finance; Dr. Henry Suzzallo, Seattle, coordination of societies and educational institutions.

State College

Drives Hard on Preparedness

(Continued from page one.)

much effort toward agricultural preparedness.

W. M. PEASE, recently elected president of the board, is a native son of Washington, his home being at Ellensburg prior to his going to Seattle to engage in business over a dozen years ago. In Seattle Mr. Pease was for a time the junior member of the firm of Miller, Wright & Pease, which company is now organized under the firm name of Turner & Pease Company, Inc., and engaged in the manufacture and sale of dairy and other farm products. He is an accomplished live stock man, and knows the business of dairy manufacture from the ground up, which practical knowledge he is expected to turn to good account during his regency at the state college.

R. C. McCROSKEY of Garfield is a native Tennesseean of the old, southern, pre-revolutionary stock. His American ancestry dates clear back to the arrival of the Scotch Covenanters, and a member of this family tree was Sam Houston, one-time governor of Tennessee and later famous in Texan history. Houston McCroskey, son of R. C. McCroskey, was named for this ancestor.

After the civil war Mr. McCroskey came west, his objective point being Salinas county, Cal. Over 30 years ago he moved from Salinas county to the Palouse country, settling first on a farm near Steptoe Butte. Later he acquired large land holdings near Garfield, where he now lives. Many times he has been elected to the state legislature, and was a member of the first legislative body that convened after statehood. On this occasion he helped draft and pass the bill which created the State College of Washington. He has been for many years a regent and one of the college's most active supporters.

W. A. RITZ, who was president of the board of regents until April 4th, is a pioneer resident of the Walla Walla valley, and has made his farm on the outskirts of Walla Walla one of the best examples of intensive cultivation there is in the state of Washington. He had charge of the Walla Walla agricultural exhibit at the Alaska-Yukon-Pacific exposition in Seattle in 1909, was a member of the board of horticultural judges at the Panama-Pacific exposition and is now a member of the board of trustees of the St. Paul Episcipal school for girls at Walla Walla. Five years ago he was a delegate to the democratic convention at Baltimore.

A. D. DUNN of Wapato is a native of the Yakima valley, and has lived on a farm and farmed all his life. His loyalty to farming led him to specialize in agriculture when in the later nineties he was a student at the State College of Washington, though at that time nine in 10 of the farm boys who went to college desired to prepare for "work in town."

Mr. Dunn's earlier experiences in farming were in hop growing. Gradually he has worked into diversified farming with one of the highest class herds of Shorthorn cattle in the west as the pride of his farm. Splendid types of sheep, hogs and horses also are found on the Dunn farms. He was treasurer of the Cascade International Stock show, has been a director in the Northwest Live Stock show for years, and in many ways has identified himself with the progress of better farming and better live stock in Washington.

EDWIN T. COMAN came to Colfax in the early nineties and practiced law. Later he branched out into banking and became an authority on rural credits in eastern Washington. Eventually he became identified with the Exchange National bank of Spokane, of which financial institution he now is president. He was active in the work of the Washington Country Life commission a few years, and the Exchange National was the first bank in the state to lend to boys on their own security money at low interest with which to buy pigs, a plan that now is widely adopted throughout the state, and has given many a country boy a start in the hog business. Along with hog raising the bank, largely through Mr. Coman's interest, has done much to promote corn growing in Washington.

Loss From Weeds on Washington Farms

Take Twenty-Five Million Dollars Each Year From the Pocket of Tillers of the Soil

By J. L. ASHLOCK, Pullman, Wash.

In the thousands of weed samples which in three or four years back have been tested by the state college there have been found, constantly, weed seeds of many kinds. Forage crop seed comprise the bulk of the samples that have been examined; and it is reasonable to assume that through mixture with forage seeds, such as clover, alsike, timothy and so on, weeds have been assisted in establishing their obnoxious selves on Washington farms. Eighty per cent of their precious host came into the Pacific northwest from elsewhere—they were no part of the native vegetation before the days of modern farms and farming.

Just how serious a thing is the presence in forage crop seed of noxious weed seed can easily be illustrated. Alfalfa seed has been tested at Pullman running from ten to twenty thousand seeds of the green fox tail per pound of "alfalfa seed"; which is to say that a farmer, buying this seed and planting it at the rate of ten pounds per acre, would be sowing per acre from 100,000 to 200,000 green foxtail seeds. An acre contains 43,560 square feet; so, foxtail sown with alfalfa at the rate above gives several seeds to the foot, which is a thick sowing for that particular weed.

Here is an actual laboratory report on green foxtail in alfalfa:

Twenty-one per cent of the samples of alfalfa containing foxtail had less than 100 foxtail seeds per pound of alfalfa seed; 21 per cent of the samples containing foxtail had 100 to 200 foxtail seeds per pound of alfalfa seed; 13 per cent of the alfalfa samples examined for fox tail contained 200 to 300 foxtails; 5 per cent had from 300 to 400; 16 per cent had from 400 to 500 foxtails per pound; 7 per cent had from 500 to 1000 foxtails per pound; 3 per cent had from 1500 to 2000 foxtail seeds per pound; 5 per cent had from 2000 to 3000 foxtails; 2 per cent had 5000 to 10,000 foxtails per pound of alfalfa seed; and 3 per cent had from 10,000 to 20,000 seeds of foxtail per pound of alfalfa seed.

Does any person wonder why foxtail is well established weed in the Pacific northwest? The showing for foxtail in alfalfa could be repeated for numerous other weeds that may be found in it and in other seeds, such as clover, alsike and timothy.

The showing of alfalfa seed in tests of the last year has been especially good. It averaged over 97 per cent pure; which is to say that in 100 alfalfa seeds 97 would be really alfalfa, and three seeds might be foxtail, or something else not alfalfa. The legal standard for alfalfa is 96 per cent pure. Alsike clover averaged over 95 per cent pure, the legal standard being 90 per cent. Red clover averaged 91 per cent pure, the legal standard being 92 per cent. It averaged poorer in quality than the others.

When it came to tests for "viability." The average viability for alfalfa was 85 per cent—which is to say that in 100

(Continued on page fourteen.)

Stork's Bill.

It grows everywhere—is a nuisance throughout the inter-mountain region. It is a wild relative of the beautiful geranium. It is also called filaree, alfilaria, pin clover, pin grass, and so on. One plant will cover three or four feet of ground. It has succulent stems, stands drouth well, and, like most weeds, is palatable to sheep. Its seeds have the curious power of being able to plant themselves. Each has at one end a curling appendage which twists about when subjected to different degrees of humidity or moisture. The other end of the seed is sharp; and the twisting appendage serves to force the seed into the ground. It has a high protein content—one reason why it has value for sheep and other stock. In spring, when it is in blossom, it is beautiful, and gives the familiar "pinkish" color to many mountainsides. To prevent it from spreading it should be cut before the seeds ripen.

Keep Calf Growing

By WILLIAM HISLOP.

It is imperative for success that these calves be kept growing from birth to maturity. Nowadays, it is believed that maturity should be reached at 24 months of age. If a steer can not make 1000 to 1200 pounds in 24 months it may as well be considered a loss.

The chief concern is to keep the calf growing. Never give it a setback. Never let the milk fat get off its back. When he reaches the shambles he will be worth more per pound and weigh more than the underfed, scrubby bred individual owned by the man who "just lets them run."

Give the stock buildings a spring cleaning. The walls should be whitewashed, and the following is a good preparation of this kind:

"Slake half a bushel of lime with boiling water, cover during the process to keep in steam, strain the liquid through a fine sieve or strainer and add to it a peck of sale, previously dissolved in warm water; also three pounds of ground rice boiled to a thin paste and stirred in while hot; half a pound of Spanish whiting and one pound of clear glue previously dissolved by soaking in cold water and then hanging over a slow fire in a small pot hung in a larger one filled with water. Add five gallons of hot water to the mixture, stir well and let it stand a few days covered from dirt. It should be applied hot, for which purpose it can be kept in a kettle or portable furnace."

Inasmuch as Ye Did It Unto One of the Least of These, Ye Did It Unto Me

This is National Red Cross week, so designated in a special proclamation by President Wilson at the request of the Red Cross association. During these seven days the people of this country are asked to contribute $100,000,000 for this great, Christ-like organization that it may be enabled to carry on successfully its world-wide work in the relief of suffering and the saving of lives that would otherwise be sacrificed through the horrors of this, the most gigantic and inhuman war in the world's history.

An Organization for Rescue.

The war is on and uncontrollable. Daily it takes its toll of life; daily it leaves on the field of battle hundreds and thousands of men of many nations, wounded and suffering, to perish if human kindness does not rescue them.

It is the self-imposed work of the Red Cross to effect this rescue, and thousands of brave and noble men and women are on the fields of blood working with surgeon's instruments, ambulances, improvised hospitals, medicines and antiseptics. They know neither race nor nationality, for a life is a life, be it that of an American, German, Belgian, Englishman, Frenchman, Austrian or Turk. They comprise the only wholly neutral organization of international scope in the world today. Their work is wholly unbiased and unselfish. They are living and working and braving dangers in the spirit of Him who said: "Inasmuch as ye did it unto one of the least of these, ye did it unto me."

One Dollar Each Needed.

The 100,000,000 people of America are asked to contribute $100,000,000 for this great work—an average of $1 each. Many will give large amounts; some subscriptions will be in thousands of dollars. But the dimes and the dollars, or the pennies from the boys and girls, are needed and will, if given, relieve suffering and save lives.

The people of the northwest, in every walk of life, in the city and on the farm, must give their share. Some two and a quarter millions of people live in the four northwestern states, and no better expression of their prosperity and their loyalty to humanity could be made than their liberal response to this call.

Will Equalize the Duty.

Local organizations throughout the entire country are seeking an equitable distribution of this duty—for it is a duty—so that the contribution need not be burdensome to any one. One method followed in one county is the apportionment of funds to be raised in proportion to the assessed valuation of property in each school district.

There are many demands for money from many soruces at this particularly critical time in the history of the world, but behind none is there greater urgency or greater human appeal than that of the Red Cross, whose sole mission is to do good.

Pointers on Food Situation

Here is the food situation as summarized by Congressman Lever of South Carolina, chairman of the house committee on agriculture:

That the world is existing on a basis of inflated currency.

That there is a tremendous gold supply reducing the purchasing power of gold.

That in this country there is a greatly disturbed transportation system; a poor shipping system.

That we have a great shortage of terminal facilities at ports.

That we are in more or less of a condition of hysteria, causing individuals to hoard food.

That there is some food speculation and various and sundry things entering into it.

Here is the remedy asked by the administration—the passage by congress of a law that would give the president—

Power to prevent hoarding and monopolization of food.

Power to prevent extortion and extortionate prices and corners.

In extreme cases, authority to take over storage plants, warehouses, mines, factories, to operate them and sell the products to the people under regulations.

To require concerns engaged in storage warehousing to be licensed and to do business under rules governing their conduct.

In order to stimulate production of the farmer, to fix a guaranteed farmer's profit.

To handle in the most effective way, either through regulation or by absolute prohibition, the matter of speculation in the necessities of life, including fuel, clothing, foodstuffs.

Power to regulate the amount of grain that may be used in alcoholic drinks, and even in nonalcoholic drinks, or to prohibit the use of grain in beverages if in his discretion he thinks it wise to do it.

Objection is heard at Washington and elsewhere that these powers are too sweeping to be intrusted even to the president of the United States. Chairman Lever answers these objections.

"The thought is in the minds of all of us who are in charge of this work that, while we are granting these very extraordinary powers to the president, the probability is it will not be necessary at any time to use any of them, except in exceptional and sporadic cases," said Mr. Lever. "In other words, we believe that the majority of the business people of this country are patriotic and willing to do their share in this emergency. But we recognize there may be a small minority over whom we must hold the power of the law. This bill really is more for the psychological effect—putting the fear of God into the hearts of those who will rob the people.

"And then we feel that putting into practical operation the provisions of this bill should be done in such a way as to give the least possible disturbance to the existing machinery of business. In other words, we are living in very abnormal times, and we can make them very much more abnormal by disturbing the machinery under which we are living. We hope to get the results outlined in this legislation without much disturbance.

"I believe the situation will get better; that it would have improved without this legislation; that it will immeasurably improve with it."

Washington Portraits No. 20.

H. E. Goldsworthy.

H. E. Goldsworthy, a prosperous farmer near Rosalia, in Whitman county, was born and raised on the farm that he now operates and has spent the greater part of his life on this farm. His training in agriculture has been a lifelong experience, supplemented by a four-year course at the state college. Mr. Goldsworthy believes in utilizing every acre every year as far as possible, and is now working toward that end. He hopes to find that peas are a great help, along with the other legumes. Mr. Goldsworthy also believes in coordinating live stock with grain growing, thereby consuming the forage crops that replace the summer fallow. He has not entirely eliminated the summer fallow, but hopes to in time. He is personally inclined to sheep, as he finds them the most profitable and also takes greater pleasure out of the handling of them.

The next in the series of Washington portraits will be that of R. P. Fuller of Castle Rock, and will be given in next week's issue of The Washington Farmer.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Where Labor Is Not Lacking

Secretary of State I. M. Howell announces from Olympia that his office is swamped with applications by persons desiring to get employment checking the names to the referendum petition just recently filed against the bone dry prohibition law. Several times as many persons want that bit of employment, which would last at the most not to exceed 30 days, as can be employed. Does this indicate a labor shortage?

It is one of the most distressing evidences of such shortage. It indicates that there are people in this state who need employment, but who want to pick their work where conditions of comfort and ease predominate. These same people, at least a large percentage of them, could find employment and lots of it if they would appeal to the farmers of the state with half the zeal they are spending on Secretary Howell. It may come to a point where Uncle Sam will have to pass another army conscription law and invite these people to seek employment where it is needed and where they can earn the wages they receive.

Food Legislation Should Be Rushed

President Wilson will make another appeal to congress to speed up action on his food control measures. A delegation of labor leaders, led by Samuel Gompers, president of the American Federation of Labor, and accompanied by a number of congressmen who had grown impatient over dilatory proceedings in the house and senate, called on the president Monday and asked him to go before congress with another urgent message.

Mr. Gompers fears that if the food control bills are not passed before July 1 it will be too late. By that time, he pointed out, the crops will be on the move, or at least contracted for, and the United States may find itself in a plight similar to that of England when she first began to cope with the food problem.

The danger is not imaginary. The grain harvest is well under way in Texas and Oklahoma, and a few weeks more will carry harvesting operations into the wheat belts everywhere. Uncertainty hangs over the country, and in justice to the farmers, they should know quickly on what basis they are to market their products.

Producers, organized labor and the general consuming public have expressed their approval. They are for minimum guaranteed prices for the producers and maximum prices beyond which dealers shall not go in their dealings with the consuming public.

Why, then, this protracted delay? Is it to be attributed to congressional inertia, or to secret manipulations by powerful and influential speculators?

We Live in the Zone of Plenty

Louis W. Hill, chairman of the Great Northern railway, says it is less spectacular work to feed the world than to fight a nation's battles—but, after all, no less important.

Mr. Hill grows eloquent in letting the nation know the great part the northwest is playing in this tremendous work of winning the war on the fertile soil of the United States. He terms it the country's "zone of plenty," and gives these startling statistics:

With less than 6 per cent of the country's population, it produces 27 per cent of the total agricultural output of the entire nation. It produces about 200,000,000 bushels of wheat a year, 30 per cent of the nation's total; 32 per cent of the rye; 21 per cent of the oats; 52 per cent of the barley.

It mills 38 per cent of the flour; it raises 99 per cent of the nation's flax. Twenty-five per cent of the nation's bread is spread with butter from this "zone of plenty."

Minnesota alone produces 62 per cent of the iron ore of the United States, Montana 16 per cent of the copper, and the northwest about 40 per cent of the lumber.

And Mr. Hill might have added that the Coeur d'Alenes produce about 35 per cent of the lead mined in the United States, and Montana fully 10 per cent of the country's wool clip.

These are the records of normal times, and now that the nation is at war the great northwest will do better still.

Yet men still living remember the northwest when it was entirely in the wild. Sixty-four years ago, when Isaac I. Stevens, Washington's first governor, rode a horse from St. Paul to Olympia, he found this vast region all Indian land, with hardly a furrow turned between the Mississippi and Puget sound.

Puzzle of Gasoline Supply

With the amazing increased use of automobiles, tractors and other gas engines on the farms of the United States the problem of finding substitutes for the rapidly exhausting gasoline supply takes on increasing gravity. Already the country feels the pinch of rising prices.

Van H. Manning, director of the United States bureau of mines, discussed this problem with much frankness in an address at Washington the other day before the Business Publishers' association. Mr. Manning reminds us that there were 2,750,000 automobiles in this country in 1916, an increase since 1910 of 2,350,000. These automobiles used a billion more gallons of gasoline last year than were used in 1910.

The total gasoline production last year was 54,000,000 barrels—more than half a barrel for every person in the United States. A little more than half of that, 28,000,000 barrels, was consumed by automobiles.

> "The apparently unsolvable puzzle," said Director Manning, "is that while we have been increasing our production of gasoline the production of automobiles has increased 200 per cent above the increase in gasoline production. Substitutes for gasoline, such as the products of the distillation of coal, are being used at present in Europe for motor fuels, and may in time be used for that purpose in this country, as many byproduct coke ovens are being constructed."

We turn to science for the answer to this problem. In bygone ages, when mankind was still bound to superstition and ignorance, credulous people carried their puzzles to professional soothsayers and oracles, and precious little information they ever got that was of any real benefit to any one.

Now mankind turns with ever-increasing faith and trust to clear-eyed, radiant Science, and seldom with disappointment.

The Slacker

The slacker is a man who is not willing to do his plain duty. That duty may take him to the trenches in northern France. It may keep him on the farm; it may not make him a hero in the eyes of his friends. He knows, though, down in his heart, whether he is doing his duty or not.

The shame of a slacker does not come from others, but from himself.

Washington Gleanings

Rural free delivery has been established at Keechelus, Kittitas county, to serve 100 families.

More than $100,000 worth of public improvements will be completed at Aberdeen during the summer.

The North Yakima Commercial club is taking the lead in launching an evaporator campaign for the Yakima valley to help in food conservation.

Eighty farmers of the Wilson Creek district recently purchased the Wilson Creek state bank at Wilson Creek from the Union Securities company of Spokane.

Thomas Cooper, living south of Garfield, recently sold 42 hogs to M. D. Overby, and received a check for $1277.10. The hogs averaged a little over 200 pounds.

President E. E. Richards of the American Poultry association has called upon the poultry men of the United States to extend their hatching through the months of June and July.

The Spokane Farm Loan district is taking the lead probably of the entire nation in application for loans according to President D. G. O'Shea of the Northwestern Farm Land bank, located at Spokane.

J. S. Barbre of Creston, county president of the Farmers' Educational & Cooperative Union of America, has called the county convention to convene at Lamona on Friday and Saturday, June 22 and 23.

J. Sheuerman of Walla Walla has bought the Len Jackson clip of 31,000 pounds at 47 1-2 cents. Mr. Jackson received a check for $14,617.15, which, however, did not include the payment of 700 yearling wethers that he sold at $7, and 320 yearling ewes that he let go at $10.

L. P. Schumacher has sold his farm of 342 acres at Curtis to Carstens Earle of Seattle for approximately $44,000. Mr. Schumacher intends to buy another ranch in the Curtis district. He is a well-known breeder of Black Percheron horses and Red Polled cattle. Mr. Schumacher retains all his stock.

Fred Beeman of Pine Creek, Okanogan county, recently sold 1000 head of ewes for $18 a head to Vincent McKenna, representing the Portland Wool & Warehouse company. The sheep are extra good coarse-wooled Shropshire grades and were sold with the understanding there would be a lamb with every ewe.

Forest Supervisor P. T. Harris of Okanogan is in receipt of a message from the Portland office authorizing him to allow men who enlist in either army or navy to retain grazing preference without using the range during enlistment by filing a statement with the supervisor so that the range may be used temporarily during the absence of those who so enlist.

Apple dryers will be constructed at Walla Walla and at Dayton or Waitsburg this spring to take care of the surplus crop this year, a combination dryer for apples and prunes and soft fruits will be erected at Milton and an apple dryer will be erected in the Baker-Langdon orchard and the Gardena orchardists will arrange to ship their fruit to the Walla Walla dryer.

What Others Say

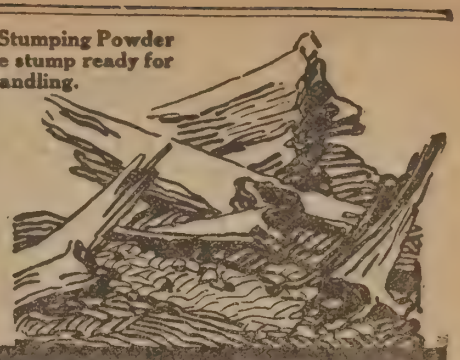
Hub, Centralia—That there can be an oversupply of substantial foods next winter seems beyond the range of possibility.

Banner, Buckley—Our plain duty of patriotism in war time is to keep the pot a-boiling. Waste is wicked, but legitimate spending a virtue.

Chronicle, Elma—A flea, for its size, is the champion broad-jumper of the world. And a grain of wheat, irrespective of size, is the new high-jumping king.

Argus, Mount Vernon—The sanest element in the consideration of the conservation of our resources and their economical consumption is the suggestion that the use of grains for the manufacture of liquors be prohibited.

Echo, Cle Elum—Our army of liberation will fight in Europe; but the real fight will be at home to back up that army with dollars. Every dollar that the people can save from current and from additional ecenomies will be needed.



The first step in stump blasting; making hole under the stump.

Loading sticks of Giant Stumping Powder in hole under center.

Giant Stumping Powder left the stump ready for easy handling.

Save money on your stump blasting

The explosives that get stumps out cleanest and cheapest are those that have a heaving and lifting effect, shattering the stumps just enough to break them up. Then you can handle them easily.

"The farmer," says an Experiment Station, "should use an explosive prepared especially for his work; one that stands all ordinary shocks of handling and transportation and does not easily freeze. He does not need and should not use the expensive nitroglycerine explosives." Thousands of farmers have taken this advice and have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always save them money because they go further than any other stumping powders Also, because they are made especially to suit *western* farm conditions and because they are always uniform in composition and action.

Giant Farm Powders—the product of the oldest manufacturer of high explosives in the United States—are the only genuine "giant powders" for agricultural use. They are made in two brands—Giant Stumping Powder and Eureka Stumping Powder.

Giant Stumping Powder is the ideal explosive for blasting stumps in wet ground. It keeps perfectly for months, resists water and chilling, and gets the stumps out economically.

Eureka Stumping Powder is the money-saving, low-freezing explosive for blasting stumps in dry soil. It costs less than Giant Stumping Powder and careful blasters save many dollars by using it for wet work also.

EVIDENCE

. I bought five boxes of your Stumping Powder and now I want to sell a lot of other powder that I have.
RUDOLPH STADELI, Silverton, Ore.

Your Stumping Powder has a wide breaking power and less fumes to contend with after being exploded than any other on the market.
G. L. METZGER, Hillsdale, Ore.

In using a thousand pounds of your Stumping Powder neither I nor any of my men had the least bit of trouble in getting the very best results. I have used practically every powder on the market and find there is more strength in yours. J. L. EIDSON, Silverton, Ore.

Your Stumping Powder shoots the roots and spreads wide in the ground instead of going down. It is the best powder we have used.
G. S. McCARTNEY, Russellville, Ore.

I find your Stumping Powder all you claim for it. ELI CLINKER, Camas, Wash.

I am a large user of powder in stump blasting as well as in grading roads, breaking boulders and making ditches. I get good results from the Giant brands all the time.
MICHAEL HARVEY, Charleston, Wash.

Giant Stumping Powder gives good results when all other means of removing stumps have failed.
ROBERT CHABOT, Moclips, Wash.

Make This Test

You want to clear your land as cheaply as you can. If you are not using Giant Farm Powders, try them *now*. Mark and mail the coupon at the right. We will have our nearest distributor supply you—at the lowest market price—with a 25-pound or 50-pound case of Giant Stumping Powder or Eureka Stumping Powder. Compare this with any other and *prove* for yourself that Giant Farm Powders will save you money, time and work.

We Issue Five Valuable Books for the Farmer

They tell and show how to remove stumps and boulders, how to increase the fertility of the farm by blasting the subsoil, how to have earlier-bearing, thriftier orchards by blasting holes for trees, and how to drain your land by using Giant Farm Powders. These books are written especially to cover Pacific Coast conditions, and will be helpful to every farmer. Choose the books that you prefer and *mark and mail the coupon.*

Increase Taxes on Idle Lands?

Great Need Is for More Small Farms in the Move for Greater Production; Uncultivated Lands Need to Be Worked

BICKLETON, Klickitat County, Washington, June 2.—The weather the last week has been favorable for the growing of grain after a cold and stormy spring. I judge about 70 per cent of the fall grain was killed out. High prices have increased the acreage of spring grain somewhat, but more noticeably potatoes. I think the acreage of potatoes this year increased 200 per cent; probably 10 times more garden truck is being raised. There is 500,000 acres in the eastern end of this county that can be irrigated from the Klickitat river that would increase the amount of food if the government would take hold of it. The present company does not seem able to finance the project, though they may make it a success yet. Most of the farms here would not need to build a house for a hired man and family. They already have such houses on additional farms they have bought and absorbed in their own holdings, but few hired men will stay the year round on one place. That is one drawback in this country, the large farmer buying out the little one. There would be a greater production of farm produce if the farms were smaller and better cultivated. Most all large farmers have some land lying idle that they do not get time to put into cultivation. This land should be producing something. You can hardly blame a man for buying land, but if a man were taxed double on land that is lying idle, it might be a solution to the problem. It might cause him to sell it or rent it to somebody. BERT FAULKNER.

Are Slaughtering Calves.

GIG HARBOR, Pierce County, Wash., June 3.—Considered relative to the advance of settlement which goes forward slowly, but steadily, live stock has certainly decreased in the last year or two. The high prices for feeds and hay mainly accounts for this falling off. If our farmers could raise enough rough stuff to adequately supplant the alfalfa which now comes from the east of the mountains, they could make shift to get the mill feeds even though extraordinarily high, but it is impossible to do a paying beef or dairy business here and buy both, or the main part of them. Cows have been culled out and beefed quite extensively. Most of those remaining will, no doubt, be held now until fall feeding time again arrives when the butchery will commence again. The local markets report heavy receipts of veal calves from local farmers. Only a few of the best are being raised.

There is a desire and quite an effort to increase the pig growing, but the scarcity of brood sows at this juncture rather limits the actual increase. This pork line would seem to offer the quickest means of building up the very low meat supply. No amount of preaching and campaigning will induce a farmer to push out in a line that he has found unprofitable. Like Pickwick he would do it for his own sake if he did it for anybody's sake. I have no doubt there will be a steady and rather rapid increase in pig growing here, but never of beef production. The conditions here are not favorable to the large production of beef.

W. D. BOYNTON.

Are Conserving Calves.

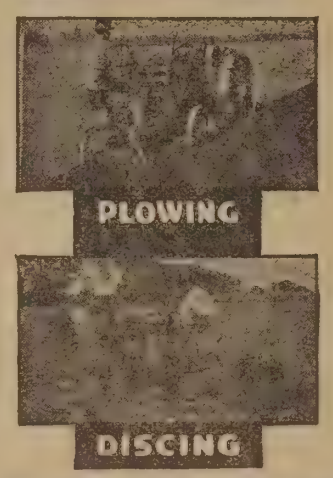
CASTLEROCK, Cowlitz County, Wash., May 26.—This has been an unusually cold, wet, backward spring and the high water expected on the low lands, has kept back the plowing and planting that is generally done at this time of year. Already the water from the Columbia river is crawling over the flat, low land in the lower part of the county. Arrangements are made for the stock and tools on higher ground. A new order of conserving the young calves has been started among the dairymen. Instead of vealing them they are carefully housed and fed on skim milk and whey, with a liberal amount of oil meal and middlings. This is one way of increasing our stock; another would be for each farmer to get a few sheep to run in the brush and logged lands that can not be used for the milch cows or young calves. Experience has taught many of the stock men that sheep prove nearly as good to browse and feed among the brush as goats, coming out in the fall sleek and fat with one or two lambs at their side, which has a decided, substantial way of increasing the meat supply. Too many of us in the past have been selling off our breeding stock for a big price, as we thought, and are left to pick up and recuperate our broken ranks. Nearly all of the farmers have finished planting and sowing.

The farm loan association appraisers are busy appraising the farms on which loans are asked. In most cases the loans asked for are far below the limit. Our creamery is doing a nice business paying the farmers about $3000 a month and the cream station nearly as much. This is a great help as it means ready money for the groceries and seed. A cheese factory has been contemplated and a farm of 200 acres bought and stocked for a nucleus, starting in with 60 cows. If this is done, several of the stockmen will put on more milch cows for immediate use. C. C. BROWN.

Have County Agent.

FERNDALE, Whatcom County, Wash., June 3.—H. B. Carroll has recently been appointed as county agriculturist of Whatcom county and will fill a long-felt need in this county, where each district had its own peculiarities, and a distance sometimes of as little as three miles makes a world of difference in the soil and therefore in the way it is farmed and the crops that are grown. On the high land in the Mount View and Alder Grove districts small fruits and berries thrive remarkably well and nearly every farm has its berry patch, while along the Nooksack, in the districts known as Evergreen and Fertile Meadows, the soil is so rich that the berry bushes all go to vines and what berries they do grow, while of excellent flavor to eat fresh, when canned tend to soften and fade. This is said to be due to the large quantities of moisture in the soil. Strawberries and raspberries sell at $1 a crate delivered, so why cultivate them on ground that is so much better adapted to hay and oats? Crops are looking fine in this locality.

MRS. JACK PLASTER.



Live Stock Decrease.

RAINIER, Thurston County, Wash., May 24.—The live stock in this community shows a decrease from one year ago. Last fall many head were shipped out and many more were killed for beef which sold for a low price. Now, after a long winter of feeding and a very late spring, the farmers are not disposed to sell. While feed is high, milk is high and pasture is coming on now. I think the farmers will keep all the dairy cows and heifers that they can raise the forage for, but the costly experience of the last two years of high-priced hay will make many farmers want to be sure that they have feed enough before they increase their herds much. The farmers will have to raise their heifer calves this season to avoid a shortage. There are no swine to speak of here, and sheep would be a novelty. Dairying is the principal business. L. F. DAVIS.

Two Hogs Bring $167.

Wood Lower of Colbert, Wash., recently delivered two Chester White hogs to the O. K. Meat market at Hillyard, Wash., that weighed, dressed, 984 pounds, for which he received 17 cents per pound, which netted him $167.27. They were weighed before they were slaughtered and weighed after. They had dressed away 17 per cent.

You Ride the Tool —Not the Tractor

See how the operator of a Moline Universal Two-Wheel Tractor *sits on the seat of the implement* just as he would if he were driving a team. You know you couldn't ride your horses and do a good job of cultivating, plowing, drilling, mowing or any other kind of farm work. Neither can you do it with a tractor. With the Moline-Universal Tractor you sit where you can watch the work the implement is doing. You simply guide it with the steering wheel—easier than you can guide a team—everything is right at your finger tips with plenty of power. You can work as many hours as you wish in all kinds of weather—on all kinds of jobs.

MOLINE ORIGINAL 2 WHEEL TRACTOR **UNIVERSAL TRACTOR**

Does All Farm Work Without Horses

(12)

—It is heavy enough to do all farm work, yet light enough to work on soft plowed ground without packing the soil.
—It will *cultivate as well as plow.*
—It will do your discing, harrowing, planting, mowing, haying, harvesting—in short, anything you can do with horses and all belt work on the average farm.
—It will do all this easier, quicker, cheaper than with horses.
—It pulls the load of 5 horses and furnishes 10 to 12 horse power on the belt.
—It is made and backed by one of the oldest, strongest, most dependable farm implement companies in the world, and built in the largest tractor factory in the world.
—It is the *only* tractor which will do all farm work without horses.
—It is low in first cost and inexpensive to operate.

The Moline Line Includes:
Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Spreaders, Mowers, Manure Spreaders; Plows (Chilled and Steel), Reapers, Scales, Seeders, Stalk Cutters, Farm Trucks, Vehicles, Wagons; also **Stephens Six Automobiles**

Costs Less Than 4 Horses Does the Work of 7 Horses

Write for our Catalog Folder and read how everywhere farmers are solving the power and hired help problems on their farms; how they are doing their farm work easier, better, quicker, and making more money. Liberty Bonds Taken

Treasury Flooded With Applications

That the people of the United States are loyal in the present emergency to the point of supplying their money to finance the war is indicated by the fact that the great Liberty loan of $2,000,000,000, the greatest bond issue ever authorized by the United States government, was oversubscribed by approximately three-quarters of a billion dollars. The bonds were sold in denominations from $50 to $100,000, but special urgency was expressed by the government officials that the largest number of individuals possible take bonds in denominations of $50, $100, $500 and so on. It is estimated that nearly 3,000,000 persons bought bonds. While the applications for bonds far exceed the number that will actually be issued, it is officially announced by the treasury department that all applications for the small bonds will be filled, and the amounts asked by the large investors reduced. The bonds bear 3 1-2 per cent interest, and may run for 30 years if the government desires, or may be retired at the end of 15 years if the treasury department is at that time ready to pay them off.

Selecting Big Army.

The great task of selecting the first units of the big army that will soon be in the process of organization from the 10,000,000 men registered for the selective draft is soon to be begun. A federal committee is now working out the methods of selection. Certain grounds for exemption are being worked out, based upon physical fitness of the enrolled men, their present occupational service to the country and the need of their remaining at home to care for dependents. How to secure the required number needed for the first units of 500,000 or more men from the list of men not exempted is the problem with which the committee is struggling. Every effort is declared to be used to prevent unfairness or political influence to manifest themselves in the selection. It is probable that each state will be required to furnish given numbers of men, and a secret system of selection used in each state to secure the required number from all those eligible.

To Develop Air Service.

It is anticipated that very soon congress will be asked to make an appropriation of $500,000,000 or more for the purpose of financing great development in the aviation service of the army. A separate aeroplane department is likely to be created, and the appropriation required within a year likely will reach a billion dollars. It is suggested that probably 5000 aviators and airships will be sent to the European battle front within the next two or three months to be of the greatest possible immediate service in lieu of this country's inability to place a large army in the field for several months.

Record Holstein Sale

Bull Calf Leads World at $53,200

The sale of Holstein cattle under the auspices of the national Holstein-Friesian Sale company, held at Worcester, Mass., this month, was one of the most remarkable in the history of the breed. The total receipts from 143 head were over $296,000, an average of $2073 per head. The top price, and also what is claimed as the world record bovine price, was established by the D. W. Field Farm company of Brockton, Mass., when they paid $53,200 for the five-and-a-half-months-old bull calf, King Ormsby Jane Rag Apple, consigned by Pine Grove Farms of Elma Center, N. Y. This calf was sired by Rag Apple Korndyke 8th, and his mother was the champion Ormsby Jane Segis Aaggie.

Another record was established when John F. Shannahan and Dodd Bros. of Buffalo bought Wandermere Belle Hengerveld for $18,300. This is claimed a world record for females of dairy breed. Another price equally interesting is that paid by the Hollywood farms of Washington for Glen Alex Queen DeKol, which brought $18,000.

Dairy Paper Appears

Inland Empire Association Aided

The first issue of the Inland Dairy News, a publication edited by B. E. Smead, secretary of the Inland Empire Dairy association, has been published and placed in the hands of the 300 members of the organization.

The association is one recently organized by the dairy producers in the district tributary to Spokane for the purpose of united effort toward the betterment of the dairy industry, especially in regard to improvements relative to the problem of distribution. The News is its official publication, designed to keep the producers informed on all matters of vital interest to their business. The first issue bristles with life, containing interesting articles by several authorities, together with facts and figures which tell their own story concerning many of the problems incident to the dairy business.

The association has enrolled approximately 100 dairymen within the last month, including now about 65 per cent of the producers in the district especially designed to be served.

Justly Proud of His Cow.

John Nordmark of Nine Mile, Spokane county, Washington, does not claim to have the champion milk producer of the county, but he is proud of his common every-day cow that he says produced 1386 pounds of milk during the month of May.

You Can Can Your Vegetables!

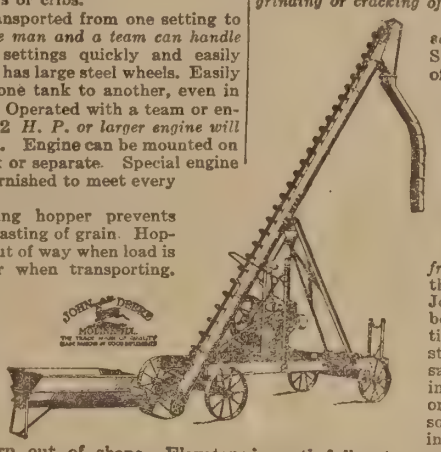
Because you tried to can some vegetables a few years ago and failed is no reason to think that you can not succeed this year, though there are thousands of housewives who are not planning to try it because they consider it a practical impossibility. Never was the need for canning and drying foodstuffs so urgent as now. And IT CAN BE DONE SUCCESSFULLY ON EVERY FARM in the northwest and WITHOUT ANY EXPENSIVE EQUIPMENT. Beginning with its next issue, that of June 28, The Farmer will substitute in place of the "Farm Garden" articles, which it has been running, a series of articles on "Farm Home Canning," giving information drawn from many sources of unquestioned reliability. If every farm home in the four northwestern states would this year can five gallons of vegetables it would mean many hundreds of tons, actual tons, of additional food for next winter. Read the articles. Study the subject. Talk it to your neighbors. Can!

Reduce the Cost of Handling Grain

Get the big profit from your crop. Save the cost of high priced sacks. Save the time and labor of sacking and tying. Handle your grain in bulk. Handle the biggest load in four to five minutes with no hard labor. Store your grain in tanks or cribs, or elevate direct into cars. All this is accomplished with a team of horses or engine and a

John Deere Tubular Steel Portable Elevator

Handles All Kinds of Small Grains



Elevates wheat, oats, rye, barley, flax, shelled corn and all small grains into tanks, granaries, cars or cribs.

Readily transported from one setting to another. *One man and a team can handle outfit.* New settings quickly and easily made. Truck has large steel wheels. Easily moved from one tank to another, even in rough fields. Operated with a team or engine power. *2 H. P. or larger engine will handle elevator.* Engine can be mounted on elevator truck or separate. Special engine drive jacks furnished to meet every requirement.

Big receiving hopper prevents spilling and wasting of grain. Hopper folds up out of way when load is driven up, or when transporting.

Wagon can be emptied from either side of hopper.

Built for years of service. Made of steel almost entirely. Cannot decay or warp out of shape. Elevator proper made of 3/16-inch steel well casing, 6-1/4 inches in diameter. Round steel flights run smoothly inside of casing. Chain is fastened in center of flight. Grain cannot get under chain or into sprockets. *No grinding or cracking of grain.*

Shafts operated in self-aligning boxes. Shafts cannot get out of line, cause heavy draft or breakage. Every part of the John Deere Tubular Elevator is designed and made to give satisfactory service.

Only steel tubular elevator on the market.

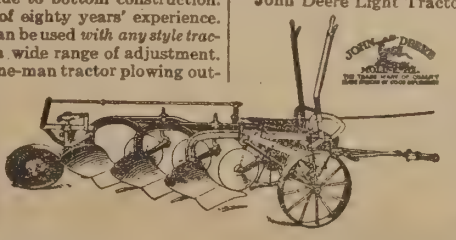
Big elevator book free. Tells all about the complete line of John Deere elevators, both portable and stationary; wood and steel. Tells how to save money in building a new corn crib or granary. Gives some valuable building plans. This book is worth dollars to any one who is planning to build a new granary.

When writing, please state the type of elevator in which you are interested.

The Bottom Is the Heart of the Plow

The right kind of plow bottom lays the foundation for the right kind of seed bed. Crop yield is increased The plow lasts longer and pulls lighter—a saving in actual cost, power, trouble.

John Deere Tractor Plows

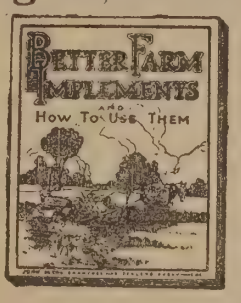


Have the Famous John Deere Plow Bottoms

The bottom on every John Deere plow is correctly designed—John Deere plow success is largely due to bottom construction. It is the result of eighty years' experience.

These plows can be used *with any style tractor.* Hitch has a wide range of adjustment.

They make one-man tractor plowing outfits. A pull of the rope by the man on the tractor lowers or raises the bottoms *high and level,* and the tractor does the work. The bottoms do not gather trash in turning or when plow is being transported.



John Deere Light Tractor Plows *can be backed up*—they have a stiff hitch.

Equipped with John Deere Quick Detachable Shares—*save eight to thirty minutes changing each share.*

Write for free booklet.

Big Book Free

Better Farm Implements and How to Use Them

America must produce more food. Labor-saving implements will play an important part in increased crop production.

This book tells all about a full line of labor-saving farming implements. Tells how to adjust and operate many of them. A practica farm implement encyclopedia. Worth dollars. Illustrates and describes the following machines: Walking and Riding Plows, Tractor Plows, Disc Plows, Disc Harrows, Spring Tooth and Spike Tooth Harrows, Corn and Cotton Planters and Drills, Listers, Alfalfa and Beet Tools, Grain Drills and Seeders, Riding and Walking Cultivators, Lister Cultivators, Mowers, Side Rakes, Loaders, Sweep Rakes and Stackers, Hay Presses, Grain and Corn Binders, Corn Cutters, Stalk Cutters, Kaffir Headers, Manure Spreaders, Portable and Inside Cup Elevators, Corn Shellers, Wagons, Farm Trucks and Buggies. This big book will be sent *FREE* if you state the implements in which you are interested and ask for Package X1670.

You Are Interested

In farm implements that save you money. The dominant idea back of the manufacture of John Deere implements is to produce tools that are economical. This means durability, easy operation and GOOD WORK.

The name "John Deere" on an implement means that these qualities are embodied in that tool.

A. B. NYSTROM, Editorial Contributor

Thoroughly Sanitary and Comfortable Dairy Barn.

The nearest approach I think I have ever seen to a thoroughly sanitary and comfortable dairy barn, at a cost in reach of a man of small means, is the one shown below, on the farm of the Avalon Dairy company, Holstein breeders, at Kuna, Idaho. It was not the desire for economy that prompted the plan of building so much as the hurry in its erection, for the company is able to build a barn of most any cost. But

it fills the requirements of a good, cheap dairy barn. The barn is 36x64 feet. The foundation and floor are of concrete. It is furnished with Star swinging stanchions, and the cows face in. The manger, made of slight slats, has no bottom, just clears the floor, and is set on hinges at each end so it can be swung back against the stalls, allowing the entire floor to be swept. The barn is merely a frame, 2x4 studding being used, with matched flooring on the sides, and is shingled. It is eight feet to the eaves, and the roof has a one-third pitch. The windows are made to drop in at the top or be taken out entirely. The only change I would suggest is windows a little longer and narrower, and slightly closer together.

As it stands the barn cost $1100. Nearly $500 of that could be saved by doing away with the concrete foundation and floor, but this would eliminate the best reature of the barn. It could also be made much warmer by ceiling inside, but that would require a King or some other ventilating system, and Mr. Austin found the barn plenty warm enough all the last cold winter, when full of cows. The only fault is that it sweats some during extreme cold weather. He plans to put a ventilator in the roof and see if that will stop the sweating. He will, however, have it so it can be closed in case it creates too much draught.

No doubt slight changes or modifications could be made according to the size of the herd and the location and climate. But as a satisfactory, cheap, but sanitary dairy barn it is certainly worthy of study. H. A.

White River Valley Cow Testing Results

Six hundred eighty cows were signed up for the third month's test in the White River Valley Cow Testing association. The average milk production per cow was 989 pounds and the average butterfat 36.88 pounds, according to the May report of Robert Cowan, official tester. There were four herds totaling 242 cows that had herd averages of over 1000 pounds per cow. Two of these herds had averages of over 40 pounds butterfat per cow. In the entire association 259 cows gave over 1000 pounds of milk; 180 gave over 40 pounds butterfat, 68 gave over 50 pounds butterfat and 13 over 60 pounds butterfat. There was a difference of 533 pounds of milk and 14.18 pounds of butterfat per cow, between the highest and lowest herd averages. The following is a list of cows giving over 1500 pounds of milk and 60 pounds of butterfat during the month of May:

Owner of cow.	Name of cow.	Bred of cow.	Lbs. Mk.	Per cent. of fat.	Lbs. butterfat
A. Zeeuw	No. 117	Grade Holstein	2102	4.3	90.39
A. Zeeuw	No. 32	Grade Holstein	2170	3.6	78.12
Cochrane Bros.	No. 94, stall 45	Grade Holstein	1984	3.6	71.42
Cochrane Bros.	No. 58, stall 58	Grade Holstein	1922	3.6	69.12
A. Zeeuw	No. 103	Grade Holstein	2030	3.3	66.99
A. Zeeuw	No. 111	Grade Holstein	2006	3.3	66.20

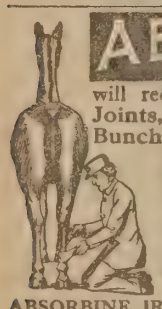
Cochrane Bros.	No. 99, stall 67	Grade Holstein	1686	3.8	61.54
A. Olson	No. 18	Grade Holstein	1922	3.2	61.50
A. Zeeuw	No. 11	Grade Holstein	1705	3.6	61.38
Cochrane Bros.	No. 91, stall 9	Grade Holstein	1962	3.1	60.51
A. Olson	No. 3	Grade Holstein	1632	3.7	60.38

May's Records Highest Yet



The Ahtanum-Wide Hollow Cow-Testing association makes the following report at the conclusion of its fifth month's work. Compilations made by Roy Larsen, tester.

The cows in the association made for the month of May higher records than any yet recorded. Not only was the highest individual record higher than those previously reported but the average of the association was also higher. Fifty-nine of the cows produced more than 40 pounds of butter fat for the month and 16 of that number produced more than 50 pounds of butterfat.

The following are the four highest producers in each age group:

Five years or over:

Name of Cow	Breed	Owner	Pounds Milk	Pounds Fat
Lady Mary Fayne	Holstein	Wm. Todd & Sons	1785	71.4
Edna Maria Jewel 2d	Holstein	E. B. Marks	1902	59.0
Rose	Grade H.	Mr. Sharp	1305	54.9
Jersey	Grade J.	Mr. Brady	1221	53.7
Four years and under 5:				
Nellie Fobes	Holstein	E. B. Marks	2253	70.3
Pieterta Beauty Tritonia	Holstein	E. B. Marks	1989	59.7
Cascade Johana Cornucopia	Holstein	Wm. Todd & Sons	1785	71.4
Bonnie Echo DeKol 2d	Holstein	E. B. Marks	1986	53.4
Three years and under 4:				
Violet's Wild Rose	Jersey	A. H. Huebner	909	43.2
Two years and under 3:				
Anna Belle	Grade H.	Henry Eno	969	48.6
Cascade Colantha	Holstein	Wm. Todd & Sons	933	40.2

You Need a New
DE LAVAL
SEPARATOR
NOW

1st If you are still using some gravity or setting process of creaming--

BECAUSE YOUR WASTE IS greatest and quality of product poorest in midsummer when the milk supply is heaviest.

BECAUSE TIME IS OF GREATest value on the farm at this season and the time and labor saving of the good separator counts for most.

BECAUSE THE SKIM-MILK IS poorest without a separator in hot weather and often more harmful than helpful to calves.

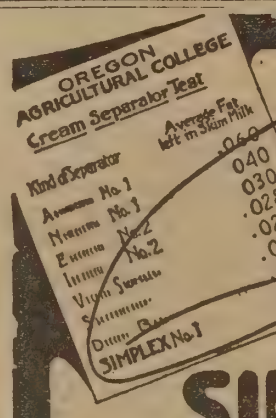
BECAUSE THE WORK OF A New De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

2nd If you have a very old De Laval or an inferior separator of any kind--

BECAUSE THE LOSSES OF THE poor separator from incomplete skimming and the tainted product of the hard-to-clean and insanitary separator are the greatest at this season.

BECAUSE OF THE GREAT economy of time at this season in having a separator of ample capacity to do the work so much more quickly.

BECAUSE THE NEW DE LAVAL is so much simpler and more easily handled and cared for than any other, and you can not afford to waste time these busy days "fussing" with a machine that ought to have been thrown on the junk-pile long ago.



BECAUSE THE DE LAVAL SEPArator of today is just as superior to other separators as the best of other separators to gravity setting, and every feature of De Laval superiority counts for most during the hot summer months.

These are all facts every De Laval local agent is glad of the opportunity to prove to any prospective buyer. If you don't know the nearest De Laval agency simply write the nearest main office, as below.

DE LAVAL DAIRY SUPPLY CO.

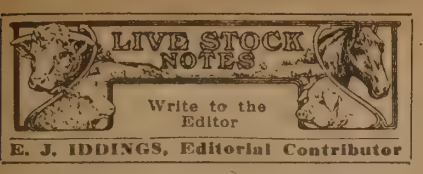
160 ACRE FARMS IN WESTERN CANADA FREE

Canadian Farmers Profit From Wheat



The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat at over $2 per bu. offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops

You Can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of Oats, Barley and Flax.

Mixed Farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

There is now an extra demand for farm laborers to replace the many young men who have volunteered for service in war. The government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

J. N. Grieve, Cor. First and Post sts., Spokane, Wash. Canadian Gov't Agt.

E. J. IDDINGS, Editorial Contributor

Classes and Grades of Swine.

A treatise on hog raising from the viewpoint of the packer has been compiled and is being sent out to the swine raisers of the country by Armour & Co. The booklet is the work of E. R. Gentry, general hog buyer for Armour & Co., assisted by Dr. R. J. H. DeLoach, director of Armour's bureau of agricultural research and education. It is not intended to supplant the excellent treatises on swine breeding put out by the government and by other learned authorities; on the contrary, it is designed to make those works more valuable to the man who desires to raise hogs for the market.

It describes the various classes and grades which are standard at the various big markets and explains the types which the packers are most anxious to get and for which they will pay the highest prices. The various cuts and the dressing percentages from the different grades are described and their bearing on the market values shown. The booklet is in no sense aimed to induce the farmers to turn toward certain breeds of swine, the intent being merely to acquaint the hog raisers with the needs of the pork packer.

The losses borne by farmers as the result of disease among the droves is dwelt upon and advice is given on how to minimize this loss. A chapter is devoted to the matter of government inspection and another to the interesting byproducts phase of the industry.

Northwest Live Stock Show.

Secretary Paul Clagstone of the Northwest Live Stock association reports that never have the prospects been so bright for a record breaking show at Lewiston, Idaho. The dates have been set nearly a month earlier than last season, November 8 to 15, inclusive, with three days between the close and the opening at the Portland show.

The Idaho legislature at its session last winter recognized the exhibition of northwestern breeders by making an appropriation of $10,000 cash. Several thousand dollars have been added to the liberal premium list, with special attention devoted to the carlot classes.

Exhibitors are already showing interest in the coming exhibition, and the secretary is getting letters announcing entries from many far away stockmen who have never shown at Lewiston, but who feel that at this time it is a patriotic duty to make sacrifices to aid the cause of live stock production in every possible way.

The premium list committee, under the ledership of Dean E. J. Iddings of the University of Idaho, has readjusted the classifications so as to correspond with the Chicago International and other leading shows of the country.

Dual Purpose Cattle

By PAUL E. TRIEM.

F. C. Sharkey of the Seattle Union stock yards is firmly convinced of the value of milking shorthorns under modern farm conditions.

"You can't get around the figures in the case," says Mr. Sharkey. "A shorthorn steer can be fattened on about half the feed it will take to finish a Holstein, for instance, and will probably command a dollar a hundred more when he is sold. Every dairyman has got to figure on a certain number of bull calves. With the straight dairy breeds these are more or less of a loss. With the dual purpose shorthorn, the steers can be finished for market almost as successfully as with a straight beef type breed, and you still have the milk pail to look to for the main profit.

"I had a practical illustration of the difference betwen the two types, beef and milk, when it comes to fitting for market, in the experience of one of our customers last winter. This man has been buying scrub steers and finishing them for some time. The premium of a cent a pound which he would have to pay for feeders of a better grade looked too big to him. Well, when he came here last winter for some feeders, there was nothing available except a bunch of poorly finished beef type steers. He had the feed, and he decided to take a chance. When the transaction was finished up and he had resold the steers, he came to me.

"'No more Holstein feeders for me!' he said. 'I've learned my lesson.'

"There isn't a valid objection to the dual purpose shorthorn," Mr. Sharkey concluded. "They'll make both beef and milk at a profit."

Balance Their Own Rations

W. F. Howard, breeder of Poland Chinas at Roswell, Idaho, on a Parma, Idaho, rural route, uses self feeders for his growing pigs. He mixes four parts oats, two parts bran and one part wheat and places tankage at one end of the feeder, in a separate compartment, as the hogs, Mr. Howard says, will balance their own ration when served cafeteria style. He has a very fine litter of pigs out of Hannah's Big Mollie, the 1916 first prize sow, that will enter the Futurity and give the others a run for their money. Mr. Howard's young herd boar, Belmont Hadley, is from the Iowa State college. He is by Varsity Hadley and out of Millie's Equal by Big Chief.

The four gilts shown in the picture were bred by E. D. Frazier of Missouri. They are Clover Blossom 1st, 2d, 3d and 4th, and are sired by Wonder King, son of Long King's Equal, dam Cloverfield Beauty 4th by Expansion Hadley.

H. A.

Percheron Stallions.

Wayne Dinsmore, secretary of the Percheron Society of America, is to be forgiven for exhibiting pride in the fact that in 20 states where stallions enrolment laws are in progress, there were 1275 Clydesdale, 2006 Shire, 2114 French Draft, 4212 Belgian and 19,199 Percheron stallions. Percherons, in every state, outnumber all the other draft breeds combined. In Iowa and Illinois, the two greatest draft horse producing states, Percherons constitute 60.68 per cent and 69.32 per cent of all pure bred draft sires. In Oklahoma 85.35 per cent are Percherons; in Kansas 77.65 per cent. In the entire 20 states, 66.49 per cent of the pure bred draft sires are Percherons, and in 10 of the leading states, on which the Percheron society published similar data two years ago, the percentage which Percherons bear to all pure bred draft sires has increased from 64 per cent to over 68 per cent, an increase of more than 4 per cent.

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

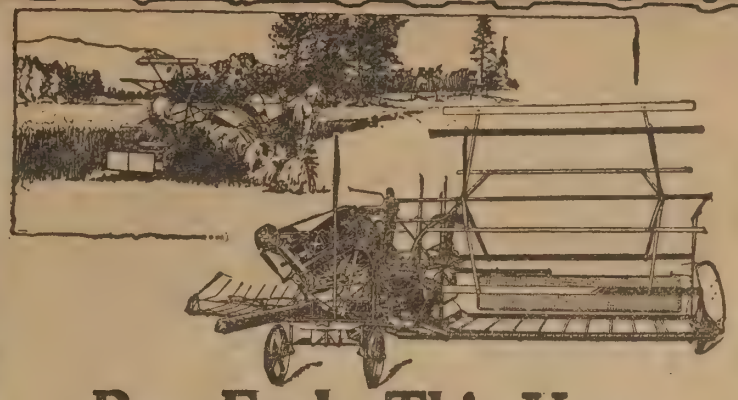
Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.



Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago

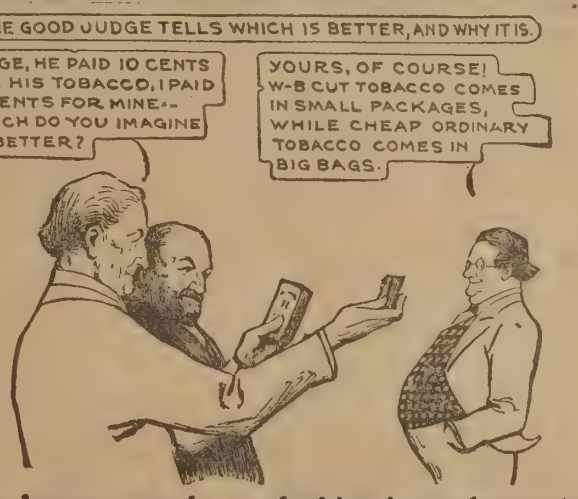
Buy Early This Year

THIS year, American farmers have need of first-class equipment in harvesting machines, twine, and binder repairs. Buy none but well-known, long-tried machines and buy early. The early buyer alone can be sure of securing the necessary repairs and new machines to take care of his grain harvest.



Buy good twine, and buy it now. This is no time to be thinking about saving a cent or two on twine, but to think of the dollars that good twine will save in the field. Our advice to every farmer is to buy at once the full amount he is going to need, and not alone to buy it, but to go to the dealer, get it, and take it home.

Champion, Deering, McCormick, Milwaukee, Osborne, and **Plano** binders now cost less in the amount of farm produce required to buy them than ever before. But prices of all manufactured goods are likely to go higher without much warning, while there is no chance at all for them to go lower this season. The safe thing to do, therefore, is to buy now, at present prices, for immediate delivery.

Your local dealer has done his share to insure the harvesting of your grain. See him as soon as you can and arrange for the repairs, twine, or new machines you are going to need this year.

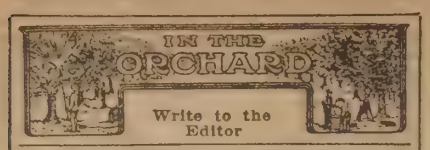
A good many people are looking into what makes men change over to W-B CUT and stick to it so. Tobacco is tobacco, but all chewing, isn't *all* tobacco. You don't have gummy excess sweetening to chew out of W-B CUT, before you get down to satisfaction. The shreds are tobacco, through and through—and the richest, sappiest tobacco that grows. You notice the difference at once—W-B CUT goes twice as far as ordinary plug.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City



Vaughan's Portable Drag Saw

WILL CUT 15 TO 20 CORDS OF WOOD IN 10 HOURS

Can be operated by one man. Two men can carry complete machine. 3½ H. P. gasline motor mounted on frame. One gallon gasoline required to cut 8 to 12 cords of wood. Engine can be used for other work without removing from frame. No gears, cogs, belts or pulleys. Friction clutch prevents breakage if saw pinches. Saw makes about 125 strokes per minute. Will cut any size log up to 6 feet. Sprockets and cranks, etc., made of cast steel. All working parts guaranteed against defects in material and workmanship.

Net cash price for complete machine as shown in cut, $140 f. o. b. Spokane and common points.

Can Government Help

Not long since, Professor Caldwell of the Washington State college lectured at North Yakima on the question of the best means of "Conserving the Orchard Wastes." The commercial club of the city had advertised it, and it was reasonably expected that a large number of fruit growers from all over the valley would be present. In this we were not disappointed; but the audience was not what some expected. I said to one man, "Are you going to hear Professor Caldwell this evening?" "No," he said, "I had intended to go, but I am too awfully tired." I went, and as I looked over the audience I knew there were others feeling the same way. One man dropped off to sleep and snored, much to the annoyance of the speaker and amusement of the audience. To my mind it was pathetic, for I knew he had worked from 4 o'clock in the morning with short intervals between for meals. He was about 60 years old and had not the vigor or rapid recuperating power of youth. He felt that he must work in order to grow the crop; that he must attend the lecture in order to learn how to best utilize the crop. But he had worked beyond his power of endurance. These are some of the farm problems. Can the government help us meet them? G. L.

Famous for Its Cherries

By HORACE ADDIS,

Most men and most towns or communities, if they become famous, do so as the result of some one effort or activity. The little town of Cove, which is in a cove on the edge of the Grand Ronde valley in eastern Oregon, is almost world famous for its cherry crop. Cherries from Cove took the grand champion prize for cherry display at the St. Louis world's fair and Karl J. Stockland, who kept up that display and is the largest grower of cherries at Cove, has the records to prove that Cove cherries have more gold medals than those of any other locality anywhere.

About two-thirds of the cherries grown around Cove are black or dark varieties and the other third are Royal Annes. The latter are contracted for Marischino cherries and are barreled in solution at Cove and so shipped, most of them to California. As high as eight or 10 car loads a day are shipped during the height of the season. As high as 80 carloads have been shipped in a season and Mr. Stockland and others estimate this year's crop at 100 carloads. For the black cherries the growers will receive at bulk prices about $65,000 and for the Royal Annes $20,000 or $25,000 more.

Cove is a little place of less than 500 inhabitants, but during the cherry packing season 400 or 500 pickers from outside the district are employed. Cove does not stop entirely on cherries, however. About 40 cars of prunes were shipped last year. They are a very sure crop, while the cherry crop is sometimes light. The apple crop runs from 20 to 60 cars, but some of the apple trees have been cut out. There are a number of young pear orchards, a very few peaches and apricots and from 5000 to 7000 crates of berries are annually shipped.

In 1901 Karl J. Stockland purchased a farm at Cove, Ore. He bought it on time, mortgaging a span of mules to make the first payment. In 1904 he planted the first orchard of sweet cherries of commercial size, east of the Cascade mountains, and then and there was started the industry that has made the little community famous and prosperous. He set 1000 cherry trees on six and a half acres, a double stand or half of thin fillers, which have later been taken out. In the meantime practically the entire community went into the cherry raising and its success is attested by the heavy annual shipments this year expected to reach 100 carloads. That orchard has now been bearing 11 years and taking good, bad and indifferent crop years and markets, it has averaged $300 per acre, net, annually.

Mr. Stockland made a display at the Panama-Pacifc exposition at San Francisco that attracted much attention, but would have attracted much more this year. It showed the American flag and eagle and liberty bell, all worked out in different colored cherries.

THE FARM GARDEN

Article 17.

Not Too Late Yet

Thousands of people in the northwest are allowing the spring season to pass without systematic planting of garden stuffs. Owing to the unusual lateness of the coming of warm weather, it is not too late even now for much to be done.

Where general conditions are favorable, garden peas, one of the vegetables that are not only luxurious food articles, but well nigh necessities, may still be produced successfully. Peas should be planted early, as they are very resistant to frosts, but since they can be planted successively for green peas during the later summer, they can still be planted for considerable production. Not only are the peas excellent and valuable food as fresh vegetables, but they are suitable for canning for winter use.

Squashes and pumpkins should be planted yet in localities at all suited for their production, if they are not already in. The late varieties, such as the Hubbard squash, should not be attempted unless the particular locality offers assurance of a long, warm season. But the more quickly maturing varieties may be produced successfully in many cases. Where the ground is well warmed up as it is in most districts now, the seed will germinate quickly, and with proper cultivation rapid growth can be reasonably expected. As fall frost time approaches it is advisable to cover the pumpkins or squashes with leaves or straw of evenings to protect them against damage should the vines be killed by the cold. Unless actually frosted a little themselves, the killing of the vines will not prevent fairly satisfactory maturing of the fruit. After frost, or whenever the squashes or pumpkins are ready to harvest, either store them in the field on and under straw or something of that character, or put them away in a cool, but dry shelter, such as the barn loft or the attic.

Sweet corn should be grown in greater abundance in the gardens this season than ever before. Many of the best corn growers have not yet put in their corn, owing to the lateness of the season. Every person with room should have a tract of corn large enough to provide plenty of fresh ears for the table during the summer, and plenty for canning for the winter. Canning corn is not as difficult as it was formerly considered to be. Simple methods have been devised. Every farm home should plan to can or dry large quantities of vegetables and fruits of various kinds this season. The United States is the only nation at war now where the people are not limited in their food rations, and no one should be surprised if before another crop season comes around in this country the government commandeers the food in general storage.

OWENS Double-Cylinder
Bean and Pea Threshers

From the largest to the smallest size, embody the essential features necessary to **thresh all varieties of peas and beans** direct from the rankest vines without splitting any of the seed.

They have more separating space and capacity than any machine on the market.

If you need a pea or bean thresher at all, **get an "Owens."**

They are the standard the world over. Built in sizes to suit any size grower from the smallest to the largest, and there are none better at any price.

Add $600,000,000 Worth of Food

The statement made at the recent agricultural conference at St. Louis that the poultry products of the United States could be doubled within a year means that if everybody in a position to help did their part $600,000,000 worth of food would be added to our supply this year.

This includes both meat for the table and eggs. Very few farmers practice a systematic plan of disposing of their fowls after they have ceased to be productive, although it is well known that fowls of the heavier breeds, such as the Plymouth Rocks, cease to produce a profitable number of eggs at the end of their second laying year, and that this holds true of the lighter breeds, such as the Leghorns, at the end of their third laying year. All poorly developed chickens should likewise be culled out and used as meat.

Caponizing the cockerels that are not intended for breeding purposes will not only increase their size, but will place a more desirable poultry meat on the market. Another practice that should be adopted more widely is that of fattening all chickens that are to be marketed before they leave the farm.

The greater production of turkeys, ducks, geese and guineas, all of which can be profitably raised and a ready market found in most sections, would increase the supply of poultry meat considerably. The production of ducks especially should be emphasized at this time, because of the rapidity with which they grow. It is estimated by poultrymen making a specialty of growing ducks that the feed cost per pound of producing duck meat ranges from 8 cents to 12 cents, depending upon the current prices of grain and other feeds.

The number of marketable eggs can be increased by following a few practical suggestions. Among the most important of these are the production of the infertile egg after the breeding season is over, and the proper handling of eggs by the farmer before sending them to market. An increased production of ducks' eggs is advisable where available markets are found.

The Motor Car
On the Farm

Northwestern distributors for the Cole Motor Car company of Indianapolis, Ind., have announced that the company they represent has not only offered to accept Liberty bonds in payment for machines purchased of them, but that it will pay a bonus of two per cent on all bonds so applied.

In other words, if the purchaser applies $500 in Liberty bonds on the payment, he will be credited with $510. If he pays $1,000 in Liberty bonds he will be credited with $1020.

This is but one evidence of the many forms of patriotism displayed by industrial plants throughout the country in their efforts toward arousing patriotic interest on the part of their patrons.

This story, told to the writer recently, is worth repeating:

"The other day a friend and I, while driving around a curve on a narrow road, found it necessary to turn into quite a little mudhole and let another car pass. I killed my engine and by the time it was started again we had settled quite a little in the soft and very slippery mud.

"We found we could go neither forward nor backward as the back wheels couldn't get a purchase. They simply went around while the car remained serenely in one place.

"There wasn't a house in sight and the chances for another car coming along were not encouraging. We tried going forward and backing up—but the car stayed right where it was.

"Then a clever idea that I had read about somewhere came to me. We cut two stakes and drove them into the road back of the car. Then took a couple of pieces of rope that I always carry along. One end of each rope we tied to a stake and the other end passed under the hubs of the rear wheels and tied to one of the spokes. This time when the gears were thrown into reverse the car backed right out of the mud in a jiffy."

Every once in a while we casually read of some predicament of a brother motorist and of some novel way of getting out of it and then some day we suddenly find ourselves in the same fix

Puyallup Summer Session.

The Puyallup summer session of the state college of Washington will be held June 25 to August 3, 1917. Write to the Registrar, State College, Pullman, Wash., for the bulletin which makes a most interesting announcement of the courses carried on at this summer school under the leadership of Principal Frank O. Kraeger, who is well known as the head of the department of elementary science at Pullman and yet better known throughout the state as lecturer on country life, community problems and industrial education. The Puyallup summer session always has been given chiefly to instruction and practice in the various branches of agriculture, horticulture, manual training and domestic science. The recreation side has been developed until a satisfactory balance of work, play and study has been attained. The location of the Puyallup summer session is ideal.

The Puyallup experiment station offers its wealth of scientific and experimental agriculture for observation and study. About the school in every direction lie the farms, gardens, dairies and berry fields of the Puyallup valley. The mills, factories and commerce of Tacoma are but a few miles away. A yeast plant, condensery, smelter, power plants, canneries, lumber mills and furniture factories are within a short distance. Land and water transportation is at hand. The region is a vast laboratory of geography, forestry, botany, agriculture, horticulture, manufacturing, commerce and transportation. The summer session has for its headquarters the Puyallup high school—a modern brick building, well equipped, with separate buildings for agriculture and manual training. The experiment station, which is made the basis of much of the scientific teaching, is less than a mile away.

Feed Your Calves at Half Cost

A properly constituted Calf Meal is equal to and better than cow's milk for raising calves, because it takes the place of milk, thus saving 50% of your feed bills.

Loss From Weeds Is Enormous

(Continued from page five.)

alfalfa seeds sown, 85 would germinate, and 15 would be "dead." The law says that 80 alfalfa seeds in a hundred must germinate; that is, it must run 80 per cent viable. So alfalfa was 5 per cent above the legal requirement for viability.

The seeds which fell below the legal standard for viability were English rye grass, German millet, Kentucky blue grass, orchard grass, red top and wheat. Probabilities are that the loss in percentage of germination or "viability" of wheat was due to injuries to the grain in threshing—too high speed of the cylinder, for example, which cracks the grain slightly.

During the last year, 32 per cent of all samples tested contained lamb's quarters. Probably the worst weed occurring in large quantity was green foxtail, which occured in 30 per cent of all samples tested. Barnyard grass occurred in 18 per cent of all seed samples examined. This is one of the worst weeds in the state. It can even "run out" dandelions—but there is no consolation in that fact, since the plantain is not as pretty in a lawn as is the blossoming dandelion. Sheepsorrel was found in 15 per cent of all farm seeds tested. Curled dock occurred in 11 per cent of the samples tested, Russian thistle in 8 per cent and so on down. Other weeds were tumble weeds, several of the brome grasses, a number of mustards, milfoil—or yarrow—rag weed, Canada thistle and a few others.

As one would expect, more than one variety of noxious weed are often found in these tests. In 1914, 13 per cent of all alfalfa samples tested contain no weed seed. Twenty-five per cent of the samples tested contained only one variety of weed. Seventeen per cent of the samples tested contained two varieties of weeds. Twenty-five per cent contained three weeds; 8 per cent contained four varieties of weeds; 9 per cent contained five varieties of weeds; 3 per cent contained six varieties of weeds.

The annual loss which Washington farming suffers from weeds is probably between fifteen and twenty-five million dollars.

About 80 per cent of the noxious weeds in Washington are of foreign origin, and have come in by means of farm seeds.

Weeds injure farm crops in several ways:

1. They rob the soil of food materials which would otherwise be available to useful crops.
2. They "crowd" the farm crops, cutting them off from sunlight, and occupying the root space needed by the former.
3. It takes as much moisture to produce a good crop of weeds as it does to produce a crop of wheat. Eastern Washington farmers are sometimes not alarmed by weeds growing on their summer fallow, and think if they keep them from seeding, that is sufficient. It is not. The moisture consumed by the weeds is needed for wheat, or other useful crops, and the latter are robbed by the weeds.
4. As well as consuming soil moisture, they rob the soil of plant food.

Morning Glory.

It is ubiquitous, omnipresent and noxious among farm weeds. Yet, it has a beautiful flower and by its beauty people often are beguiled into letting it stay on the place till it has worked havoc in field, orchard, garden, lawn. It is also called bind weed. It reproduces by an abundance of seeds and an equal abundance of underground stems or root stalks in which it accumulates large quantities of excess food material. In this respect it has somewhat the instinct of a squirrel storing nuts for winter. If the top is cut off the morning glory or bind weed immediately repairs the damage to its household by drawing upon the food supply stored in its roots for just such an emergency, and growing a new top. The top of the plant—or leaves—manufacture the food which is sent down underground for storage in the roots. So if one keep on cutting off the tops, after awhile the plant will have exhausted the food in root storage—and then starves to death. Also, if one throws straw over patches of bind weed and keeps the sun away from the leaves they are powerless to manufacture food, and the plant starves. Hogs like to eat the underground stems in which its reserve food is stored and will root industriously in the soil where these roots and stems are.

Shepherd's Purse.

Though it belongs to the mustard family it is not as bad as the Jim Hill or tumbling mustard. It produces enormous quantities of seeds—begins in March and April and keeps it up till snow. In fields, gardens and lawns, it can be controlled by rotation with cultivated crops. One of the worst things about this weed is its immense prolificacy.

43½ Bu. Wheat Per Acre

Mr. W. Loat writes: "I had 203 acres of wheat that averaged 43.5 bushels an acre, 17 acres of oats that averaged 65 bushels, 25 acres of barley that averaged 50.5 bushels an acre."

This is only one of thousands of good reports coming from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected, centrally located lands close to the railway, that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the best grain land, land also adapted to dairy and mixed farming. Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.

Free Homesteads

If you have not the capital to buy land you can still get one of the recently surveyed 160 acre fertile Homesteads along the Canadian Northern Railway, the newest transcontinental railroad, "The Road to Opportunity."

ure needed by useful crops, weeds also consume soil nitrates and other plant food. If they are retilled into the soil, the soil nitrates are recovered to a certain extent; not so with the moisture.

5. A number of weeds are somewhat poisonous to the soil, giving off "toxic" substances injurious to other plants.

6. A great many weeds harbor fungous diseases and insect pests which are harmful to farm crops. "Rhizoctonia" in Washington, the causative agent of tomato blight in the Pacific northwest, is harbored by dandelions, some of the mustards, sour dock, lambs quarter, the sow thistle and a few others, perhaps. If these weeds are permitted to grow in tomato-producing sections year after year it is impossible to get rid of the tomato blight—which is also a serious disease of beans, cucumbers, sweet peas and potatoes.

The native home of the "potato bug" which now is making costly inroads upon the potato crop of the northwest is on the "horse nettle," a weed in Colorado.

Recommendations.

Sow only clean seed.

Never allow weed seed to ripen.

Disk stubble often and induce weed seed to germinate. If the plants start in the fall, most of them winter kill.

Cultivate frequently. Ordinary farm tools are usually sufficient to kill weeds.

Get some sheep—they are highly efficient destroyers of weeds.

Diversify—nothing is so conducive to weeds as continued cropping to one kind of crop.

Be suspicious of every new plant that appears on your farm. Hoe it up on general principle till you know whether or not it is danger. Send any "unknown" to the department of botany of the state college, Pullman, Washington, for identification and report. Take no chances.

There is no royal road to weed eradication. The only thing to do is to get them out of the ground by plowing, cultivation, hoeing, pulling or similar means. Get the first ones.

Common Cheat.

It takes this name, probably because it resembles grass. It grows in waste places, and is relished by sheep, the grazing of which is about the most efficient means of getting rid of it.

Sheep Sorrel.

It is also called correl grass and red sorrel. It produces seeds abundantly, and is frequently found in commercially sold forage plant seeds such as alfalfa, clover and alsike. It grows also by underground stems. About the best way of getting rid of it is to put the ground in a rotation of crops, one being a cultivated crop.

Curiously enough, this plant seems to thrive better on poor soil than on good soil. Soil that is somewhat acid is congenial to it. Enriching the soil by means of lime, or barnyard manure discourages its growth and correspondingly encourages the growth of useful crops.

"CATTERLOUSE"

Self-Laying Track Tractor Attachment for Automobiles.

This attachment has a self-laying track made of pressed steel lugs riveted to flexible member which makes track absolutely jointless and durable without the usual upkeep expense incident to self-laying tracks with joints. All gears enclosed.

Attached to axles of car only with but five bolts. No part of car altered—simply remove the rear wheels. Pulls two 14-inch plows or three sections of harrow. Will haul four-ton load on road. All this done on high gear.

Built regularly for Ford cars—and furnished with extra water tank and circulator at only **$210.00** f. o. b. Spokane, Wash.

Built heavier in proportion for larger and more powerful cars at additional cost.

This is a practical attachment for practical purposes. It does its work in a satisfactory way and it appeals to farmers and fruit growers because this type of track meets all soil conditions.

Large numbers of these attachments now operating successfully in orchard and grain fields of the Pacific Northwest.

Order now for early delivery.

Every Acre-Every Fence Corner Must Be Tilled This Year

DEALERS!

Here's a light tractor proposition that you can sell under an absolute guarantee of satisfaction to the buyer. The pioneer Ford tractor attachment of them all—a tried and **proven** success on thousands of farms—we are offering you for a short time only, the opportunity to sell TRACFORDS in **your** territory on most liberal terms.

TRACFORD agents have sold as many as 15 to 20 machines in a single demonstration—hundreds have sold out their allotment in a few days. So write or wire us for dealer information **at once!** This offer will remain open for only a short time.

Write or wire us TODAY

The food supply of the world is practically exhausted. Our success in the war is dependent upon the American farmer—and upon America's 1917 crops.

To meet the demand, every tillable acre must be put under cultivation—every small tract and fence corner must be profitably planted. The foresighted business man is planning on plowing every foot of his ground—*and plowing and planting right up to the fence line.* That is why thousands of American farmers are buying the

TRACFORD

"The Tractor Universal"

$125 F.O.B. Detroit

—the dependable and **proven** attachment for converting Fords into light farm tractors. With the TRACFORD, you can quickly turn your Ford car into a powerful tractor unit—a tractor light in weight and with a short turning radius, making it a most practical plowing machine for cultivating the open field—the small strip of land. Its short turning radius makes the TRACFORD splendidly adapted for orchard work—for working in and around—"to" and "away" from the trees.

The TRACFORD is the tractor unit for **you**—for **your** work—and **your** farm.

Read Your History As It Happens

Do you realize that the days we are living through now are among the most momentous in the history of the world? Our country is making preparations for war on such a gigantic scale that the effects are felt in every home throughout the land. Our sons and brothers will soon be marching in the military encampments. In a few months they may be fighting a ruthless foe in foreign trenches, while our sisters and daughters are nursing wounded soldiers of France, Belgium, England and America. It is your duty, it is your opportunity to keep yourself and your family thoroughly in touch with these world-quaking, home-shaking events. Do not stop your ears to the call of the bugle. Do not shut your eyes to the glare of the campfire. The whole panorama of our modern history as it unfolds is faithfully reported by

The Twice-a-Week Spokesman-Review

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events.. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line where the history of our day is being set down in ink and blood.

A Timely Offer

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a worth-while saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers. It is a paper particularly welcome just at this time.

WORTH WHILE SAVING

Twice-a-Week Spokesman-Review for 1 year regular **$1.00**
The Washington Farmer for 3 years if subscribed for a year at a time..**$3.00**

Total value **$4.00**

Our Special Price for Both, $2.00

Big things are happening this week. Big things will happen next. To get the facts about these events, send in your order at once. Paid ahead subscriptions will be advanced from the dates to which they are paid.

Poultry Patriotism.

It was a patriotic duty to hatch chickens last month and the month before to help feed the world, but it is doubtful whether it is patriotic to hatch any after the first of June, with prices of feed as they are, and with prices of broilers as low or lower than they were a year ago. But it is a patriotic duty to make every ounce of high-priced grain that is fed to chickens count in raising them.

Don't throw high-priced grain at the chickens and expect them to make profitable use of it without green food, grit and animal food.

Don't feed $3 wheat to chickens to make blood and flesh out of it, and then let mites suck blood out of the chickens that was made out of the wheat. That is too much of a leak.

Cooperative Organization.

Helpful suggestions may be obtained by poultry raisers and others by writing to the Animal Industry Department of Parks, Davis & Co. of Detroit, for free booklets on farm sanitation and poultry raising, giving the A. B. C. of the industry, plus many practical and profitable suggestions.

Head Lice on Chicks.

On hen-brooded chicks, head lice are likely to be found in two or three days after hatched. A good remedy is a very little lard rubbed well in on top of head and under throat.

The Annual Food Cost of a Hen

The cost of feed for a flock of heavy-laying Barred Plymouth Rock hens at the Oregon station last year was $1.80 per hen. They averaged 181 eggs each, just a cent an egg. The eggs at wholesale prices in Portland were worth $4.27 per hen, showing a feed prefit of $2.47. This was very good profit. If the feed had cost as much as it did in April and May of this year, the cost would have been $3.06, leaving a profit of $1.21 at last year's egg prices. This shows an increased food cost of 71 per cent.

If the production had been 150 eggs per hen, which is a good overage for pullets, the profit on feed would be only 49 cents at last year's egg prices with April and May feed prices.

If the production had been 100 eggs per hen, which is more than the average of all the hens of the United States, there would have been a loss of 70 cents per hen on the feed, at April and May feed prices and last year's egg prices.

In this experiment the feed was purchased by the ton and the wheat averaged $1.75 per hundred pounds. If bought in a small way at retail stores the cost would have been somewhat greater. On the other hand, a flock of farm hens having free range on the farm, would have been fed at less cost; or rather, the food bill would have been reduced by the amount of waste feed found on the farm.

Again the egg prices secured were higher than most farmers receive for their eggs. If sold at the local stores the returns would not have been so great.

The monthly production cuts a big figure in cost and profit. Good layers lay well in fall and winter when prices are high. Poor layers lay few eggs when prices are high. In the above estimates I have assumed that the percentage monthly production was the same with both good and poor layers. But this is not correct. If 181 eggs made a profit of $1.21 this year's prices of feed, 150 eggs per hen would not make 49 cents profit, as mentioned above, because the poorer layer will not lay as well proportionately as the good layer when prices of eggs are high. The chances are that this difference in monthly production would wipe out the 49 cents profit.

So that the Plymouth Rock hen of 150-egg capacity will not make a profit at April and May prices of feed and last year's egg prices. With such a flock the poultryman must get better prices for his eggs than last year, if the feed prices are to continue high for the year. In point of fact egg prices have been ranging high enough this year for the 150-egg hen to pay for her feed. There is very good prifit with hens laying 175 to 200 eggs in the year.

Prices of feed and prices of eggs vary and no definite amount can be stated as the profit of a hen. But the appetite of the hen does not vary. The food consumption is the same year after year. The main point in the experiment quoted is the amount of different foods eaten. Knowing the food consumption, which is a definite definable amount, the poultryman can figure out in any year and at any feed prices what profit he is making.

The flock of Plymouth Rock pullets in question were kept in confinement where they could get no feed except what was actually weighed out to them. Even the amount of water they drank was weighed. With Leghorns or small breeds the profit on feed should be greater because they eat less food than Plymouth Rocks, at least 10 per cent.

The different foods eaten by the pen of Rocks and cost of same per hen is shown in following table. At feed prices prevailing last year the ration was an economical one. At present prices it will pay to modify the ration by reducing the amount of wheat and changing it in some other respects.

	Feed. Amount in Lbs.	Price per cwt. 1916-17	Value
Wheat	45.95	$1.75	$0.803
Oats	16.25	1.50	.243

Straw (for litter)	40.00	.25	.09
Total per hen	....	....	$1.80

Cooperative Organizations.

The steady growth of the agricultural industry in the western provinces of Canada is evident from various annual returns, of which those showing the results of the operations of farmers' organizations and of the distribution of cattle from the Winnipeg stock yards are especially significant. The farmers' organizations have 48,000 shareholders, a paid-up capital of more than $2,000,000, and assets of more than $8,000,000. Although the 1916 crop was unusually light these companies handled 90,000,000 bushels, or one-third of the marketable portion of the grain raised; the profits aggregated $1,814,000, and of this amount $620,000 will be paid to the government under the provisions of the business profits war tax act.

Through these cooperative associations efforts are being made to encourage mixed farming and the acquisition of more live stock.

Fire-Proof Celluloid.

In Germany there has been invented a fire-proof celluloid for use in wind shields and automobile windows.

Truth in Advertising

Nationally advertised goods may be depended upon for the reason that national advertisers know that their goods must be truthfully advertised to gain and hold popularity. A good name in advertising has to be won on merit, therefore the buyer may be sure of obtaining right value when buying widely advertised articles.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XV.

In which the 15-year-old bunchgrass boy launches out into the financial world.

Ways and means of earning money were to a 15-year-old boy on a farm in pioneer eastern Washington of 25 years ago rather scarce. The first money I ever earned, I think, was by poisoning squirrels at 75 cents a day. The work was done for a neighboring bachelor who had 160 acres of wheat. It was my business to hunt over every square rod of the field, and to deposit at the mouth of each squirrel burrow I found a big spoonful of wheat that had been soaked in water sweetened and treated with strychnine.

To get over the field without loss of time it was necessary for me to carry a five-gallon pail of the poisoned grain The pail, when full, was pretty heavy. Also, in plodding through the soft, finely pulverized field my shoes filled with earth, which gathered in little bumps under the soles of my feet and made blisters. I tried going barefooted, but this was unsatisfactory, since the young wheat blades caught between my bare toes. Then, too, I was afraid of rattlesnakes.

One of our neighbor women remarked to a boy friend of mine that she did not believe I was poisoning all the squirrel holes in the hundred and sixty. She said it would be more like me to throw the poison into a badger hole.

My friend told me what she said. I was so angered over the matter that for days I brooded over it. For this woman I developed a most profound dislike. Had I ever consented to poison squirrels for her I believe it would not have been a bit above me to dump the poison in a badger hole, even if my act cost her a whole wheat crop. I disliked her, disliked her husband, disliked her children, disliked their cows, their horses, their pigs and their chickens. They and theirs I disliked; and as I grew older the dislike did not abate a jot, and it is about as strong as ever today.

Another source of income in my early boyhood was in finding horses that had strayed out of "The Ridge" country that was five to eight miles north of our place. The Ridge was quite thickly settled. It rained more up there than down on the Flat where we lived. The wheat crops were bigger, the farms better tilled, the farmers were more prosperous, and their horses often bigger and fatter than our horses. But very frequently the big, fat horses of the Ridge strayed down into the Flat, and on south into what we called "the Pot Holes." Once in the Pot Holes the stray horses from the Ridge were safe from discovery by their owners.

I knew the Pot Holes, almost inch by inch. Ranchers from the Ridge would come to our place and offer me 25 cents or a little more, maybe, to find their lost animal or animals. I generally located the truants in half a day of riding. I knew about when they went for water, knew which holes were dry, knew where there were shady clumps of "sarvice" and willow where the strays often rested when it was hot; knew the half hidden coyote trails, and knew certain curious conical piles of stone the early Indians had set up to guide them through the Pot Holes. I knew the high points on which I could ride to scan the surrounding country for the rising dust clouds that indicated a bunch of horses making for water; and knew how to thread my way swiftly through the Pot Holes to the point where I could most advantageously head off the horses and "cut out" the strays. These things and much other lore of the Pot Holes I knew; and I do not remember ever having failed to find a single stray animal that had escaped into the Pot Holes.

An opportunity came for me to get rich right away—so I thought—when I was 15. This was a little while after the close of the Spanish-American war. A "war history" had been published by a Chicago publishing house. I received a neatly typewritten letter from the company, asking me if I didn't want to sell its new and authentic and well illustrated history of the Spanish-American war. My commission would be 40 per cent of sales, the books selling at $2 each. The letter stated that already a stack of these books three miles high had been sold. The company sought to avail itself of my salesmanship in order to start on the fourth mile of the stack.

I felt highly honored by the offer that had been made. I had read in stories, of business men who, deep in meditation on some business problem, paced the floor till far into the night. I supposed that to decide what to do with this offer I should pace the floor. So I paced nightly, after my parents had gone to bed. The board floor creaked under my pacing, and my mother finally lost patience and told me to get to bed. I felt hurt, but complied. Eventually, I decided to help the company begin building the fourth mile of the stack of war histories it had already sold.

So I equipped myself with a sample book. Mother made me an oil cloth bag which I could swing over my shoulder under my coat. I repaired my saddle, curried my pony, trimmed his mane and tail, and fared forth as a seller of what was claimed to be the greatest history of the Spanish-American war that had been written.

I first made the round of the neighborhood and sold to the people who knew me. In Hartline I stationed myself at the entrance of the wheat warehouse and as the teamsters came in with loads of wheat sold them a war history. It was not long till my sales mounted to one hundred books, my commission on which was eighty dollars! This sudden wealth made me almost dizzy.

Among my friends I used several pretty effective talking points. Many of the boys had gone to the war and my book told about the battles in which they had participated. Harry Keyes, son of Old Man Keyes, a pioneer resident of the Hartline country, had been killed on the Maine in Havana harbor. Harry had spent a couple of years in our neighborhood—in fact, he

(Continued on page twenty.)

"Buck" and His Master Sleep Side by Side

By PAUL E. TRIEM.

Beside one of the gravel paths in Lakeview cemetery, Seattle, rises a slender monument of dark gray stone. Its base is shrouded in ivy. On one side the name "Buck" stands out in raised

In Memory of Buck.

letters, and is usually taken by the casual passerby for the surname of some pioneer, long ago forgotten.

The inference is substantially correct. Buck was a pioneer—one of those trail-breakers and burden-bearers whose unmarked graves are scattered over the vanishing frontier. To one who has the leisure, in these days of turbulence and hurry, to pause for a moment, the story of a life typical of many heroic lives of a vanishing era is quickly revealed. Pressing aside the matted vines around the foot of the monument the inquirer discloses four inscriptions, one on each side of the foundation stone.

On one side is chiseled:

"Buck, my favorite cattle horse, died Sept. 20, 1884. Aged 18 yrs. & 6 mos."

A second inscription is: "In adversity faithful." On a third side is carved the single word, "Corral'd." The fourth inscription tells the story quite fully. It reads:

"For 13 years my trusty friend and companion, in blackness of night, in storm, sunshine and danger."

Twenty years ago Buck's master followed the old cow pony along the last, mysterious trail, and all that was mortal of him was laid to rest close to the granite shaft which he had caused to be raised over his four-footed friend. Once a flicker of excitement was occasioned by the discovery, made by one of those bigoted people to whom the unusual is always the scandalous, that "a horse is buried right next to people, in the cemetery." There was a short lived attempt made to have the old pioneer's bones exhumed and buried in another place, but the matter was soon dropped.

And so, in these stirring days of the 20th century, when the seed sown by a generation of wilderness tamers already forgotten is beginning to bear fruit in great cities and prosperous country sides, Buck and his master sleep side by side; waiting the great day, perhaps, when all true hearts, whether they be those of men or beasts, shall know that—

"Nothing walks with aimless feet,
That not one life shall be destroyed
Or cast as rubbish to the void
When God hath made the pile complete."

Peas Beat Barley for Hogs

As a result of a series of experiments with four lots of hogs during a period lasting from January 27 to March 16, inclusive, Benton M. Bangs, a graduate of the State College of Washington at Pullman, found that peas proved to be a better hog feed than barley; that self-feeders are desirable from the standpoint of labor and time saving, and that shorts should not be used as more than 15 or 20 per cent of the feed ration.

Benton M. Bangs, whose article on hog rationing is referred to herewith, is one of the northwest practical students of agriculture whose fame has gone abroad because of his football record. Bangs was the most noted member of the team of the state college which in 1916 defeated every team that it met, including Brown university in the game played at Pasadena on New Year's day.

These facts are brought out in a comprehensive thesis by Mr. Bangs, who received a master's degree in agriculture from the state college this commencement. "The Best Ration for Hogs" was his subject.

The following proved to be the ideal ration from the standpoint of profit: Peas, 60 per cent; shorts, 30 per cent; tankage, 10 per cent. This yielded an estimated profit per hog during the time of the experiment of $5.71.

Results with other lots fed with different rations were as follows:

No. 1 ration—Barley, 60 per cent; shorts, 30 per cent; tankage, 10 per cent. Profit per hog, $3.72.

No. 3 ration—Peas, 60 per cent; shorts, 30 per cent; oil meal, 10 per cent. Profit per hog, $3.81.

No. 4 ration—Barley, 60 per cent; shorts, 30 per cent; tankage, 10 per cent. Profit per hog, $4.87.

Hogs in lot 1 were hand-fed, those in lots 3 and 4 being self-fed.

COYOTES ARE DYING.
Rabies Taking Large Numbers.

The Washington Farmer was pleased to receive a call from E. F. Averill, predatory animal inspector for Washington and Oregon, who brings the gratifying news that in the section of country on the east side of the Columbia from Pasco north to Ephrata and above there are only about 25 per cent of the coyotes seen that were prevalent a year ago. Mr. Averill says the chief cause in this lessening of the coyotes has been the rabies itself among the animals. A coyote affected with rabies lives only a few days, eats nothing and becomes merely a skeleton. This leads some to suppose that coyotes are dying of starvation, but, says Mr. Averill, a coyote will live on almost any kind of animals from a mouse up to a steer. On the west side of the Columbia there are also fewer coyotes seen, and here the government hunters have been effective largely in reducing the number. Mr. Averill was on his way to Sprague in which section a couple of government hunters are to be put on.

Ye Have Heard That It Was Said by Them of Old Time.

THE FALSE WITNESS.

"Thou shalt not bear false witness against thy neighbor."—Exodus 20:16.

There appears to be a distinction here. The ninth comandment does not say that thou shalt not lie, but that a lie must not be told to the injury of another. And this would seem to include not only the courts of law, where an oath is administered, but also private conversations where a falsehood whispered about another might, and sometimes does, blast a character forever.

The gossip and scandal monger are classed here alongside the murderer and thief. We are prone to look on the circulation of false tales as not polite and courteous or kind, but have we recognized this sort of thing as on the same plane as crimes?

So far as we can see no distinction is made. Moses did not say that killing was worse than bearing false witness.

It is an out-and-out sin, and though it is not classed as a punishable crime to tattle and retail gossip, it will be punished by the courts of eternal justice just the same.

Heads Relief Expedition.

Captain Robert A. Bartlett, who was with Peary in his arctic explorations, will command the steamer Neptune, which has been chartered by the American Museum of Natural History to be sent to the relief of the Crockerland expedition, which has been marooned in the Arctic since 1913. This will be the third attempt to reach the expedition, the prior efforts proving failures. It is expected the relief expedition will start about July 1, and if successful it should return in September. Members of the Crockerland expedition, who are believed still alive in Etah, were sent out in 1913 by the Museum of Natural History, the American Geological society and the University of Illinois. The expedition consists of six scientists and the crew.

Getting Wilson's Address to Germans

Copyrighted by International.

That the German soldiers might be correctly informed regarding the entry of the United States into the world war and its reasons for so doing, the French had President Wilson's great message translated into German and distributed over the German lines. This photograph shows the printed speeches being tied to a balloon.

Ups and Downs of a Bunch Grass Boy

(Continued from page eighteen.)

and I had ridden the hills together looking for horses and cattle. I do not know in what capacity Harry shipped on the Maine after he left home, but somehow he got on and afterwards was killed. So there was a good deal of local interest in my war history, which, coupled with the fact that most of the people knew me, made the book go like hot cakes.

Next I raided Coulee City and sold to most of the business men in the town. The railway "section house" where the laborers boarded was occupied and managed by two old maids. One of them bought a war history. I did not know just what argument to advance in order to persuade the women to buy my book. In desperation I said that the men were buying it and that I thought the women ought to buy it also.

Coming out of the section house I heard a man shoveling coal in one of the bins a short distance up the track. I followed the sound and eventually found a grimy, good-natured Irishman busy with a shovel. He said his name was John Corley. Sure he would buy the book—glad to; did I want my money now? I did, but was too timid to say so. I said he could pay me when the book was delivered. A month later I visited the coal bin to deliver the book, but John Corley was shoveling coal somewhere else likely, and had departed without leaving his address.

My book selling campaign that fall included our neighborhood, the region east as far as Almira, where I struck the territory of another agent for the same book, and west 50 miles to Waterville. In the western country towards Waterville all was virgin land so far as book agents were concerned. The pioneer people, many of them, hauled their wheat 20 and 30 miles to market. They welcomed me, and almost any kind of a canvass sold a book. When it was night I stopped at the first house and asked for lodging for myself and horse. In the morning my bill was either 25 cents or 50 cents, and often nothing, with an invitation to return. I invaded homes, threshing machine outfits, hotels and cow camps, and often was offered a harvest field job. Once I climbed up on the derrick table of a thresher, took the fork from the hand of a workman, gave him my prospectus and asked him to go and sit in the shade of the stack and look at it. He did so. I worked on the "hoe down" in his place for 20 minutes, until he came back with his name written down in the place I had showed him.

In Waterville I did not sell many books. The people were wary of agents, and I had no skill in getting into a house where agents were not wanted. I tried the outskirts of the town, but with no better success. Then I struck across Badger mountain and into the southside country, 75 miles from home and among strangers who were increasingly difficult to interest in war histories, no matter how authentic.

Returning from the southside country I got lost in a snowstorm on top of Badger mountain. I had a hard ride that day, aiming to get over the mountain and down to Waterville. In the higher altitude of the mountain it had been snowing all day, and in the tops of the big pines that grew thickly on each side of the road were lodged great masses of feathery snow, which was shaken down as the night wind began to rise.

I had been raised on the prairie. The timber did not look good to me that night. It occurred to me that it would be mighty easy to get lost if one got off the road in the timber. It was dark when I reached the clearing about Bishop's sawmill, and the comfortable lights of the bunkhouse made a pretty strong appeal. I knew in my heart I should stop; but with twinges of homesickness I held to my determination to get to Waterville that night.

The wind blew harder as evening advanced and shook the fluffy snow out of the trees in masses that nearly buried me and my pony at times. It got darker till I could see only the white, narrow roadway through the timber. On all sides it was black as ink.

Then the thing happened. I came suddenly to a place where the road branched to the right and the left, with one road going straight ahead. Which road to take was a mystery to me. On my native prairie I would not have been dismayed, even in the dark and snow; but of timber I was afraid. I halted my tired pony and pondered. A heavy drift of snow fell from the overhanging treetop and nearly smothered me and my horse. He reared and floundered and snorted, and when I had quieted him and gotten the snow out of my eyes and ears I was lost. I did not know which road was the back trail, or which would lead me to Waterville.

It was clear to me that my case was fairly critical. One might not freeze if obliged to stay out in the snow all night, but it would surely be uncomfortable. Besides, there was the humiliation of being lost, even if I did scrape through without freezing. Luckily I had sense enough not to "stampede"; but sat my horse and tried to ponder a way out of the difficulty. It would be useless to wander about, I decided, since by so doing my confusion would be increased.

I reasoned, finally, that as I had ridden from Bihop's mill the wind had been at my back. Therefore, desiring to return, I should face the storm. Unfortunately the trail leading into the storm was the wrong one, I was sure. It was plain that the wind could not have changed its direction, however; also, the very fact that I was lost was proof adequate that my sense of direction was muddled. Hence, the wind, rather than my own belief, seemed the safe guide, so I headed into the storm for Bishop's mill.

I held to the trail, hours it seemed, sure every minute that the road was wrong, yet knowing that the wind had not changed. Eventually, to my vast relief, the friendly lights of the bunkhouse appeared. I rode up to the door and shouted. The door opened, light streaming out, and several men crowded to the doorway. My shrill voice puzzled them, perhaps. One said: "It's a woman." Another said: "It must be a kid that's lost." They came out and surrounded me, storming as it was, and I explained that I had been trying to get to Waterville, but was uncertain which of the three roads to take.

"The middle road," said one of the men—"in the morning." He laid his hand on my bridle and asked me to dismount. It was Mr. Bishop himself who spoke. I was white with snow, and they swept me off with a broom; they warmed and fed me by a fire of pine knots that blazed high, filling the room with warmth and their own resinous fragrance.

They put me to bed, presently, in a top bunk supplied with a mattress, warm, dry horse blankets for covering, and one of the men's coats rolled up for a pillow. On the roof a couple of feet from my head was the pounding of the storm which had increased in violence; and I went to sleep with its roar and thoughts of home 70 miles away in my last, fading consciousness.

In the next instalment, the Bunchgrass Boy recalls his "baching" days while attending business college in Walla Walla. Here is one paragraph from his narrative:

"I had a red flannel shirt which was part of my equipment brought from the Big Bend. I knew enough not to wear it on the streets of Walla Walla; but I wore it in doing my housework and cutting wood. Eventually it needed washing. I thought I ought to 'boil' it, and did; in fact, I boiled it good and plenty with such garments as light underwear, white shirts, white handkerchiefs, and so on. The color of the shirt 'ran'—indeed, it ran like a scared wolf. All the clothes came out a sort of reddish pink. So the rest of the winter I wore pinkish socks, pinkish shirts and pinkish underwear."

Grow and Can Your Own Vegetables

Agriculture

And the Farming Business

By OSCAR H. BENSON, U. S. Dept. of Agriculture, and GEORGE H. BETTS, Cornell College, Iowa.

This book is what you need and all you need, for it is the only complete work on the subject ever issued in one volume. Crops, fruits, soil, fertilizers, farm economics, gardening, gathering, home canning, preserving, the use of the home grounds and wood lot—all complete, compact, practical. Containing the latest and most accurate knowledge obtained by the U. S. Department of Agriculture and leading agricultural schools—778 pages, 235 photographic illustrations. Price $3.50, postage prepaid. Book mailed on request. If you can afford to be without it, send it back; there will be no charge. Otherwise send us $3.50. You can't better do your bit.

Bran and White Flour.

Please tell us what portion of the wheat the middlings are, also the shorts. Is there any real flour in either of them? It would interest many to know how and what portion of same could be added to flour to make good bread, biscuits and hot cakes. Please give recipe in your paper.—H. E. B.

Wheat is a starchy mass surrounding the embryo and surrounded by six layers of tissue. Bran is the outer coat of the wheat separated from the flour by bolting. Middlings and shorts are often used for the same article, which is composed of the coarser flour and finer bran. Shorts sometimes consist of ground over bran and have no flour to speak of. Bran contains bulk, protein and ash and is a valuable feed. Middlings furnish a richer and more concentrated feed. There is rye bran, corn bran, rice bran and buckwheat bran, as well as wheat bran, though commonly it refers to wheat. Whole wheat flour contains most of the bran and, of course, the middlings. Authorities say that white flour contains more digestible matter than bran or whole wheat, but the bulk material is valuable for mechanical reasons.

An excellent housewife states that if you use bran with white flour for bread or biscuit use from one-half to one-third bran with white flour, make the bread in the same manner as with white flour. Use more sweetening than in ordinary white bread.

Secrets of Health and Happiness

By DR. LEONARD KEENE HIRSHBERG.
A. B., M. A., M. D. (Johns Hopkins University).

Sleep Needs Depend Upon Work and Habits

It is universally agreed that an abundance of sleep is needed by all, in order to do the best work, enjoy the best health and obtain the longest life.

Dr. Hirshberg.

Thinking and doing both use up the forces of the tissues more rapidly than they recuperate, hence it is necessary to lay by a part of every 24 hours for repairs and thus accumulate new strength for recurring duties. Many die yearly from lack of sleep, the wear having been greater than the repair. Whoever, by work, pleasure, sorrow or any other cause, is regularly diminishing sleep is shortening life.

The number of hours required for sleep for an adult varies from six to 10, according to the temperament, vigor, duties and mental condition of the person. Many say that women need more sleep than men. It is claimed by some that persons who think and work fast will sleep more in an hour than slow people and thus require a less number of hours of rest. This is certainly false and absurd reasoning.

Persons of active, energetic, highly nervous temperament do not build up more readily than others, and, by great activity of mental force added to all they do, wear out more rapidly, hence require more sleep—not less than eight hours, and some as many as 10. They may seem to require less because they are so much interested in whatever claims their attention, that after a moderate amount of sleep they find it easy to be wide awake.

Energetic people need not be afraid of sleeping too much. Persons who feel uncomfortable after sleeping may generally trace their unpleasant feelings to other causes than too much sleep, which may have been heavy because of an unhealthy condition of the blood, want of ventilation or obstructed circulation from improper clothing or position.

No one should become so fatigued by work of muscle or brain that a good night's rest will not follow and afford complete recuperation.

It is important to have several hours' sleep before midnight and better to sleep during the shades of night than when the sun bids all things to be astir, yet it is better to take a nap during the day than not to sleep enough. Indeed, a little nap before the noon meal will rest the nerves and promote digestion.

Do not sleep just after eating, as it retards digestion. Stimulants of any kind should not be resorted to in the hope of gaining strength. An increase of vigor can only be had from the nutritive particles in the blood, which were obtained from the food previously eaten and has been oxygenized by contact with good air in the lungs and by the rest which sleep affords.

Yet I doubt not through the ages
one increasing purpose runs,
And the thoughts of men are widened with the process of the suns. —Tennyson.

Balancing of Food

By Grace Powers Fischer.

"We build our bodies brick by brick," said Mrs. J. D. Spencer, food expert, in a talk before the Oregon grange women's club at a recent meeting. "Slowly, step by step, little by little, we make our bodies, right or wrong. Carelessness or ignorance in the choice of food, the balancing of food and the preparation of food are responsible for most of our bodily ills."

There are, according to Mrs. Spencer, three main forms of food elements—protein, carbohydrates and fats. Nearly all foods contain all three in differing quantities. Because there is a high percentage of proteins in them, lean meat, fish, poultry, eggs, milk, cheese, dried peas and beans and peanuts are called protein foods; breads, rice, pastry and the like are carbohydrate foods, and fat meat, chocolate, butter, nuts, etc., are fat foods. There are other materials in foods, mainly mineral salts which the body needs, such as iron for the red corpuscles of the blood, lime and magnesium for making bones and teeth.

The good housewife must not only balance her ration, but do it economically. It is easy to buy so much protein and so much fat and so much carbohydrate food, mix them and serve. But to pick out the right amount of each and still keep the purse fat is not so easy, especially when prices vary all the time. A very valuable food one week may lose its value because of its price the next. The following table was placed on the blackboard, giving values in the three food elements and also "calories" or units of heat or energy:

	Protein.	Fat.	Carbohydrates.	Calories.
Beef ribs	19.7	12.7	....	8.45
Cheese	28.8	38.9	3.0	19.90
Chicken	21.5	2.5	....	4.93
Almonds	21.0	54.9	17.3	29.40
Walnuts	18.4	64.4	13.0	31.82
Peanuts	25.3	38.6	24.4	24.90
Peanut butter	29.3	46.5	17.1	26.90
Beans	22.5	1.8	59.6	15.65
Peas	26.4	1.0	62.0	16.11
Graham bread	8.9	1.3	52.1	11.39
White bread	9.1	1.6	53.3	11.99
Chocolate	12.9	48.7	30.3	27.65
Rice	8.0	.3	79.0	16.20
Potatoes	2.2	.1	18.4	3.78
Prunes	2.1	....	73.3	13.65
Raisins	2.6	3.3	76.0	15.62

Sugar and lard, containing nothing but pure food elements, Mrs. Spencer called them "straight foods." Fats and starches can be changed into each other. Pure fat contains about 2 1-4 times as much heat or energy as starch.

Crochet and Tatting Designs

By Winifred Worth

MEDALLION YOKE.

Here's another yoke that will appeal to every crochet worker. The medallions furnish a most pleasing circular motif.

Detail for medallion:

1st Row—12 ch. Join.
2d Row—36 dc. in loop.
3d Row—Sc. on top of 36 dc.
4th Row—Sc. widening every 9th st.
5th Row—Sc. widening every 9th st.
6th Row—Sc. widening every 10th st.
7th Row—Ch. 3. Make dc. in 3 st., leaving 1 st. between each 3, making 12 groups of 3, 3 ch. st. and then 7 sc.
8th Row—3 ch. 6 dc. into each l, making 2 ch. between the 6 dc. and 3 ch. between group of 6 st. 3 ch. at end and 2 sc. Increase at each end.
9th Row—3 ch. same as 8th row.
10th Row—3 ch. into l. of 6 dc. st. put 3 dc. 3 ch. catching up two lower l. 3 ch. at end, and increase 2 sc. st. each end.
11th Row—3 ch. fastened in middle of 3 sts., 12 ch. fastened in middle of 3 sts., 2 sc. Increase at each end.
12th Row—12 dc. in L. of 12 st. ending as before with 3 ch. and increase to 2 sc. sts. each end.
13th Row—3 ch. 3 dc. 2 ch. 6 dc. putting in every st. of 12 dc. 2 ch. between every 6 st. 3 ch. st. end and increase of 2 sc. each end.
14th Row—3 ch. in L. 6 dc. 2 st. between each 3. 3 ch. and so on.
15th Row—3 ch. in L. 6 dc. 3 st. between each 3. 3 ch. and so on to end.
16th Row—3 ch. in L. 3 dc. with 3 p. edge. 3 ch. and take up 2 lower L. 3 more ch. and 3 st., dc. So on to end.

Patterns

2001—Ladies' house dress, with or without back yoke. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires six and three-eighths yards of 36-inch material for a 36-inch size. The skirt measures about three yards at the foot. Price 10 cents.

2121—Girls' dress. Cut in three sizes: 12, 14 and 16 years. Size 14 will require five and one-eighth yards of 32-inch material. Price 10 cents.

2109—Ladies' waist. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires two and five-eighths yards of 36-inch material for a 36-inch size. Price 10 cent.

2110—Ladies' tunic skirt, in raised waistline. Cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires three and one-eighth yards of 44-inch material for the skirt and two and a half yards for the tunic for a 24-inch size. The skirt measures about two and a half yards at the foot. Price 10 cents.

2120—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires six and a half yards of 36-inch material for a 36-inch size. The skirt measures about two and three-quarters yards at the foot. Price 10 cents.

1971—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires six yards of 44-inch material for a 36-inch size. The skirt measures about three and a quarter yards at the foot. Price 10 cents.

9662 — Ladies' combination chemise and drawers. Cut in three sizes, small, medium and large. It requires two and three-quarters yards of 36-inch material for a medium size. Price 10 cents.

2112—Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. It requires three and a half yards of 44-inch material for an eight-year size. Price 10 cents.

1339—Ladies' kimono. Cut in three sizes, small, medium and large. It requires four and a half yards of 44-inch material for the full-length style and two and three-quarters for sack length, for a medium size. Price 10 cents.

2105—Ladies' skirt. Cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require two and three-quarters yards of 44-inch material for a 24-inch size. Price 10 cents.

1993—Girls' one-piece dress. Cut in five sizes: 4, 6, 8, 10 and 12 years. It requires three and a quarter yards of 44-inch material for an eight-year size. Price 10 cents.

2130—Girls' dress, with or without bolero. Cut in four sizes: 6, 8, 10 and 12 years. It requires one and an eighth yards for the bolera and three and three-quarters yards for the dress, of 27-inch mateial, for a six-year size. Price 10 cents.

2125—Ladies' waist. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires two and seven-eighths yards of 36-inch material. Price 10 cents.

Work Together for Good

What is the quotation or what are the words which have helped you in the journey of life?

Send it to the editor of The Farmer and let it help another.

To the Editor: The best quotation I know is from the Bible: "And we know that all things work together for good to them that love God." Romans 8:28.

WILLIAM BRICKEY.

Kamiah, Idaho.

Bits of Home Cookery.

To make mashed salmon—Carefully turn the contents of a can of salmon onto a hot platter. This is done without breaking the shape by opening the can all way round and giving a sharp rap to the bottom. When ready to serve pour over two cupfuls of cream of white sauce, in which a beaten egg has been stirred just as the sauce is removed from the stove. Sprinkle with salt and red pepper.

What True Economy Is.

Economy does not always consist in using what is called necessites, but rather in using good, pure, wholesome food, eliminating waste and utilizing every scrap; last but not the least important is cooking and serving the plainest food in a manner which is attractive and appetizing and which appeals to the palate, says the The Kansas City Star.

There's Profit in HOME CANNING

Turn your surplus products and time into money this year and have a business of your own—home canning. There is good money to be made in home and community canning every year, but there never was a better year than this to start.

START RIGHT.

Don't experiment with makeshifts, do your canning by steam pressure; "the safe and only thorough way to sterilize." By our new selling plan you get all your supplies from one source. We furnish retorts, cans, modern can-sealing machine, instruction—everything for canning work in home, orchard or community, showing how to market your product to best advantage. Outfits include 60-page book of recipes on goods you can put up.

Simply send a postal for free literature on how to can for profit.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

A Flock of Black-Eyed Crows.

Dear Aunt Nellie: I am going to write about a large flock of crows I saw coming over the hills one night. They came from the north and were going to the south to the sea to bed. Over on the other side of the hill was a large tree which did not have any bark on it and only a few limbs in the top. They all went over there to rest. Before they lighted they circled and circled around in the sky to find a good lighting place, but they soon lighted and then their fuss was over of cawing and cawing. They stayed there over a quarter of an hour and then they went their way. They came back before daylight and go before dusk. They are a great pest to the farmer because they steal his corn and wheat. They steal his eggs and little chicks that have just been hatched. They are very sly and sneaking. They come back of our schoolhouse and eat the crumbs the children throw out of their pails. If the teacher opens the window or any one goes outside they are gone as quick as you can snap your finger. They go way back out in the trees or behind the stumps and ferns so no one can see them. This bird is coal black and he is not a handsome bird. He has eyes which are very black and keen. This old bird follows us home from school wanting us to throw something out of our buckets.—Mabel Kessey, Grays River, Wash.

Saw Four Deer Near the Orchard.

Dear Aunt Nellie: My subject is many things. I am three feet and eight inches tall. I weigh 44 pounds so you can guess how big I am. My little brother is 6 years old and weighs 45 pounds and is one inch shorter than I am. Tonight mama saw four deer just above our orchard. My big brother also saw them, but Florence, David and I did not see them because we were in the house. My mother raises lots of flowers. She loves most any flowers. We have a heliotrope, which I love the smell of. We have only one cat because our tomcat got poisoned. I guess the neighbors were poisoning squirrels and he caught a poisoned one and ate it. He weighed about 15 pounds. Our school let out the 20th of April, which is the day before my birthday, and Helen Proctor's birthday was the last day of school. Our school began the second week in September and we did not have any Christmas vacation. I have dark brown hair and hazel eyes. I got a ring, a little silk handkerchief with a flower in one corner of it, a bracelet, a string of beads and a buffalo nickel for my birthday. I would like to correspond with any girl of my age.—Glenn Faber, R. F. D. 2, Colbert, Wash.

How Their Doggy Came to Them.

Dear Aunt Nellie: My father takes The Washington Farmer. I love to read the letters. I live on a 175-acre farm. I am in the fifth grade and am 11 years old. My birthday is December 5. I have one sister and one brother. My sister's name is Elve, and my brother's name is Rudolph. I have got two cats and a dog. One cat's name is Tommy and the other is Calico, because it has color like calico goods. My dog's name is Rosie. The dog belongs to my sister, brother and I. I will tell you how we happened to get our dog. It was near Christmas night. My papa went to the harbor and when he came back he had a dog. In the morning papa said that we got a dog for a Christmas present. He put the dog outside for he was to go to bed. In the morning she was gone. Pretty soon she came back and she jumped on us for she was so glad. Our horses' names are Nubby, Babe, Kiras. We have pigs and cows. We have a big house and a big barn. There is a sawmill near our house. We also have a homestead. I like to live on a farm.—Hilda Hilstrom, Oakville, Wash., R. F. D. No. 1, Box 10.

Turns First Thing to the Corner.

Dear Aunt Nellie: We take The Washington Farmer and the first thing I turn to is the Corner. I enjoy reading the letters of the other children so much that I thought I would write. I am 5 feet 2 inches tall, have light brown hair and brown eyes. The subject I am going to write on is "My Best Friend." My best friend is my mother. She is my best friend because she took care of me when I was a baby and she gets my meals and washes my clothes and so many other things. I live on a 40-acre farm. We have six cows, three horses, three pigs, six geese, about 10 chickens, one dog, one cat and a lamb. I am 12 years old and my birthday is the 17th of March.—Beulah Coatney, R. 1, LaCenter,—Wash.

A Hike Through the Woods.

Dear Aunt Nellie: This is the second time I have written to the Corner. I have gotten several letters from Harry Burke since the last time I wrote to the Corner. Spring has come and the wild flowers are all in bloom and the trees and shrubs are beginning to leaf out and everything is getting green out here. We have an automobile now and we also have a new dog. My old white cat has four kittens, two of them are white but the other two are gray and black. My cousin, Rufus Nivell, and I made a wooden shoe and a canoe each and we will take them to the fair next fall. Last Friday the whole school went for a hike through the woods. My mother has two hens with little chicks. I have made a garden.—Frank Saeger, Shelton, Wash.

First Letter We've Had From Hilma.

Dear Aunt Nellie: I have read all the letters that have come in The Washington Farmer. I like them all very much. I am going to tell you about our farm. It is not very big. It is only 13 acres. We have it about all cleared. We have a horse named Dick. We have four cows, two calves, two dogs, two pigs, 10 chickens. We have some little chickens. They are very pretty. We have a cat as old as I am. Her color is black and white. I go to a city school. My birthday is August 8. I am 10 years old. My mother died when I was 5 years old, my sister was 3 years old and my brother was 1 year old. My mother was 29 years old when she died. She died June 12, 1912. My grandma is taking care of us now. She is 58 years old. I have five uncles. I have no aunts. I have one grandma and one grandpa. We have just got our garden planted. Our house is painted gray. It is quite a big house.—Hilma Anderson, R. F. D. No. 3, box 19, Olympia, Wash.

Baby and Bunny Play Together.

Dear Aunt Nellie: I like to read the letters very much so I thought I would write one too. My school is out now. I passed into the fifth grade. I have had my teacher for two years. I believe she is the best teacher I have ever had. Her name is Miss Clinton. I had to walk about three miles to school. My little sister and brother are very sick. Gordon is my brother who is sick and Martha is my sister who is sick. We have seven Indian Runner ducks that are always getting into the creek and I have to chase them out. I have a little baby brother who seems very cute to me. We have a little black bunny. The baby will try to take hold of its ears. Then it will jump. This will make baby laugh at him. They will keep this up until they both get tired of it. Every time any of us children go in the barn one of our little calves will run and kick up her heels. I am glad the Children's Corner is growing fast. I am 10 years old and will be 11 June the 19th.—Laura Smith, Rice, Wash.

The Bible Says:

Kathryn Will Raise Cucumbers.

Dear Aunt Nellie: I enjoy reading the letters in The Farmer. I am 11 years old. My birthday is the 7th of September. I am in the fifth grade. My teacher's name is Miss Johnson. I like her very much. We have two rooms in our schoolhouse. My brother, Parker, rode his pony to high school, six miles, all last winter. My brother James and I walk one mile to school. I joined a school club. I am going to raise cucumbers. I live on a 40-acre ranch. We have four head of horses, their names are Dandy, Dick, Joe and Maud. We have 17 head of cattle, two mother pigs and eight little ones. My brother has a hound, his name is Prince. I have two cats. Their names are Mutt and Jeff. I also have 11 little ducks and two old ones. The mother duck is setting on 14 eggs. They will soon hatch. I live in the Benston school district No. 16.—Kathryn Tattler, Graham, Wash.

Raymond's School Is Out Now.

Dear Aunt Nellie: This is the first time I have written to the Corner. I have three geese and one dog and three cats. My school lets out tomorrow. We have 17 horses and two cows and 200 chickens. It is raining today. There are 12 pupils in our school. I walk three quarters of a mile to school. We are having warm and rainy weather. I can hardly wait till the Washington Farmer comes. I am in the third grade. I read the letters in the Corner.—Raymond Geissler, Odessa, Wash.

Likes Boys' and Girls' Letters.

Dear Aunt Nellie: I haven't written to the Corner before. I read all the letters the boys and girls write and enjoy them very much. I live on a 40-acre farm. We have 16 cows and three horses. The names of our horses are Fey, King and Prince. I go to school. I am in the sixth grade and I am 12 years old. I have a mile and a quarter to go to school. I have three brothers but no sisters. Their names are Harold, Philip and Olaf. Harold is married and he has a little boy whose name is Irving. We have a new piano and I take lessons from Harold's wife. I have three cats. I also have 17 little chickens.—Mabel Iverson, R. F. D. No. 3, box 105, Mount Vernon, Wash.

In Sight of Pretty Lake Chelan.

Dear Aunt Nellie: I like to read the letters of the other cousins so I thought I would write, too. I live on a six-acre apple ranch in sight of Lake Chelan. It is a very pretty lake. We have one cow and three horses. The cow's name is Polly and the horses' names are Nancy, Babe and Barny. We also have a goat whom we call Billy. I am going to tell you about my flower garden. I am going to raise lilies, roses, tulips, pansies, asters, cosmos, California poppies, sweet peas, morning glories, nasturtiums, candytuft, sweet alyssums, snapdragons, and mignonettes. I go to the Manson school. My teacher's name is Miss Pierce. I am in the fifth grade and my brother, Milford, is in the third grade. He is 8 years old and I was 10 years old the 18th of February.—Margareta Schultz, Manson, Wash.

Loves to Hear the Birds Singing.

Dear Aunt Nellie: I am glad that spring is here. I like to listen to the birds and frogs singing. I like to make flower garden and plant flowers. I am 9 years old and in the third grade. It is three miles to school. My teacher's name is Miss Thulan. I have one brother and two sisters. My oldest sister is married. Her name is Mildred. My other sister is home. Her name is Lillian. My brother's name is Frank. I live on a 160-acre farm. We have five horses. Their names are Dolly, Bird, Jenny, Purtsy and Pansy. Two of them are colts and two are the team. The other one is the saddle horse. We have one cow, one heifer and two steers. My pets are two cats and one dog. The dog's name is Tige. We have about two dozen chickens.—Esther Anderson, Camden, Wash.

Hopes for Good Luck With Her Garden

Dear Aunt Nellie: I am a girl of 10. I have been reading with pleasure the Children's Corner for some time and I want to be a cousin. I am making a garden and hope I have good luck with it. I have a pet pigeon. She is white with a black spot on her head and tail. Her name is Beauty. I have five dolls. Their names are Flo, Quimbo, Laura, Zota and Alice. I like to live in the country. I do not like to live in the city. I have lots of fun on the farm. We have some little chickens. I have one of my own. There are two little black chickens, one red and three white ones.—Avah Sharpe, Alameda, Wash.

Best Friend Just Moved to Canada.

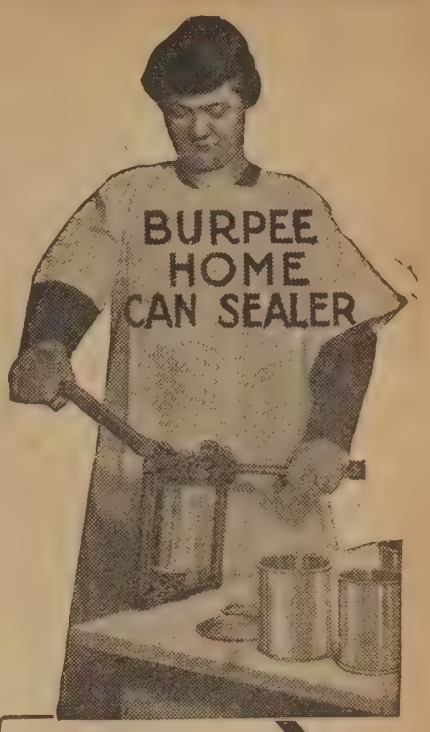
Dear Aunt Nellie: I saw my name in the paper yesterday and thought I would write again. I like the Children's Corner very much and would like to correspond with any boys or girls. I have lost my best friend today. She has moved to Canada. I hated to have her go because we were such good friends. She is in the same grade as I am. We are both in the sixth. She lived closer to me than any other girl my age. The people that are going to move on their place are Finlanders. They have four children, two boys and two girls.—Laverne Nunn, Meyers Falls, Wash.

Cousin Clifford Is a Scout.

Dear Aunt Nellie: This is the first letter I have written to the Corner. I am 9 years old. I am in the third grade. I like to read the children's letters. They are so interesting. I am a Lone Scout of America. My birthday is October 11. I like to go to school. I have no pets but I like animals. I had a dog, his name was Bobbie. We have no stock. If I have a twin I wish he or she would write to me.—Clifford Zimmerman, Lelean, Wash.

In a Pretty Valley in Fragaria.

Dear Aunt Nellie: I am very interested in reading the Children's Corner of what the other children wrote. We take The Washington Farmer. I live in Kitsap county in a pretty valley in Fragaria. My cousin, sister and I walk a mile to school every morning and evening. I will be 9 years old the 9th of November. I am in the fourth grade.—Louise Hwang, Olalla, Wash.



A Few Sweet Peas Are in Blossom.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I was 9 on the 28th of December. I have light hair and blue eyes. I wish a girl that is about my age would write to me. I read The Farmer nearly every time it comes. My pet is a kitten. She is about a year old. We have a few sweet peas in bloom in the greenhouse.—Rosa Sahli, Kent, Wash.

Ruby Belongs to a Bird Club.

Dear Aunt Nellie: This is the first time I have written, so I thought I would write to you. I live in town. My teacher's name is Miss Driskell. There are 31 in our room. We are having a bird club. I am in the fourth grade at school. I am 11 years old. I wish some of the children would write to me.—Ruby E. Werz, Elma, Wash.

Aunt Nellie is glad to announce the receipt of leters for the Children's Corner from the following during the last week: Olive Miller, Ida Dock, Annie Fowler, Thelma Gowing, Christina Schmelzer, Mabel Evanson, Helen Roberts, Florence Spoolman, Herdis Hansen, Edith Crabb, Stella Ruark, Warren Keith.

ARE YOU READY FOR HARVEST

Fruits and vegetables will soon be ready for market. Are you sure that you can sell all you produce? Insure yourself against glutted markets, waste and loss by buying a

BURPEE HOME CAN SEALER

The strongly built, simple, easily operated machine for sealing sanitary tin cans without acid or solder. Clamps on any kitchen table.

It will save all those fruits and vegetables you might have to feed the hogs. It will start you in a new and highly profitable business. Made and guaranteed by one of the biggest canning machine manufacturers in the country. Cans easily secured. Free book of canning recipes, compiled with the assistance of the U. S. Dept. of Agriculture, with each machine. Write today for information.

How to Prepare Sheep for Show

Live Stock Shows Aid in Developing Uniform Type

ARTICLE VIII—By E. J. Iddings.

The modern live stock show is primarily an educational institution. Farm animals of all kinds are assembled and competent judges arrange them in order of merit accordingly as they approach closely or fail to meet certain well defined ideals of type. Live stock shows help toward uniformity of type and harmony of effort in animal breeding and are the meeting place of those who are producing live stock to sell and those who desire to purchase live stock.

The exhibitor learns much in the show ring that is of value to him in his breeding operation, but the principal benefit comes in the way of advertising. Hence the advantage of specially preparing and fitting animals for show. There is certainly nothing to be gained educationally in driving sheep from a pasture and showing them to visitors without any attempt to clean or prepare them for critical inspection. Some fitting is necessary even for our smaller fairs and live stock shows.

Should Represent Type.

The first effort should be made in selecting animals of such confirmation as are suitable to properly represent their type and breed. In most breeds of sheep the choice for the show ring should fall on a reasonably low set, thick, strong-backed and vigorous individual that shows to a considerable degree the particular characteristics of the breed to which it belongs. Additional flesh, as compared with pasture condition, will result from a little especially good pasture for the cooler hours of the day, shade during the midday hours and a grain ration of bran and oats. If the animals are quite thin and need to be crowded they may be left on pasture but one hour daily and given a heavier grain ration and clover and alfalfa hay in addition to the grain.

The feet should be trimmed and the sheep taught to stand squarely on the legs. The fleece should be freed from straw or other coarse material and blocked out with a pair of hand shears. In the blocking-out process the wool over the back is cut down and leveled, the side lines straightened, and the entire form as represented by the wool is made more shapely. The wool surface is then evened by careful trimming until the entire outline is regular and attractive to the eye. A dampened brush is used in brushing the fleece. Brushing straightens the fibers to that when once trimmed the fleece keeps the form given it with the shears.

Some experience must be had in order to get good results in trimming. A little preliminary instruction and some practice on sheep not intended for show often enables a beginner to materially improve the appearance of animals destined for the show ring.

Washington Crop Report.

A summary of the June crop report for the state of Washington and for the United States, as compiled by the bureau of crop estimates, United States department of agriculture, is as follows:

Winter Wheat—State: June 1 forecast, 10,700,000 bushels; production last year (final estimate), 18,285,000 bushels. United States: June 1 forecast, 373,000,000 bushels; production last year (final estimate), 481,744,000 bushels.

Spring Wheat—State: June 1 forecast, 28,500,000 bushels; production last year (final estimate), 19,350,000 bushels. United States: June 1 forecast, 283,000,000; production last year (final estimate), 158,142,000 bushels.

Oats—State: June 1 forecast, 14,100,000 bushels; production last year (final estimate), 14,300,000 bushels. United States: June 1 forecast, 1,380,000,000 bushels; production last year (final estimate), 1,251,982,000 bushels.

Barley—State: June 1 forecast, 6,720,000 bushels; production last year (final estimate), 6,814,000 bushels. United States: June 1 forecast, 214,000,000 bushels; production last year (final estimate), 180,927,000 bushels.

All Hay—State: June 1 forecast, 1,970,000 tons; production last year (final estimate), 2,048,000 tons. United States: June 1 forecast, 102,000,000 tons; production last year (final estimate), 109,786,000 tons.

Pasture—State: June 1 condition 96, compared with 10-year average of 95. United States, June 1 condition 83.8, compared with the 10-year average of 89.5.

Apples (Agricultural Crop)—State: June 1 forecast, 2,150,000 barrels of three bushels; production last year (final estimate), 3,225,000 barrels. United States: June 1 forecast, 25,400,000 barrels of three bushels; production last year (final estimate), 67,415,000 barrels.

Prices—The first price given below is the average on June 1 this year, and the second the average on June 1 last year. State: Wheat, 237 and 84 cents per bushel; corn, 179 and 112; oats, 74 and 44; potatoes, 211 and 89; hay, $19.70 and $18.70 per ton; eggs, 32 and 22 cents per dozen. United States: Wheat, 283.5 and 100 cents per bushel; corn, 160.1 and 74.1 cents; oats, 69.9 and 42.1 cents; potatoes, 274 and 98.8 cents; hay, $15.25 and $12.46 per ton; cotton, 20.2 and 12.2 cents per pound; eggs, 31.1 and 19 cents per dozen.

LOOK THIS UP

The Breeders' Department in this issue contains the names of many prominent live stock breeders. Their offers are worthy your consideration.

In answering advertisements don't fail to mention this paper.

Grain and Produce Markets

Chicago Grain.

CHICAGO, June 16.—Increased offerings of new wheat from Texas had a bearish influence on prices today. During almost the entire session the market ruled lower and the finish was unsettled at 1-2c to 1 1-2c net decline with July at $2.21 1-2 and September, $1.95 1-2. Corn closed unchanged to 1c higher. Oats a shade off to 5-8c up and provisions at an advance of 10 to 22c.

Downturns in the wheat market began at the outset. One of the reasons was a current estimate that as much as 60,000,000 bushels still remained in the United States for export before July 1, not counting bread and seed requirements. Bearish sentiment was increased later by word that new wheat was being moved in Texas at a cost less than for old wheat, and by evidence that the new crop offerings from the southwest were expanding noticeably in volume.

Corn rose sharply as a result of active commission house demand. It was current gossip that about half of the domestic visible supply was under contract for export. Expected warmer weather during next week led to much realizing, however, by holders in the last half-hour.

Frost reports and seaboard demand gave firmness to oats. Crop advices remained favorable, but sellers were scarce.

Liberal warehouse stocks depressed the provision market for a time, but later a decided rally took place, the result of profit-taking by shorts.

Seattle Wheat.

SEATTLE, June 16.—There has been little life to the wheat trade this week, due, buyers believe, to the limited amount of grain that is not close held for milling or export purposes. Bluestem and turkey red moved groggily forward, with only a few scattered sales reported in. Bids dropped 2 to 4 cents by midweek and a total of 10 @12c as compared with last Saturday.

Country bids varied from $2.50 downward. There has been no demand for wheat excepting a little club for feed purposes. Aside from milling bluestem and turkey red, all the so-called export wheats, such as club, fife and fortyfold, have been selling as feed. Minneapolis buyers are no longer in the market in person, but have been sending wires of inquiry with occasional requests to agents to buy. There is no export of wheat now unsold, the 10,000 tons for delivery by water having been gotten out of the way so far as new business is concerned.

In the Big Bend district it is stated that the wheat is thin, backward and of poor quality and the outlook in the Palouse country is not as bright as was hoped. Millers say that from appearance today the club varieties of wheat will be very scarce. Very little turkey red, so highly favored by Minneapolis millers during the last year, has been planted. Stands of bluestem are good everywhere. There will be an increased acreage of marquis wheat, but this is not looked upon with high favor by Puget sound millers, who are specializing more extensively in the trade of the southeast.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3.50 cwt; new potatoes, $4.50 cwt.

Apples—Washington apples, cooking, 75c box, Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwool, 40c lb; Solid Pack, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25½c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $11.25 case.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dress Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Portland Market.

PORTLAND, Ore., June 18.—Wheat trading with the east slowed down again at the close of the week when cash premiums in the eastern markets fell off. There is no present demand here or in California for wheat.

Closing cash bids at the merchants' exchange were: Bluestem, $2.52; forty-fold and club, $2.48; red Russian, $2.46.

Oats and barley continue very dull.

Flour is steady at the recent advance, but millfeed is tending lower.

The demand for hay is limited, but dealers expect present prices to be maintained until the new crop is on the market.

Wool sales are increasing in volume in this state, but the trading is at scattered points. Most of the large public sales scheduled for June have been postponed until July, owing to the delay in shearing. Dealers are bidding 53 to 55 cents for fine wool and up to 58 cents for coarse. Valley wools are bringing 60 to 62 1-2 cents.

Poultry is also weaker, with increased receipts and a slow demand. Dressed meats are holding steady.

The old potato season has closed and there is still more or less stock on hand, in spite of predictions by speculators that there would be a famine in potatoes before the spring was half gone.

Strawberries, at the close of the week, were in sufficient supply for the first time this season and prices dropped to $1.75@2.50 for southern Oregons and $3.50 for Hood Rivers.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to prodcers. The other quotations are prices from jbobers to retailers:

Oats—No. 1, $46 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $35 per ton; shorts, $38.

Barley—No. 1 feed, $42; brewing, nominal, rolled, $49.

Hay—Buying prices: Timothy, eastern Oregon, $28@30; alfalfa, $23; grain, $18@20.

Eggs—Oregon ranch, case counts, 30@31c per dozen; candled, 33c.

Poultry—Hens, 15@17c; ducks, 16@20c; turkeys, alive, 20@22c; dressed, 23@28c; geese, 10@11c.

Butter—City creamery, prints, 38@39c per pound; cubes, 36@36 1-2c.

Cheese—Oregon triplets, 24c; young Americas, 25c.

Dressed meats — Veal, 14 1-2@15c; pork, 19@19 1-2c.

Hops—Nominal.

Potatoes — Oregon jobbing price, $3.50@4.

Wool—Eastern Oregon, fine, 50@55c; coarse, 55@58c; valley, 60@62 1-2c.

Beans — California small white, 16 1-2c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 13c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Seattle Market.

SEATTLE, Wash., June 16.—Butter is easy and city creamerymen are concentrating their attention on getting their cost prices down. If this can be accomplished there will be some storage during the remainder of the month.

Creamerymen throughout this territory are paying the same price for butterfat and until it can be reduced the trade will not expect to buy butter for any less than the going quotations of today. The make all along the Pacific coast is showing a heavy increase, but a short, dry and hot summer is feared, during which the grass will be burned out and cream production reduced. This is the bullish undertone of the trade today.

Cheese has apparently not struck bottom. Quotations are half a cent less for the week.

Old local potatoes are firm at $90 and Yakimas at $100. Jobbers are finding difficulty in getting hold of enough gems to supply the demand.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 33c per dozen.

Poultry—Live hens, fat, over 4 lbs., 19c per lb.; 3 lbs. and under, 17c; old roosters, 12c per lb.; springs, 22c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 15@19c per lb.

Butter fat—32c per lb.; dairy butter, 30@31c per lb.

Beef—Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 13@15c per lb.; do heavy, 12@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 32c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 30c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 30@33c per lb.

Live Stock Quotations.

At Chicago.

CHICAGO, June 16.—Hogs—Receipts, 9000; unsettled at yesterday's average. Bulk, $15.20@15.90; light, $14.60@15.75; mixed, $15@16; heavy, $15@16.05; tive beef cattle, $9@13.70; stockers and rough, $15@15.20; pigs, $10@14.50.

Cattle—Receipts, 10,000: weak. Na-feeders, $7.30@10.60; cows and heifers, $6@11.80; calves, $10.50@15.50.

Sheep—Receipts, 2000; firm. Wethers, $8.20@11.35; lambs, $10.50@16; springs, $13.50@18.

At Omaha.

OMAHA, June 16.—Hogs—Receipts, 6500; market, 5c and 10c lower. Heavy, $15.15@15.45; mixed, $15.10@15.25; light, $14.85@15.25; pigs, $12.50@14.50; bulk, $15@15.25.

Cattle—Receipts, 200; steady. Native steers, $10@13.40; cows and heifers, $8.75@11.50; western steers, $9.50@12; Texas steers, $9@10.50; cows and heifers, $8.50@10; canners, $7@8.50; stockers and feeders, $7@10.75; calves, $10@14.50; bulls, $7@11.

Sheep—Receipts, 100; steady. Yearlings, $11.50@12; wethers, $10@10.75; ewes, $8@10; lambs, $14.50@17.50.

At Seattle.

SEATTLE, June 16.—Receipts: 18 cattle; 197 hogs. Steady market; strong on good quality hogs.

Hogs—Prime light, $15.55@15.70; medium to choice, $15.30@15.40; smooth heavies, $14.80@15.20; rough heavies, $14.30@14.70; pigs, $13.50@14.50.

Cattle—Best steers, $8.50@10.25; medium to choice steers, $8@9; common to good cows and heifers, $6@8; best bulls, $7@8; common to good bulls, $4@6.75; calves, $6.50@11.50.

Sheep—Prime lambs, $13@13.50; good lambs, $12.50@12.75; wethers, $11@12.50; cows, $10@11.

Spokane Stock Yards Saturday.

Hogs—Receipts, 31; market, steady. Bulk of sales, $15.25; prime heavy packing, $15.25@15.50; prime light packing, $15@15.25; smooth heavies, $14@14.50; pigs, $12.75@13.50; stockers, $12.25@13.75.

Cattle—Receipts, 98; market, strong on good beef steers and cows, steady on other grades. Prime light steers, $10@10.25; prime heavy steers, $10@10.50; good steers, $9.25@9.75; prime cows, $8.75@9.25; good cows, $8@8.50; common cows, $6.25@7.25; best heifers, $8.75@9.75; bulls, $6@8; calves, $8@10; stockers and feeders, $5.75@8.

Sheep — Receipts, 2042; market, steady. Prime lambs, $13@13.50; common lambs, $12@12.50; prime shorn yearlings, $10.25@11.25; choice shorn ewes, $9@10.

At Portland.

PORTLAND, Ore., June 16.—Hogs—Weak; receipts, 452. Prime heavies, $15@15.10; light butchers and packing, $14.90@15.10; bulk of sales, $14.90@15; rough heavies, $13.90@14.25; pigs and skips, $12@12.50; stock hogs, $11@12.50.

Cattle—Strong; receipts, 17. Steers, prime light, $9.75@10.25; prime heavy, $9.50@10; good, $9@9.25; cows, choice, $7.75@8.25; medium to good, $7.50@8; ordinary to fair, $7@7.50; heifers, $5@8.50; bulls, $5@7.50; calves, $7@8.50.

Sheep—Weak; receipts, 44. Spring lambs, $13@13.50; spring lambs, culls, $11@12; shorn wethers, $10@10.50; shorn ewes, $7@9; shorn yearlings, $8 10.50.

At Salt Lake.

SALT LAKE, Utah, June 13.—With liberal receipts of cattle here today our market was strong and demand good. Several loads changed hands at fully steady prices. Some two cars of veal calves sold for $11 per hundred, and, considering weights, they are higher than the river prices. A feature of todays trading was the excellent demand for butcher stuff. Some fair to good cows and heifers brought $8.75. Quotations on todays trading as follows:

Receipts: Cattle, 1915; hogs, 93; sheep, none. The following are the quotations:

Choice steers	$10.50	to	$11.25
Fair to good steers	9.00	to	10.50
Common to fair steers	6.50	to	9.00
Choice cows and heavy heifers	8.75	to	9.75
Fair to good cows and heifers	7.75	to	8.75
Cutters	7.00	to	7.75
Canners	4.50	to	5.50
Fat bulls	8.00	to	8.50
Bologna bulls	7.00	to	8.00
Good to choice yearlings	9.00	to	10.00
Veal calves	9.00	to	12.00
Choice hogs, 200 to 240 lbs.	14.45	to	14.55
Mixed, 160 lbs. up	14.25	to	14.45
Heavy roughs	13.00	to	13.50
Fat lights, 130 to 160 lbs.	12.00	to	13.00
Spring lambs	14.00	to	15.00
Wethers	10.50	to	11.50
Ewes	8.50	to	9.50

Wool.

BOSTON, June 15.—The Commercial Bulletin will say tomorrow:

Business in the Boston wool market has been less active during the last week. The market, however, is very strong and the strength of the situation appears to be dictated more by the west than the east. Operations in the west are going forward steadily at slightly higher prices.

Manufacturers are generally well employed and are devoting more and more time to government contracts.

Scoured basis: Texas, fine 12 months, 155@160; fine 8 months, 135@145.

California northern, 155@160; middle county, 135@140; southern, 115@120.

Oregon, eastern No. 1 staple, 160@165; eastern clothing, 135@140; valley No. 1, 145.

Territory fine staple, 165@170; half-blood combing, 145@150; 3-8 blood combing, 130@135; fine clothing, 135@140; fine medium clothing, 120@125. Pulled: extra, 175@180; AA, 165@175; A supers, 145@150.

Good Power

GOOD strong power is just as essential as any other feature of a threshing outfit. It is impossible to do a good job of threshing without steady and even motion, and a strong, well-built engine is necessary. The *Nichols-Shepard Steam Traction Engine* has the strongest and best built boiler ever used in traction engine building.

The double-cylinder engine boilers do not have a bolt, stud-bolt or cap screw that goes through the shell into steam or water space. It steams easily—is powerful in the belt, runs steadily during the entire season. All Nichols & Shepard Engines are members of the

Red River Special Line

With the Red River Special threshers, they make a combination that is sure to save the farmer's thresh bill.

Write for big, free catalogue and read why the Nichols-Shepard Engine excels all others. The most profitable for both threshermen and farmers. Write for description of anything in Threshing Machine Line desired.

News for Breeders

At the Warren T. McCray Hereford sale at Kentland, Ind., May 16, the bull Martin Fairfax sold for $17,000, the highest price ever received for a Hereford bull at auction in America. George E. Fuller of Craig, Saskatchewan, Canada, was the buyer. No animal sold for less than $1000, and the average was $1750 for the 75 head, which was also a new record for an American auction.

W. C Postlethwaite of Caldwell, Idaho, is a business man who breeds Chester White hogs on the side and will exhibit at the state fair of Idaho this fall. His herd boar is by Wildwood Prince, a hog that was grand champion at the Iowa state fair, weighed 1100 pounds and sold for $750. Mr. Postlethwaite's boar weighed close to 500 pounds at 20 months. He has two sows that were bred to Big Bone when he purchased them and they brought a fine lot of pigs. The gilts as well as the sows are now bred to his boar and he will be able to give other exhibitors strong competition if no accident happens before fair time.

H. A.

To Be Fitted for Fall Shows.

Golden Lad, calved October 15, 1916, owned by I. H. Jorgensen, Nez Perce, Idaho. The foundation stock of Mr. Jorgensen's herd was purchased from J. H. McCroskey, Fishtrap, Wash.

Percherons at $857

Mullhall's first annual public sale of registered Percheron horses and Shorthorn cattle was held May 23 on the farm near Fenn, Idaho.

When the sale started there were about 100 present. The registered Percherons averaged $857. The Shorthorn cows were in thin condition, but averaged $200. The bulls averaged $187. They were young, ranging from sucking calves to one year old. They were sired by the herd bull, Prince Booth, and were as even and uniform a lot of bulls as you ever see.

Mr. Mulhall started his herd 15 years ago with $175 invested in one registered cow; three years later he added another cow. The two cows have raised him 27 calves. He sold the first cow at the age of 17 years for $87.50. The other one is still in the herd and is now raising a fine calf. The entire offering, together with 75 others in his herd, are the offspring of these two cows and their increase.

Harry C. Cranke of Nez Perce, Idaho, acted as auctioneer, and Felix Martzen of Cottonwood, Idaho, as clerk.

Below is a list of sales:

Horses.

Calypso, 122650, dark gray stallion, 2 years old, Rothelsburg brothers, Grangeville, Idaho, $875; Eclipse 122652, bay stallion, 2 years old, J. L. McHugh, Grangeville, $925; Vidocq 40937, black stallion, 14 years old, Jake Jensen, Cottonwood, $775.

Cows.

Candidate 213665, calved October 9, 1913, H. E. Sweet, Grangeville, $150; Goodenough 213670, calved April 4, 1913, H. E. Sweet, $200; Maid of Orleans 542201, calved April 7, 1916, E. S. Sweet, $375; Molly 121728, calved April 7 ,1911, H. E. Sweet, $150; Rubyville 246046, calved May 20, 1914, H. E. Sweet, $125.

Bulls.

Beauty and the Beast 542175, calved March 18, 1916, E. S. Sweet, $180; Beautiful Lad 542176, calved April 17, 1916, E. S. Sweet, $215; Great Expectation 542181, calved October 4, 1916, Henry Munsterman, Gifford, $130; Hero of Leonato 542182, calved September 23, 1916, E. S. Sweet, $150; Last Judgment 542184, calved February 16, 1916, George Cowgill, Grangeville, $200; Pound Sterling 542190, calved October 4, 1916, E. S. Sweet, $115; Our Mutual Friend 542188, calved April 13, 1916, J. L. McHugh, $250; Flash of Bourbon, calved April 23, 1916, Kube and Schlicker, Grangeville, $185; Prince Figet, calved March 21, 1916, E. S. Sweet, $190; Duke of Shawnee, calved April 7, 1916, Harry C. Cranke, Nez Perce, Idaho, $180.

D. G. S.

BUT LITTLE DISEASE.

D. G. Ruby, president of the Idaho Live Stock Sanitary board, says the states has not been so free from animal diseases in years as at present. At the meeting of the board, May 10, only three places in the state were reported as having any hog cholera, and they were light outbreaks. There is practically no scab or other sheep diseases and the general health of cattle is excellent. There is harmony and efficient cooperation between Dr. Bodle, state veterinarian, and his able corps of deputies and the government veterinarians operating in the state, and in a short time a systematic plan to test all the cattle in the state for tuberculosis will be started. Mr. Ruby expressed the opinion that the next legislature would pass a comprehensive compensation bill for all cattle destroyed on account of tuberculosis.

H. A.

COOPER'S JERSEY SALE.

The annual Memorial day Jersey sale of T. S. Cooper & Son at Cooperstown, Pa., was a great success, as usual, and high prices were received. The 88 head that passed through the sale ring brought a total of $60,280, or an average of $685. The 83 females averaged $710. Top price was paid for Simone of St. Saviours, a 6-year-old daughter of Plymouth Lad, with several certificates of merit tests to her credit. She went to Mrs. C. D. Illingsworth of Fox Chase, Ohio. Conservate Lady went to R. J. Fleming of Canada for $2000. Golden Champion Brown Maid was secured by William Ross Proctor of Barryville, N. Y., for $1850. Some of these Jerseys went to California, Texas and Canada, but none to the northwestern states. They were all of Island or Close Up or Island breeding.

H. A.

REPORT GOOD CROP OF LAMBS.

The Deseret Sheep company report a splendid crop of lambs at their big ranch near Nyssa, Ore. The 2500 ewes produced 122 per cent of lambs. They have been put on summer range near Council, Idaho, in good condition. The sheep were loaded at Ontario, Ore., and were unloaded at Council, right on the range. The ranch at Nyssa is finely equipped, with running water in the barn and all modern sheep conveniences. Most of this company's sheep are registered Cotswolds, the balance registered Hampshires. They exhibited at the Salt Lake fair last fall, winning pretty near everything in their classes. They will show again this fall and will probably also show at the Idaho state fair at Boise. They will have 500 sheep in the Salt Lake sale in August.

Unite in Honor of Hoe and Gun

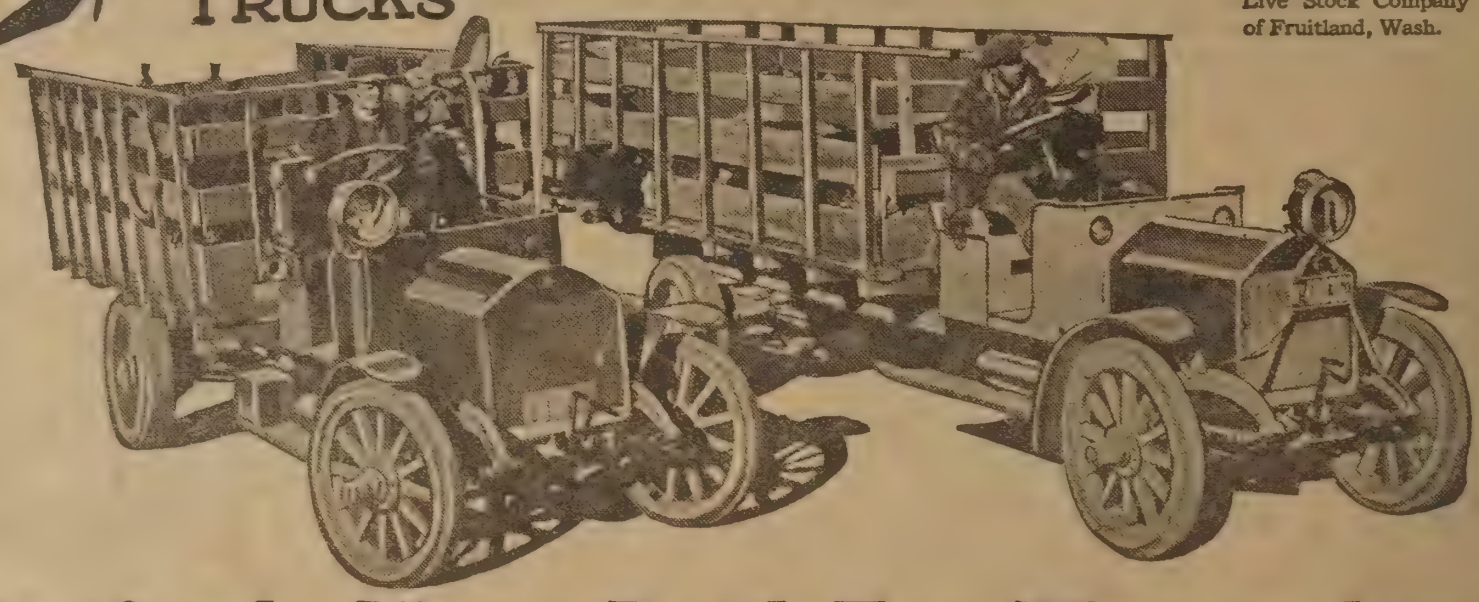
Dedicate July Fourth to Nation's Enrolled Ten Million

Governor Ernest Lister:

"No better day than July Fourth could be selected for the paying of honor to the 10,000,000 young men who have registered for service under the selective draft law. The day itself commemorates the birth of freedom in this land and it is fitting that these young men who go to fight and to give up their lives if necessary to preserve this freedom, should feel that the people of the nation appreciate the manner in which they have accepted their responsibilities and are loyally behind them with every means at their command to insure the success of the cause to which they have pledged their service.

"To make the celebration of July Fourth this year a fitting tribute to these men is an excellent idea. The day should be so observed not only in Washington, but in all the states of the Union."

THE above is the manner of Governor Ernest Lister's indorsement of the campaign of The Washington Farmer to have the Fourth of July this year dedicated to a fitting recognition of the loyalty of the men who, through their registration June 5, have placed themselves in readiness to answer their country's call to whatsoever service may be necessary. From all parts of the state, and many points throughout the entire northwest, has come vigorous expression of the united loyalty that will find voice in the national observation of America's great patriotic day next week. It seems peculiarly appropriate that the recognition of the enrolment of the nation's first great army for world-wide service should be made the keynote of the celebration.



Never again will the entire nation have the opportunity to give united recognition to its ten million enrolled patriots; never again will the state of Washington have the opportunity to give united recognition to the more than 100,000 young men on her great honor roll. Before another year shall have passed, some of these men, unless the miracle of an early peace is enacted, will have "paid the last full measure of devotion" to their country on the field of battle, a foreign field, but the field of world-wide humanity.

This Fourth of July, or never, may these soldiers of liberty be made to know that their community, their state and their nation honor them and are with them in loyalty to the cause to which their country has pledged them. This Fourth of July, or never, may the mothers and wives and sisters of these young men be made to know that the sacrifices they are called upon to make are appreciated by those of their countrymen who remain at home to fight the battle of their country in the ranks of productive industry.

Next Wednesday is America's great opportunity; it is the northwest's great

Garford MOTOR TRUCKS

These are the two Garford Trucks that have more than paid for themselves in the service of the Tonasket Live Stock Company of Fruitland, Wash.

"Garfords Have Paid For Themselves"

—says The Tonasket Live Stock Co.
of Fruitland, Washington

"—Regarding Garford Trucks purchased from you—one in July, and in continuous operation since date of purchase, and second one purchased in December.

"—trucks are used exclusively for hauling hogs—a great deal of the time from Fruitland, Washington, to Spokane, a distance of 80 miles.

"In addition to never having been laid up for repairs a single minute these Garfords have absolutely paid for themselves in the saving in the shrinkage of the hogs.

"By the old method of hauling we used to figure from 12 to 15 pounds shrinkage between points of purchase and delivery.

"By Garford Trucks the maximun is 3 pounds, and very often not over two—and we have hauled loads of them that did not lose enough to mention.

"I have hauled over 2500 hogs. Figure out the saving.

"Operating cost has been nominal. We are certainly satisfied with Garford Trucks."

(—letter from Tonasket Live Stock Co.)

Garfords Will Be Just As Profitable For *You*

Garford Trucks will pay for themselves in *your* service too. They are doing the hauling for hundreds of farmers all over the country. And they are doing it as *dependably*, as *economically*, as *profitably* as they are for the Tonasket Live Stock Company.

Garfords are hauling bales of hay, bags of grain, crates of fruit, timber, machinery and all the hundred and one things a farm truck *must* haul.

And they are making the farmer's day *shorter*—and his profits *longer*.

Write to us or one of our dealers for information.

We can tell you how some one with problems *just like yours* is solving them the Garford way.

Garford Motor Truck Co., Inc.
1701 Broadway Seattle, Washington

The Fancher-Larson Company
1201 First Avenue Spokane, Washington

Oregon-Oakland Motor Company
522 Alder Street Portland, Oregon

Vol. 40. No. 26 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF June 28, 1917

Does Smut Damage Quality of Grain?

Wheat of Northwest Docked Thousands of Dollars Yearly for Damage

Uniformity of grading standards for grain and hay between the states of Oregon, Washington, Idaho and Montana and the federal government, were overwhelmingly favored by those attending the series of open hearings on grading held during the last few days at Portland and Pendleton, Ore., and Tacoma, Spokane and North Yakima, Wash.

The public service commissioners of Washington and Oregon joined in the hearings with a view to taking uniform action for both states, which would virtually determine the grading for Montana and Idaho as well, owing to the fact that the greater portion of the products of these latter states find their shipping outlet through Washington and Oregon terminals.

Smutty Grain Troublesome.

Smut in grain and the problems that its presence creates were the center of much discussion at the hearings. The central problem in this discussion was whether or not a differential should be adopted in grading to account for the cost of cleaning the grain of smut and to cover also the irreparable damage to the quality of the grain caused by the smut, if such damage actually exists. That the grower of wheat is the loser through smut in four directions was clearly evident from the discussions, though the dealers and millers present declined to admit it. The farmer loses in actual yield; he loses actual weight of threshed grain when the smut is removed; he loses when the cost of removing the smut from the grain is charged up against him directly or indirectly; and he loses when his grain is docked on the ground that it is damaged for milling purposes by the smell of smut which it retains.

Whether or not the quality of the grain is actually injured beyond the power of the cleaner and the scouring machine to remedy is a disputed question. Millers claim it is. Many prominent buyers and dealers declare it is not. Under the present conditions of buying and selling grain the grower actually pays for this supposed injury by receiving less for his grain on that alleged account.

If the growers could once establish beyond question, and have incorporated in the grain standards regulations the fact that their wheat is not permanently injured by the presence of smut, it would mean a gain to them of thousands of dollars.

Proposed Differentials.

The new federal grain standards act provides that smutty wheat shall be graded with reference to the actual weight loss when the smut is removed, but makes no provision for the cost of cleaning. Buyers contend that the public service commission should establish a differential expressed in cents per bushel to cover this cost of cleaning and the alleged damage to the grain quality.

One proposal, expressed at the hearings by H. H. Harder of the Seattle Merchants' Exchange, was that a flat rate of two cents per bushel should be deducted for grain with one per cent of smut, and that this should be increased as the rate of one cent per bushel for each additional one per cent of smut.

This would mean that wheat with three per cent of smut would have to bear a loss of four cents a bushel; that wheat with five per cent would have to bear a loss of six cents a bushel.

This proposal was based on the claim that the actual cost of cleaning was two cents a bushel for wheat with one per cent smut; that it increased at the rate of half a cent per bushel for each additional one per cent of smut, and that the damage to the quality of the grain amounted to half a cent a bushel per additional one per cent of smut.

Counter claims were made that the cost of smutting was not in excess of one and a half cents, and that there was no actual damage to the quality of the grain because of the smut.

Commissions Will Decide.

It is apparent that the members of the two state commissione are working in perfect harmony in their movement to coordinate the grading systems of this northwestern territory. The last legislature of Oregon picked up the Washington grain standards act and enacted it into law for Oregon with the one main exception that where the Washington law leaves it optional with the Washington public service commission to follow the federal act, the Oregon law requires that the Oregon commission adopt the federal standards for Oregon grading.

The federal standards govern all shipments from one state into another, and all export shipments without regard to the state laws, the latter governing only shipments between points within the state itself.

The Oregon and Washington commissions have called a joint hearing for Friday, June 29, at which their grain department experts will hear the testimony of picked representatives asked to present the views of the growers, shippers, millers and dealers. These experts will then draft rules for the final consideration of the commissions, who will act on them at the earliest possible date.

The federal grain standards become effective for winter wheat on July 1 this year, and those for spring wheat on August 1.

If Oceans Would Rise.

If the ocean should rise one twenty-sixth of their depth they would flood one-half of the land.

The photograph above shows the members of the Washington and Oregon state public service commissions, who conducted the hearing on the grain standards problems in Spokane June 20. Others who took special part in the hearing are also shown, the personnel of the group being, from left to right:

Front row: Frank R. Spinning and Arthur A. Lewis, members of Washington public service commission; Chairman Frank J. Miller and Fred G. Buchtel, members of the Oregon public service commission; Professor George R. Hyslop of the field crops department of the Oregon Agricultural college, and C. E. Porter, chief grain inspector of the Oregon public service commission.

Back row: William P. Ellis, stenographic reporter for the Oregon public service commission; J. F. Marias of the Astoria dock commission; L. M. Jeffers of the United States department of agriculture; F. R. Randall of the Portland dock commission; Leslie Kayler, stenographic reporter for the Washington public service commission, and P. J. Sweeney, chief grain inspector for the Washington public service commission.

Washington Portraits No. 21.

R. P. Fuller.

R. P. Fuller is one of the prosperous farmers of Cowlitz county. His farm is near Castlerock and his leading product is potatoes, although he has been very successful with alfalfa and clover. His dairy and fruit also afford a source of revenue. Mr. Fuller is an influential man in the community, acting as the secretary of the Farmers' Loan association and a prominent grange member.

The next in the series of Washington portraits will be that of W. G. Rex of Shelton, and will be given in next week's issue of The Washington Farmer.

Year 'Round Labor

Solution Given by Montana Man

By J. M. LEWIS, Manhattan, Mont.

Every farmer should so handle and stock his ranch where conditions permit of live stock at all so as to have a year 'round man; this is the right kind of help. The year 'round man should have also a good thrifty wife, who should likewise help the farmer's wife with the heavier tasks of washing, ironing and weekly house cleaning as regular help. She should, of course, be right on the job for the day of and day after the hog killing, for the sausage and lard making, meat pickling, and cleaning up after. Then is the time to make the soap, too. This year 'round family should have a neat home, their own garden or free use of the farm garden, their own chickens or interest in the farm chickens and other fowls, free milk, cream and butter and a fair allowance of the automobile for themselves occasionally. A Sunday team they should have in reason. The family so treated can be left in charge once every year when father and mother take their vacation which, for best service and economy, they must have.

Far East Markets for Fruit

To help American fruit shippers obtain Pacific outlets for their products during the coming season the office of markets and rural organization is sending a representative to China, Japan, Australia, the Philippines and eastern Siberia to investigate the marketing of American fruit in these countries, according to an announcement of the U. S. department of agriculture today.

The need of expanding the Pacific outlet is made evident by the closing, practically, of the English and Scandinavian markets to which the United States has previously forwarded large quantities of fruit, particularly apples and pears.

Vegetables Are as Easily Canned as Fruit

There Is One Fundamental Principle to Be Observed; Observe It and You Will Not Fail

Garden vegetables can be canned. They can be canned and made to keep. They can be canned by any one who knows the one fundamental principle of canning and does those things necessary to put that principle into effect. Those things are not hard to do. They do not require elaborate canning outfits. They do not require anything that the average kitchen does not possess. In other words, any housewife can "put up" corn, spinach, string beans, peas, turnips, carrots, or almost any other garden vegetable and make them keep for winter use.

What Is the Principle?

There is nothing mysterious about the principle or the methods of putting it into practical operation, says J. F. Breazeale, of the government bureau of chemistry, in a comprehensive article on "Canning Vegetables in the home":

"The great secret of canning or preserving lies in complete sterilization."

He goes on to explain this principle as follows: "The air we breathe, the water we drink, all fruits and vegetables are teeming with minute forms of life which we call bacteria, or molds, or germs. These germs are practically the sole cause of decomposition or rotting. The exclusion of air from canned articles, which was formerly supposed to be so important, is unnecessary provided the air is sterile or free from germs. The exclusion of air is necessary only because in excluding it we exclude the germ. In other words, air which has been sterilized or freed from germs by heat or mechanical means can be passed continuously over canned articles without affecting them in the least."

Killing the Germs.

With this principle in mind, the question then becomes: How can these germs be destroyed and the fruit or vegetables kept absolutely free from them? Others qualified to speak on the subject agree with Mr. Breazeale that any fruit or vegetable will keep if these bacteria, or germs, are kept away—absolutely away.

The answer to the question is that, since high and continued temperature will kill these germs, the material to be canned must be subjected to this high degree of heat sufficiently long to destroy them and must then be sealed so that no more can enter.

Both these things can be done successfully by any careful housewife in any ordinary kitchen. The purpose of this article is to indicate how.

This article is the first in a series to be published in the Farmer on canning. It is designed to indicate the principle that must be observed in successful canning, and also to indicate in a general way the methods of putting the principle into effect. There are three recognized methods of canning: First—The open kettle process. Second—The intermittent sterilization process. Third—The single period process. The first method is largely passing out of use because of the superiority of the second and third methods. The second method is described in this article. The third method will be taken up in next week's article, and subsequent articles will give details on many phases of canning both vegetables and fruit. It must not be forgotten, however, that the fundamental principle is the same in all successful methods.

Extracts from the United States department bulletin above quoted follow:

The First Essential.

"The first requisite for successful canning is a good jar. Glass is the most satisfactory. Tin is more or less soluble in the juices of fruits and vegetables. Even the most improved styles of tin cans which are lacquered on the inside to prevent the juice from coming in contact with the tin are open to this objection. While the amount of tin dissolved under these conditions is very small, enough does come through the lacquer and into the contents of the can to be detected in an ordinary analysis. While the small amount of tin may not be injurious, it gives an undesirable color to many canned articles. Tin cans can not readily be used a second time, while glass with proper care will last indefinitely.

"There are a great many kinds of glass jars on the market, many of them possessing certain distinct points of advantage. The ordinary screw-top jar is the one in most common use. Although cheap in price, these jars are the most expensive in the long run. The tops last only a few years. The tops also furnish an excellent hiding place for germs, which makes sterilization very difficult. An improved type of screw-top jar is fitted with a glass top held in place by a metal cover which screws down over the neck of the jar. If the canning or sterilization is conducted properly, practically all of the air will be driven out of the jar by the steam. Upon cooling, this is condensed, a vacuum is formed on the inside which clamps down the glass top against the rubber ring and seals the jar automatically.

"Another type of jar in common use require no rubber rings, but are fitted with a metal top, lacquered on both sides and having a groove around the lower edge. This groove contains a composition of the consistency of rubber which is melted during canning by the heat of the jar and forms a seal that takes the place of the rubber ring. These metal tops must be renewed each year, as it is necessary to puncture them in order to open the jar.

"The most satisfactory jar that the writer has had any experience with has a rubber ring and glass top which is held in place by a simple wire spring. There are several brands of these jars on the market, so no difficulty should be experienced in obtaining them.

"Vegetables often spoil after being sterilized because of defective rubbers. It is poor economy to buy cheap rubbers or to use them a second time. As a general rule black rubbers are more durable than white ones.

"In selecting a jar, always give preference to those having wide mouths.

Equipment for Sterilizing.

"The writer uses a tin clothes boiler with a false bottom made of wire netting cut to fit. The netting is made of medium-sized galvanized wire with one-half inch mesh. A false bottom is absolutely necessary as the jars will break if set flat on the bottom of the boiler. Narrow strips of wood, straw or almost anything of this nature may be used for the purpose, but the wire gauze is clean and convenient.

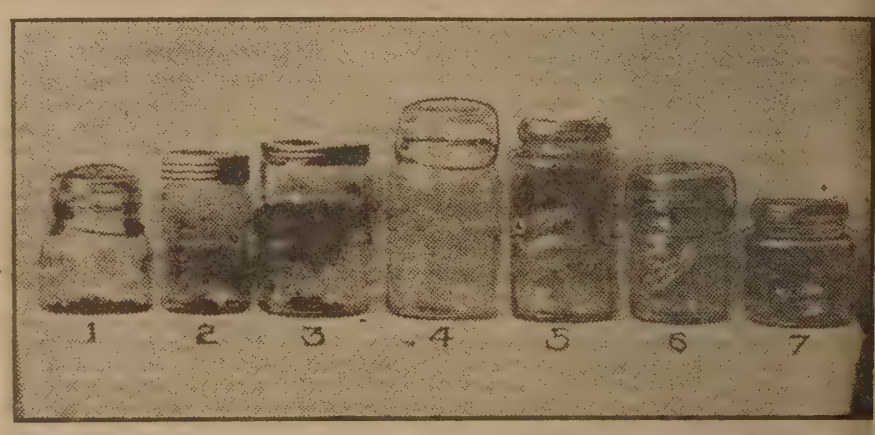
"There are several varieties of patent steamers or steam cookers in common use.

First Step in Canning.

"The first step in successful canning in the selection and preparation of the vegetables: Never attempt to can any vegetable that has matured and commenced to harden, or one that has begun to decay. As a general rule, young vegetables are superior in flavor and texture to the more mature ones. This is especially true of string beans, okra, and asparagus. Vegetables are better if gathered in the early morning while the dew is still on. If it is impossible to can them immediately, do not allow them to wither, but put them in cold water or in a cold, damp place and keep them crisp until you are ready for them."

How to Can Corn.

To illustrate the exact methods to be followed in canning vegetables, the following specific directions for the canning of sweet corn are quoted from the article by Mr. Breazeale:



"Contrary to the general opinion, corn is one of the easiest vegetables to can. The United States department of agriculture has shown that the amount of sugar in the sweet varieties diminishes very rapidly after the ear is pulled from the stalk; therefore in order to retain the original sweetness and flavor it is necessary to can corn very soon after it is pulled—within an hour if possible. Select the ears with full grains before they have begun to harden, as this is the period of greatest sugar content. Husk them and brush the silks off with a stiff brush. Shear off the grains with a sharp knife and pack the jar full. Add salt to taste, usually about a teaspoonful to the quart is sufficient, and fill up the jar to the top with cold water. Put the rubber ring around the neck of the jar and place the glass top on loosely.

"Place the false bottom in the boiler and put in as many jars as the boiler will conveniently hold. Don't try to crowd them in. Leave space between them. Pour in about three inches of cold water, or just enough to form steam and to prevent the boiler from going dry during the boiling. It is not necessary to have the water up to the neck of the jars, as the steam will do the cooking. Put the cover on the boiler and set it on the stove. Bring the water to a boil and keep it boiling one hour. At the end of that time, remove the cover and allow the steam to escape. Press down the spring at the side of the jar. (Assuming that the spring type of jar is used. Otherwise close the jar air tight as if ready to set it away.—Editor's note.) This clamps on the top and will prevent any outside air from entering. The jars can now be removed and cooled or allowed to stand in the boiler until the next day.

"On the second day raise the spring at the side of the jar. (Loosen top if another type of jar is being used.—Editor's note.) This will relieve any pressure from steam that might accumulate inside the jar during the second cooking. Place the jars again in the boiler and boil for one hour. Clamp on the top as on the preceding day and allow them to cool. Repeat the operation on the third day. In removing the jars from the boiler, be careful not to expose them to a draft of cold air while they are hot, as a sudden change in temperature is likely to crack them.

"After the sterilization is complete the jars may be set aside a day or two and then tested. This is done by releasing the spring at the side and picking the jar up by the top. (The writer is still assuming that the spring-top jar is being used. This test could not be

(Continued on page seven.)

The above picture shows various types of jars suitable for canning fruit or vegetables. Nos. 1, 4 and 6 are the spring top kind, a wire spring being made to hold the top down snugly against the rubber ring. No. 2, 3 and 5 are forms of the screw top jar, while No. 7 is a form frequently used which depends upon two factors to insure the sealing. The first factor is the pressure of the atmosphere on the top when the contents of the jar cool and contract, forming a vacuum and thereby reducing the inside pressure. The second factor is a rubbery compound around the inside edges of the lid which softens when the lid is placed on the hot jar, hardening as the jar cools.

The picture above, taken from an Oregon Agricultural college bulletin, shows a home-made canning outfit, very practicable and available for every farm kitchen. It is a common wash boiler with a false bottom made of wooden slats to set the jars on in order that they will not be broken, as is frequently the case where they are set flat on the bottom of the boiler. Note that the water in the boiler comes probably two-thirds of the way to the top of the jars of vegetables. The steam cooks that part above the water. The tops of the jars must be left sufficiently loose to allow the steam and expanding air to escape from the jar when they become hot.

Unite in Honor of Hoe and Gun

Dedicate July Fourth to the Nation's Ten Million Enrolled Patriots

(Continued from page one.)

opportunity; it is Washington's great opportunity. If the response received by The Farmer to its suggestion for the observation of that day is typical of public sentiment—and it can not be otherwise—July 4, 1917, will witness the greatest outpouring of loyal patriotism since that memorable day one hundred and forty-one years ago, the first Fourth of July.

The following sentences give the purport of an article in last week's Farmer, urging that everywhere throughout the state the Fourth of July celebration this year shall honor the patriotism of the ten million young men who have just been enrolled in the United States, as well as point out the profound responsibility resting upon them in these momentous days of the world war:

> How shall the program of the Fourth of July celebration this year give special recognition to more than 41,000 young men who have just been enrolled in this state by the selective draft?
>
> Is not this the logical keynote for this year's national celebration of July Fourth?
>
> Whether in the war that is now shaking the nations to their very foundations or in the mighty economic and social problems which will follow this upheaval, these young men are to play the leading part. It is to them that the country looks, that not only the nation but the world as well shall, under God, have a new birth of freedom and that government of the people, by the people, for the people shall not perish from the earth.

This article was enclosed in a letter to a representative citizen here and there all over the state, asking that the letter be returned with an O. K. if the idea was endorsed. In all the replies received there is not a single dissenting voice. On the other hand, many have added words of most hearty cooperation in carrying out this feature of the Fourth of July celebration.

All walks of life are represented in the replies received, farmers, stockmen, bankers, manufacturers, educators, lawyers, and so on. For instance, one will see mentioned below representatives of these different vocations men like J. V. McCall of Hay, president of the Washington State Farmers' union; Charles Hebberd of Spokane, member of the state council of defense; W. J. Sutton of Cheney, President S. B. L. Penrose of Whitman college, Walla Walla; Judge Thomas Burke of Seattle, and N. B. Coffman of Chehalis.

Nothing More Fitting.

J. V. McCall, Hay: I most heartily approve the suggestion that our national celebration this year be given the turn indicated—that of honoring the splendid young manhood of our country who have offered their services to defend our homes and our families from the aggressions of a would-be-world autocracy, which today without question, threatens us. I shall be very glad to do what I may to make July Fourth a special service in their honor.

Charles Hebberd, Spokane: Most decidedly.

Charles E. Meyers, Davenport: Your splendid encomium in behalf of the 10,000,000 young men who registered for service under the colors of our country is most opportune and ought to be recognized and made use of by all committees having in charge the program for the Fourth. I heartily approve of your plan and will follow it in an address I have promised to make on that day.

D. A. Scott, Ritzville: I heartily indorse the sentiments expressed in your article and will do my part in carrying out such a program.

W. F. Millard, Newport: Let us all do our part and push the good work along.

John Gellatly, Wenatchee: Your editorial is fine and I surely approve of it.

Richard Foster, Springdale: I heartily o. k. the article enclosed in this note. At Springdale we will make the enrolment the principal theme of the "free celebration" that we are giving. Del Cary Smith will address us on that occasion.

R. V. Peringer, Belmont: I most heartily indorse the sentiment of the enclosed article.

L. S. Munger, Marcus: Article referred to o. k. in every particular.

Stanley Hallet, Medical Lake: Most assuredly I do.

N. B. Coffman, Chehalis: Most heartily indorse. Celebration here is being planned along these lines.

D. A. Angus, Rosalia: I heartily approve of the suggestion.

Mark E. Reed, Shelton: This certainly is a capital idea and the people of the state of Washington could not show their patriotism in any better manner than to dedicate our national holiday to a celebration in tribute to the young men of our country who are going to the front to battle for the freedom of our country and its people.

M. B. Howe, Waterville: I not only can o. k. it with all the earnestness I possess, but I want to do more than that. I want to indorse it by suggesting that we make the day one of consecration instead of exaltation. We have started on a journey, the end of which God only can foresee, and I believe we not only should, but must, consecrate every effort and every thought to the work ahead. No phase of our situation can call for light-heartedness or self-assurance. Self-confidence we must have in proper degree, but more than all must we have a proper realization of the work before us. We must not only win, but must win at a minimum cost, and to the accomplishment of this we can not dedicate ourselves too soon.

Ralph Metcalf, Tacoma: I heartily approve.

Robert Prior, North Yakima: Your article is o. k. and very fitting way of recognizing the enlisted men.

A. A. Smith, Port Angeles: O. k. Sure!

O. L. Olsen, Deer Park: I heartily indorse.

Guy E. Kelly, Tacoma: I most earnestly approve the attached article.

John S. Baker, Tacoma: Good work

Thomas Burke, Seattle: Yes. O. k. in full measure.

J. H. Perkins, Ritzville: I believe in the enclosed article. Nothing would please me more than to see this Fourth of July made an inspiration to the boys who have registered to serve their country. It would impress upon our new made citizens, especially, that we believe in what our fathers fought for in 1776.

Frank Carpenter, Cle Elum: Your article has my hearty approval, but on account of Red Cross and other work we will not hold a celebration this year.

H. Stanley Coffin, North Yakima: Yes.

C. F. Monroe, Montesano: Think your idea excellent.

A. Alexander, Wilbur: I most heartily indorse your letter.

W. D. Vincent, Spokane: Patriotism is the capital of the business of war. War is now the business of the nation. Yours is a fine editorial.

W. W. Gray, Wenatchee: You bet this is o. k.

Samuel Kreidel, Ellensburg: I certainly believe in such patriotic move. Here is my o. k.

H. W. Reaugh, Ephrata: O. k.—a mighty good plan.

J. J. Donovan, Bellingham: Your article is just what is needed and I am sending it to the chairman of our committee. These men are the power and stand for the soul of the America.

E. O. Holland, Pullman: Most heartily do I concur in the above.

E. E. Flood, Spokane: I have carefully read the proof of the article, which you intend for your June 21 issue and desire to compliment you on it. I think this is an excellent move and is worthy of commendation.

W. P. Sawyer, Wapato: O. k. My only son is with those already enlisted and gone.

L. C. Van Patten, Cheney: I heartily approve of this article and hope it will reach the hearts of those who have neglected patriotism for lesser things.

J. H. Davis, Tacoma: I fully indorse this sentiment and hope all good citizens will stop and think and remember we all have a duty to perform in this great struggle for humanity and a greater and better civilization.

Peter Iverson, Poulsbo: A few weeks ago, in an editorial in the Kitsap County Herald, I advocated the same idea as you suggest. I certainly O. K. the sentiments expressed.

A. L. Ray, Prescott: The article referred to certainly voices my sentiments.

A. A. Kelly, East Spokane: A patriotic inspiration! We can offer only one of the 100,000 now; later another, the necessity of which may God forbid.

A. L. Rogers, Waterville: Fine.

B. E. Smead, Opportunity: Fine idea.

J. P. Duke, Palouse: I think that you have struck the keynote in your article. Our Fourth of July celebration has been too much just waving flags without going into the deeper significance of the day. I think this year would be the right time to celebrate in a more serious manner, using the money which we have been accustomed to spending in frivolities and unnecessary celebration for a donation to some serious and good cause—something which will be the means of making life easier for those selected to serve in the war for our future freedom and welfare.

John A. Rea, Tacoma: In addition to his o. k. Mr. Rea adds the following:

To the Slackers.

Brethren, how shall it fare with me
When the war is laid aside
If it be proven I am he
For whom the world has died?

If it be found when the battle clears
Their death has set me free
How shall I live with myself thru the years
Which they have fought for me?

Brethren, how must it fare with me
Or how am I justified
If it be found that I am he
Who being questioned, denied?

More O. K.'s.

A simple O. K. when given by the men of the type represented below may mean more than pages of words:

J. A. Balmer, Cle Elum.
H. E. Barr, Dayton.
E. A. Bryan, Pullman.
J. W. Clise, Seattle.
Charles A. Cole, Tacoma.
A. G. Craig, Deer Park.
Amel Carlson, Spangle.
P. H. Carlyon, Olympia.
D. H. Cox, Walla Walla.
Chester C. Farr, Everett.
H. D. Hopkins, Port Townsend.
J. E. Hoobler, Clarkston.
A. W. Hawn, Grandview.
John F. Lyon, Tacoma.
H. J. Lipsett, Port Ludlow.
O. L. McWhorter, Port Angeles.
W. H. Martin, Ritzville.
John W. Mathews, Pullman.
Ralph D. Nichols, Seattle.
George A. Nelson, South Bend.
S. B. L. Penrose, Walla Walla.
H. L. Pierson, Pomeroy.
C. W. Ramsey, Goldendale.
John A. Rea, Tacoma.
N. D. Showalter, Cheney.
W. L. Sax, Colville.
Charles M. Sanford, Hanford
George W. Sherk, Kennewick
W. J. Sutton, Cheney.
Charles M. Talmadge, Newport
G. E. Willison, Pasco.
A. L. Wiffin, Ritzville.
Hugh Waddell, Colville.
J. W. Wright, Mansfield.
E. F. Benson, Olympia.
Samuel Curry, Chimacum.
T. J. East, Bridgeport.
Harry J. Kerr, Okanogan.
George M. McDonald, Coulee City.
Mrs. George Urquhart, Krupp.
E. F. Banker, Winthrop.
John P. Hopkins, Ione.

Over $2,000,000 in Loans Approved

Land Bank Continues to Extend Its Service to Farmers

The northwest district farm loan bank at Spokane, covering the four states of Oregon, Washington, Idaho and Montana, continues to expand its business of furnishing money to the farmers at 5 per cent interest.

The number of charters actually granted to local farm loan associations has been brought up to 46, with many others practically ready for final action.

The loans sought by the farmers included in the charter membership of these 46 chartered associations total more than $2,000,000, with additional members coming in with requests for loans which will ultimately increase the loans to be made to these associations by many thousands of dollars.

To illustrate this point, the applications show that the charter membership of the association at Freewater, Ore., asked for about $30,000 in loans. Additional membership in the Freewater association has come in since that time asking for about $80,000 more.

President D. G. O'Shea of the district bank says that already loans have been approved for some of the applicants who have joined some of the chartered associations since the charters were granted, but that such loans must of necessity be somewhat delayed, and take their turn as the business of the bank will permit. Other applications for loans and for membership in associations not yet chartered are daily being received. No action can be taken by the bank on them until the association has been approved and the charter granted.

"We are receiving many applications from those who did not come in on the original membership roll," says President O'Shea. "Such will have to be held till after the charter is granted, as such association is not a legal body until chartered. After a charter is granted, then the association is a corporation, authorized to admit new members. Then such application will be taken up."

The following are the chartered associations from No. 40 to 46, inclusive, showing the loans sought by the charter members, those up to No. 40 having been published previously in these columns:

Washington.	
Mt. Vernon, Skagit county	$133,750
Carrolls, Cowlitz county	27,125
Idaho.	
Midvale, Washington county	58,750
Montana.	
Retah, Dawson county	52,300
Froid, Sheridan county	23,700
Oregon.	
Harrisburg, Linn county	35,500
Freewater, Umatilla county	30,450

An Appropriate Celebration.

To the Editor of The Washington Farmer: I believe the article in the last issue of The Washington Farmer, regarding the Fourth of July celebration, is an appropriate article for the occasion.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Severe Indictment Is Made of Dairy Products Distributors

Secretary E. B. Smead of the Inland Empire Dairy Producers' association charges the large distributors with direct responsibility for the decline in the dairy industry. In the first number of the Inland Empire Dairy Journal he says:

"They have had little consideration in the past for the individual dairyman. So now, when their troubles are multiplying on all sides, we feel sorry for them in their extremity, but can honestly say that they brought it on themselves. For if they had kept the good of the dairy industry at heart, kept track of the cost of production, and paid enough to the farmer always to enable him to have a fair profit, there never would have been the need for the producers to organize. But we have been driven to it at last and the feeling is unanimous among dairy farmers that they will either have a fair price for dairy products or quit the business."

This is a severe indictment, but many believe it is not unfounded. We were discussing this problem the other day with a dairy producer who recently sold off his herd and quit production.

"The distributors have only themselves to blame," he declared. "For years they had pursued a policy of grinding down the producers with low prices for milk, while charging the consumers high prices. They got away with that policy until war conditions altered the whole situation. Dairy farmers hung on because they had no other landing place. By working themselves and families long hours they managed to keep their herds going, preferring that course to the sacrifices they would have to make if they sold their cows at the low prices then prevailing.

"Then war conditions ran up the price of beef and provided the producers just the opportunity they had long wanted to get from under. That is why so many farmers are going out of business. They are afraid that if they let this opportunity pass it may not continue. They distrust the distributors. They fear that if the old conditions should come back again the dealers will resume their former practices."

Already some of the distributors and their defenders are trying to put the blame for existing conditions on others. They have even tried to make a scapegoat of The Farmer and other journals that have been investigating dairy conditions.

As our readers well know, we have opened our columns to the fullest discussion. We have printed the opinions of both producers and distributors. We have turned on the searchlight and have no apologies to offer.

It is ridiculous for these critics to say that the honest publication of facts can hurt any industry, and they are wasting breath when they try to shift the blame from their own shoulders, for the producers know that unprofitable prices are the source of the trouble, and the consumers want the facts and are determined to have them.

Should Renew the Pledge of 1776

On July 4, 1776, the signers of that epoch-making document, the Declaration of Independence, spoke this pledge for the united people of the American colonies:

"For the support of this declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes and our sacred honor."

One hundred and forty-one years have passed, and the American people are again called upon, in the name of humanity, to renew their allegiance to the principle of that pledge of the first Fourth of July.

For support in the conflict into which America has been drawn she may still place a firm reliance on the protection of divine providence, for her cause is just. Her people again may pledge to each other their lives, for life is no dearer today than in that memorable time. Her fortunes are greater, but inasmuch as they are so much greater is the duty to throw them into the service of humankind. Her honor, grown yet more sacred through the decades of fulfilment of her high purposes, must again be vindicated by whatever sacrifice may be required. Menacing though the bloody hand of Prussianism may appear to the very life and liberty of the people of these United States, may it never truthfully be said that "America's ten million" enrolled for selfish service alone; may it never truthfully be said that American industry and American homes have rallied to the needs of war to save themselves alone from the hand of despotism. With eyes on the devastated fields of Europe, on the hordes of once free and happy men and women now toiling in slavery under the goad of tyranny; on the miles and miles of nameless graves; on the wreckage where but a few short months ago there stood thriving towns and homes of happy people—with eyes on the work of inhuman ambition, the free people of every American community should consecrate themselves anew this Fourth of July, and, with a firm reliance on the protection of divine providence, pledge to each other their lives, their fortunes and their sacred honor to the redemption of humanity.

Do What You Can Do Best

It would be poor policy to try to make a foot-racer out of a one-legged cook. The effective way of doing things is to keep experts busy at useful things which they can do best.

During a war one of the most useful things is to provide food. Without food there can be no army. We have at no time had too many good farmers, and now it seems that many of them have enlisted to fight the enemy with arms instead of food.

There are other classes of men which could be spared more conveniently.

Nobody would deny the right of young American farmers to fight for their country, but the most effective fighting they can do this first year at least is on the farm.

Cultivation Will Help

In the great agricultural states of the east and the middle west much stress is laid by the farmers on cultivation of their crops. This is no doubt partially true because of the more intensive development of the farms and the farming methods, but this is a year when all farming should feel the impetus of intensive methods as much as possible.

Cultivation properly done will greatly increase yields. A day with a man and team in the potato patch will actually increase the yield of potatoes by bushels. Work with the plow, the harrow, the hoe or other implement in the corn and beans will very materially add to the output when harvest time comes.

Wherever it is possible crops should receive better cultivation this year than has been the custom. There will be need for the greatest output of foodstuffs this year in the history of the United States. If cultivation will increase the yield of an acre one bushel, that acre should be cultivated if possible.

Washington Gleanings

The Satsop cooperative cheese factory sold $49,351 worth of cheese during the year ending May 1.

Fifty thousand trout have been planted in Whitestone lake near Brewster by Game Warden Clay Fruit.

The Washington state fair is offering prizes this year for essays on birds by school children or children of school age.

Bounties for 136 coyotes, two lynx and one bobcat have been paid to Lincoln county people by the county auditor's office since March 15.

The state and county fish hatchery at Leavenworth has been active. There is now ready for delivery to the waters of the Wenatchee river some 1,300,000 Chinook salmon fry.

Four thousand gallons of rhubarb have been put up this season at the Sumner cannery, according to Mr. Paulhamus. The association has orders for something over 6000 dozen gallons.

Jess Miller of Colfax purchased the Kenoyer ranch, consisting of 440 acres of land, recently. It lies midway between Central Ferry and the Penawawa. The sale price was announced as $17,600.

As further conservation of natural food resources, the state fish commission declared all tributaries of the Columbia, on the Washington side, closed for two years from June 1 to commercial fishing.

Closely following the purchase of the E. H. Stanton packing plant by Armour & Co., is the announcement of Roberts Brothers to make additions and improvements costing $50,000 to the Union stock yards at Spokane.

Clallam county's third annual fair will be held October 4, 5 and 6 and assurances already have been received of community exhibits from Fairview, Eden Valley, Mount Pleasant, Ramapo, Forks and Quillayute.

Two carloads of Russian-German workmen who are to labor in the beet fields of the Utah-Idaho Sugar company arrived at Ellensburg lately with their wives and children, and their household appurtenances.

Commissioner E. F. Benson of the department of agriculture has appointed M. L. Dean of Montana as assistant commissioner in charge of the division of horticulture, succeeding T. O. Morrison, who has resigned.

Between 350 and 400 boys and girls of Whitman county are now engaged in boys' and girls' club work under the direction of J. Carl Laney, county leader of boys' and girls' club work. There are altogether 27 clubs in Whitman county.

Ross and Orville Smith of Riverside and Pine Creek have purchased the entire band of sheep owned by Bert Webber, which, together with their own holdings, will give these boys a flock of approximately 3000. The purchase price of the flock was $12,000.

American Patriots

"Our country is the world; our countrymen are all mankind."—William Lloyd Garrison.

"They that can give up essential liberty to obtain a little temporary safety, deserve neither liberty nor safety."—Ben Franklin.

"Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty or give me death."—Patrick Henry.

"It (Independence day) ought to be commemorated as the day of deliverance, by solemn acts of devotion to God Almighty. It ought to be solemnized with pomp and parade, with shows, games, sports, guns, bells, bonfires and illuminations, from one end of this continent to the other, from this time forth and forever more."—John Adams.

"Conquer or Submit"

So Says Wilson in World Message

"The day has come to conquer or submit."

This startling declaration was recently made to the world by President Wilson in a message to the newly organizing government of Russia.

"Unless we pour out our blood and treasure now, and succeed, we may never be able to unite or show conquering force again in the great cause of human liberty," said the president in a plea to the Russian government to listen to no intrigues by Germany, but to stand firmly with the allied nations and fight to the end the battle for liberty and righteousness.

So clear is the statement by the president of the purposes which led this country to join the allies in the world-wide war, and so great have been the difficulties encountered in making those purposes clear, it is not amiss to revert to his remarkable message to new Russia.

He says in part:

"It seems opportune and appropriate that I should state again in the light of this new partnership the objects the United States has had in mind in entering the war. Those objects have been very much beclouded during the last few weeks by mistaken and misleading statements and the issues at stake are too momentous, too tremendous, too significant for the whole human race to permit any misinterpretations or misunderstandings, however slight, to remain uncorrected for a moment.

"The position of America in this war is so clearly avowed that no man can be excused for mistaking it. She seeks no material profit or aggrandizement of any kind. She is fighting for no advantage or selfish object of her own, but for the liberation of peoples everywhere from the aggressions of autocratic force.

"We are fighting for the liberty, the self-government and the undictated development of all peoples and every feature of the settlement that concluds this war must be conceived and executed for that purpose. Wrongs must first be righted and then adequate safeguard must be created to prevent their being committed again.

"We ought not to consider remedies merely because they have a pleasing and sonorous sound.

"Practical questions can be settled only by practical means. Phrases will not achieve the result. Effective readjustments will, and whatever readjustments are necessary must be made.

"But they must follow a principle, and that principle is plain.

"No people must be forced under sovereignty under which it does not wish to live.

"No territory must change hands except for the purpose of securing those who inhabit it a fair chance for life and liberty.

"No indemnities must be insisted except those that constitute payment for manifest wrongs done.

"No readjustment of power must be made except such as will tend to secure the future peace of the world and the future welfare and happiness of its peoples.

"And then the free people of the world must draw together in some common covenant, some genuine and practical cooperation that will in effect combine their force to secure peace and justice in the dealings of nations with one another. The brotherhood of mankind must no longer be a fair but empty phrase; it must be given a structure of force and reality. The nations must realize their common life and effect a workable partnership to secure that life against the aggressions of autocratic and selfpleasing power."

Milions for Red Cross.

The nation-wide campaign during the last week for $100,000,000 for the work of the Red Cross in stricken Europe demonstrated the heart of the people of America. While at this writing the totals contributed have not been compiled, reports from scores of centers indicate that the allotments have been more than raised. In the northwest was this more than true. Washington's allotment of $1,000,000 is thought to be assured. Oregon is exceeding its quota of $400,000 by approximately $100,000. Idaho's $250,000 is being swelled to nearly $350,000. Montana is raising over $500,000 instead of the $400,000 originally allotted to it.

Food Bill Is Coming.

The lower house of congress has passed the government food control measure and the senate is expected to pass it with certain amendments before the end of the week. The measure as passed by the house gives wide powers to control prices and distribution, and prohibits the use of grains in the manufacture of intoxicatingliquors. This proposal has both friends and enemies in the senate, and will precipitate a vigorous fight.

The Motor Car

On the Farm

Stale air which has remained in a tire for four or six months has a slight deteriorating effect upon the rubber and should be let out and replaced by fresh air. The use of exhaust from the engine to inflate tires is injurious on account of oil and gases contained therein. Of course, there is no objection to the use of pumps operated by engine power, provided they fill the tire with fresh air.

The general practice of carrying one or more extra inner tubes results in quite a percentage of them being injured before they are even placed inside of a casing. There is danger of the tube being chafed when carried in the ordinary pasteboard box in which they are purchased and it is advisable to provide tube bags for spare tubes.

A mistake which usually results in short life for a tube is placing it in either too large or too small a casing. A 4 1-2-inch tube in a four-inch case wrinkles and creases and is soon weakened or worn through. A four-inch tube in a 4 1-2-inch case requires excessive stretching of the rubber and weakens it.

The matter of lubrication is generally given but little consideration, but is one of the most important factors in conserving tubes. New tubes are coated with a white solution to prevent tubes from sticking to the case, but a good lubricant should also be dusted on the fabric all around the case and on the inner tube. Soapstone, powdered mica and graphite are the common lubricants and all are satisfactory if properly used. Powdered mica is more durable than soapstone and as effective as graphite, as well as more pleasant to handle. Soapstone is quite satisfactory, but not lasting and should be applied two or three times during the season, care being exercised as to the amount used. Too much is as bad, if not worse than too little. If a quantity is dumped into a case it will collect at one point and during the hot weather will heat to such an extent as to burn the rubber of the tube, making it very thin, brittle and lifeless; this can be recognized by the honey-combed appearance.

Hires Out as Ranch Hand; Tells of His Short Experience.

For obvious reasons the writer of this article doesn't wish to sign his name to it. The labor problem on farms has become a serious question and wages have risen considerably. It would be in line with general business principles that where the demand is increasing those supplying the demand obtain more and more favorable terms both as to wages and accommodations. However, The Washington Farmer is willing to let this man have a hearing in its columns:

I was over to the city employment office this morning and saw a list three feet long of "Ranch Hands Wanted," posted on the board. There were more than enough idle men in the large waiting room to fill all those jobs. Why don't those men jump at those jobs?

Not being able to pass the physical examination required of a soldier I did the next best thing I could think of and several weeks ago I secured a job on a ranch at $45 per month.

Some days it rained and we did not work and other days it rained, but not so hard, and we worked in the rain. I am not what would be called a robust man, but can do as much work on a ranch as any one with five to eight horses if I can get proper food and proper sleep and do not have to work in the rain. I told my boss that I could not stand to work in the rain, but he told me that it would not hurt me. He seemed to know more about me than I did myself though I have lived with myself for nearly 50 years and he had only known me for a short time.

My doctor ordered that I eat nothing sweet, but the wife of my boss became offended because I would not eat her pies and insisted that they would not hurt me. So I decided that a rancher and his wife do not want a ranch hand to have any ideas of his own even about his own personal affairs.

Working in the rain, eating sweet food, having a miserable bed and no place at all for a bath put me out of business in a short time and I was compelled to leave. However, my boss refused to pay me for the rainy days I did not work thus compelling me to spend more than it amounted to in order to collect or accept day wages at monthly wage rates.

I began work at 5 a. m. by feeding 11 head of horses, cleaned the stable and wheeled the manure in a cart over 100 feet. By the time I had my horses curried and harnessed it was 6 o'clock and breakfast time. A half hour was given to breakfast when I immediately got the horses out of the stable. I quit in the field at 11:30 a. m., but it was another half hour before my horses were watered and in the stable and fed. At 1 p. m. I again took my horses out of the stable and quit in the field at 6 p. m., taking another half hour to get the horses into the stable and unharnessed. After supper I spent a half hour caring for the horse making a total of 12½ hours on duty. On Sundays I had at least from two to three hours work in caring for the horses making at least 334 hours per month.

Figuring meals at $20 per month and the use of a board bunk on which to unroll my blankets, at 4c per night or $1.20 per month my wages amounted to $66.20 per month or a trifle less than 20 cents per hour. I asked one of the men who sweeps the streets of Spokane how much he received and he said 37½ cents per hour and they were talking of raising this to 40 cents per hour. It is certainly as hard work and requires as much skill to drive from five to eight head of horses to a plow, harrow or seeder as it does to sweep up the trash on the smooth streets of Spokane.

My boss told me that he came to Washington 30 years ago with $10 and that he was now worth $100,000. If, he paid, say 30 cents per hour for his ranch hands and furnished a bunkhouse with a bath for the men and a separate room for each one he might not make quite so much money, but I would make a bet that he would have less trouble getting ranch hands to work for him. S.

Spokane, Wash.

Vegetables Are Easily Canned

(Continued from page four.)

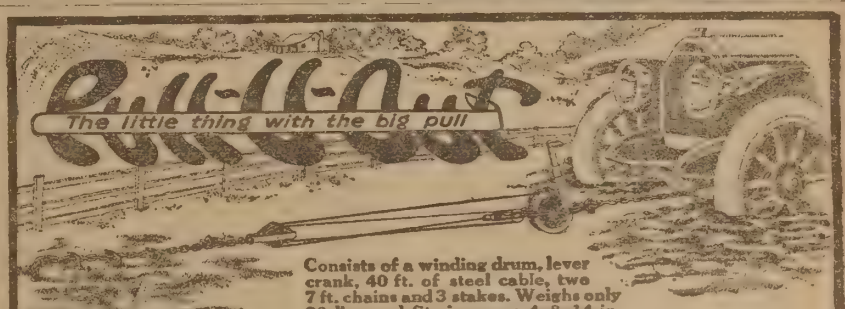
made with a screw-top jar, but could with any jar having a false glass tin top from which the screw top, spring or clamp could be removed without actually opening the jar.—Editor's note.) If there has been the least bit of decomposition, or if sterilization has not been complete, the top will come off. This is because the pressure on the top has been releived by the gas formed by the bacteria. In this case, it is best to empty the corn and fill the jar with a fresh supply. If canning fruits or some expensive vegetable, however, examine the contents of the jar, and, if decomposition has not gone far enough to injure the flavor, place it once more in the boiler and sterlize over again. If the top does not come off when the jar is lifted by it, one may be reasonably sure that the corn is keeping. In case any jars spoil, increase the time of boiling to one and a half hours."

20,000 Miles From Tires-Guaranteed

HIGHWAY TIRE PROTECTORS

Do away with punctures, blowouts, cuts, bruises. Prolong life of tires. We absolutely guarantee any standard rubber tire to wear 20,000 miles if Highway Tire Protectors are used.

Prevent skidding; keep tires cool, smooth, dry. Tightening links insure correct adjustment. May be put on and taken off without defating tires. Steel studs grip the road, give tremendous traction power. Reduce gas consumption Damaged sections can be replaced in five (5) minutes.

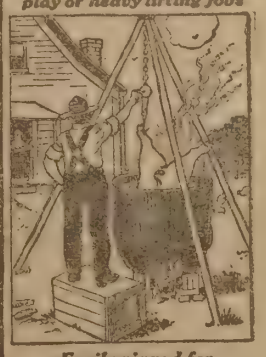


Save your tires, and tire expense. Highway Tire Protectors cost little compared to saving in tire bills.

Write for descriptive circular and Free Trial Offer. See for yourself. Prove our statements.

BUKOLT MFG. CO., 59 Second St., Stevens Point, Wis.

Pull-U-Out



The little thing with the big pull

Consists of a winding drum, lever crank, 40 ft. of steel cable, two 7 ft. chains and 3 stakes. Weighs only 28 lbs. and fits in space 4x8x14 in.

Pull-U-Out makes child's play of heavy lifting jobs

Easily rigged for similar jobs anywhere

Test it at *our* risk

Pull-U-Out is shipped and sold on the make good basis.

Interesting booklet—free

Tells all about Pull-U-Out, how and why it works.

Here's the most wonderful little machine ever invented for farmers. It combines two things—a rescuing device for your automobile and a machine that will do hundreds of lifting and pulling jobs on the farm, easily and quickly. It saves a world of back ache and is worth its weight in gold.

Pull-U-Out fits into the tool box of your auto, yet is so powerful that it will pull a 5,000 lb. auto out of hub-deep mud without delay, expense, trouble or damage to car or clothes. Lifts 2,000 lbs. dead weight; pulls 100,000 lbs. on wheels.

No motorist, however experienced and careful, should venture out, even on the best of roads, without Pull-U-Out, because accidents come *suddenly* —without any warning. Trouble is lurking every where. You may get stuck in the mud, skid into a ditch or overturn. It is then that you will bless the day you bought a Pull-U-Out. With powerful, inexpensive little Pull-U-Out in your tool box you need never fear road conditions; you can go wherever your business or fancy leads you. If you meet with an accident you *know* that you have *immediate* and efficient help right at hand. Don't wait for an accident to make you wish you'd bought a Pull-U-Out—buy one today.

Does wonders on the farm!

Wherever there's *any* heavy lifting or pulling to do, use Pull-U-Out. For loading and unloading wagons, scalding hogs, quartering beef, lifting wagon beds and hay racks on and off the running gear, stretching wire fences, loading baled hay, bales of cotton, sacked grain and other heavy things, Pull-U-Out is marvelous. It is light, portable and strong. Easily moved by one man from one place to another. Does lifting and pulling jobs that usually take from 3 to a dozen men.

Pull-U-Out Sales Co., 2044 Market Street, St. Louis, Mo.

Steady Price Is Greatly Needed

Up and Down Prices Tend To Discourage Producers of Meat Animals and Result in Reduction of the Herds

RITZVILLE, Adams County, Wash., June 18.—The number of live stock, except hogs, are about the same as a year ago. We are disposing only of surplus stock and increasing our herds where condition permits. The best means of increasing the number and size of herds is the big price and steady market, as an up-and-down price is most discouraging to the herdmen. The quickest way of increasing our meat supply is to prepare the female stock. The range is so far in good condition, and the unusually long winter has played havoc with the grasshoppers and sage ticks, which are reduced in numbers tenfold.

JACOB HARDER.

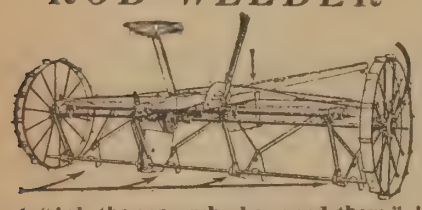
Hogs Quickest Way to Meat.

GARFIELD, Whitman County, Wash., June 18.—There is not much chance to increase live stock now, but we should protect what we have, forbid veal to be butchered, and try to make it unnecessary for cattle to starve in winter. Hogs are the quickest way to meat. So many say they can not afford to raise hogs on such high-priced wheat. Some even have cut down the number of chickens to save feed. Can't they realize that, whatever the feed costs, the meat will pay for it? We are really not talking so much about these things here. No farm work could be done until May, and everybody is too busy. Wheat around Garfield is better than the general run, and east of here, where the snow lay on until the middle of April, fall wheat is very good. Crops and gardens just finished, and summer fallowing is well on.

MRS. MARILLA KIDWELL.

Skagit Is Prosperous.

MT. VERNON, Skagit County, Wash., June 1.—Aside from the fact that the season is just about a month late, crop conditions here look favorable. Most of the oats are up and look good; grass is up, and in fact everything is growing well now. There is more than twice the acreage of potatoes, onions and beans than is commonly grown. Nearly every family has a garden and much more land is being tilled this year than ever before. I think it is a fairly close estimate to say that about 350,000 pounds of milk is being hauled into Mount Vernon every day, the present price being $2.15 per hundred pounds. The third condenser which is nearing completion expects to begin receiving milk June 15.



C. S. PHILLIPS.

All Are Comrades.

OTHELLO, Adams County, Wash., June 16.—Regarding comparison of the number of live stock now and one year ago, personally, I believe there is about an even number of horses and cattle. Many young horses are coming into harness and farmers are breeding more than formerly. The farmers are really inceasing their herds in both lines of stock. As to hogs, there is a very decided shortage; high-priced feed last fall cleaned out the pens. The quickest way to increase meat supply is for all the farmers to keep all breeding stock and see that they are kept busy. With proper care, sows may produce two litters annually and be made money makers. The writer takes no little pride in his brood sows, but there are very few in this vicinity. We feel it the patriotic duty of all breeders to make an extra effort to increase their herds. If we older men can not go to the trenches, we can devote more time and care to increasing the food supply for those who are there. We are all comrades in a common cause.

ROTARY ROD WEEDER & MGF. CO.,
Cheney, Wash.

Recommends Silos.

SPOKANE, Spokane County, Wash., June 15.—The number of live stock in this community is very much less than it was in 1915 and 1916. This is especially true of hogs. In communities where pea growing is under way, there is a promise of feed in the shape of the shattered peas which remain in the field and also from the split peas which are taken from the threshed peas. Several men made good use of this material last season. The customary price for these split peas last season was 1 1-2 cents a pound. With this opportunity to secure such cheap feed, stronger inducements await the farmers who would like to have more hogs on their farms. In regard to the business of keeping up the meat and dairy products, I find there is a tendency to reduce the amount of dairy cattle kept upon our ranches and to some extent the beef cattle are also being reduced. As a matter of great importance, as county agent, I am directing the attention of the farmers in the following manner to the great need along this line:

"Since our nation is at war and is one of the greatest agricultural countries it is called upon as never before to feed and clothe the world. Dairy products, beef and leather, are mighty essential to accomplish this service properly. In the face of this obligation we have passed through one of the most trying experiences in the history of our farming. Feed has been scarce and high priced and the tendency has been to reduce the cattle of our farms. In order to assist in handling the situation and to help provide another winter's supply of feed for cattle, the following suggestions are made and the cattle owners of Spokane country are urged to carry them into operation:

"1. A silo is essential on every farm where four or more beef or dairy cows are kept. It will save one-third the hay, or in other words, wheat, oats or barley when made into silage will go one-third farther as feed than the same material made into hay.

"2. A home-made silo will cost from $40 for the smaller sizes to $100 for the larger ones. At these prices there need be no farmer without a silo where sufficient cattle are owned to warrant its use.

"3. The hay problem is also perplexing. Relief from this condition may be secured through the enormous acreage of peas in Spokane county this year. Pea threshings make excellent cattle feed. In many instances these threshings are found superior to oat hay and equal to clover hay. Many of the large seed companies have found that they can winter their horses on pea straw. If your community is not growing peas in a large way, remember there are plenty other sections in Spokane county from which you can obtain this pea straw.

"4. During the threshing of peas more or less waste is found in the shape of split peas. These, ground into meal, make excellent cattle feed and will assist materially in cheapening rations. Split peas sold for 1 1-2 cents per pound in the pea-growing sections in the fall of 1916."

J. R. SHINN.

Preparing to Feed.

EPHRATA, Grant County, Wash., June 18.—The increase in cattle this year will amount to approximately 25 per cent in this county. The crop of calves is exceptionally good, practically no loss occurring. Last year considerable loss occurred at this season of the year from blackleg, but the largest percentage of the stockraisers have vaccinated and the loss today has been practically nothing from that disease. More purebred bulls have been purchased in this county this year than have ever been in the county at one time before. The people are preparing for better feeding next year. Many contemplate putting in silos for winter feeding. There are not so many hogs in the county as last year, but many people are getting in at least one sow for next year. It looks as if by another year the hog industry would be increased materially. No live stock has been marketed at present.

H. W. REAUGH.

Grow Small Farm Mutton.

STRAW, Fergus County, Mont., June 20.—On account of the severe winter and late spring, the live stock has been reduced by a large percentage. The calf and lamb crop is also comparatively light. The farmers are trying to increase their herds, but the hogs will be hampered as long as grain is so high in price. More mutton is being produced by small farmers than usual. In order to increase the meat supply there will have to be more pastures and more alfalfa raised, so that more mutton and beef can be raised. The price of grains almost prohibit hog raising at the present time here. Many farmers are selling cattle, but mostly to local buyers. Good prices always stimulate production. The present prices are good, so conditions are favorable for increasing herds.

B. F. GORDON.

Need More Meadows.

MARIETTA, Whatcom County, Wash., June 4.—There is not as much live stock in this community as a year ago due to purchasers from Montana buying heavily here. Most farmers are disposing of their grade cows and are intending building up their dairy herds with high class cows. I would suggest that farmers clear more land and increase their meadows as the quickest way of raising the meat supply. Weather for the month of May has been very dry, only .66 inches of rain falling, but at this writing there has come a generous downpour which will be very much appreciated by all.

S. B. MAYHEW.

Afraid of Hog Raising.

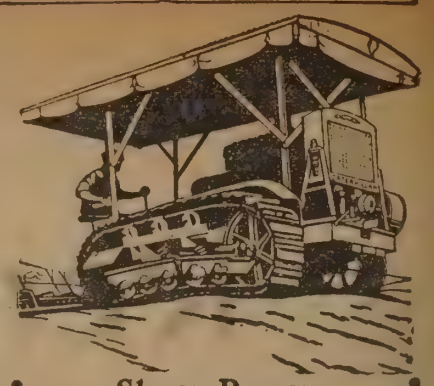
LA CROSSE, Whitman County, Wash., June 1.—The number of live stock is considerable less than a year ago, especially hogs which have decreased about 50 per cent. Cattle and horses are more nearly normal, only the undesirables being weeded out. There should not be any scarcity of hogs, but the low prices of hogs a year ago got the grower skeptical and it will be some time before many farmers will raise pork for the open market.

M. E. SCHRECK.

All Crops Increased.

OMAK, Okanogan County, Wash., June 5.—There is a general increase in the acreage in all crops. Potatoes and beans are being planted in unusual quantities and all available land is being put to use. The weather has been very favorable so far this spring. Alfalfa is looking very thrifty. Some ranchers have cottages for their hired help, but in most cases help is not needed the year 'round.

J. O. WOODS.



Rabbits Increase Rapidly.

GRESHAM, Mulnomah County, Oregon, June 16.—In this county there seems to be a general decrease in the amount of stock on hand, especially in dairy cows, which usually form a big percentage of the farm income in this district. A good many of the farmers are disposing of their stock on account of the high cost of feed as well as the handsome prices which they are receiving for the animals, no matter what state of primeness they are in. Some of the more reliable farmers ary trying to build up good herds, but if the price of feed goes up and the consuming public refuses to give more for their products, they too will sell their cows to the butcher from whom they will get reasonable prices. There is, undoubtedly, a need for an increase in the meat supply, but just how to supply this need is a proposition that is harder to solve than a person would expect. I am advising farmers in this community to save their brood sows and raise all the pigs they possibly can. About one of the quickest ways of increasing the meat supply in small towns is to encourage the breeding of rabbits and chickens.

Wasted Grain and Time Could Have Paid Your Thresh Bill

Save your grain from the straw stack. Hire the man with a Red River Special, or get our "Junior" Red River Special and thresh your own grain. "We know that this separator saved enough grain to pay our thresh bills," says W. B. Sharp and 13 other farmers of Cordell, Oklahoma, after threshing with a

Red River Special
It Saves the Farmer's Thresh Bill

Here's the thresher that's different. It *beats out* the grain. Built for fast work too. Saves the farmer's and thresherman's time—crowds more bushels into the day's work and more good jobs into the season's run.

Our "Junior" Red River Special is the ideal thresher for home threshing. It's a younger brother to the Red River Special. Small enough to make home threshing pay—big enough to make money in custom work.

Has every needed feature of the big Red River Special—famous "Man Behind the Gun"—shakers, large sieves, etc. Hook it to your tractor.

Read Your History As It Happens

Do you realize that the days we are living through now are among the most momentous in the history of the world? Our country is making preparations for war on such a gigantic scale that the effects are felt in every home throughout the land. Our sons and brothers will soon be marching in the military encampments. In a few months they may be fighting a ruthless foe in foreign trenches, while our sisters and daughters are nursing wounded soldiers of France, Belgium, England and America. It is your duty, it is your opportunity to keep yourself and your family thoroughly in touch with these world-quaking, home-shaking events. Do not stop your ears to the call of the bugle. Do not shut your eyes to the glare of the campfire. The whole panorama of our modern history as it unfolds is faithfully reported by

The Twice-a-Week Spokesman-Review

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events.. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line where the history of our day is being set down in ink and blood.

A Timely Offer

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a worth-while saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers. It is a paper particularly welcome just at this time.

A. B. NYSTROM, Editorial Contributor

Leander Martin of Castle Rock, Wash., reports great activity in silo building in his county. A carload of knocked-down silos has been shipped in by one firm this spring, and this is probably less than half of those built or in the process of building. Mr. Martin calls attention to the prevalence of stagggers western Washington horses and is of the opinion that the ergot so abundantly found on various types of vegetation west of the Cascades is at least partially responsible for the trouble.

"Some of these things have not been definitely and finally determined," he comments, "but it is well for our farmers to keep in mind that fern pasture may have a bearing on the problem. Another unsolved problem of considerable economic interest to the farmer is the effect of feeding highly acid silage to dairy cattle year after year. That silage is a valuable food for increasing or maintaining production, we all know, but we must not forget that in the course of the years an acid product of this kind may influence the animal's health."

Jefferson County Cows

The May report of the Jefferson County Cow Testing association shows the average production of all cows tested during the month to be 848 lbs. milk, yielding 33.0 lbs. fat, according to the report of Elmer Leonard, tester.

Very little grain is being fed. Most of the herds on good pasture and are doing creditable work. It is noticeable that cows which were brought through the winter in good condition are paying the farmer for the extra care and expense by a greater production on pasture.

The high herd average production and also the high individual records for the month are held by Yarr Bros., of Chimacum. Their herd of 23 cows averaged for the month 1404 pounds milk and 48.97 pounds fat. Their high cow produced 1947 pounds milk, containing 85.66 pounds fat. These results were obtained on pasture alone.

Following is a list of cows producing over 50 pounds fat for the month: Yarr Bros.' Gr. Hol. produced 1947 pounds milk, containing 85.66 pounds fat; Yarr Bros.' Gr. Hol. produced 1575 pounds milk, containing 67.72 pounds fat; Yarr Bros.' Gr. Hol. produced 1649 pounds milk, containing 67.60 pounds fat; Yarr Bros.' Gr. Hol. produced 1686 pounds milk, containing 67.44 pounds fat; George Hendricks' Gr. Hol. produced 1693 pounds milk, containing 66.03 pounds fat; Glendale Creamery company's P. B. Jersey produced 1302 pounds milk, containing 65.10 pounds fat; Glendale Creamery company's Gr. Jersey produced 1857 pounds milk, containing 64.99 pounds fat; Yarr Bros.' Gr. Hol. produced 1689 pounds milk, containing 60.80 pounds fat; Yarr Bros.' Gr. Hol. produced 2207 pounds milk, containing 59.59 pounds fat; Bert McConogy's Gr. Hol. produced 1739 pounds milk, containing 57.39 pounds fat; George Hendricks' P. B. Hol. produced 1280 pounds milk, containing 56.32 pounds fat; Glendale Creamery company's Gr. Jersey produced 1023 pounds milk, with 56.26 pounds fat; Bert McConogy's Gr. Hol. produced 1411 pounds milk, containing 55.00 fat; Yarr Bros.' Gr. Hol. produced 1528 pounds milk, containing 55.00 pounds fat; H. L. Hansen's Gr. Hol. produced 1442 pounds milk, containing 54.8 pounds fat; B. McConogy's Gr. Hol. produced 1516 pounds milk, containing 54.57 pounds fat; Yarr Bros.' Gr. Hol. produced 1612 pounds milk, containing 53.18 pounds fat; Glendale Creamery company's Gr. Jersey produced 1175 pounds milk, containing 52.87 pounds fat; Glendale Creamery company's Gr. Jersey produced 1008 pounds milk, containing 52.40 pounds fat; Yarr Bros.' Gr. Hol. produced 1652 pounds milk, containing 52.86 pounds fat; Griffith Bros.' Gr. Hol. produced 1311 pounds milk, containing 52.45 pounds fat; Glendale Creamery company's Gr. Jersey produced 1091 pounds milk, containing 52.37 pounds fat; Glendale Creamery company's Gr. Jersey produced 1339 pounds milk, containing 52.22 pounds fat; H. L. Hansen's Gr. Hol. produced 1522 pounds milk, containing 51.85 pounds fat; Yarr Bros.' Gr. Hol. produced 1504 pounds milk, containing 51.13 pounds fat; Fred Stutler's Gr. Jersey produced 1141 pounds milk, containing 51.34 pounds fat; James Maddock's Gr. Jersey produced 825 pounds milk, containing 51.12 pounds fat. Yarr Bros.' Gr. Hol. produced 1500 pounds milk, containing 51.00 pounds fat; Yarr Bros.' Gr. Hol. produced 1451 pounds milk, containing 50.78 pounds fat

The six highest producing herds are as follows:

Yarr Bros.' 23 cows produced 1404 pounds milk, containing 48.97 pounds fat; George Hendricks's 12 cows produced 1236 pounds milk, containing 44.00 pounds fat; Robert Cook's 15 cows produced 1058 pounds milk, with 41.12 pounds fat; Bert McConogy's 23 cows produced 1105 pounds milk, containing 39.49 pounds fat. H. L. Hansen's 9 cows produced 1136 pounds milk, containing 38.62 pounds fat; Miss M. Chase's 13 cows produced 804 pounds milk, containing 38.24 pounds fat.

Testing of Dairy Herd.

Professor E. L. Westover, formerly with the dairy husbandry departmental work in California, has come to Oregon and taken charge of the work surrendered by Professor Barr.

Veterinary

Dr. S. B. Nelson

Warts—How can I get rid of warts on cows' teats?—E. D. J., Rochester, Wash.

Answer—The treatment as advanced in this column (answer to A. K.), I think, will be of value to your animals also.

Bloody Milk.—What can I do for a cow that gives bloody milk?—C. O. O., Corral, Idaho.

Answer.—Try giving your cow one teaspoonful of hypo-sulphite of soda in one quart of water morning and evening for a week to 10 days time.

Sometimes it is advisable to prepare the cow for this treatment by first giving her one and one-half pounds of Epsom salts in three quarts of water, and then begin the prescribed treatment two days later.

Warts on Teats—I have two cows that are becoming badly affected with warts on their teats.—A. K. Rockford, Wash.

Answer—Apply the following preparation to the warts on the teats twice daily:

Chloral-hydrate, drachms 1 1-2
Acetic acid, drachms 1 1-2
Salicylic acid, drachms.....1
Spirits of ether, drachms 1
Collodiom, drachms 4

This has given good results in many instances.

Udder Cakes—I have a cow that I could not dry up before she freshened and now about twice a week one-quarter of her udder will cake and the milk will get gargety for a couple of milkings.—G. C., Bow, Wash.

Answer—Give your cow one and one-half pounds of Epsom salts in three quarts of water. Two days later begin giving her a tablespoonful of fluid extract of pigroot in a pint of water morning and evening for about a week. Also give her every other day about a handful of Epsom salts in a pint of water. Try that for some time. If she does well under that, she will not of course need further treatment. If not, you may have to give injections into the udder, about which you will be advised later if you write again.

Depends on Cow—If a cow should lose her calf how long would it be before she came in heat. Is it possible to bring a cow to her milk after drying her up. On account of being in poor condition I have one which I am trying it on by feeding dairy food. I have been getting about two teacups of milk a day which cost me one dollar a week.—H. G. F., Port Orchard, Wash.

Answer—The time of heat depends a great deal upon circumstances, and upon the individual cow. As a general rule, they may come into heat 21 days after calving and the natural period occurs regularly. However, after a cow loses her calf and there is some inflammation or severe relaxation of the generative organs, this physiological function may vary considerably and occur at irregular periods varying from the normal three weeks up to a month or even more. There is very little opportunity of getting a cow to her milk during this lactation period. After she goes dry, and again freshens, she may come again to her lactation period. It would hardly pay to put high-priced feed into a cow for two teacupfuls of milk a day. The sooner she is dried up completely the better for the owner.

$53,200
Paid for Holstein Bull Calf

The greatest tribute to the superiority of Holstein-Friesian cattle was paid in the auction sale at Worcester, Mass., June 7 and 8, where a Holstein bull calf brought $53,200, a Holstein cow $18,300, and a Holstein heifer $18,000. 143 animals were sold for $296,470, or an average of about $2073 per head. In 1916 at Detroit, Mich., 140 animals were sold for an average of $1173 per head. This great increase in selling values is proof conclusive of Holstein popularity, partly due to Holsteins raising in the past year all world's 7-day records for milk and butter. The world's record for butter in 7 days is now over 50 lbs.

Cows Kept Out of Doors

A few years ago, when orchard lands were booming, the Avalon Orchard Tract company cleared up a big tract of land at Kuna, Idaho, and set most of it to fruit trees. Part of the tract was sold, but the company retains 360 acres, a good part of which is in orchard. The apples are just coming into bearing and are expected to yield 150 boxes per acre this year. Sixty acres of prunes are four years old. While waiting for the trees to come in bearing a part of the land was put in alfalfa, a herd of registered Holsteins was purchased, and the dairy began to bring in immediate returns.

A visit to the Avalon Dairy, which is in charge of C. B. Austin, secretary and treasurer of the company, reveals a herd of really high-class individuals of rich breeding. Hartwood Helio Hengerveld heads the herd. He is by Pontiac Korndyke Hengerveld, a son

of Pontiac Korndyke, that is sire of King of the Pontiacs, with over 100 A. R. O. daughters, including K. P. Pontiac Lass, and his dam by Hengerveld DeKol, sire of 116 A. R. O. daughters and 62 proven sons. Hartwood Helio Hengerveld's dam is Lady Helio Butter Girl, with an A. R. O. record of 24.51 pounds of butter as a four-year-old, and she is a granddaughter of the two great bulls, Mooie Mutual DeKol and Sir Korndyke Manor DeKol. The bull is now three years old and weighs 2200 pounds. He has sired a very nice lot of both bulls and heifers.

The photo shown herewith is that of Pauline Hengerveld Fayne, with a two-year-old record of 14.65 pounds of butter and 304 pounds of milk in seven days. She will later have another official test, and Mr. Austin expects her and at least two others to go above 30 pounds. Milk and Butter Girl Clothilde has 495.4 pounds of milk and 23.41 pounds of butter to her credit, as a junior four-year-old, made here. Her half sister, Belle Columbo Johanna, has 431 pounds of milk and 23.2 pounds of butter as a junior four-year-old made here. There are seven official records and more will be made.

A concrete silo is used and is annually filled with corn silage, with very satisfactory results. The cows run on pasture and are only put in the barn to be milked and fed. They are kept out of doors even in winter, during the many sunny days for which southern Idaho is famous.

R. T. Walbank, president of the company, personally owns an extremely well equipped little creamery in a brick building, which uses all the milk besides that of some neighbors.

H. A.

Whitman County Tests

The cows in the Whitman county association made an excellent showing for the month of May, despite adverse weather conditions and the scarcity of feed, according to the report of Noel Buchanan, tester. Seventy-nine of the 326 cows milking during the month produced over 40 pounds butterfat, while the average of the whole number was 32.9 pounds fat and 86.5 gallons of milk.

The 10 highest producers made remarkable records, which are as follows:

Name of Cow.	Lbs. Milk.	Lbs. Fat.
Minnie 1581		77.5
Blackie 1923		76.5
Megsilo Fern Lassie 1541		76.4
Princess Coleman 1089		75.3
Emnent's Foxy Belle 1313		73.9
Genasta Daches 1310		65.50
Fancy Iron Duchess 1065		60.9
No. 111 Grade 1049		60.8
Foxes Friars Lucy 1213		60.6
Emnent's Coquette Girl .1293		69.8

Must Have Horses

War Greatly Increases the Demand

Colonel Henry J. Reilly is a West Point graduate who has seen many years of active service with the regular army. He is also an experienced correspondent and has for a considerable time been attached to the staff of the Chicago Tribune. In February, 1917, he went abroad. Through the courtesy of the Tribune, Wayne Dinsmore, secretary of the Percheron Society of America, was enabled to make arrangements with Colonel Reilly to have him give special heed to the part which horses were playing in this greatest of all wars. Qualified by training, experience and by reason of unequaled opportunity for observation on the battle front in France he has prepared this message to horse breeders in general, as well as to the Percheron breeders in America, to whom it is particularly addressed:

To the Percheron breeders of America:

I know of no more vital message to send America's horsebreeders than this:

HORSES ARE INDISPENSABLE IN WAR.

There seems to be a rapidly increasing opinion that the day of the horse in war has passed. The nearly three years of warfare in Europe has shown this to be an entirely erroneous idea.

On the eastern or Russian-Rumanian front, where there are a few good roads, in other words, where the road conditions are somewhat similar to those which ordinarily obtain in the United States, the horse has not only held his own for the mounted services, such as the cavalry and artillery, but also for supply purposes. Again and again the armies operating on this front have found the arrival of supplies and ammunition dependent upon the use of horse transport. Even on the western front, where the road system is probably the best in the world, mechanical traction has not been able to displace the horse. In general, it might be said that the line between mechanical and horse traction on a battlefield is the extreme limit of the enemy's artillery fire when any heavy action is going on. The horse is used on the battle field and the mechanical traction in rear of it. Of course, during calm periods, mechanical traction is used along the rear part of the battle field. There are various reasons for this division. Probably the main one is that batteries frequently must be placed and supplied in positions some distance from a road. Often the country to be traversed is so rough that a tractor can not get over it. If the army is operating on conquered ground, this ground generally is so cut up with old trenches and shell holes that horse traction and only horse traction is practicable. Frequently the mud is so deep that mechanical traction is helpless. In many cases the situation is such that no wheeled carriages of any kind can move. In such cases pack animals have to be used.

So well are these conditions recognized that in spite of the tremendous weights of heavy artillery material and the slowness and difficulty of moving them by horse traction, it is considered that only half the heavy batteries should have mechanical traction. The remainder are horsed, and thus the means is always available to move the batteries, no matter what the difficulties. Therefore, in general, it may be said that an army must still have animals for all its cavalry, the usefulness of which is far from disappearing; it must have horses for all its light field artillery, half its heavy field artillery, and all its regimental and divisional supply trains. Incidentally every regiment of infantry must have several hundred horses and mules. The more the question is examined, the more two facts stand out. The first is that certain work in modern warfare can be done only by horses. The second is that the number of horses needed for armies which are counted by millions must be counted by the hundred thousands.

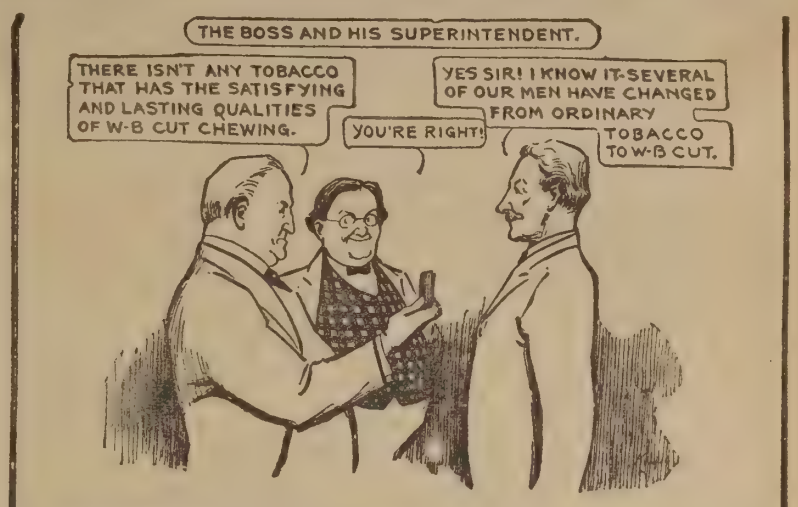
Live Stock Prices

Other Commodities Must Govern

By E. L. POTTER.

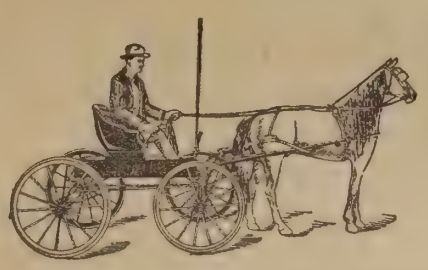
Governmental control of the prices of live stock and other agricultural products is now being advocated by the United States department of agriculture and by some of the large packers. That fixed prices for agricultural products would be desirable is generally admitted, but the fixed prices must bear a proper relation to the cost of production and the price of each product must bear a proper relation to the prices of other commodities. Then with nonstandardized products, like live stock, there must be some means provided to so grade the product that it will be possible to tell just when the product is actually bringing the standard price.

Wheat is usually considered as the barometer of the agricultural trade. Other cereals follow more or less closely the price of wheat. Any continued rise or fall in the price of wheat will be followed by a similar change in the price of barley, corn and oats. Likewise the price of cereals has a direct bearing on the price of live stock. If, for example, the price of wheat was fixed at $2 a bushel and the price of good 200-pound hogs at $12, the tendency will be to drive the hog men out of business, since wheat fed to $12 hogs will return less than $1.50 per bushel. On the other hand, if wheat were priced at $1 and hogs left at $15, the wheat man would feed his wheat all to hogs and thereby get a return of $1.80 a bushel. As a result the hog markets would be glutted, but there would be no wheat for milling.



The prices of all kinds of live stock must be kept at about the same level. During the last seven years the average price of lambs on the Chicago market has been $8. The average price of native steers during the same period has been the same—$8. The price of light hogs has been $7.85. In other words, during this period the prices of cattle, sheep and hogs have been practically the same. The condition could not well be otherwise, since the average consumer will buy whichever is the cheapest, thus tending to force prices to an equality. A study of the live stock history of this country shows that the price which the farmer receives for well-finished pigs, good steers or fat lambs should be about five times the price which he receives for a pound of wheat. The city prices for live stock must, therefore, be from 50 cents to $1 higher than farm prices to cover cost of shipping and shrinkage. We consider live stock prices high, but they are not in line with the price of grain. To correspond with the price of wheat live stock should be worth in Portland better than $20 per hundred. The present situation is discouraging live stock production, and the effect would really be serious were it not for the fact that most farmers do not expect wheat to be as high at threshing time as it is now.

All of these price inter-relationships must be given careful consideration whenever any price fixing is undertaken. Otherwise we will find ourselves with a feast of one product and a famine of another.



Argentine Meat Exports.

Exports of chilled and frozen meats from Argentina during the first three months of 1917 show a distinct falling off as compared with exportations of these products for the corresponding period of last year.

Made by the oldest and greatest Separator Factory in America
SHARPLES
Famous Suction-Feed
Skims clean at any Speed
SEPARATOR
Experiment stations and separator manufacturers all admit that all separators (except Sharples) lose considerable cream when turned slow or unevenly. Thousands of investigations have proved that 19 people out of 20 turn their separators too slow. Sharples is the *only* separator that:
—skims clean at widely varying speeds
—gives cream of unchanging thickness—all speeds
—skims your milk quicker when you turn faster
—has just *one* piece in the bowl—no discs
—has knee-low supply tank and once-a-month oiling
Over a million Sharples users in every dairying country of the world. Write for catalog to Department 49.
The Sharples Separator Co. - - - West Chester, Pa.
Sharples Milkers—used on over 300,000 cows daily
Branches: Chicago San Francisco Toronto S101
SPOKANE SEED CO.
General Agents 910 First Ave., Spokane, Wash.

THERE'S as much difference between tobaccos as there is between sugar canes—the more sap there is in the leaf to start with, the longer it takes before the last drop of goodness is used up. W-B CUT is shredded; so that the *satisfaction*, stored in the rich, sappy tobacco, comes along easy, without so much chewing. When you chew W-B CUT, you are chewing *tobacco*.

Opportunity for Owner of Rig or Automobile
THE publisher of **The Washington Farmer** wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are offering these positions only to farm owners or renters and are paying good salaries to workers who had no experience in this line before accepting our offer. In almost every neighborhood there is an opportunity for building up a successful business. Perhaps this is the very chance you want to earn some extra money.
We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. We give you full instructions and the right kind of help.
You will be able to earn a salary of from $25 to $150 per month, or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.
We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.
Give full details in your first letter.

Fruiting Science

Conditions That Make Barrenness

By GRANVILLE LOWTHER.

C. F. Becker of Kalama, Wash., writes:

"I have two walnut trees that bloom and have little nuts on, but they fall off and we never have a harvest. They are cultivated and properly cared for. Please let me know why the nuts fall off before they are grown."

I am not as familiar with walnuts as with apples and some other friuts. The walnut industry in this country is in its infancy, and I do not know whether I can give the right instructions or not. However, there are some general principles that apply to almost all orchard trees, and, in fact, there are principles that run through all nature and which probably would apply to walnuts as well as to apples, peaches, pears and other fruits.I can give those general principles because I have studied them and observed them in relation to fruits in general but not in relation to walnuts.

Causes of Sterility.

The most frequent causes of sterility are:

1. Lack of pollenation.
2. The blossoms injured from drouth.
3. Fruit buds injured from winter freezing.
4. Fruit buds injured from late spring frosts.
5. Blossoms injured from lack of proper nourishment.
6. The tree may fail to bloom from an excess of certain kinds of nourishment. This means a lack of proper proportions of chemicals in the soil.

In order to understand the natural causes for sterility it is necessary to know that plant life, as well as animal life, is classified into sexes.

In botany the term sex is by analogy applied to the differences in the reproductive organs of the higher plants. The staminate organs, which produce the pollen, correspond to the male sexual organs in animals; the pistillate organs, which produce the ovule, correspond to the female sexual organs. Hermaphroditism is common, the stamens and pistils occurring on a single flower in most plants, while the occurrence of pistillate flowers on one plant and of staminate flowers on another is rare.

Self-Fertile and Self-Sterile.

Some fruits are self-fertile; that is, they will pollenate from their own bloom. Others are self-sterile, that is, they will not pollenate from their own bloom; but the pollen has to be carried from other varieties, either by the winds or by insects.

Some varieties of fruits are more or less completely unable to pollenate themselves, and they should be planted near other varieties to insure fruitfulness. Any variety will fertilize any other variety of the same species, so far as known, if the bloom occurs at the same time. In general, in planting a self-sterile variety, every second or third row should be planted to some other variety.
